

Preface

Audience

This guide is for the networking professional using the Cisco IOS command-line interface (CLI) to manage the Cisco IE 3000 switch, hereafter referred to as *the switch*. Before using this guide, you should have experience working with the Cisco IOS commands and the switch software features. Before using this guide, you should have experience working with the concepts and terminology of Ethernet and local area networking.

Purpose

The Cisco IE 3000 switch is supported by either the LAN base image or the IP services image. The LAN base image provides intelligent Layer 2 services, such as access control lists (ACLs) and quality of service (QoS) features. The IP services image includes Layer 2+ features and full Layer 3 routing (IP unicast routing, IP multicast routing, and fallback bridging).

This guide provides the information that you need about the Layer 2 and Layer 3 commands that have been created or changed for use with the IE 3000 switches. For information about the standard Cisco IOS Release 12.2 commands, see the Cisco IOS documentation set available from the Cisco.com home page by selecting **Technical Support & Documentation > Cisco IOS Software**.

This guide does not provide procedures for configuring your switch. For detailed configuration procedures, see the software configuration guide for this release.

This guide does not describe system messages you might encounter. For more information, see the system message guide for this release.

For documentation updates, see the release notes for this release.
