Registering Cisco UCS Domains with Cisco UCS Central

Registration of Cisco UCS Domains

You can have Cisco UCS Central manage some or all of the Cisco UCS domains in your data center.

If you want Cisco UCS Central to manage a Cisco UCS domain, you need to register that domain. When you register, you must choose which types of policies and other configurations will be managed by Cisco UCS Central and Cisco UCS Manager. Cisco UCS Central can manage the same types of policies and configurations for all registered Cisco UCS domains. You can also choose to have different settings for each registered Cisco UCS domain.

Perform the following before registering a Cisco UCS domain with Cisco UCS Central:

- Configure an NTP server and the correct time zone in both Cisco UCS Manager and Cisco UCS Central to ensure that they are in sync. If the time and date in the Cisco UCS domain and Cisco UCS Central are out of sync, the registration might fail.

- Obtain the hostname or IP address of Cisco UCS Central

- Obtain the shared secret that was configured when Cisco UCS Central was deployed.

Policy Resolution between Cisco UCS Manager and Cisco UCS Central

For each Cisco UCS domain that you register with Cisco UCS Central, you can choose which application will manage certain policies and configuration settings. This policy resolution does not have to be the same for every Cisco UCS domain that you register with the same Cisco UCS Central.

Note	Unregistering a Cisco UCS domain with Cisco UCS Central will terminate all open sessions.

You have the following options for resolving these policies and configuration settings:

- **Local**—The policy or configuration is determined and managed by Cisco UCS Manager.

- **Global**—The policy or configuration is determined and managed by Cisco UCS Central.

The following table contains a list of the policies and configuration settings that you can choose to have managed by either Cisco UCS Manager or Cisco UCS Central:

Name	Description
Infrastructure & Catalog Firmware	Determines whether the Capability Catalog and infrastructure firmware policy are defined locally or come from Cisco UCS Central.
Time Zone Management	Determines whether the date and time is defined locally or comes from Cisco UCS Central.
Communication Services	Determines whether HTTP, CIM XML, Telnet, SNMP, web session limits, and Management Interfaces Monitoring Policy settings are defined locally or in Cisco UCS Central.
Global Fault Policy	Determines whether the Global Fault Policy is defined locally or in Cisco UCS Central.
User Management	Determines whether authentication and native domains, LDAP, RADIUS, TACACS+, trusted points, locales, and user roles are defined locally or in Cisco UCS Central.
DNS Management	Determines whether DNS servers are defined locally or in Cisco UCS Central.
Backup & Export Policies	Determines whether the Full State Backup Policy and All Configuration Export Policy are defined locally or in Cisco UCS Central.
Monitoring	Determines whether Call Home, Syslog, and TFTP Core Exporter settings are defined locally or in Cisco UCS Central.
SEL Policy	Determines whether managed endpoints are defined locally or in Cisco UCS Central.
Power Allocation Policy	Determines whether the Global Power Allocation Policy is defined locally or in Cisco UCS Central
Powerextended Policy	Determines whether the Powerextended Policy is defined locally or in Cisco UCS Central.
Powersave Policy	Determines whether the Powersave Policy is defined locally or in Cisco UCS Central.
Modular Chassis Fan Control Policy	Determines whether the Modular Chassis Fan Control Policy is defined locally or in Cisco UCS Central.

Name	Description
Power Policy	Determines whether the Power Policy is defined locally or in Cisco UCS Central.
Equipment Policy	Determines whether Equipment Global, LAN Cloud, and SAN Cloud Policies are defined locally or in Cisco UCS Central.
Port Configuration	Determines whether port configuration is defined locally or in Cisco UCS Central.

Registering a Cisco UCS Domain with Cisco UCS Central

Before you begin

Configure an NTP server and the correct time zone in both Cisco UCS Manager and Cisco UCS Central to ensure that they are in sync. If the time and date in the Cisco UCS domain and Cisco UCS Central are out of sync, the registration might fail.

Procedure

Step 1 In the **Navigation** pane, click **Admin**.

Step 2 Expand **All** > **Communication Management**.

Step 3 Click the **UCS Central** node.

Step 4 In the **Actions** area, click **UCS Central**.

Step 5 In the **Actions** area, click **Register With UCS Central**.

Step 6 In the **Register with UCS Central** dialog box, do the following:

a) Complete the following fields:

Name	Description
Hostname/IP Address field	The hostname or IP address of the virtual machine where Cisco UCS Central is deployed. **Note** If you use a hostname rather than an IPv4 or IPv6 address, you must configure a DNS server. If the Cisco UCS domain is not registered with Cisco UCS Central or DNS management is set to **local**, configure a DNS server in Cisco UCS Manager. If the Cisco UCS domain is registered with Cisco UCS Central and DNS management is set to **global**, configure a DNS server in Cisco UCS Central.
Shared Secret field	The shared secret (or password) that was configured when Cisco UCS Central was deployed.

b) In the **Policy Resolution Control** area, click one of the following radio buttons for each of the fields:

> • **Local**—The policy or configuration is determined and managed by Cisco UCS Manager.
>
> • **Global**—The policy or configuration is determined and managed by Cisco UCS Central.

    c) Click **OK**.

Configuring Policy Resolutions between Cisco UCS Manager and Cisco UCS Central

Procedure

Step 1	In the **Navigation** pane, click **Admin**.
Step 2	Expand **All** > **Communication Management**.
Step 3	Click the **UCS Central** node.
Step 4	In the **Actions** area, click **UCS Central**.
Step 5	In the **Policy Resolution Control** area, click one of the following radio buttons for each of the fields: • **Local**—The policy or configuration is determined and managed by Cisco UCS Manager. • **Global**—The policy or configuration is determined and managed by Cisco UCS Central.
Step 6	Click **Save Changes**.

Setting Cisco UCS Central Registration Properties in Cisco UCS Manager

Procedure

Step 1	In the **Navigation** pane, click **Admin**.
Step 2	Expand **All** > **Communication Management**.
Step 3	Click the **UCS Central** node.
Step 4	In the **Actions** area, click **UCS Central**.

Step 5	In the **Status** area, complete the following as appropriate:
	
	a) Click the radio button for the **Cleanup Mode** that you want to use.
	
	   This can be one of the following:
	
	     • **Localize Global**—When a Cisco UCS domain is unregistered, all global policies in the Cisco UCS domain will be localized to Cisco UCS Manager. The policies remain in the Cisco UCS domain,

policy ownership is now local to Cisco UCS Manager, and Cisco UCS Manager admin users can make changes.

Note	If you reregister the Cisco UCS domain with Cisco UCS Central, there can be policy conflicts due to the policies existing both in Cisco UCS Central and in Cisco UCS Manager. Either delete the local policies, or set the local policies to global before you try to create and associate a global service profile.

- **Deep Remove Global**—This option should only be used after careful consideration. When a Cisco UCS domain is unregistered, all global policies in the Cisco UCS domain are removed. If there are global service profiles, they will now refer to Cisco UCS Manager local default policies, and one of the following occurs:

  - If there are local default policies present, the server will reboot.

  - If there are no local default policies, the service profile association fails with a configuration error.

Note	The deep remove global cleanup mode does not remove global VSANs and VLANs when you unregister from Cisco UCS Central. Those must be removed manually if desired.

b) Optionally check the **Suspend State** check box.

If checked, the Cisco UCS domain is temporarily removed from Cisco UCS Central, and all global policies revert to their local counterparts. All service profiles maintain their current identities. However, global pools are no longer visible and cannot be accessible by new service profiles.

c) Optionally check the **Acknowledge State** check box.

If the event ID stream that represents time and consistency between Cisco UCS Manager and Cisco UCS Central becomes skewed or inconsistent, Cisco UCS Manager places itself in a Suspended State and disconnects itself from Cisco UCS Central.

If you check this check box, you acknowledge that inconsistencies exist between Cisco UCS Manager and Cisco UCS Central and are still willing to reconnect the Cisco UCS domain with Cisco UCS Central.

Step 6   Click **Save Changes**.

Unregistering a Cisco UCS Domain from Cisco UCS Central

When you unregister a Cisco UCS domain from Cisco UCS Central, Cisco UCS Manager no longer receives updates to global policies.

Procedure

Step 1   In the **Navigation** pane, click **Admin**.

Step 2   Expand **All** > **Communication Management**.

Step 3   Click the **UCS Central** node.

Step 4   In the **Actions** area, click **UCS Central**.

Step 5   In the **Actions** area, click **Unregister From UCS Central**.

Step 6   If a confirmation dialog box displays, click **Yes**.

Step 7   Click **OK**.

For more information on the impact of unregistering and registering a Cisco UCS Domain with Cisco UCS Central, see Policy Resolution between Cisco UCS Manager and Cisco UCS Central.
