Finding Feature Information

Your software release may not support all of the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on Cisco.com is not required.

Restrictions on Band Selection, 802.11 Bands, and Parameters

- Band-selection enabled WLANs do not support time-sensitive applications like voice and video because of roaming delays.
- Band selection can be used only with Cisco Aironet 1040, 1140, 1250, 1260, 3500, and the 3600 series access points.
- Band selection operates only on access points that are connected to a controller. A FlexConnect access point without a controller connection does not perform band selection after a reboot.

- The band-selection algorithm directs dual-band clients only from the 2.4-GHz radio to the 5-GHz radio of the same access point, and it only runs on an access point when both the 2.4-GHz and 5-GHz radios are up and running.
- You can enable both band selection and aggressive load balancing on the controller. They run independently and do not impact one another.
- It is not possible to enable or disable band selection and client load balancing globally through the controller GUI or CLI. You can, however, enable or disable band selection and client load balancing for a particular WLAN. Band selection and client load balancing are enabled globally by default.

Information About Configuring Band Selection, 802.11 Bands, and Parameters

Band Selection

Band selection enables client radios that are capable of dual-band (2.4- and 5-GHz) operation to move to a less congested 5-GHz access point. The 2.4-GHz band is often congested. Clients on this band typically experience interference from Bluetooth devices, microwave ovens, and cordless phones as well as co-channel interference from other access points because of the 802.11b/g limit of three nonoverlapping channels. To prevent these sources of interference and improve overall network performance, you can configure band selection on the device.

Band selection is enabled globally by default.

Band selection works by regulating probe responses to clients. It makes 5-GHz channels more attractive to clients by delaying probe responses to clients on 2.4-GHz channels.

802.11 Bands

You can configure the 802.11b/g/n (2.4-GHz) and 802.11a/n (5-GHz) bands for the controller to comply with the regulatory requirements in your country. By default, both 802.11b/g/n and 802.11a/n are enabled.

When a controller is configured to allow only 802.11g traffic, 802.11b client devices are able to successfully connect to an access point but cannot pass traffic. When you configure the controller for 802.11g traffic only, you must mark 11g rates as mandatory.

802.11n Parameter

This section provides instructions for managing 802.11n devices such as the Cisco Aironet 1140 and 3600 Series Access Points on your network. The 802.11n devices support the 2.4- and 5-GHz bands and offer high-throughput data rates.

The 802.11n high-throughput rates are available on all 802.11n access points for WLANs using WMM with no Layer 2 encryption or with WPA2/AES encryption enabled.

**Note**

Some Cisco 802.11n APs may intermittently emit incorrect beacon frames, which can trigger false wIPS alarms. We recommend that you ignore these alarms. The issue is observed in the following Cisco 802.11n APs: 1140, 1250, 2600, 3500, and 3600.

802.11h Parameter

802.11h informs client devices about channel changes and can limit the transmit power of those client devices.

How to Configure 802.11 Bands and Parameters

Configuring Band Selection (CLI)

SUMMARY STEPS

1. **configure terminal**
2. **wireless client band-select cycle-count** *cycle_count*
3. **wireless client band-select cycle-threshold** *milliseconds*
4. **wireless client band-select expire suppression** *seconds*
5. **wireless client band-select expire dual-band** *seconds*
6. **wireless client band-select client-rssi** *client_rssi*
7. **end**
8. **wlan** *wlan_profile_name wlan_ID SSID_network_name* **band-select**
9. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 2	wireless client band-select cycle-count <i>cycle_count</i> Example: Device(config)# wireless client band-select cycle-count 3	Sets the probe cycle count for band select. You can enter a value between 1 and 10 for the <i>cycle_count</i> parameter.
Step 3	wireless client band-select cycle-threshold <i>milliseconds</i>	Sets the time threshold for a new scanning cycle period. You can enter a value for threshold between 1 and 1000 for the <i>milliseconds</i> parameter.

	Command or Action	Purpose
	Example: Device(config)# wireless client band-select cycle-threshold 5000	
Step 4	wireless client band-select expire suppression <i>seconds</i> Example: Device(config)# wireless client band-select expire suppression 100	Sets the suppression expire to the band select. You can enter a value for suppression between 10 to 200 for the <i>seconds</i> parameter.
Step 5	wireless client band-select expire dual-band <i>seconds</i> Example: Device(config)# wireless client band-select expire dual-band 100	Sets the dual band expire. You can enter a value for dual band between 10 and 300 for the <i>seconds</i> parameter.
Step 6	wireless client band-select client-rssi <i>client_rssi</i> Example: Device(config)# wireless client band-select client-rssi 40	Sets the client RSSI threshold. You can enter a value for minimum dBm of a client RSSI to respond to a probe between 20 and 90 for the <i>client_rssi</i> parameter.
Step 7	end Example: Device(config)# end	Returns to privileged EXEC mode. Alternatively, you can also press Ctrl-Z to exit global configuration mode.
Step 8	wlan <i>wlan_profile_name</i> <i>wlan_ID</i> <i>SSID_network_name</i> band-select Example: Device(config)# wlan wlan1 25 ssid12 Device(config-wlan)# band-select	Configures band selection on specific WLANs. You can enter a value between 1 and 512 for the <i>wlan_ID</i> parameter. You can enter the up to 32 alphanumeric characters for <i>SSID_network_name</i> parameter.
Step 9	end Example: Device(config)# end	Returns to privileged EXEC mode. Alternatively, you can also press Ctrl-Z to exit global configuration mode.

Configuring the 802.11 Bands (CLI)

You can configure 802.11 bands and parameters.

SUMMARY STEPS

1. `configure terminal`
2. `ap dot11 5ghz shutdown`
3. `ap dot11 24ghz shutdown`
4. `ap dot11 {5ghz | 24ghz} beaconperiod time_unit`
5. `ap dot11 {5ghz | 24ghz} fragmentation threshold`
6. `ap dot11 {5ghz | 24ghz} dtpc`
7. `wireless client association limit number interval milliseconds`
8. `ap dot11 {5ghz | 24ghz} rate rate {disable | mandatory | supported}`
9. `no ap dot11 5ghz shutdown`
10. `no ap dot11 24ghz shutdown`
11. `ap dot11 24ghz dot11g`
12. `end`

DETAILED STEPS

	Command or Action	Purpose
Step 1	<code>configure terminal</code> Example: Device# <code>configure terminal</code>	Enters global configuration mode.
Step 2	<code>ap dot11 5ghz shutdown</code> Example: Device(config)# <code>ap dot11 5ghz shutdown</code>	Disables the 802.11a band. Note You must disable the 802.11a band before configuring the 802.11a network parameters.
Step 3	<code>ap dot11 24ghz shutdown</code> Example: Device(config)# <code>ap dot11 24ghz shutdown</code>	Disables the 802.11b band. Note You must disable the 802.11b band before configuring the 802.11b network parameters.
Step 4	<code>ap dot11 {5ghz 24ghz} beaconperiod <i>time_unit</i></code> Example: Device(config)# <code>ap dot11 5ghz beaconperiod 500</code>	Specifies the rate at which the SSID is broadcast by the access point. The beacon interval is measured in time units (TUs). One TU is 1024 microseconds. You can configure the access point to send a beacon every 20 to 1000 milliseconds.
Step 5	<code>ap dot11 {5ghz 24ghz} fragmentation <i>threshold</i></code> Example: Device(config)# <code>ap dot11 5ghz fragmentation 300</code>	Specifies the size at which packets are fragmented. The threshold is a value between 256 and 2346 bytes (inclusive). Specify a low number for areas where communication is poor or where there is a great deal of radio interference.

	Command or Action	Purpose
Step 6	<p>ap dot11 {5ghz 24ghz} dtpc</p> <p>Example: Device(config)# ap dot11 5ghz dtpc</p> <p>Device(config)# no ap dot11 24ghz dtpc</p>	<p>Enables access points to advertise their channels and transmit the power levels in beacons, and probe responses.</p> <p>The default value is enabled. Client devices using dynamic transmit power control (DTPC) receive the channel and power level information from the access points and adjust their settings automatically. For example, a client device used primarily in Japan could rely on DTPC to adjust its channel and power settings automatically when it travels to Italy and joins a network there.</p> <p>Note On access points that run Cisco IOS software, this feature is called world mode.</p> <p>The no form of the command disables the 802.11a or 802.11b DTPC setting.</p>
Step 7	<p>wireless client association limit <i>number</i> interval <i>milliseconds</i></p> <p>Example: Device(config)# wireless client association limit 50 interval 1000</p>	<p>Specifies the maximum allowed clients that can be configured.</p> <p>You can configure a maximum number of association request on a single access point slot at a given interval. The range of association limit that you can configure is from one through 100.</p> <p>The association request limit interval is measured between 100 to 10000 milliseconds.</p>
Step 8	<p>ap dot11 {5ghz 24ghz} rate <i>rate</i> {<i>disable</i> <i>mandatory</i> <i>supported</i>}</p> <p>Example: Device(config)# ap dot11 5ghz rate 36 mandatory</p>	<p>Specifies the rate at which data can be transmitted between the controller and the client.</p> <ul style="list-style-type: none"> • <i>disabled</i>—Defines that the clients specify the data rates used for communication. • <i>mandatory</i>—Defines that the clients support this data rate in order to associate to an access point on the controller. • <i>supported</i>—Any associated clients that support this data rate may communicate with the access point using that rate. However, the clients are not required to be able to use this rate in order to associate. • <i>rate</i>—Specifies the rate at which data is transmitted. For the 802.11a and 802.11b bands, the data is transmitted at the rate of 1, 2, 5.5, 6, 9, 11, 12, 18, 24, 36, 48, or 54 Mbps.
Step 9	<p>no ap dot11 5ghz shutdown</p> <p>Example: Device(config)# no ap dot11 5ghz shutdown</p>	<p>Enables the 802.11a band.</p> <p>Note The default value is enabled.</p>
Step 10	<p>no ap dot11 24ghz shutdown</p> <p>Example: Device(config)# no ap dot11 24ghz shutdown</p>	<p>Enables the 802.11b band.</p> <p>Note The default value is enabled.</p>
Step 11	<p>ap dot11 24ghz dot11g</p>	<p>Enables or disables 802.11g network support.</p>

	Command or Action	Purpose
	Example: Device(config)# ap dot11 24ghz dot11g	The default value is enabled. You can use this command only if the 802.11b band is enabled. If you disable this feature, the 802.11b band is enabled without 802.11g support.
Step 12	end Example: Device(config)# end	Returns to privileged EXEC mode.

Configuring 802.11n Parameters (CLI)

SUMMARY STEPS

1. **configure terminal**
2. **ap dot11 {5ghz | 24ghz} dot11n**
3. **ap dot11 {5ghz | 24ghz} dot11n mcs tx rtu**
4. **wlanwlan_profile_name wlan_ID SSID_network_name wmm require**
5. **ap dot11 {5ghz | 24ghz} shutdown**
6. **{ap | no ap} dot11 {5ghz | 24 ghz} dot11n a-mpdu tx priority {all | 0-7}**
7. **no ap dot11 {5ghz | 24ghz} shutdown**
8. **ap dot11 {5ghz | 24ghz} dot11n guard-interval {any | long}**
9. **ap dot11 {5ghz | 24ghz} dot11n rifs rx**
10. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 2	ap dot11 {5ghz 24ghz} dot11n Example: Device(config)# ap dot11 5ghz dot11n	Enables 802.11n support on the network. The no form of the command disables the 802.11n support on the network.
Step 3	ap dot11 {5ghz 24ghz} dot11n mcs tx rtu Example: Device(config)# ap dot11 5ghz dot11n mcs tx 20	Specifies the modulation and coding scheme (MCS) rates at which data can be transmitted between the access point and the client. You can set a value from 0 through 23 for the mcs tx parameter. The no form of the command disables the MCS rates that is configured.

	Command or Action	Purpose																		
Step 4	<p><code>wlan wlan_profile_name wlan_ID SSID_network_name wmm require</code></p> <p>Example: Device(config)# <code>wlan wlan1 25 ssid12</code> Device(config-wlan)# <code>wmm require</code></p>	<p>Enables WMM on the WLAN and uses the 802.11n data rates that you configured.</p> <p>The require parameter requires client devices to use WMM. Devices that do not support WMM cannot join the WLAN.</p>																		
Step 5	<p><code>ap dot11 {5ghz 24ghz} shutdown</code></p> <p>Example: Device(config)# <code>ap dot11 5ghz shutdown</code></p>	<p>Disables the network.</p>																		
Step 6	<p><code>{ap no ap} dot11 {5ghz 24 ghz} dot11n a-mpdu tx priority {all 0-7}</code></p> <p>Example: Device(config)# <code>ap dot11 5ghz dot11n a-mpdu tx priority all</code></p>	<p>Specifies the aggregation method used for 802.11n packets.</p> <p>Aggregation is the process of grouping packet data frames together rather than transmitting them separately. Two aggregation methods are available: Aggregated MAC Protocol Data Unit (A-MPDU) and Aggregated MAC Service Data Unit (A-MSDU). Both A-MPDU and A-MSDU are performed in the software.</p> <p>You can specify the aggregation method for various types of traffic from the access point to the clients.</p> <p>The following table defines the priority levels (0-7) assigned per traffic type.</p> <p>Table 1: Traffic Type Priority Levels</p> <table border="1"> <thead> <tr> <th>User Priority</th> <th>Traffic Type</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Best effort</td> </tr> <tr> <td>1</td> <td>Background</td> </tr> <tr> <td>2</td> <td>Spare</td> </tr> <tr> <td>3</td> <td>Excellent effort</td> </tr> <tr> <td>4</td> <td>Controlled load</td> </tr> <tr> <td>5</td> <td>Video, less than 100-ms latency and jitter</td> </tr> <tr> <td>6</td> <td>Voice, less than 100-ms latency and jitter</td> </tr> <tr> <td>7</td> <td>Network control</td> </tr> </tbody> </table>	User Priority	Traffic Type	0	Best effort	1	Background	2	Spare	3	Excellent effort	4	Controlled load	5	Video, less than 100-ms latency and jitter	6	Voice, less than 100-ms latency and jitter	7	Network control
User Priority	Traffic Type																			
0	Best effort																			
1	Background																			
2	Spare																			
3	Excellent effort																			
4	Controlled load																			
5	Video, less than 100-ms latency and jitter																			
6	Voice, less than 100-ms latency and jitter																			
7	Network control																			

	Command or Action	Purpose
		<p>You can configure each priority level independently, or you can use the all parameter to configure all of the priority levels at once. You can configure priority levels so that the traffic uses either A-MPDU transmission or A-MSDU transmission.</p> <ul style="list-style-type: none"> • When you use the ap command along with the other options, the traffic associated with that priority level uses A-MPDU transmission. • When you use the no ap command along with the other options, the traffic associated with that priority level uses A-MSDU transmission. <p>Configure the priority levels to match the aggregation method used by the clients. By default, A-MPDU is enabled for priority level 0, 4 and 5 and the rest are disabled. By default, A-MPDU is enabled for all priorities except 6 and 7.</p>
Step 7	no ap dot11 {5ghz 24ghz} shutdown Example: Device(config)# no ap dot11 5ghz shutdown	Reenables the network.
Step 8	ap dot11 {5ghz 24ghz} dot11n guard-interval {any long} Example: Device(config)# ap dot11 5ghz dot11n guard-interval long	Configures the guard interval for the network.
Step 9	ap dot11 {5ghz 24ghz} dot11n rifs rx Example: Device(config)# ap dot11 5ghz dot11n rifs rx	Configures the Reduced Interframe Space (RIFS) for the network.
Step 10	end Example: Device(config)# end	Returns to privileged EXEC mode. Alternatively, you can also press Ctrl-Z to exit global configuration mode.

Configuring 802.11h Parameters (CLI)

SUMMARY STEPS

1. `configure terminal`
2. `ap dot11 5ghz shutdown`
3. `{ap | no ap} dot11 5ghz channelswitch mode switch_mode`
4. `ap dot11 5ghz power-constraint value`
5. `no ap dot11 5ghz shutdown`
6. `end`

DETAILED STEPS

	Command or Action	Purpose
Step 1	<code>configure terminal</code> Example: Device# <code>configure terminal</code>	Enters global configuration mode.
Step 2	<code>ap dot11 5ghz shutdown</code> Example: Device(config)# <code>ap dot11 5ghz shutdown</code>	Disables the 802.11a network.
Step 3	<code>{ap no ap} dot11 5ghz channelswitch mode <i>switch_mode</i></code> Example: Device(config)# <code>ap dot11 5ghz channelswitch mode 0</code>	Enables or disables the access point to announce when it is switching to a new channel. You can enter a 0 or 1 for the channelswitch parameter to specify whether transmissions are restricted until the actual channel switch (0) or are not restricted (1). The default value is disabled.
Step 4	<code>ap dot11 5ghz power-constraint <i>value</i></code> Example: Device(config)# <code>ap dot11 5ghz power-constraint 200</code>	Configures the 802.11h power constraint value in a range from zero through 255. The default value for the value parameter is 3 dB.
Step 5	<code>no ap dot11 5ghz shutdown</code> Example: Device(config)# <code>no ap dot11 5ghz shutdown</code>	Reenables the 802.11a network.
Step 6	<code>end</code> Example: Device(config)# <code>end</code>	Returns to privileged EXEC mode. Alternatively, you can also press Ctrl-Z to exit global configuration mode.

Monitoring Configuration Settings for Band Selection, 802.11 Bands, and Parameters

Monitoring Configuration Settings Using Band Selection and 802.11 Bands Commands

This section describes the new commands for band selection and 802.11 bands.

The following commands can be used to monitor band selection, and 802.11 bands and parameters the .

Table 2: Monitoring Configuration Settings Using Band Selection and 802.11 Bands Commands

Command	Purpose
show ap dot11 5ghz network	Displays 802.11a bands network parameters, 802.11a operational rates, 802.11n MCS settings, and 802.11n status information.
show ap dot11 24ghz network	Displays 802.11b bands network parameters, 802.11b/g operational rates, 802.11n MCS settings, and 802.11n status information.
show wireless dot11h	Displays 802.11h configuration parameters.
show wireless band-select	Displays band select configuration settings.

Example: Viewing the Configuration Settings for 5-GHz Band

```

Device# show ap dot11 5ghz network
802.11a Network : Enabled
11nSupport : Enabled
  802.11a Low Band : Enabled
  802.11a Mid Band : Enabled
  802.11a High Band : Enabled

802.11a Operational Rates
  802.11a 6M : Mandatory
  802.11a 9M : Supported
  802.11a 12M : Mandatory
  802.11a 18M : Supported
  802.11a 24M : Mandatory
  802.11a 36M : Supported
  802.11a 48M : Supported
  802.11a 54M : Supported
802.11n MCS Settings:
  MCS 0 : Supported
  MCS 1 : Supported
  MCS 2 : Supported

Age Out Dual Band (sec)        : 60
Client RSSI (dBm)              : 80

```

Configuration Examples for Band Selection, 802.11 Bands, and Parameters

Examples: Band Selection Configuration

This example shows how to set the probe cycle count and time threshold for a new scanning cycle period for band select:

```
Device# configure terminal
Device(config)# wireless client band-select cycle-count 3
Device(config)# wireless client band-select cycle-threshold 5000
Device(config)# end
```

This example shows how to set the suppression expire to the band select:

```
Device# configure terminal
Device(config)# wireless client band-select expire suppression 100
Device(config)# end
```

This example shows how to set the dual band expire for the band select:

```
Device# configure terminal
Device(config)# wireless client band-select expire dual-band 100
Device(config)# end
```

This example shows how to set the client RSSI threshold for the band select:

```
Device# configure terminal
Device(config)# wireless client band-select client-rssi 40
Device(config)# end
```

This example shows how to configure band selection on specific WLANs:

```
Device# configure terminal
Device(config)# wlan wlan1 25 ssid12
Device(config-wlan)# band-select
Device(config)# end
```

Examples: 802.11 Bands Configuration

This example shows how to configure 802.11 bands using beacon interval, fragmentation, and dynamic transmit power control:

```
Device# configure terminal
Device(config)# ap dot11 5ghz shutdown
Device(config)# ap dot11 24ghz shutdown
Device(config)# ap dot11 5ghz beaconperiod 500
Device(config)# ap dot11 5ghz fragmentation 300
Device(config)# ap dot11 5ghz dtpc
Device(config)# wireless client association limit 50 interval 1000
Device(config)# ap dot11 5ghz rate 36 mandatory
Device(config)# no ap dot11 5ghz shutdown
Device(config)# no ap dot11 24ghz shutdown
Device(config)# ap dot11 24ghz dot11g
Device(config)#end
```

Examples: 802.11n Configuration

This example shows how to configure 802.11n parameters for 5-GHz band using aggregation method:

```
Device# configure terminal
Device(config)# ap dot11 5ghz dot11n
Device(config)# ap dot11 5ghz dot11n mcs tx 20
Device(config)# wlan wlan1 25 ssid12
Device(config-wlan)# wmm require\
Device(config-wlan)# exit
Device(config)# ap dot11 5ghz shutdown
Device(config)# ap dot11 5ghz dot11n a-mpdu tx priority all
Device(config)# no ap dot11 5ghz shutdown
Device(config)#exit
```

This example shows how to configure the guard interval for 5-GHz band:

```
Device# configure terminal
Device(config)# ap dot11 5ghz dot11n
Device(config)# ap dot11 5ghz dot11n mcs tx 20
Device(config)# wlan wlan1 25 ssid12
Device(config-wlan)# wmm require\
Device(config-wlan)# exit
Device(config)# no ap dot11 5ghz shutdown
Device(config)# ap dot11 5ghz dot11n guard-interval long
Device(config)#end
```

This example shows how to configure the RIFS for 5-GHz band:

```
Device# configure terminal
Device(config)# ap dot11 5ghz dot11n
Device(config)# ap dot11 5ghz dot11n mcs tx 20
Device(config)# wlan wlan1 25 ssid12
Device(config-wlan)# wmm require\
Device(config-wlan)# exit
Device(config)# ap dot11 5ghz shutdown
Device(config)# ap dot11 5ghz dot11n rifs rx
Device(config)#end
```

Examples: 802.11h Configuration

This example shows how to configure the access point to announce when it is switching to a new channel using restriction transmission:

```
Device# configure terminal
Device(config)# ap dot11 5ghz shutdown
Device(config)# ap dot11 5ghz channelswitch mode 0
Device(config)# no ap dot11 5ghz shutdown
Device(config)#end
```

This example shows how to configure the 802.11h power constraint for 5-GHz band:

```
Device# configure terminal
Device(config)# ap dot11 5ghz shutdown
Device(config)# ap dot11 5ghz power-constraint 200
Device(config)# no ap dot11 5ghz shutdown
Device(config)#end
```
