

# **Debug Commands**

This appendix describes the **debug** privileged EXEC commands that have been created or changed for use with the Catalyst 3750 switch. These commands are helpful in diagnosing and resolving internetworking problems and should be enabled only under the guidance of Cisco technical support staff.

Caution

Because debugging output is assigned high priority in the CPU process, it can render the system unusable. For this reason, use the **debug** commands only to troubleshoot specific problems or during troubleshooting sessions with Cisco technical support staff. It is best to use the **debug** commands during periods of lower network traffic and fewer users. Debugging during these periods decreases the likelihood that increased **debug** command processing overhead will affect system use.

#### debug autoqos

Use the **debug autoqos** privileged EXEC command to enable debugging of the automatic quality of service (auto-QoS) feature. Use the **no** form of this command to disable debugging output.

debug autoqos

no debug autoqos

- Syntax Description This command has no keywords or arguments.
- **Defaults** Auto-QoS debugging is disabled.
- Command Modes Privileged EXEC

Command History	Release	Modification
12.1(14)EA1 This com		This command was first introduced.

**Usage Guidelines** To display the QoS configuration that is automatically generated when auto-QoS is enabled, enable debugging *before* you enable auto-QoS. You enable debugging by entering the **debug autoqos** privileged EXEC command.

The undebug autoqos command is the same as the no debug autoqos command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member.

**Examples** 

This example shows how to display the QoS configuration that is automatically generated when auto-QoS is enabled:

Switch# debug autoqos
AutoQoS debugging is on
Switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config)# interface gigabitethernet2/0/1
Switch(config-if)# auto qos voip cisco-phone

<b>Related Commands</b>	Command	Description
	auto qos voip	Configures auto-QoS for voice over IP (VoIP) within a QoS domain.
	show auto qos	Displays the initial configuration that is generated by the automatic auto-QoS feature
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals Command</b> <b>Reference For IOS Release 12.1 &gt; Cisco IOS System Management</b> <b>Commands &gt; Troubleshooting Commands</b> .

#### debug cluster

Use the **debug cluster** privileged EXEC command to enable debugging of cluster-specific events. Use the **no** form of this command to disable debugging output.

debug cluster {discovery | events | extended | hsrp | http | ip [packet] | members | nat | neighbors | platform | snmp | vqpxy}

no debug cluster {discovery | events | extended | hsrp | http | ip [packet] | members | nat | neighbors | platform | snmp | vqpxy}

Cumters Decembertie		
Syntax Description	discovery	Display cluster discovery debug messages.
	events	Display cluster event debug messages.
	extended	Display extended discovery debug messages.
	hsrp	Display the Hot Standby Router Protocol (HSRP) debug messages.
	http	Display Hypertext Transfer Protocol (HTTP) debug messages.
	ip [packet]	Display IP or transport packet debug messages.
	members	Display cluster member debug messages.
	nat	Display Network Address Translation (NAT) debug messages.
	neighbors	Display cluster neighbor debug messages.
	platform	Display platform-specific cluster debug messages.
	snmp	Display Simple Network Management Protocol (SNMP) debug messages.
	vqpxy	Display VLAN Query Protocol (VQP) proxy debug messages.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .
	show cluster	Displays the cluster status and a summary of the cluster to which the switch belongs.
	show cluster candidates	Displays a list of candidate switches when entered on the command switch.
	show cluster members	Displays information about cluster members when executed on the command switch.

## debug dot1x

Use the **debug dot1x** privileged EXEC command to enable debugging of the 802.1X feature. Use the **no** form of this command to disable debugging output.

debug dot1x {all | errors | events | packets | registry | state-machine}

no debug dot1x {all | errors | events | packets | registry | state-machine}

Syntax Description	all	Display all 802.1X debug messages.
	errors	Display 802.1X error debug messages.
	events	Display 802.1X event debug messages.
	packets	Display 802.1X packet debug messages.
	registry	Display 802.1X registry invocation debug messages.
	state-machine	Display state-machine related-events debug messages.
Defaults	Debugging is dis	abled.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
	12.1(14)EA1	The <b>authsm</b> , <b>backend</b> , <b>besm</b> , <b>core</b> , and <b>reauthsm</b> keywords were removed. The <b>errors</b> , <b>events</b> , <b>packets registry</b> , and <b>state-machine</b> keywords were added.
Usage Guidelines	The <b>undebug dot1x</b> command is the same as the <b>no debug dot1x</b> command. When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member.	
	member, you mu	st start a session from the stack master by using the session switch-number privileged
Related Commands	member, you mu	st start a session from the stack master by using the session switch-number privileged
Related Commands	member, you mu EXEC command	st start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged. Then enter the <b>debug</b> command at the command-line prompt of the stack member. <b>Description</b>

#### debug dtp

Use the **debug dtp** privileged EXEC command to enable debugging of the Dynamic Trunking Protocol (DTP) activity. Use the **no** form of this command to disable debugging output.

debug dtp {aggregation | all | decision | events | oserrs | packets | queue | states | timers }

no debug dtp {aggregation | all | decision | events | oserrs | packets | queue | states | timers}

Syntax Description	aggregation	Display DTP user-message aggregation debug messages.
	all	Display all DTP debug messages.
	decision	Display the DTP decision-table debug messages.
	events	Display the DTP event debug messages.
	oserrs	Display DTP operating system-related error debug messages.
	packets	Display DTP packet-processing debug messages.
	queue	Display DTP packet-queueing debug messages.
	states	Display DTP state-transition debug messages.
	timers	Display DTP timer-event debug messages.
Defaults	Debugging is disa	bled.
Command Modes	Privileged EXEC

#### debug etherchannel

Use the **debug etherchannel** privileged EXEC command to enable debugging of the EtherChannel/PAgP shim. This shim is the software module that is the interface between the Port Aggregation Protocol (PAgP) software module and the port manager software module. Use the **no** form of this command to disable debugging output.

debug etherchannel [all | detail | error | event | idb]

no debug etherchannel [all | detail | error | event | idb]

Syntax Description	all (Opt	ional) Display all EtherChannel debug messages.
	detail (Opti	ional) Display detailed EtherChannel debug messages.
	error (Opti	ional) Display EtherChannel error debug messages.
	event (Opt	ional) Debug major EtherChannel event messages.
	idb (Opti	ional) Display PAgP interface descriptor block debug messages.
Note	Though visible in the	ne command-line help strings, the <b>linecard</b> keyword is not supported.
Defaults	Debugging is disable	led.
Command Modes	Privileged EXEC	
Command History	Release	Modification
, on mana motory	12.1(11)AX	This command was first introduced.
Usage Guidelines	•	y a keyword, all debug messages are displayed.
	-	channel command is the same as the <b>no debug etherchannel</b> command.
	member, you must s	ebugging, it is enabled only on the stack master. To enable debugging on a stack start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged hen enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .
	show debugging	syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.

## debug interface

Use the **debug interface** privileged EXEC command to enable debugging of interface-related activities. Use the **no** form of this command to disable debugging output.

- **debug interface** {*interface-id* | **null** *interface-number* | **port-channel** *port-channel-number* | **vlan** *vlan-id*}
- **no debug interface** {*interface-id* | **null** *interface-number* | **port-channel** *port-channel-number* | **vlan** *vlan-id*}

Syntax Description	interface-id	Display debug messages for the specified physical interface, identified by type switch number/module number/ port, for example <b>gigabitethernet 6/0/3</b> .
	null interface-number	Display debug messages for null interfaces. The <i>interface-number</i> is always <b>0</b> .
	<b>port-channel</b> port-channel-number	Display debug messages for the specified EtherChannel port-channel interface. The <i>port-channel-number</i> range is 1 to 12.
	vlan vlan-id	Display debug messages for the specified VLAN. The <i>vlan-id</i> range is 1 to 4094.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	If you do not specify a k	keyword, all debug messages are displayed.
	The undebug interface	command is the same as the <b>no debug interface</b> command.
	When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileg EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member	
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .
	show etherchannel	Displays EtherChannel information for the channel.

# debug ip igmp filter

Use the **debug ip igmp filter** privileged EXEC command to enable debugging of Internet Group Management Protocol (IGMP) filter events. Use the **no** form of this command to disable debugging output.

debug ip igmp filter

no debug ip igmp filter

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
12.1(11)AX		This command was first introduced.

#### **Usage Guidelines** The **undebug ip igmp filter** command is the same as the **no debug ip igmp filter** command.

<b>Related Commands</b>	Command	Description	
	show debugging	Displays information about the types of debugging that are enabled. For	
		syntax information, select Cisco IOS Configuration Fundamentals	
		Command Reference for IOS Release 12.1 > Cisco IOS System	
		Management Commands > Troubleshooting Commands.	

#### debug ip igmp max-groups

Use the **debug ip igmp max-groups** privileged EXEC command to enable debugging of Internet Group Management Protocol (IGMP) maximum groups events. Use the **no** form of this command to disable debugging output.

debug ip igmp max-groups

no debug ip igmp max-groups

Syntax Description	This command has no	o arguments or keywords.
--------------------	---------------------	--------------------------

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

**Usage Guidelines** The **undebug ip igmp max-groups** command is the same as the **no debug ip igmp max-groups** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.

#### debug ip igmp snooping

Use the **debug igmp snooping** privileged EXEC command to enable debugging of Internet Group Management Protocol (IGMP) snooping activity. Use the **no** form of this command to disable debugging output.

debug ip igmp snooping [group | management | router | timer]

no debug ip igmp snooping [group | management | router | timer]

Syntax Description	group	(Optional) Display IGMP snooping group activity debug messages.
	management	(Optional) Display IGMP snooping management activity debug messages.
	router	(Optional) Display IGMP snooping router activity debug messages.
	timer	(Optional) Display IGMP snooping timer event debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug ip igmp</b>	<b>snooping</b> command is the same as the <b>no debug ip igmp snooping</b> command.
	member, you must star	gging, it is enabled only on the stack master. To enable debugging on a stack t a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged a enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	debug platform ip igmp snooping	Displays information about platform-dependent IGMP snooping activity.
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

## debug lacp

Use the **debug lacp** privileged EXEC command to enable debugging of Link Aggregation Control Protocol (LACP) activity. Use the **no** form of this command to disable debugging output.

debug lacp [all | event | fsm | misc | packet]

no debug lacp [all | event | fsm | misc | packet]

Syntax Description	all	(Optional) Display all LACP debug messages.
	event	(Optional) Display LACP event debug messages.
	fsm	(Optional) Display LACP finite state-machine debug messages.
	misc	(Optional) Display miscellaneous LACP debug messages.
	packet	(Optional) Display LACP packet debug messages.
Defaults	Debugging is disa	pled.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(14)EA1	This command was first introduced.
Usage Guidelines	The undebug lac	command is the same as the <b>no debug lacp</b> command.
Usage Guidelines	When you enable member, you must	command is the same as the <b>no debug lacp</b> command. debugging, it is enabled only on the stack master. To enable debugging on a stack start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged Then enter the <b>debug</b> command at the command-line prompt of the stack member.
	When you enable member, you must	debugging, it is enabled only on the stack master. To enable debugging on a stack start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged
Usage Guidelines Related Commands	When you enable member, you must EXEC command.	debugging, it is enabled only on the stack master. To enable debugging on a stack start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged Then enter the <b>debug</b> command at the command-line prompt of the stack member.

# debug mac-notification

Use the **debug mac-notification** privileged EXEC command to enable debugging of MAC notification events. Use the **no** form of this command to disable debugging output.

debug mac-notification

no debug mac-notification

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

- **Defaults** Debugging is disabled.
- **Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

#### **Usage Guidelines** The **undebug mac-notification** command is the same as the **no debug mac-notification** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .
	show mac address-table notification	Displays the MAC address notification information for all interfaces or the specified interface.

#### debug matm

Use the **debug matm** privileged EXEC command to enable debugging of platform-independent MAC address management. Use the **no** form of this command to disable debugging output.

debug matm

no debug matm

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

#### **Usage Guidelines** The **undebug matm** command is the same as the **no debug matm** command.

<b>Related Commands</b>	Command	Description
	debug platform matm	Displays information about platform-dependent MAC address management.
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

#### debug monitor

Use the **debug monitor** privileged EXEC command to enable debugging of the Switched Port Analyzer (SPAN) feature. Use the **no** form of this command to disable debugging output.

debug monitor {all | errors | idb-update | info | list | notifications | platform | requests | snmp}

no debug monitor {all | errors | idb-update | info | list | notifications | platform | requests | snmp}

Syntax Description         all         Display all SPAN debug messages.           errors         Display detailed SPAN error debug messages.           idb-update         Display SPAN interface description block (IDB) update-trace debug messages.           list         Display SPAN informational-tracing debug messages.           list         Display SPAN port and VLAN-list tracing debug messages.           platform         Display SPAN notification debug messages.           requests         Display SPAN request debug messages.           snmp         Display SPAN and Simple Network Management Protocol (SNMP) tracing debug messages.           snmp         Display SPAN and Simple Network Management Protocol (SNMP) tracing debug messages.           Command Modes         Privileged EXEC           Command History         Release         Modification           12.1(11)AX         This command was first introduced.           Usage Guidelines         The undebug monitor command is the same as the no debug monitor command.           When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the session switch-number privileget EXEC command. Then enter the debug command at the command-line prompt of the stack member. ## debug mvrdbg

Use the **debug mvrdbg** privileged EXEC command to enable debugging of Multicast VLAN Registration (MVR). Use the **no** form of this command to disable debugging output.

debug mvrdbg {all | events | igmpsn | management | ports}

no debug mvrdbg {all | events | igmpsn | management | ports}

Syntax Description		
Syntax Description	all	Display all MVR activity debug messages.
	events	Display MVR event-handling debug messages.
	igmpsn	Display MVR Internet Group Management Protocol (IGMP) snooping-activity
		debug messages.
	management	Display MVR management-activity debug messages.
	ports	Display MVR port debug messages.
Defaults	Debugging is disab	led.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines		This command was first introduced. <b>dbg</b> command is the same as the <b>no debug mvrdbg</b> command.
Usage Guidelines	The <b>undebug mvro</b> When you enable d member, you must	
	The <b>undebug mvro</b> When you enable d member, you must	<b>lbg</b> command is the same as the <b>no debug mvrdbg</b> command. ebugging, it is enabled only on the stack master. #### debug pagp

Use the **debug pagp** privileged EXEC command to enable debugging of Port Aggregation Protocol (PAgP) activity. Use the **no** form of this command to disable debugging output.

debug pagp [all | event | fsm | misc | packet]

no debug pagp [all | event | fsm | misc | packet]

Syntax Description	all	(Optional) Display all PAgP debug messages.
	event	(Optional) Display PAgP event debug messages.
	fsm	(Optional) Display PAgP finite state-machine debug messages.
	misc	(Optional) Display miscellaneous PAgP debug messages.
	packet	(Optional) Display PAgP packet debug messages.
Defaults	Debugging is disab	oled.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines		command is the same as the <b>no debug pagp</b> command.
Usage Guidelines	The <b>undebug pag</b> When you enable of member, you must	
	The <b>undebug pag</b> When you enable of member, you must	b command is the same as the <b>no debug pagp</b> command. lebugging, it is enabled only on the stack master. To enable debugging on a stack start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged
Usage Guidelines Related Commands	The <b>undebug pagj</b> When you enable of member, you must EXEC command.	<b>b</b> command is the same as the <b>no debug pagp</b> command. lebugging, it is enabled only on the stack master. To enable debugging on a stack start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged Then enter the <b>debug</b> command at the command-line prompt of the stack member.

## debug platform acl

Use the **debug platform acl** privileged EXEC command to enable debugging of the access control list (ACL) manager. Use the **no** form of this command to disable debugging output.

debug platform acl {all | exit | label | main | racl | stack | vacl | vlmap | warn}

no debug platform acl {all | exit | label | main | racl | stack | vacl | vlmap | warn}

Syntax Description	all	Display all ACL manager debug messages.
	exit	Display ACL exit-related debug messages.
	label	Display ACL label-related debug messages.
	main	Display the main or important ACL debug messages.
	racl	Display router ACL related debug messages.
	stack	Display ACL stack-related debug messages.
	vacl	Display VLAN ACL-related debug messages.
	vlmap	Display ACL VLAN-map-related debug messages.
	warn	Display ACL warning-related debug messages.
Defaults	Debugging is	disabled.
Command Modes	Privileged EX	ALC .
Commanu Woucs	Filvineged EA	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
	12.1(11)/11	
	12.1(11)/1/	
Usage Guidelines		g platform acl command is the same as the no debug platform acl command.
Usage Guidelines	The <b>undebug</b> When you en member, you	
Usage Guidelines Related Commands	The <b>undebug</b> When you en member, you	<b>g platform acl</b> command is the same as the <b>no debug platform acl</b> command. able debugging, it is enabled only on the stack master. To enable debugging on a stack must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged

#### debug platform cli-redirection main

Use the **debug platform cli-redirection main** privileged EXEC command to enable debugging of the main (important) command-line interface (CLI) redirection events. Use the **no** form of this command to disable debugging output.

debug platform cli-redirection main

no debug platform cli-redirection main

**Syntax Description** This command has no arguments or keywords.

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

Usage Guidelines The undebug platform cli-redirection main command is the same as the no debug platform cli-redirection main command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

# debug platform configuration

Use the **debug platform configuration** privileged EXEC command to enable debugging of configuration file activity across the stack. Use the **no** form of this command to disable debugging output.

debug platform configuration {all | reception | transmission}

no debug platform configuration {all | reception | transmission}

Syntax Description	all	Display debug messages for all configuration file transmission and reception events
Syntax Description	an	throughout the stack.
	reception	Display debug messages for configuration file reception from other stack members.
	transmission	Display debug messages for configuration file transmission to other stack members.
Defaults	Debugging is di	sabled.
Command Modes	Privileged EXE	C
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug platform configuration</b> command is the same as the <b>no debug platform configuration</b> command. When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member.	
Related Commands	Command	Description
	show debuggin	Displays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.

#### debug platform cpu-queues

Use the **debug platform cpu-queues** privileged EXEC command to enable debugging of platform central processing unit (CPU) receive queues. Use the **no** form of this command to disable debugging output.

debug platform cpu-queues {broadcast-q | cbt-to-spt-q | cpuhub-q | host-q | icmp-q | igmp-snooping-q | layer2-protocol-q | logging-q | remote-console-q | routing-protocol-q | rpffail-q | software-fwd-q | stp-q}

no debug platform cpu-queues {broadcast-q | cbt-to-spt-q | cpuhub-q | host-q | icmp-q | igmp-snooping-q | layer2-protocol-q | logging-q | remote-console-q | routing-protocol-q | rpffail-q | software-fwd-q | stp-q}

Syntax Description	broadcast-q	Display debug messages about packets received by the broadcast queue.
	cbt-to-spt-q	Display debug messages about packets received by the core-based tree to shortest-path tree (cbt-to-spt) queue.
	cpuhub-q	Display debug messages about packets received by the CPU heartbeat queue.
	host-q	Display debug messages about packets received by the host queue.
	icmp-q	Display debug messages about packets received by the Internet Control Message Protocol (ICMP) queue.
	igmp-snooping-q	Display debug messages about packets received by the Internet Group Management Protocol (IGMP)-snooping queue.
	layer2-protocol-q	Display debug messages about packets received by the Layer 2 protocol queue.
	logging-q	Display debug messages about packets received by the logging queue.
	remote-console-q	Display debug messages about packets received by the remote console queue.
	routing-protocol-q	Display debug messages about packets received by the routing protocol queue.
	rpffail-q	Display debug messages about packets received by the reverse path forwarding (RFP) failure queue.
	software-fwd-q	Debug packets received by the software forwarding queue.
	stp-q	Debug packets received by the Spanning Tree Protocol (STP) queue.
Defaults	Debugging is disable	d.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

# Usage Guidelines The undebug platform cpu-queues command is the same as the no debug platform cpu-queues command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

## debug platform device-manager

Use the **debug platform device-manager** privileged EXEC command to enable debugging of the platform-dependent device manager. Use the **no** form of this command to disable debugging output.

debug platform device-manager {all | device-info | poll | port-download | trace}

no debug platform device-manager {all | device-info | poll | port-download | trace}

Syntax Description	all	Display all platform device manager debug messages.
	device-info	Display platform device manager device structure debug messages.
	poll	Display platform device manager 1-second poll debug messages.
	port-download	Display platform device manager remote procedure call (RPC) usage debug messages.
	trace	Trace platform device manager function entry and exit debug messages.
Defaults	Debugging is disa	bled.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	<b>device-manager</b> of When you enable	tform device-manager command is the same as the <b>no debug platform</b> command. debugging, it is enabled only on the stack master. To enable debugging on a stack t start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged
	· •	Then enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.

## debug platform dot1x

Use the **debug platform dot1x** privileged EXEC command to enable debugging of stack-related 802.1X events. Use the **no** form of this command to disable debugging output.

debug platform dot1x {initialization | interface-configuration | rpc}

no debug platform dot1x {initialization | interface-configuration | rpc}

Syntax Description	initialization	Display 802.1X initialization sequence debug messages.
	interface-configuration	Display 802.1X interface configuration-related debug messages.
	rpc	Display 802.1X remote procedure call (RPC) request debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug platform</b> d	lot1x command is the same as the no debug platform dot1x command.
	member, you must start a	ing, it is enabled only on the stack master. To enable debugging on a stack session from the stack master by using the <b>session</b> <i>switch-number</i> privileged nter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

## debug platform etherchannel

Use the **debug platform etherchannel** privileged EXEC command to enable debugging of platform-dependent EtherChannel events. Use the **no** form of this command to disable debugging output.

debug platform etherchannel {init | link-up | rpc-detailed | rpc-generic | warnings}

no debug platform etherchannel {init | link-up | rpc-detailed | rpc-generic | warnings}

Cumters Description	• •4	
Syntax Description	init	Display EtherChannel module initialization debug messages.
	link-up	Display EtherChannel link-up and link-down related debug messages.
	rpc-detailed	Display detailed EtherChannel remote procedure call (RPC) debug messages.
	rpc-generic	Display EtherChannel RPC generic debug messages.
	warnings	Display EtherChannel warning debug messages.
Defaults	Debugging is di	sabled.
Command Modes	Privileged EXE	с
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug p</b> command.	latform etherchannel command is the same as the no debug platform etherchannel
	member, you m	le debugging, it is enabled only on the stack master. To enable debugging on a stack ust start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged d. Then enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debuggin	ngDisplays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.

## debug platform fallback-bridging

Use the **debug platform fallback-bridging** privileged EXEC command to enable debugging of the platform-dependent fallback bridging manager. Use the **no** form of this command to disable debugging output.

debug platform fallback-bridging [error | retry | rpc {events | messages}]

no debug platform fallback-bridging [error | retry | rpc {events | messages}]

Syntax Description	error	(Optional) Display fallback bridging manager error condition messages.	
	retry	(Optional) Display fallback bridging manager retry messages.	
	rpc {events   messages}	(Optional) Display fallback bridging debugging information. The keywords have these meanings:	
		• events—Display remote procedure call (RPC) events.	
		• messages—Display RPC messages.	
Defaults	Debugging is disabled.		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	12.1(11)AX	This command was first introduced.	
Usage Guidelines	If you do not specify a ke	eyword, all fallback bridging manager debug messages are displayed.	
	The <b>undebug platform fallback-bridging</b> command is the same as the <b>no debug platform</b> <b>fallback-bridging</b> command.		
	member, you must start a	ing, it is enabled only on the stack master. To enable debugging on a stack session from the stack master by using the <b>session</b> <i>switch-number</i> privileged nter the <b>debug</b> command at the command-line prompt of the stack member.	
Related Commands	Command	Description	
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .	

#### debug platform forw-tcam

Use the **debug platform forw-tcam** privileged EXEC command to enable debugging of the forwarding ternary content addressable memory (TCAM) manager. Use the **no** form of this command to disable debugging output.

debug platform forw-tcam [adjustment | allocate | audit | error | move | read | write]

no debug platform forw-tcam [adjustment | allocate | audit | error | move | read | write]

Syntax Description	adjustment	(Optional) Display TCAM manager adjustment debug messages.	
	allocate	(Optional) Display TCAM manager allocation debug messages.	
	audit	(Optional) Display TCAM manager audit messages.	
	error	(Optional) Display TCAM manager error messages.	
	move	(Optional) Display TCAM manager move messages.	
	read	(Optional) Display TCAM manager read messages.	
	write	(Optional) Display TCAM manager write messages.	
Defaults	Debugging is disa	bled.	
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	12.1(11)AX	This command was first introduced.	
Usage Guidelines	If you do not spec	ify a keyword, all forwarding TCAM manager debug messages are displayed.	
	The <b>undebug platform forw-tcam</b> command is the same as the <b>no debug platform forw-tcam</b> command.		
	member, you must	debugging, it is enabled only on the stack master. To enable debugging on a stack t start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged Then enter the <b>debug</b> command at the command-line prompt of the stack member.

	show ucougging	syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b>	

## debug platform ip igmp snooping

Use the **debug platform ip igmp snooping** privileged EXEC command to enable debugging of platform-dependent Internet Group Management Protocol (IGMP) snooping. Use the **no** form of this command to disable debugging output.

- debug platform ip igmp snooping {all | di | error | event | group | mgmt | pak | retry | rpc | warn}
- debug platform ip igmp snooping pak {*ip-address* | error | ipopt | leave| query | report | rx | svi | tx}

debug platform ip igmp snooping rpc [cfg | l3mm | misc | vlan]

no debug platform ip igmp snooping {all | di | error | event | group | mgmt | pak | retry | rpc | warn}

Syntax Description	all	Display all IGMP snooping debug messages.
	di	Display IGMP snooping destination index (di) coordination remote procedure call (RPC) debug messages.
	error	Display IGMP snooping error messages.
	event	Display IGMP snooping event debug messages.
	group	Display IGMP snooping group debug messages.
	mgmt	Display IGMP snooping management debug messages.
	pak { <i>ip-address</i>   error   ipopt   leave	Display IGMP snooping packet event debug messages. The keywords have these meanings:
	query   report   rx   svi   tx }	• <i>ip-address</i> —IP address of the IGMP group.
	2·,	• error—Display IGMP snooping packet error debug messages.
		• <b>ipopt</b> —Display IGMP snooping IP bridging options debug messages.
		• leave—Display IGMP snooping leave debug messages.
		• query—Display IGMP snooping query debug messages.
		• <b>report</b> —Display IGMP snooping report debug messages.
		• <b>rx</b> —Display IGMP snooping received packet debug messages.
		• <b>svi</b> —Display IGMP snooping switched virtual interface (SVI) packet debug messages.
		• <b>tx</b> —Display IGMP snooping sent packet debug messages.
	retry	Display IGMP snooping retry debug messages.

	rpc [cfg   l3mm   misc   vlan]	Display IGMP snooping remote procedure call (RPC) event debug messages. The keywords have these meanings:	
		• <b>cfg</b> —(Optional) Display IGMP snooping RPC debug messages.	
		• <b>I3mm</b> —(Optional) IGMP snooping Layer 3 multicast router group RPC debug messages.	
		• <b>misc</b> —(Optional) IGMP snooping miscellaneous RPC debug messages.	
		• vlan—(Optional) IGMP snooping VLAN assert RPC debug messages.	
	warn	Display IGMP snooping warning messages.	
Defaults	Debugging is disabled.		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	12.1(11)AX	This command was first introduced.	
Usage Guidelines	The <b>undebug platform ip igmp snooping</b> command is the same as the <b>no debug platform ip igmp</b> <b>snooping</b> command.		
	member, you must start	gging, it is enabled only on the stack master. To enable debugging on a stack a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged enter the <b>debug</b> command at the command-line prompt of the stack member.	
Related Commands	Command	Description	
	debug ip igmp snooping	Displays information about platform-independent IGMP snooping activity.	
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .	

#### debug platform ip multicast

Use the **debug platform ip multicast** privileged EXEC command to enable debugging of IP multicast routing. Use the **no** form of this command to disable debugging output.

debug platform ip multicast {all | mdb | mdfs-rp-retry | midb | mroute-rp | resources | retry | rpf-throttle | snoop-events | software-forward | swidb-events | vlan-locks}

no debug platform ip multicast {all | mdb | mdfs-rp-retry | midb | mroute-rp | resources | retry | rpf-throttle | snoop-events | software-forward | swidb-events | vlan-locks}

Syntax Description	all	Display all platform IP-multicast event debug messages.
		<b>Note</b> Using this command can degrade the performance of the switch.
	mdb	Display IP-multicast debug messages for multicast distributed fast switching (MDFS) multicast descriptor block (mdb) events.
	mdfs-rp-retry	Display IP-multicast MDFS rendezvous point (RP) retry event debug messages.
	midb	Display IP-multicast MDFS multicast interface descriptor block (MIDB) debug messages.
	mroute-rp	Display IP-multicast RP event debug messages.
	resources	Display IP-multicast hardware resource debug messages.
	retry	Display IP-multicast retry processing event debug messages.
	rpf-throttle	Display IP-multicast reverse path forwarding (RPF) throttle event debug messages.
	snoop-events	Display IP-multicast IGMP snooping event debug messages.
	software-forward	Display IP-multicast software forwarding event debug messages.
	swidb-events	Display IP-multicast MDFS software interface descriptor block (swidb) or global event debug messages.
	vlan-locks	Display IP-multicast VLAN lock and unlock event debug messages.
Defaults	Debugging is disable	d.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

# **Usage Guidelines** The **undebug platform ip multicast** command is the same as the **no debug platform ip multicast** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

#### debug platform ip unicast

Use the **debug platform ip unicast** privileged EXEC command to enable debugging of platform-dependent IP unicast routing. Use the **no** form of this command to disable debugging output.

debug platform ip unicast {adjacency | all | arp | dhcp | errors | events | interface | mpath | registries | retry | route | rpc | standby | statistics}

no debug platform ip unicast {adjacency | all | arp | dhcp | errors | events | interface | mpath | registries | retry | route | rpc | standby | statistics}

Syntax Description	adjacency	Display IP unicast routing adjacency programming event debug messages.	
Syntax Description			
	all	Display all platform IP unicast routing debug messages.	
		Note Using this command can degrade the performance of the switch.	
	arp	Display IP unicast routing Address Resolution Protocol (ARP) and ARP throttling debug messages.	
	dhcp	Display IP unicast routing Dynamic Host Configuration Protocol (DHCP) dynamic address-related event debug messages.	
	errors	Display all IP unicast routing error debug messages, including resource allocation failures.	
	events	Display all IP unicast routing event debug messages, including registry and miscellaneous events.	
	interface	Display IP unicast routing interface event debug messages.	
	mpath	Display IP unicast routing multi-path adjacency programming event debug messages (present when performing equal or unequal cost routing).	
	registries	Display IP unicast routing forwarding information database (FIB), adjacency add, update, and delete registry event debug messages.	
	retry	Display IP unicast routing reprogram FIBs with ternary content addressable memory (TCAM) allocation failure debug messages.	
	route	Display IP unicast routing FIB TCAM programming event debug messages.	
	rpc	Display IP unicast routing Layer 3 unicast remote procedure call (RPC) interaction debug messages.	
	standby	Display IP unicast routing standby event debug messages, helpful in troubleshooting Hot Standby Routing Protocol (HSRP) issues.	
	statistics	Display IP unicast routing statistics gathering-related event debug messages.	
Defaults	Debugging is disabled.		
Command Modes	Privileged E	XEC	
Command History	Release	Modification	
-	12.1(11)AX	This command was first introduced.	

#### Usage Guidelines

The undebug platform ip unicast command is the same as the no debug platform ip unicast command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b>
		Command Reference for IOS Release 12.1 > Cisco IOS System
		Management Commands > Troubleshooting Commands.

## debug platform ipc

Use the **debug platform ipc** privileged EXEC command to enable debugging of the platform-dependent Interprocess Communication (IPC) Protocol. Use the **no** form of this command to disable debugging output.

debug platform ipc {all | init | receive | send | trace}

no debug platform {all | init | receive | send | trace}

Syntax Description	all	Display all platform IPC debug messages.	
		<b>Note</b> Using this command can degrade the performance of the switch.	
	init	Display debug messages related to IPC initialization.	
	receive	Display IPC traces each time an IPC packet is received by the switch.	
	send	Display IPC traces each time an IPC packet is sent by the switch.	
	trace	Display IPC trace debug messages, tracing the code path as the IPC functions are executed.	
Defaults	Debugging i	s disabled.	
Command Modes	Privileged E	XEC	
Command History	Release	Modification	
	12.1(11)AX	This command was first introduced.	
Usage Guidelines	The undebu	g platform ipc command is the same as the no debug platform ipc.	
	When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member.		
Related Commands	Command	Description	
	show debug	ggingDisplays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.	

# debug platform led

Use the **debug platform led** privileged EXEC command to enable debugging of light-emitting diode (LED) actions. Use the **no** form of this command to disable debugging output.

debug platform led {generic | signal | stack}

no debug platform led {generic | signal | stack}

Syntax Description	generic	Display LED generic action debug messages.
	signal	Display LED signal bit map debug messages.
	stack	Display LED stack action debug messages.
Defaults	Debugging is	disabled.
Command Modes	Privileged EX	EC
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug</b>	platform led command is the same as the no debug platform led command.
	member, you	able debugging, it is enabled only on the stack master. To enable debugging on a stack must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged and. Then enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugg	ingDisplays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.

# debug platform matm

Use the **debug platform matm** privileged EXEC command to enable debugging of platform-dependent MAC address management. Use the **no** form of this command to disable debugging output.

debug platform matm {aging | all | ec-aging | errors | learning | rpc | secure-address | warnings}

no debug platform matm {aging | all | ec-aging | errors | learning | rpc | secure-address | warnings}

Syntax Description	aging	Display MAC address aging debug messages.	
	all	Display all platform MAC address management event debug messages.	
	ec-aging	Display EtherChannel address aging-related debug messages.	
	errors	Display MAC address management error messages.	
	learning	Display MAC address management address-learning debug messages.	
	rpc	Display MAC address management remote procedure call (RPC) related debug	
		messages.	
	secure-address	Display MAC address management secure address learning debug messages.	
	warning	Display MAC address management warning messages.	
Defaults	Debugging is disal	bled.	
	66 6		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
oominiana mistory	12.1(11)AX	This command was first introduced.	
Usage Guidelines	The undebug platform matm command is the same as the no debug platform matm command.		
	When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member.

## debug platform messaging application

Use the **debug platform messaging application** privileged EXEC command to enable debugging of application messaging activity. Use the **no** form of this command to disable debugging output.

no debug platform messaging application {all | badpak | cleanup | events | memerr | messages | stackchg | usererr}

Syntax Description	all	Display all application-messaging debug messages.	
Syntax Description	badpak	Display bad-packet debug messages.	
	cleanup	Display clean-up debug messages.	
	events	Display event debug messages.	
	memerr	Display memory-error debug messages.	
	messages	Display application-messaging debug messages.	
	stackchg	Display stack-change debug messages.	
	usererr	Display user-error debug messages.	
Defaults	Debugging is disabled	1.	
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	12.1(11)AX	This command was first introduced.	
Usage Guidelines	The <b>undebug platform messaging application</b> command is the same as the <b>no debug platform</b> <b>messaging application</b> command.		
	When you enable debugging, it is enabled only on the stack master. To enable of member, you must start a session from the stack master by using the <b>session</b> <i>sw</i> EXEC command. Then enter the <b>debug</b> command at the command-line prompt		
Related Commands	Command	Description	
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .	

debug platform messaging application {all | badpak | cleanup | events | memerr | messages | stackchg | usererr}

## debug platform phy

Use the **debug platform phy** privileged EXEC command to enable debugging of PHY driver information. Use the **no** form of this command to disable debugging output.

debug platform phy {automdix | flowcontrol | forced | init-seq | link-status | read | sfp | show-controller | speed | write}

no debug platform phy {automdix | flowcontrol | forced | init-seq | link-status | read | sfp | show-controller | speed | write}

Syntax Description	automdix	Display PHY automatic media-dependent-interface crossover (Auto MDIX)
		debug messages.
	flowcontrol	Display PHY flowcontrol debug messages.
	forced	Display PHY forced-mode debug messages.
	init-seq	Display PHY initialization-sequence debug messages.
	link-status	Display PHY link-status debug messages.
	read	Display PHY-read debug messages.
	sfp	Display PHY small form-factor pluggable (SFP) modules debug messages.
	show-controller	Display PHY show-controller debug messages.
	speed	Display PHY speed-change debug messages.
	write	Display PHY-write debug messages.
Defaults	Debugging is disabled	l.
	Debugging is disabled Privileged EXEC	l.
Command Modes	Privileged EXEC	
ommand Modes	Privileged EXEC	Modification
command Modes	Privileged EXEC          Release         12.1(11)AX	Modification This command was first introduced.
Command Modes	Privileged EXEC	Modification
Command Modes	Privileged EXEC Release 12.1(11)AX 12.1(14)EA1	<b>Modification</b> This command was first introduced.

member, you must start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

## debug platform pm

Use the **debug platform pm** privileged EXEC command to enable debugging of the platform-dependent port manager software module. Use the **no** form of this command to disable debugging output.

- debug platform pm {all | counters | errdisable | etherchnl | exceptions | hpm-events | idb-events | if-numbers | ios-events | link-status | platform | pm-events | pm-vectors [detail] | rpc [general | oper-info | state | vectors | vp-events] | soutput | stack-manager | sync | vlans}
- no debug platform pm {all | counters | errdisable | etherchnl | exceptions | hpm-events | idb-events | if-numbers | ios-events | link-status | platform | pm-events | pm-vectors [detail] | rpc [general | oper-info | state | vectors | vp-events] | soutput | stack-manager | sync | vlans }

ntax Description	all	Display all port-manager debug messages.
	counters	Display counters for remote procedure call (RPC) debug messages.
	errdisable	Display error-disabled related-events debug messages.
	etherchnl	Display EtherChannel related-events debug messages.
	exceptions	Display system exception debug messages.
	hpm-events	Display platform port-manager event debug messages.
	idb-events	Display interface descriptor block (IDB) related-events debug messages.
	if-numbers	Display interface-number translation-event debug messages.
	ios-events	Display IOS event debug messages.
	link-status	Display interface link-detection event debug messages.
	platform	Display port-manager function-event debug messages.
	pm-events	Display port manager event debug messages.
	pm-vectors [detail]	Display port-manager vector-related-event debug messages. The keyword has this meaning:
		• <b>detail</b> —Display vector-function details.
	rpc [general   oper-info   state	Display RPC related-event debug messages. The keywords have these meanings:
	vectors   vp-events]	• general—(Optional) Display RPC general events.
		• <b>oper-info</b> —(Optional) Display operational- and informational-related RPC messages.
		• <b>state</b> —(Optional) Display administrative- and operational-related RPC messages.
		• vectors—(Optional) Display vector-related RPC messages.
		• <b>vp-events</b> —(Optional) Display virtual ports related-events RP messages
	soutput	Display IDB output vector event debug messages.
	stack-manager	Display stack-manager related-events debug messages.
	sync	Display operational synchronization and VLAN line-state event debug
		messages.

Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	When you enable deb member, you must sta	<b>cm pm</b> command is the same as the <b>no debug platform pm</b> command. bugging, it is enabled only on the stack master. To enable debugging on a stack art a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged en enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

## debug platform port-asic

Use the **debug platform port-asic** privileged EXEC command to enable debugging of the port application-specific integrated circuit (ASIC) driver. Use the **no** form of this command to disable debugging output.

debug platform port-asic {interrupt | periodic | read | stack | write}

no debug platform port-asic {interrupt | periodic | read | stack | write}

Syntax Description	interrupt	Display port-ASIC interrupt-related function debug messages.
	periodic	Display port-ASIC periodic-function-call debug messages.
	read	Display port-ASIC read debug messages.
	stack	Display stacking-related function debug messages.
	write	Display port-ASIC write debug messages.
Defaults	Debugging is disabled	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug platform port-asic</b> command is the same as the <b>no debug platform port-asic</b> . When you enable debugging, it is enabled only on the stack master. To enable debugging on member, you must start a session from the stack master by using the <b>session</b> <i>switch-number</i> EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack	
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For

Management Commands > Troubleshooting Commands.

## debug platform port-security

Use the **debug platform port-security** privileged EXEC command to enable debugging of platform-dependent port-security information. Use the **no** form of this command to disable debugging output.

debug platform port-security {add | aging | all | delete | errors | rpc | warnings}

no debug platform port-security {add | aging | all | delete | errors | rpc | warnings}

Syntax Description	add	Display secure address addition debug messages.	
	aging	Display secure address aging debug messages.	
	all	Display all port-security debug messages.	
	delete	Display secure address deletion debug messages.	
	errors	Display port-security error debug messages.	
	rpc	Display remote procedure call (RPC) debug messages.	
	warnings	Display warning debug messages.	
Defaults	Debugging is disabled.		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	12.1(11)AX	This command was first introduced.	
Usage Guidelines	The <b>undebug platform port-security</b> command is the same as the <b>no debug platform port-security</b> command.		
	When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member.		
Related Commands	Command	Description	
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b>	

## debug platform qos-acl-tcam

Use the **debug platform qos-acl-tcam** privileged EXEC command to enable debugging of the quality of service (QoS) and access control list (ACL) ternary content addressable memory (TCAM) manager software. Use the **no** form of this command to disable debugging output.

debug platform qos-acl-tcam {all | ctcam | errors | labels | mask | rpc | tcam}

no debug platform qos-acl-tcam {all | ctcam | errors | labels | mask | rpc | tcam}

Syntax Description	all	Display all QoS and ACL TCAM (QATM) manager debug messages.	
	ctcam	Display Cisco TCAM (CTCAM) related-events debug messages.	
	errors	Display QATM error-related-events debug messages.	
	labels	Display QATM label-related-events debug messages.	
	mask	Display QATM mask-related-events debug messages.	
	rpc	Display QATM remote procedure call (RPC) related-events debug messages.	
	tcam	Display QATM TCAM-related events debug messages.	
Defaults	Debugging is disable	ed.	
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	12.1(11)AX	This command was first introduced.	
Usage Guidelines	The <b>undebug platform qos-acl-tcam</b> command is the same as the <b>no debug platform qos-acl-tcam</b> command.		
	When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member.		
Related Commands	Command	Description	
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .	

### debug platform remote-commands

Use the **debug platform remote-commands** privileged EXEC command to enable debugging of remote commands. Use the **no** form of this command to disable debugging output.

debug platform remote-commands

no debug platform remote-commands

- **Defaults** Debugging is disabled.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

## Usage Guidelines The undebug platform remote-commands command is the same as the no debug platform remote-commands command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

# debug platform resource-manager

Use the **debug platform resource-manager** privileged EXEC command to enable debugging of the resource manager software. Use the **no** form of this command to disable debugging output.

debug platform resource-manager {all | dm | erd | errors | madmed | sd | stats | vld}

no debug platform resource-manager {all | dm | erd | errors | madmed | sd | stats | vld }

Syntax Description	all	Display all resource manager debug messages.
	dm	Display destination-map debug messages.
	erd	Display equal-cost-route descriptor-table debug messages.
	errors Display error debug messages.	
	madmed	Display the MAC address descriptor table and multi-expansion descriptor table debug messages.
	sd	Display the station descriptor table debug messages.
	stats	Display statistics debug messages.
	vld	Display the VLAN-list descriptor debug messages.
Defaults	Debugging is dis	sabled.
Command Modes	Privileged EXEC	C
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The undebug pl resource-manag	atform resource-manager command is the same as the <b>no debug platform</b> ger command.
	member, you mu	e debugging, it is enabled only on the stack master. To enable debugging on a stack ist start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged I. Then enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debuggin	<ul> <li>g Displays information about the types of debugging that are enabled. For syntax information, refer to the Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 &gt; Cisco IOS System Management Commands &gt; Troubleshooting Commands.</li> </ul>

### debug platform snmp

Use the **debug platform snmp** privileged EXEC command to enable debugging of the platform-dependent Simple Network Management Protocol (SNMP) software. Use the **no** form of this command to disable debugging output.

#### debug platform snmp

Syntax Description	This command has no arguments or keywords	
--------------------	---	--

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

#### **Usage Guidelines** The **undebug platform snmp** command is the same as the **no debug platform snmp** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.

### debug platform span

Use the **debug platform span** privileged EXEC command to enable debugging of the platform-dependent Switched Port Analyzer (SPAN) software. Use the **no** form of this command to disable debugging output.

#### debug platform span

no debug platform span

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

#### **Usage Guidelines** The **undebug platform span** command is the same as the **no debug platform span** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b>

		Management Commands > Troubleshooting Commands.

# debug platform stack-manager

Use the **debug platform stack-manager** privileged EXEC command to enable debugging of the stack manager software. Use the **no** form of this command to disable debugging output.

debug platform stack-manager {all | rpc | sdp | sim | ssm | trace}

no debug platform stack-manager  $\{all \mid rpc \mid sdp \mid sim \mid ssm \mid trace\}$ 

Syntax Description	all	Display all stack manager debug messages.	
-,	rpc	Display stack manager remote procedure call (RPC) usage debug messages.	
	sdp	Display the Stack Discovery Protocol (SDP) debug messages.	
	sim	Display the stack information module debug messages.	
	ssm	Display the stack state-machine debug messages.	
	trace	Trace the stack manager entry and exit debug messages.	
Defaults	Debugging is dis	abled.	
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	12.1(11)AX	This command was first introduced.	
Usage Guidelines	stack-manager of When you enable member, you mus	<b>atform stack-manager</b> command is the same as the <b>no debug platform</b> command. e debugging, it is enabled only on the stack master. To enable debugging on a stack st start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged . Then enter the <b>debug</b> command at the command-line prompt of the stack member.	
Related Commands	Command	Description	
	show debugging	-	

## debug platform supervisor-asic

Use the **debug platform supervisor-asic** privileged EXEC command to enable debugging of the supervisor application-specific integrated circuit (ASIC). Use the **no** form of this command to disable debugging output.

debug platform supervisor-asic {all | errors | receive | send}

no debug platform supervisor-asic {all | errors | receive | send}

Syntax Description	all	Display all supervisor-ASIC event debug messages.
	errors	Display the supervisor-ASIC error debug messages.
	receive	Display the supervisor-ASIC receive debug messages.
	send	Display the supervisor-ASIC send debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug platforn</b> supervisor-asic comm	n supervisor-asic command is the same as the no debug platform hand.
	member, you must star	agging, it is enabled only on the stack master. To enable debugging on a stack of a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged of enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

## debug platform sw-bridge

Use the **debug platform sw-bridge** privileged EXEC command to enable debugging of the software bridging function. Use the **no** form of this command to disable debugging output.

debug platform sw-bridge {broadcast | control | multicast | packet | unicast}

no debug platform sw-bridge {broadcast | control | multicast | packet | unicast}

Syntax Description	broadcast	Display broadcast-data debug messages.
	control	Display protocol-packet debug messages.
	multicast	Display multicast-data debug messages.
	packet	Display sent and received data debug messages.
	unicast	Display unicast-data debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug platform</b> command.	sw-bridge command is the same as the no debug platform sw-bridge
	member, you must start	ging, it is enabled only on the stack master. To enable debugging on a stack a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

#### debug platform tcam

Use the **debug platform tcam** privileged EXEC command to enable debugging of ternary content addressable memory (TCAM) access and lookups. Use the **no** form of this command to disable debugging output.

- debug platform tcam {log | read | search | write}
- debug platform tcam log l2 {acl {input | output} | local | qos}
- debug platform tcam log l3 {acl {input | output} | ipv6 {acl {input | output} | local | qos | secondary} | local | qos | secondary}
- debug platform tcam read {reg | ssram | tcam}
- debug platform tcam search
- debug platform tcam write {forw-ram | reg | tcam}
- no debug platform tcam {log | read | search | write}
- no debug platform tcam log l2 {acl {input | output} | local | qos}
- no debug platform tcam log l3 {acl {input | output} | ipv6 {acl {input | output} | local | qos | secondary} | local | qos | secondary}
- no debug platform tcam read {reg | ssram | tcam}
- no debug platform tcam search
- no debug platform tcam write {forw-ram | reg | tcam}

Syntax Description	log l2 {acl {input   output}   local   qos}	Display Layer-2 field-based CAM look-up type debug messages. The keywords have these meanings:
		<ul> <li>acl {input   output}—Display input or output ACL look-up debug messages.</li> </ul>
		• local—Display local forwarding look-up debug messages.
		• <b>qos</b> —Display classification and quality of service (QoS) look-up debug messages.
	l3 {acl {input   output}   ipv6 {acl {input   output}	Display Layer-3 field-based CAM look-up type debug messages. The keywords have these meanings:
	local   qos   secondary}   local   qos   secondary}	• acl {input   output}—Display input or output ACL look-up debug messages.
		• <b>ipv6</b> { <b>acl</b> { <b>input</b>   <b>output</b> }   <b>local</b>   <b>qos</b>   <b>secondary</b> }—Display IPv6-based look-up debug messages. Options include displaying input or output ACL look-up, local forwarding look-up, classification and QoS look-up, or secondary forwarding look-up debug messages.
		• local—Display local forwarding look-up debug messages.
		• <b>qos</b> —Display classification and quality of service (QoS) look-up debug messages.
		<ul> <li>secondary—Display secondary forwarding look-up debug messages.</li> </ul>
	read {reg   ssram   tcam}	Display TCAM-read debug messages. The keywords have these meanings:
		• <b>reg</b> —Display TCAM-register read debug messages.
		• <b>ssram</b> —Display synchronous static RAM (SSRAM)-read debug messages.
		• tcam—Display TCAM-read debug messages.
	search	Display supervisor-initiated TCAM-search results debug messages.
	write {forw-ram   reg   tcam}	Display TCAM-write debug messages. The keywords have these meanings:
		forw-ram—Display forwarding-RAM write debug messages.
		<b>reg</b> —Display TCAM-register write debug messages. <b>tcam</b> —Display TCAM-write debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release Mo	dification
-	12.1(11)AX Thi	s command was first introduced.

#### **Usage Guidelines** The **undebug platform tcam** command is the same as the **no debug platform tcam** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b>
		Command Reference for IOS Release 12.1 > Cisco IOS System
		Management Commands > Troubleshooting Commands.

## debug platform udld

Use the **debug platform udld** privileged EXEC command to enable debugging of the platform-dependent UniDirectional Link Detection (UDLD) software. Use the **no** form of this command to disable debugging output.

debug platform udld [all | error | rpc {events | messages}]

no debug platform udld [all | error | rpc {events | messages}]

Syntax Description	all	(Optional) Display all UDLD debug messages.		
	error	(Optional) Display error condition debug messages.		
	<pre>rpc {events   messages}</pre>	(Optional) Display UDLD remote procedure call (RPC) debug messages. The keywords have these meanings:		
		• events—Display UDLD RPC events.		
		• messages—Display UDLD RPC messages.		
Defaults	Debugging is disabled.			
Command Modes	Privileged EXEC			
Command History	Release	Modification		
	12.1(11)AX	This command was first introduced.		
Usage Guidelines	The <b>undebug platform udld</b> command is the same as the <b>no debug platform udld</b> command.			
	When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member.			
Related Commands	Command	Description		
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .		

## debug platform vlan

Use the **debug platform vlan** privileged EXEC command to enable debugging of the VLAN manager software. Use the **no** form of this command to disable debugging output.

debug platform vlan {errors | mvid | rpc}

no debug platform vlan {errors | mvid | rpc}

Syntax Description	errors	Display VLAN error debug messages.
	mvid	Display mapped VLAN ID allocations and free debug messages.
	rpc	Display remote procedure call (RPC) debug messages.
Defaults	Debugging is disabled	l.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The undebug platfor	<b>m vlan</b> command is the same as the <b>no debug platform vlan</b> command.
-	member, you must sta	ugging, it is enabled only on the stack master. To enable debugging on a stack rt a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged on enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

#### debug pm

Use the **debug pm** privileged EXEC command to enable debugging of port manager (PM) activity. The port manager is a state machine that controls all the logical and physical interfaces. All features, such as VLANs, UniDirectional Link Detection (UDLD), and so forth, work with the port manager to provide switch functions. Use the **no** form of this command to disable debugging output.

- debug pm {all | assert | card | cookies | etherchnl | messages | port | registry | sm | span | split | vlan | vp}
- no debug pm {all | assert | card | cookies | etherchnl | messages | port | registry | sm | span | split | vlan | vp}

Syntax Description	all	Display all PM debug messages.
	assert	Display assert debug messages.
	card	Display line-card related-events debug messages.
	cookies	Display internal PM cookie validation debug messages.
	etherchnl	Display EtherChannel related-events debug messages.
	hatable	Display Host Access Table events debug messages.
	messages	Display PM debug messages.
	port	Display port related-events debug messages.
	registry	Display PM registry invocation debug messages.
	sm	Display state-machine related-events debug messages.
	span	Display spanning-tree related-events debug messages.
	split	Display split-processor debug messages.
	vlan	Display VLAN related-events debug messages.
	vp	Display virtual port related-events debug messages.

Though visible in the command-line help strings, the scp and pvlan keywords are not supported.

Defaults

Debugging is disabled.

**Command Modes** Privileged EXEC

#### **Command History**

······································	Release	Modification	
	12.1(11)AX	This command was first introduced.	
	12.1(14)EA1	The <b>hatable</b> keyword was added.	

#### **Usage Guidelines** The **undebug pm** command is the same as the **no debug pm** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b>
		Command Reference for IOS Release 12.1 > Cisco IOS System
		Management Commands > Troubleshooting Commands.

## debug port-security

Use the **debug port-security** privileged EXEC command to enable debugging of the allocation and states of the port security subsystem. Use the **no** form of this command to disable debugging output.

debug port-security

no debug port-security

**Defaults** Debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

#### **Usage Guidelines** The **undebug port-security** command is the same as the **no debug port-security** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .
	show port-security	Displays port-security settings for an interface or for the switch.

#### debug qos-manager

Use the **debug qos-manager** privileged EXEC command to enable debugging of the quality of service (QoS) manager software. Use the **no** form of this command to disable debugging output.

debug qos-manager {all | event | verbose}

no debug qos-manager {all | event | verbose}

Syntax Description	all	Display all QoS-manager debug messages.
	event	Display QoS-manager related-event debug messages.
	verbose	Display QoS-manager detailed debug messages.
Defaults	Debugging is disable	ed.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The undebug qos-m	nanager command is the same as the no debug qos-manager command.
	member, you must s	bugging, it is enabled only on the stack master. To enable debugging on a stack tart a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged then enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, refer to the <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .

## debug spanning-tree

Use the **debug spanning-tree** privileged EXEC command to enable debugging of spanning-tree activities. Use the **no** form of this command to disable debugging output.

- debug spanning-tree {all | backbonefast | bpdu | bpdu-opt | config | csuf/csrt | etherchannel |
   events | exceptions | general | mstp | pvst+ | root | snmp | switch | synchronization |
   uplinkfast}
- no debug spanning-tree {all | backbonefast | bpdu | bpdu-opt | config | csuf/csrt | etherchannel | events | exceptions | general | mstp | pvst+ | root | snmp | switch | synchronization | uplinkfast}

Syntax Description	all	Display all spanning-tree debug messages.
	backbonefast	Display BackboneFast-event debug messages.
	bpdu	Display spanning-tree bridge protocol data unit (BPDU) debug messages.
	bpdu-opt	Display optimized BPDU handling debug messages.
	config	Display spanning-tree configuration change debug messages.
	csuf/csrt	Display cross-stack UplinkFast and cross-stack rapid transition activity debug messages.
	etherchannel	Display EtherChannel-support debug messages.
	events	Display spanning-tree topology event debug messages.
	exceptions	Display spanning-tree exception debug messages.
	general	Display general spanning-tree activity debug messages.
	mstp	Debug Multiple Spanning Tree Protocol events.
	pvst+	Display per-VLAN spanning-tree plus (PVST+) event debug messages.
	root	Display spanning-tree root-event debug messages.
	snmp	Display spanning-tree Simple Network Management Protocol (SNMP) handling debug messages.
	synchronization	Display the spanning-tree synchronization event debug messages.
	switch	Display switch shim command debug messages. This shim is the software module that is the interface between the generic Spanning Tree Protocol (STP) code and the platform-specific code of various switch platforms.
	uplinkfast	Display UplinkFast-event debug messages.

**Defaults** Debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
	12.1(14)EA1	The <b>mstp</b> and <b>csuf/csrt</b> keywords were added.
Usage Guidelines	The <b>undebug spannin</b>	<b>ig-tree</b> command is the same as the <b>no debug spanning-tree</b> command.
	member, you must star	agging, it is enabled only on the stack master. To enable debugging on a stack rt a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged n enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .
	show spanning-tree	Displays spanning-tree state information.

# debug spanning-tree backbonefast

Use the **debug spanning-tree backbonefast** privileged EXEC command to enable debugging of spanning-tree BackboneFast events. Use the **no** form of this command to disable debugging output.

debug spanning-tree backbonefast [detail | exceptions]

no debug spanning-tree backbonefast [detail | exceptions]

Syntax Description	detail	(Optional) Display detailed BackboneFast debug messages.	
	exceptions	(Optional) Display spanning-tree BackboneFast-exception debug messages.	
Defaults	Debugging is disabled.		
Command Modes	Privileged EXE	С	
Command History	Release	Modification	
	12.1(11)AX	This command was first introduced.	
Usage Guidelines	The <b>undebug spanning-tree backbonefast</b> command is the same as the <b>no debug spanning-tree</b> <b>backbonefast</b> command.		
	member, you m	le debugging, it is enabled only on the stack master. To enable debugging on a stack ust start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged d. Then enter the <b>debug</b> command at the command-line prompt of the stack member.	
Related Commands	Command	Description	
	show debuggin	Displays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System	
		Management Commands > Troubleshooting Commands.	

## debug spanning-tree bpdu

Use the **debug spanning-tree bpdu** privileged EXEC command to enable debugging of sent and received spanning-tree bridge protocol data units (BPDUs). Use the **no** form of this command to disable debugging output.

debug spanning-tree bpdu [receive | transmit]

no debug spanning-tree bpdu [receive | transmit]

Syntax Description	receive	(Optional) Display the nonoptimized path for received BPDU debug messages.	
	transmit	(Optional) Display the nonoptimized path for transmitted BPDU debug messages.	
Defaults	Debugging is di	sabled.	
Command Modes	Privileged EXE	C	
Command History	Release	Modification	
	12.1(11)AX	This command was first introduced.	
Usage Guidelines	The <b>undebug spanning-tree bpdu</b> command is the same as the <b>no debug spanning-tree bpdu</b> command.		
	member, you m	le debugging, it is enabled only on the stack master. To enable debugging on a stack ust start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged d. Then enter the <b>debug</b> command at the command-line prompt of the stack member.	
Related Commands	Command	Description	
	show debuggin	Displays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.	
	show spanning	<b>-tree</b> Displays spanning-tree state information.	

## debug spanning-tree bpdu-opt

Use the **debug spanning-tree bpdu-opt** privileged EXEC command to enable debugging of optimized spanning-tree bridge protocol data units (BPDUs) handling. Use the **no** form of this command to disable debugging output.

debug spanning-tree bpdu-opt [detail | packet]

no debug spanning-tree bpdu-opt [detail | packet]

Syntax Description	detail	(Optional) Display detailed optimized BPDU-handling debug messages.
	packet	(Optional) Display packet-level optimized BPDU-handling debug messages.
Defaults	Debugging is disab	bled.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug span</b> command.	ning-tree bpdu-opt command is the same as the no debug spanning-tree bpdu-opt
	member, you must	debugging, it is enabled only on the stack master. To enable debugging on a stack start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged Then enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .
	show spanning-tr	Displays spanning-tree state information.

## debug spanning-tree mstp

Use the **debug spanning-tree mstp** privileged EXEC command to enable debugging of the Multiple Spanning Tree Protocol (MSTP) software. Use the **no** form of this command to disable debugging output.

debug spanning-tree mstp {all | boundary | bpdu-rx | bpdu-tx | errors | flush | init | migration | pm | proposals | region | roles | sanity\_check | sync | tc | timers }

no debug spanning-tree mstp {all | boundary | bpdu-rx | bpdu-tx | errors | flush | init | migration | pm | proposals | region | roles | sanity\_check | sync | tc | timers}

boundary       Debug flag changes at these boundaries:         • An multiple spanning-tree (MST) region and a single spanning-tree region running Rapid Spanning Tree Protocol (RSTP)         • An MST region and a single spanning-tree region running 802.1D         • An MST region and another MST region with a different configuration         bpdu-rx       Debug the received MST bridge protocol data units (BPDUs).         bpdu-tx       Debug the transmitted MST BPDUs.         errors       Debug MSTP errors.         flush       Debug the port flushing mechanism.         init       Debug the protocol migration of the MSTP data structures.         migration       Debug MSTP port manager events.         proposals       Debug the received BPDU sanity check messages.         spinc       Debug MSTP roles.         sanity_check       Debug the port synchronization events.         tc       Debug the port synchronization events.         tc       Debug the port synchronization events.         tc       Debug the port synchronization events.         tmers       Debug the MSTP timers for start, stop, and expire events.         Defaults       Debug the MSTP timers for start, stop, and expire events.         Command Modes       Privileged EXEC			
<ul> <li>An multiple spanning-tree (MST) region and a single spanning-tree region running Rapid Spanning Tree Protocol (RSTP)</li> <li>An MST region and a single spanning-tree region running 802.1D</li> <li>An MST region and another MST region with a different configuration</li> <li>bpdu-tx Debug the received MST bridge protocol data units (BPDUs).</li> <li>bpdu-tx Debug the transmitted MST BPDUs.</li> <li>errors Debug MSTP errors.</li> <li>flush Debug the port flushing mechanism.</li> <li>init Debug the port flushing mechanism.</li> <li>init Debug the port flushing mechanism.</li> <li>init Debug the protocol migration state machine.</li> <li>pm Debug MSTP port manager events.</li> <li>proposals Debug the received BPDU sanity check messages.</li> <li>sync Debug the received BPDU sanity check messages.</li> <li>sync Debug the port synchronization events.</li> <li>tc Debug the MSTP timers for start, stop, and expire events.</li> </ul>	Syntax Description	all	Enable all the debugging messages.

# Usage Guidelines The undebug spanning-tree mstp command is the same as the no debug spanning-tree mstp command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.
	show spanning-tree	Displays spanning-tree state information.

## debug spanning-tree switch

Use the **debug spanning-tree switch** privileged EXEC command to enable debugging of the software interface between the Spanning Tree Protocol (STP) software module and the port manager software module. Use the **no** form of this command to disable debugging output.

debug spanning-tree switch {all | errors | flush | general | helper | pm | rx {decode | errors | interrupt | process} | state | tx [decode] | uplinkfast}

no debug spanning-tree switch {all | errors | flush | general | helper | pm | rx {decode | errors | interrupt | process} | state | tx [decode] | uplinkfast}

Syntax Description	all	Display all spanning-tree switch debug messages.	
	errors	Display debug messages for the interface between the spanning-tree software module and the port manager software module.	
	flush	Display debug messages for the shim flush operation.	
	general	Display general event debug messages.	
	helper	Display spanning-tree helper-task debug messages. Helper tasks handle bulk spanning-tree updates.	
	pm	Display port-manager event debug messages.	
	rx	Display received bridge protocol data unit (BPDU) handling debug messages. The keywords have these meanings:	
		• <b>decode</b> —Display decoded received packets.	
		• errors—Display receive error debug messages.	
		• <b>interrupt</b> —Display interrupt service request (ISR) debug messages.	
		• process—Display process receive BPDU debug messages.	
	state	Display spanning-tree port state change debug messages;	
	tx [decode]	Display transmitted BPDU handling debug messages. The keyword has this meaning:	
		• <b>decode</b> —(Optional) Display decoded transmitted packets.	
	uplinkfast	Display uplinkfast packet transmission debug messages.	
Defaults	Debugging is d	isabled.	
Command Modes	Privileged EXE	BC	
Command Modes	Privileged EXE	EC Modification	

# **Usage Guidelines** The **undebug spanning-tree switch** command is the same as the **no debug spanning-tree switch** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.
	show spanning-tree	Displays spanning-tree state information.

## debug spanning-tree uplinkfast

Use the **debug spanning-tree uplinkfast** privileged EXEC command to enable debugging of spanning-tree UplinkFast events. Use the **no** form of this command to disable debugging output.

debug spanning-tree uplinkfast [exceptions]

no debug spanning-tree uplinkfast [exceptions]

Syntax Description	exceptions (C	Optional) Display spanning-tree UplinkFast-exception debug messages.
Defaults	Debugging is disable	ed.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug spanning-tree uplinkfast</b> command is the same as the <b>no debug spanning-tree</b> <b>uplinkfast</b> command.	
	When you enable del member, you must st	d. bugging, it is enabled only on the stack master. To enable debugging on a stack eart a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged then enter the <b>debug</b> command at the command-line prompt of the stack member.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.
		The second secon

## debug sw-vlan

Use the **debug sw-vlan** privileged EXEC command to enable debugging of VLAN manager activities. Use the **no** form of this command to disable debugging output.

debug sw-vlan {badpmcookies | cfg-vlan {bootup | cli} | events | ifs | management | notification | packets | registries | vtp}

no debug sw-vlan {badpmcookies | cfg-vlan {bootup | cli} | events | ifs | management | notification | packets | registries | vtp}

Syntax Description	badpmcookies	Display debug messages for VLAN manager incidents of bad port manager cookies.
	cfg-vlan {bootup   cli}	Display config-vlan debug messages. The keywords have these meanings:
		• <b>bootup</b> —Display messages when the switch is booting up.
		• <b>cli</b> —Display messages when the command-line interface (CLI) is in config-vlan mode.
	events	Display debug messages for VLAN manager events.
	ifs	See the <b>debug sw-vlan ifs</b> command.
	management	Display debug messages for VLAN manager management of internal VLANs.
	notification	See the <b>debug sw-vlan notification</b> command.
	packets registries vtp	Display debug messages for packet handling and encapsulation processes.
		Display debug messages for VLAN manager registries.
		See the <b>debug sw-vlan vtp</b> command.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug sw-vlan</b> co	ommand is the same as the <b>no debug sw-vlan</b> command.
	member, you must start a	ging, it is enabled only on the stack master. To enable debugging on a stack a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged enter the <b>debug</b> command at the command-line prompt of the stack member.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .
	show vlan	Displays the parameters for all configured VLANs or one VLAN (if the VLAN name or ID is specified) in the administrative domain.
	show vtp	Displays general information about VTP management domain, status, and counters.

## debug sw-vlan ifs

Use the **debug sw-vlan ifs** privileged EXEC command to enable debugging of the VLAN manager IOS file system (IFS) error tests. Use the **no** form of this command to disable debugging output.

debug sw-vlan ifs {open {read | write} | read {1 | 2 | 3 | 4} | write}

no debug sw-vlan ifs {open {read | write} | read {1 | 2 | 3 | 4} | write}

Syntax Description	open {read   write}	Display VLAN manager IFS file-open operation debug messages. The keywords have these meanings:
		• read—Display VLAN manager IFS file-read operation debug messages.
		• write—Display VLAN manager IFS file-write operation debug messages.
	read {1   2   3   4}	Display file-read operation debug messages for the specified error test (1, 2, 3, or 4).
	write	Display file-write operation debug messages.
Defaults	Debugging is disabled	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	When you enable debu member, you must star EXEC command. The	<b>ifs</b> command is the same as the <b>no debug sw-vlan ifs</b> command. Igging, it is enabled only on the stack master. To enable debugging on a stack rt a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged n enter the <b>debug</b> command at the command-line prompt of the stack member.
	verification word and the contains most of the de	file read operation, Operation 1 reads the file header, which contains the header the file version number. Operation 2 reads the main body of the file, which omain and VLAN information. Operation 3 reads type length version (TLV) Operation 4 reads TLV data.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for IOS Release 12.1 > Cisco IOS System Management Commands > Troubleshooting Commands.
	show vlan	Displays the parameters for all configured VLANs or one VLAN (if the VLAN name or ID is specified) in the administrative domain.

# debug sw-vlan notification

Use the **debug sw-vlan notification** privileged EXEC command to enable debugging of the activation and deactivation of Inter-Link Switch (ISL) VLAN IDs. Use the **no** form of this command to disable debugging output.

debug sw-vlan notification {accfwdchange | allowedvlancfgchange | fwdchange | linkchange | modechange | pruningcfgchange | statechange}

no debug sw-vlan notification {accfwdchange | allowedvlancfgchange | fwdchange | linkchange | modechange | pruningcfgchange | statechange}

Syntax Description	accfwdchange	Display debug messages for VLAN manager notification of aggregated access interface spanning-tree forward changes.
	allowedvlancfgchange	Display debug messages for VLAN manager notification of changes to the allowed VLAN configuration.
	fwdchange	Display debug messages for VLAN manager notification of spanning-tree forwarding changes.
	linkchange	Display debug messages for VLAN manager notification of interface link-state changes.
	modechange	Display debug messages for VLAN manager notification of interface mode changes.
	pruningcfgchange	Display debug messages for VLAN manager notification of changes to the pruning configuration.
	statechange	Display debug messages for VLAN manager notification of interface state changes.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The <b>undebug sw-vlan n</b> e command.	otification command is the same as the no debug sw-vlan notification
	member, you must start a	ging, it is enabled only on the stack master. To enable debugging on a stack a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged nter the <b>debug</b> command at the command-line prompt of the stack member.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .
	show vlan	Displays the parameters for all configured VLANs or one VLAN (if the VLAN name or ID is specified) in the administrative domain.

## debug sw-vlan vtp

Use the **debug sw-vlan vtp** privileged EXEC command to enable debugging of the VLAN Trunking Protocol (VTP) code. Use the **no** form of this command to disable debugging output.

debug sw-vlan vtp {events | packets | pruning [packets | xmit] | xmit}

no debug sw-vlan vtp {events | packets | pruning | xmit}

Syntax Description	events	Display debug messages for general-purpose logic flow and detailed VTP messages generated by the VTP_LOG_RUNTIME macro in the VTP code.	
	packets	Display debug messages for the contents of all incoming VTP packets that have been passed into the VTP code from the IOS VTP platform-dependent layer, except for pruning packets.	
	pruning [packets   xmit]	Display debug messages generated by the pruning segment of the VTP code. The keywords have these meanings:	
		• <b>packets</b> —(Optional) Display debug messages for the contents of all incoming VTP pruning packets that have been passed into the VTP code from the IOS VTP platform-dependent layer.	
		• <b>xmit</b> —(Optional) Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send.	
	xmit	Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send, except for pruning packets.	
Defaults	Debugging is disabled.		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
,	12.1(11)AX	This command was first introduced.	
Usage Guidelines	The undebug sw-vlan vtp	command is the same as the <b>no debug sw-vlan vtp</b> command.	
	When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member.		
	If no further parameters are entered after the <b>pruning</b> keyword, VTP pruning debugging messages are displayed. They are generated by the VTP_PRUNING_LOG_NOTICE, VTP_PRUNING_LOG_INFO, VTP_PRUNING_LOG_DEBUG, VTP_PRUNING_LOG_ALERT, and VTP_PRUNING_LOG_WARNING macros in the VTP pruning code.		

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .
	show vtp	Displays general information about VTP management domain, status, and counters.

# debug udld

Use the **debug udld** privileged EXEC command to enable debugging of the UniDirectional Link Detection (UDLD) feature. Use the **no** form of this command to disable UDLD debugging.

debug udld {events | packets | registries}

no debug udld {events | packets | registries}

events	Display debug messages for UDLD process events as they occur.	
packets	Display debug messages for the UDLD process as it receives packets from the packet queue and tries to send them at the request of the UDLD protocol code.	
registries	Display debug messages for the UDLD process as it processes registry calls from the UDLD process-dependent module and other feature modules.	
Debugging is di	sabled.	
Privileged EXE	С	
Release	Modification	
12.1(11)AX	This command was first introduced.	
member, you m	le debugging, it is enabled only on the stack master. To enable debugging on a stack ust start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged d. Then enter the <b>debug</b> command at the command-line prompt of the stack member.	
For <b>debug udld events</b> , these debugging messages are displayed:		
General UDLD program logic flow		
State machine state changes		
Program actions for the set and clear ErrDisable state		
Neighbor cache additions and deletions		
Processing of configuration commands		
Processing of link-up and link-down indications		
For debug udld packets, these debugging messages are displayed:		
General pace	cket processing program flow on receipt of an incoming packet	
	of the contents of the various pieces of packets received (such as type length versions they are examined by the packet reception code	
• Packet tran	smission attempts and the outcome	
	packetsregistriesDebugging is diDrivileged EXERelease12.1(11)AXThe undebug uWhen you enabmember, you mEXEC commanFor debug udld• General UE• State machi• Program ac• Neighbor ca• ProcessingFor debug udld• General pac• Indications[TLVs]) as	

For debug udld registries, these categories of debugging messages are displayed:

- Sub-block creation
- Fiber-port status changes
- State change indications from the port manager software
- MAC address registry calls

	show debugging	Displays information about the types of debugging that are enabled. For syntax information, select <b>Cisco IOS Configuration Fundamentals</b> <b>Command Reference for IOS Release 12.1 &gt; Cisco IOS System</b> <b>Management Commands &gt; Troubleshooting Commands</b> .
	show udld	Displays UDLD administrative and operational status for all ports or the specified port.

### debug vqpc

Use the **debug vqpc** privileged EXEC command to enable debugging of the VLAN Query Protocol (VQP) client. Use the **no** form of this command to disable debugging output.

debug vqpc [all | cli | events | learn | packet]

no debug vqpc [all | cli | events | learn | packet]

<u> </u>		
Syntax Description	all	(Optional) Display all VQP client debug messages.
	cli	(Optional) Display the VQP client command-line interface (CLI) debug
		messages.
	events	(Optional) Display VQP client event debug messages.
	learn	(Optional) Display VQP client address learning debug messages.
	packet	(Optional) Display VQP client packet information debug messages.
Defaults	Debugging is disable	ad
Donanto		
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(11)AX	This command was first introduced.
Usage Guidelines	The undebug vqpc	command is the same as the <b>no debug vqpc</b> command.
	When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you must start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member.
