fsmStFailFabricComputeSlotEpIdentify:ExecutePeer

Fault Code: F16519

Message: [FSM:STAGE:FAILED|RETRY]: identifying a server in [chassisId]/[slotId] via CIMC(FSM-STAGE:sam:dme:FabricComputeSlotEpIdentify:ExecutePeer)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: execute-peer-failed
mibFaultCode: F16519
mibFaultName: fsmStFailFabricComputeSlotEpIdentifyExecutePeer
```

```
moClass: fabric:ComputeSlotEp
Type: fsm
autoCleared: true
Affected MO: fabric/server/chassis-[chassisId]/slot-[slotId]
```

fsmStFailComputeBladeDiscover:BiosPostCompletion

Fault Code: F16520

Message: [FSM:STAGE:FAILED|RETRY]: Waiting for BIOS POST completion from CIMC on server [chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiscover:BiosPostCompletion)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: bios-post-completion-failed
mibFaultCode: F16520
mibFaultName: fsmStFailComputeBladeDiscoverBiosPostCompletion
moClass: compute:Blade
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
```

fsmStFailComputeBladeDiscover:BladeBootPnuos

Fault Code: F16520

Message: [FSM:STAGE:FAILED|RETRY]: power server [chassisId]/[slotId] on with pre-boot environment(FSM-STAGE:sam:dme:ComputeBladeDiscover:BladeBootPnuos)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: blade-boot-pnuos-failed
mibFaultCode: F16520
mibFaultName: fsmStFailComputeBladeDiscoverBladeBootPnuos
moClass: compute:Blade
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
```

fsmStFailComputeBladeDiscover:BladeBootWait

Fault Code: F16520

Message: [FSM:STAGE:FAILED|RETRY]: Waiting for system reset on server [chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiscover:BladeBootWait)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: blade-boot-wait-failed
mibFaultCode: F16520
mibFaultName: fsmStFailComputeBladeDiscoverBladeBootWait
moClass: compute:Blade
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
```

fsmStFailComputeBladeDiscover:BladePowerOn

Fault Code: F16520

Message: [FSM:STAGE:FAILED|RETRY]: power on server [chassisId]/[slotId] for discovery(FSM-STAGE:sam:dme:ComputeBladeDiscover:BladePowerOn)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: blade-power-on-failed
mibFaultCode: F16520
mibFaultName: fsmStFailComputeBladeDiscoverBladePowerOn
moClass: compute:Blade
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
```

fsmStFailComputeBladeDiscover:BladeReadSmbios

Fault Code: F16520

Message: [FSM:STAGE:FAILED|RETRY]: Waiting for SMBIOS table from CIMC on server [chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeDiscover:BladeReadSmbios)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: blade-read-smbios-failed
mibFaultCode: F16520
mibFaultName: fsmStFailComputeBladeDiscoverBladeReadSmbios
moClass: compute:Blade
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
```

fsmStFailComputeBladeDiscover:BmcConfigPnuOS

Fault Code: F16520

Message: [FSM:STAGE:FAILED|RETRY]: provisioning a bootable device with a bootable pre-boot image for server(FSM-STAGE:sam:dme:ComputeBladeDiscover:BmcConfigPnuOS)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```

1. Make sure secondary FI is up and running.
2. Make sure the auth-server-group used in the auth-domain is exist and is deployed on to switch.
3. If auth-server-group doesn't exist, either create auth-server-group in appropriaate realm (RADIUS/TACACS+/LDAP) or unset the auth-server-group in auth-domain.

fsmStFailSysdebugAutoCoreFileExportTargetConfigure:Peer

Fault Code: F16605

Message: [FSM:STAGE:FAILED|RETRY]: configuring automatic core file export service on peer(FSM-STAGE:sam:dme:SysdebugAutoCoreFileExportTargetConfigure:Peer)

Explanation: Cisco UCS Manager could not set the configurations in the subordinate Fabric Interconnect (FI) for auto core transfer to remote TFTP server. This fault typically appears for one of the following reasons:

- The subordinate FI is not reachable.
- The subordinate FI is experiencing an internal system error on applying the configuration.

Recommended Action: If you see this fault, take the following actions:

1. Check the FI cluster state to ensure that the subordinate FI is reachable and functioning correctly. If the subordinate FI is down, take appropriate corrective actions so that the UCS cluster goes into HA ready state.
2. If the HA state of the primary and subordinate FIs are good, execute the show tech-support command and contact Cisco Technical Support.

fsmStFailComputePhysicalFwUpgrade:PnuOSIdent

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Identify pre-boot environment agent(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PnuOSIdent)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: pnuosident-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePnuOSIdent
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PnuOSInventory

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Perform inventory of server(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PnuOSInventory)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: pnuosinventory-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePnuOSInventory
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PnuOSPolicy

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Populate pre-boot environment behavior policy(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PnuOSPolicy)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: pnuospolicy-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePnuOSPolicy
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PnuOSSelfTest

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Trigger self-test on pre-boot environment(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PnuOSSelfTest)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: pnuosself-test-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePnuOSSelfTest
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PnuOSUnloadDrivers

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Unload drivers on server(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PnuOSUnloadDrivers)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
```

```
Cause: pnuosunload-drivers-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePnuOSUnloadDrivers
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PnuOSValidate

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Pre-boot environment validation for Firmware Upgrade(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PnuOSValidate)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: pnuosvalidate-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePnuOSValidate
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PollBiosActivateStatus

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: waiting for BIOS activate(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PollBiosActivateStatus)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: poll-bios-activate-status-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePollBiosActivateStatus
moClass: compute:Physical
Type: fsm
autoCleared: true
```

```
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PollBiosUpdateStatus

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Waiting for BIOS update to complete(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PollBiosUpdateStatus)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: poll-bios-update-status-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePollBiosUpdateStatus
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PollBoardCtrlPowerCycle

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Waiting for Board Controller power cycle to complete(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PollBoardCtrlPowerCycle)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: poll-board-ctrl-power-cycle-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePollBoardCtrlPowerCycle
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PollBoardCtrlUpdateStatus

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Waiting for Board Controller update to complete(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PollBoardCtrlUpdateStatus)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: poll-board-ctrl-update-status-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePollBoardCtrlUpdateStatus
moClass: compute:Physical

autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PollClearBiosUpdateStatus

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: waiting for pending BIOS image update to clear(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PollClearBiosUpdateStatus)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: poll-clear-bios-update-status-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePollClearBiosUpdateStatus
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PowerCycleBoard

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Power cycle the board controller(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PowerCycleBoard)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: power-cycle-board-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePowerCycleBoard
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PowerDeployWait

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Waiting for power allocation to server [serverId](FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PowerDeployWait)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: power-deploy-wait-failed
mibFaultCode: F17327
mibFaultName: fsmStFailComputePhysicalFwUpgradePowerDeployWait
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmStFailComputePhysicalFwUpgrade:PowerOffForSbAdaptorActivation

Fault Code: F17327

Message: [FSM:STAGE:FAILED|RETRY]: Power off the server for activating Secure boot adapter firmware(FSM-STAGE:sam:dme:ComputePhysicalFwUpgrade:PowerOffForSbAdaptorActivation)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: power-off-for-sb-adaptor-activation-failed
mibFaultCode: F17327

Affected MO: sys/sysdebug/log-export-policy
```

fsmStFailSysdebugLogExportPolicyConfigure:Peer

Fault Code: F17755

Message: [FSM:STAGE:FAILED|RETRY]: configuring log file export service on peer(FSM-STAGE:sam:dme:SysdebugLogExportPolicyConfigure:Peer)

Explanation: Cisco UCS Manager could not set the configurations in the subordinate Fabric Interconnect (FI) for log file transfer to remote server. This fault typically appears for one of the following reasons:

- The subordinate FI is not reachable.
- The subordinate FI is experiencing an internal system error on applying the configuration.

Recommended Action: If you see this fault, take the following actions:

1. Check the FI cluster state to ensure that the subordinate FI is reachable and functioning correctly. If the subordinate FI is down, take appropriate corrective actions so that the UCS cluster goes into HA ready state.
2. If the HA state of the primary and subordinate FIs are good, execute the show tech-support command and contact Cisco Technical Support.

Fault Details

Type: fsm
autoCleared: true
Affected MO: sys/sysdebug/file-export
```

fsmRmtErrSysdebugAutoCoreFileExportTargetConfigure:Peer

Fault Code: F78045

Message: [FSM:STAGE:REMOTE-ERROR]: configuring automatic core file export service on peer(FSM-STAGE:sam:dme:SysdebugAutoCoreFileExportTargetConfigure:Peer)

Explanation: Cisco UCS Manager could not set the configurations in the subordinate Fabric Interconnect (FI) for auto core transfer to remote TFTP server. This fault typically appears for one of the following reasons:

- The subordinate FI is not reachable.
- The subordinate FI is experiencing an internal system error on applying the configuration.

Recommended Action: If you see this fault, take the following actions:

1. Check the FI cluster state to ensure that the subordinate FI is reachable and functioning correctly. If the subordinate FI is down, take appropriate corrective actions so that the UCS cluster goes into HA ready state.

2. If the HA state of the primary and subordinate FIs are good, execute the show tech-support command and contact Cisco Technical Support.

Fault Details

fsmRmtErrEquipmentChassisPowerCap:Wait

Fault Code: F78384

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting before powercap deployment on chassis [id](FSM-STAGE:sam:dme:EquipmentChassisPowerCap:Wait)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: wait-failed
mibFaultCode: F78384
mibFaultName: fsmRmtErrEquipmentChassisPowerCapWait
moClass: equipment:Chassis
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]
```

fsmRmtErrEquipmentIOCardMuxOffline:CleanupEntries

Fault Code: F78385

Message: [FSM:STAGE:REMOTE-ERROR]: cleaning host entries(FSM-STAGE:sam:dme:EquipmentIOCardMuxOffline:CleanupEntries)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: cleanup-entries-failed
mibFaultCode: F78385
mibFaultName: fsmRmtErrEquipmentIOCardMuxOfflineCleanupEntries
moClass: equipment:IOCard
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fsmRmtErrComputePhysicalAssociate:ActivateBios

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Activate BIOS image for server [serverId](FSM-STAGE:sam:dme:ComputePhysicalAssociate:ActivateBios)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: activate-bios-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateActivateBios
```

```
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:AssertBypassWait

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for assert bypass on rack server(FSM-STAGE:sam:dme:ComputePhysicalAssociate:AssertBypassWait)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: assert-bypass-wait-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateAssertBypassWait
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:BiosImgUpdate

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Update blade BIOS image(FSM-STAGE:sam:dme:ComputePhysicalAssociate:BiosImgUpdate)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: bios-img-update-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateBiosImgUpdate
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:BiosPostCompletion

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for BIOS POST completion from CIMC on server [serverId](FSM-STAGE:sam:dme:ComputePhysicalAssociate:BiosPostCompletion)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: bios-post-completion-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateBiosPostCompletion
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:BladePowerOff

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Power off server for configuration of service profile [assignedToDn](FSM-STAGE:sam:dme:ComputePhysicalAssociate:BladePowerOff)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: blade-power-off-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateBladePowerOff
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:BmcConfigPnuOS

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: provisioning a bootable device with a bootable pre-boot image for server(FSM-STAGE:sam:dme:ComputePhysicalAssociate:BmcConfigPnuOS)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: bmc-config-pnuos-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateBmcConfigPnuOS
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:BmcPreconfigPnuOSLocal

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: prepare configuration for preboot environment(FSM-STAGE:sam:dme:ComputePhysicalAssociate:BmcPreconfigPnuOSLocal)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: bmc-preconfig-pnuoslocal-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateBmcPreconfigPnuOSLocal
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:BmcPreconfigPnuOSPeer

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: prepare configuration for preboot environment(FSM-STAGE:sam:dme:ComputePhysicalAssociate:BmcPreconfigPnuOSPeer)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: bmc-preconfig-pnuospeer-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateBmcPreconfigPnuOSPeer
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:BmcUnconfigPnuOS

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: unprovisioning the bootable device for server(FSM-STAGE:sam:dme:ComputePhysicalAssociate:BmcUnconfigPnuOS)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: bmc-unconfig-pnuos-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateBmcUnconfigPnuOS
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:BootHost

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Boot host OS for server (service profile: [assignedToDn])(FSM-STAGE:sam:dme:ComputePhysicalAssociate:BootHost)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
```

```
Cause: boot-host-failed
mibFaultCode: F78413

fsmRmtErrComputePhysicalAssociate:WaitForBiosPostCompletion

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for adaptor to come up after BIOS POST completion(FSM-STAGE:sam:dme:ComputePhysicalAssociate:WaitForBiosPostCompletion)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: wait-for-bios-post-completion-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateWaitForBiosPostCompletion
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:WaitForBorderConfigCompletionLocal

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Wait for border ports configuration completion on primary fabric interconnect(FSM-STAGE:sam:dme:ComputePhysicalAssociate:WaitForBorderConfigCompletionLocal)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: wait-for-border-config-completion-local-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateWaitForBorderConfigCompletionLocal
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:WaitForBorderConfigCompletionPeer

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Wait for border ports configuration completion on secondary fabric interconnect(FSM-STAGE:sam:dme:ComputePhysicalAssociate:WaitForBorderConfigCompletionPeer)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: wait-for-border-config-completion-peer-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateWaitForBorderConfigCompletionPeer
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:activateAdaptorNwFwLocal

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Activate adapter network firmware on(FSM-STAGE:sam:dme:ComputePhysicalAssociate:activateAdaptorNwFwLocal)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: activate-adaptor-nw-fw-local-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateActivateAdaptorNwFwLocal
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:activateAdaptorNwFwPeer

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Activate adapter network firmware on(FSM-STAGE:sam:dme:ComputePhysicalAssociate:activateAdaptorNwFwPeer)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: activate-adaptor-nw-fw-peer-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateActivateAdaptorNwFwPeer
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:activateIBMCFw

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Activate CIMC firmware of server [serverId](FSM-STAGE:sam:dme:ComputePhysicalAssociate:activateIBMCFw)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: activateibmcfw-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateActivateIBMCFw
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:activateNwSbAdaptorFw

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Activate Network Secure boot adapter firmware(FSM-STAGE:sam:dme:ComputePhysicalAssociate:activateNwSbAdaptorFw)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: activate-nw-sb-adaptor-fw-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateActivateNwSbAdaptorFw
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:copyRemote

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Copy images to peer node(FSM-STAGE:sam:dme:ComputePhysicalAssociate:copyRemote)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: copy-remote-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateCopyRemote
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:downloadImages

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Download images from operations manager(FSM-STAGE:sam:dme:ComputePhysicalAssociate:downloadImages)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
```

```
Cause: download-images-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateDownloadImages
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:hagHostOSConnect

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Connect to host agent on server (service profile: [assignedToDn])(FSM-STAGE:sam:dme:ComputePhysicalAssociate:hagHostOSConnect)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: hag-hostosconnect-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateHagHostOSConnect
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:hagPnuOSConnect

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Connect to pre-boot environment agent for association with [assignedToDn](FSM-STAGE:sam:dme:ComputePhysicalAssociate:hagPnuOSConnect)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: hag-pnuosconnect-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateHagPnuOSConnect
moClass: compute:Physical
Type: fsm
autoCleared: true
```

```
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:hagPnuOSDisconnect

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Disconnect pre-boot environment agent(FSM-STAGE:sam:dme:ComputePhysicalAssociate:hagPnuOSDisconnect)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: hag-pnuosdisconnect-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateHagPnuOSDisconnect
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:resetIBMC

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Reset CIMC of server [serverId](FSM-STAGE:sam:dme:ComputePhysicalAssociate:resetIBMC)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: resetibmc-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateResetIBMC
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:serialDebugPnuOSConnect

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Connect to pre-boot environment agent for association with [assignedToDn](FSM-STAGE:sam:dme:ComputePhysicalAssociate:serialDebugPnuOSConnect)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: serial-debug-pnuosconnect-failed
mibFaultCode: F78413
mibFaultName: fsmRmtErrComputePhysicalAssociateSerialDebugPnuOSConnect
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalAssociate:serialDebugPnuOSDisconnect

Fault Code: F78413

Message: [FSM:STAGE:REMOTE-ERROR]: Disconnect pre-boot environment agent(FSM-STAGE:sam:dme:ComputePhysicalAssociate:serialDebugPnuOSDisconnect)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: serial-debug-pnuosdisconnect-failed

fsmRmtErrComputePhysicalDisassociate:UnconfigExtMgmtRules

Fault Code: F78414

Message: [FSM:STAGE:REMOTE-ERROR]: cleaning all ext mgmt rules for vmedia(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:UnconfigExtMgmtRules)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
```

```
Cause: unconfig-ext-mgmt-rules-failed
mibFaultCode: F78414
mibFaultName: fsmRmtErrComputePhysicalDisassociateUnconfigExtMgmtRules
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDisassociate:UnconfigFlexFlash

Fault Code: F78414

Message: [FSM:STAGE:REMOTE-ERROR]: Unconfiguring FlexFlash(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:UnconfigFlexFlash)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: unconfig-flex-flash-failed
mibFaultCode: F78414
mibFaultName: fsmRmtErrComputePhysicalDisassociateUnconfigFlexFlash
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDisassociate:UnconfigServerIdentity

Fault Code: F78414

Message: [FSM:STAGE:REMOTE-ERROR]: reset asset tag for server (service profile: [assignedToDn])(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:UnconfigServerIdentity)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: unconfig-server-identity-failed
mibFaultCode: F78414
mibFaultName: fsmRmtErrComputePhysicalDisassociateUnconfigServerIdentity
moClass: compute:Physical
Type: fsm
autoCleared: true
```

```
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDisassociate:UnconfigSoL

Fault Code: F78414

Message: [FSM:STAGE:REMOTE-ERROR]: Removing SoL configuration from server(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:UnconfigSoL)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: unconfig-so-lfailed
mibFaultCode: F78414
mibFaultName: fsmRmtErrComputePhysicalDisassociateUnconfigSoL
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDisassociate:UnconfigUuid

Fault Code: F78414

Message: [FSM:STAGE:REMOTE-ERROR]: Restore original UUID for server (service profile: [assignedToDn])(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:UnconfigUuid)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: unconfig-uuid-failed
mibFaultCode: F78414
mibFaultName: fsmRmtErrComputePhysicalDisassociateUnconfigUuid
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDisassociate:VerifyFcZoneConfig

Fault Code: F78414

Message: [FSM:STAGE:REMOTE-ERROR]: Verifying Storage(FC Zones) Connectivity(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:VerifyFcZoneConfig)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: verify-fc-zone-config-failed
mibFaultCode: F78414
mibFaultName: fsmRmtErrComputePhysicalDisassociateVerifyFcZoneConfig
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDisassociate:hagPnuOSConnect

Fault Code: F78414

Message: [FSM:STAGE:REMOTE-ERROR]: Connect to pre-boot environment agent on server for disassociation with service profile [assignedToDn](FSM-STAGE:sam:dme:ComputePhysicalDisassociate:hagPnuOSConnect)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: hag-pnuosconnect-failed
mibFaultCode: F78414
mibFaultName: fsmRmtErrComputePhysicalDisassociateHagPnuOSConnect
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDisassociate:hagPnuOSDisconnect

Fault Code: F78414

Message: [FSM:STAGE:REMOTE-ERROR]: Disconnect pre-boot environment agent for server(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:hagPnuOSDisconnect)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: hag-pnuosdisconnect-failed
mibFaultCode: F78414
mibFaultName: fsmRmtErrComputePhysicalDisassociateHagPnuOSDisconnect
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDisassociate:serialDebugPnuOSConnect

Fault Code: F78414

Message: [FSM:STAGE:REMOTE-ERROR]: Connect to pre-boot environment agent on server for disassociation with service profile [assignedToDn](FSM-STAGE:sam:dme:ComputePhysicalDisassociate:serialDebugPnuOSConnect)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: serial-debug-pnuosconnect-failed
mibFaultCode: F78414
mibFaultName: fsmRmtErrComputePhysicalDisassociateSerialDebugPnuOSConnect
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDisassociate:serialDebugPnuOSDisconnect

Fault Code: F78414

Message: [FSM:STAGE:REMOTE-ERROR]: Disconnect pre-boot environment agent for server(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:serialDebugPnuOSDisconnect)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: serial-debug-pnuosdisconnect-failed
mibFaultCode: F78414
mibFaultName: fsmRmtErrComputePhysicalDisassociateSerialDebugPnuOSDisconnect
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalPowerCap:Config

Fault Code: F78415

Message: [FSM:STAGE:REMOTE-ERROR]: Configuring power cap of server [dn](FSM-STAGE:sam:dme:ComputePhysicalPowerCap:Config)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: config-failed
mibFaultCode: F78415
mibFaultName: fsmRmtErrComputePhysicalPowerCapConfig
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDecommission:CleanupCIMC

Fault Code: F78416

Message: [FSM:STAGE:REMOTE-ERROR]: Cleaning up CIMC configuration for server [dn](FSM-STAGE:sam:dme:ComputePhysicalDecommission:CleanupCIMC)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: cleanupcimc-failed
mibFaultCode: F78416
mibFaultName: fsmRmtErrComputePhysicalDecommissionCleanupCIMC
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDecommission:CleanupPortConfigLocal

Fault Code: F78416

Message: [FSM:STAGE:REMOTE-ERROR]: Cleaning up local port config for server [dn](FSM-STAGE:sam:dme:ComputePhysicalDecommission:CleanupPortConfigLocal)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: cleanup-port-config-local-failed
mibFaultCode: F78416
mibFaultName: fsmRmtErrComputePhysicalDecommissionCleanupPortConfigLocal
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDecommission:CleanupPortConfigPeer

Fault Code: F78416

Message: [FSM:STAGE:REMOTE-ERROR]: Cleaning up peer port config for server [dn](FSM-STAGE:sam:dme:ComputePhysicalDecommission:CleanupPortConfigPeer)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: cleanup-port-config-peer-failed
mibFaultCode: F78416
```

```
mibFaultName: fsmRmtErrComputePhysicalDecommissionCleanupPortConfigPeer
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDecommission:Execute

Fault Code: F78416

Message: [FSM:STAGE:REMOTE-ERROR]: Decommissioning server [dn](FSM-STAGE:sam:dme:ComputePhysicalDecommission:Execute)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: execute-failed
mibFaultCode: F78416
mibFaultName: fsmRmtErrComputePhysicalDecommissionExecute
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDecommission:PrecleanupPortConfig

Fault Code: F78416

Message: [FSM:STAGE:REMOTE-ERROR]: Preparing to clean port config for server [dn](FSM-STAGE:sam:dme:ComputePhysicalDecommission:PrecleanupPortConfig)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: precleanup-port-config-failed
mibFaultCode: F78416
mibFaultName: fsmRmtErrComputePhysicalDecommissionPrecleanupPortConfig
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
```

```
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDecommission:StopVMediaLocal

Fault Code: F78416

Message: [FSM:STAGE:REMOTE-ERROR]: Unprovisioning the V-Media bootable device for server [dn](FSM-STAGE:sam:dme:ComputePhysicalDecommission:StopVMediaLocal)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: stopvmedia-local-failed
mibFaultCode: F78416
mibFaultName: fsmRmtErrComputePhysicalDecommissionStopVMediaLocal
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDecommission:StopVMediaPeer

Fault Code: F78416

Message: [FSM:STAGE:REMOTE-ERROR]: Unprovisioning the V-Media bootable device for server [dn](FSM-STAGE:sam:dme:ComputePhysicalDecommission:StopVMediaPeer)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: stopvmedia-peer-failed
mibFaultCode: F78416
mibFaultName: fsmRmtErrComputePhysicalDecommissionStopVMediaPeer
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalDecommission:UnconfigExtMgmtGw

Fault Code: F78416

Message: [FSM:STAGE:REMOTE-ERROR]: cleaning all ext mgmt gateway for vmedia(FSM-STAGE:sam:dme:ComputePhysicalDecommission:UnconfigExtMgmtGw)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: unconfig-ext-mgmt-gw-failed
mibFaultCode: F78416
mibFaultName: fsmRmtErrComputePhysicalDecommissionUnconfigExtMgmtGw
moClass: compute:Physical
Type: fsm

fsmRmtErrComputePhysicalSoftreset:PreSanitize

Fault Code: F78422

Message: [FSM:STAGE:REMOTE-ERROR]: Preparing to check hardware configuration server [dn](FSM-STAGE:sam:dme:ComputePhysicalSoftreset:PreSanitize)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: pre-sanitize-failed
mibFaultCode: F78422
mibFaultName: fsmRmtErrComputePhysicalSoftresetPreSanitize
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalSoftreset:Sanitize

Fault Code: F78422

Message: [FSM:STAGE:REMOTE-ERROR]: Checking hardware configuration server [dn](FSM-STAGE:sam:dme:ComputePhysicalSoftreset:Sanitize)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: sanitize-failed
mibFaultCode: F78422
mibFaultName: fsmRmtErrComputePhysicalSoftresetSanitize
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalSwConnUpd:A

Fault Code: F78423

Message: [FSM:STAGE:REMOTE-ERROR]: Updating fabric A for server [dn](FSM-STAGE:sam:dme:ComputePhysicalSwConnUpd:A)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: a-failed
mibFaultCode: F78423
mibFaultName: fsmRmtErrComputePhysicalSwConnUpdA
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalSwConnUpd:B

Fault Code: F78423

Message: [FSM:STAGE:REMOTE-ERROR]: Updating fabric B for server [dn](FSM-STAGE:sam:dme:ComputePhysicalSwConnUpd:B)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: b-failed
mibFaultCode: F78423
mibFaultName: fsmRmtErrComputePhysicalSwConnUpdB
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:CheckPowerAvailability

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Check if power can be allocated to server [serverId](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:CheckPowerAvailability)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: check-power-availability-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryCheckPowerAvailability
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:Cleanup

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Completing BIOS recovery mode for server [dn], and shutting it down(FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:Cleanup)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: cleanup-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryCleanup
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:PowerDeployWait

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for power allocation to server [serverId](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:PowerDeployWait)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: power-deploy-wait-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryPowerDeployWait
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:PreSanitize

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Preparing to check hardware configuration server [dn](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:PreSanitize)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: pre-sanitize-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryPreSanitize
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:Reset

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Resetting server [dn] power state after BIOS recovery(FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:Reset)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
```

```
Cause: reset-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryReset
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:Sanitize

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Checking hardware configuration server [dn](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:Sanitize)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: sanitize-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoverySanitize
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:SetupVmediaLocal

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Provisioning a V-Media device with a bootable BIOS image for server [dn](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:SetupVmediaLocal)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: setup-vmedia-local-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoverySetupVmediaLocal
moClass: compute:Physical
Type: fsm
autoCleared: true
```

```
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:SetupVmediaPeer

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Provisioning a V-Media device with a bootable BIOS image for server [dn](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:SetupVmediaPeer)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: setup-vmedia-peer-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoverySetupVmediaPeer
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:Shutdown

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Shutting down server [dn] to prepare for BIOS recovery(FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:Shutdown)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: shutdown-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryShutdown
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:Start

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Running BIOS recovery on server [dn](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:Start)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: start-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryStart
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:StopVMediaLocal

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Unprovisioning the V-Media bootable device for server [dn](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:StopVMediaLocal)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: stopvmedia-local-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryStopVMediaLocal
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:StopVMediaPeer

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Unprovisioning the V-Media bootable device for server [dn](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:StopVMediaPeer)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: stopvmedia-peer-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryStopVMediaPeer
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:TeardownVmediaLocal

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Unprovisioning the V-Media bootable device for server [dn](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:TeardownVmediaLocal)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: teardown-vmedia-local-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryTeardownVmediaLocal
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:TeardownVmediaPeer

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Unprovisioning the V-Media bootable device for server [dn](FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:TeardownVmediaPeer)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: teardown-vmedia-peer-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryTeardownVmediaPeer
moClass: compute:Physical
Type: fsm
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fsmRmtErrComputePhysicalBiosRecovery:Wait

Fault Code: F78424

Message: [FSM:STAGE:REMOTE-ERROR]: Waiting for completion of BIOS recovery for server [dn] (up to 15 min)(FSM-STAGE:sam:dme:ComputePhysicalBiosRecovery:Wait)

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: wait-failed
mibFaultCode: F78424
mibFaultName: fsmRmtErrComputePhysicalBiosRecoveryWait

fsmRmtErrSysdebugLogExportPolicyConfigure:Local

Fault Code: F79195

Message: [FSM:STAGE:REMOTE-ERROR]: configuring log file export service on local(FSM-STAGE:sam:dme:SysdebugLogExportPolicyConfigure:Local)

Explanation: Cisco UCS Manager could not set the configurations in the primary Fabric Interconnect for log file transfer to remote server.

Recommended Action:

If you see this fault, take the following actions:

1. Execute the show tech-support command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: local-failed
mibFaultCode: F79195
mibFaultName: fsmRmtErrSysdebugLogExportPolicyConfigureLocal
moClass: sysdebug:LogExportPolicy
Type: fsm
autoCleared: true
Affected MO: sys/sysdebug/log-export-policy
```

fsmRmtErrSysdebugLogExportPolicyConfigure:Peer

Fault Code: F79195

Message: [FSM:STAGE:REMOTE-ERROR]: configuring log file export service on peer(FSM-STAGE:sam:dme:SysdebugLogExportPolicyConfigure:Peer)

Explanation:

Cisco UCS Manager could not set the configurations in the subordinate Fabric Interconnect (FI) for log file transfer to remote server. This fault typically appears for one of the following reasons:

- The subordinate FI is not reachable.
- The subordinate FI is experiencing an internal system error on applying the configuration.

Recommended Action: If you see this fault, take the following actions:

1. Check the FI cluster state to ensure that the subordinate FI is reachable and functioning correctly. If the subordinate FI is down, take appropriate corrective actions so that the UCS cluster goes into HA ready state.
2. If the HA state of the primary and subordinate FIs are good, execute the show tech-support command and contact Cisco Technical Support.

Fault Details

CHAPTER 4

Call Home Faults

- About Call Home Messages, on page 2451
- Cisco UCS Faults that Raise Call Home Alerts, on page 2451
- Cisco UCS Faults and Call Home Priority Levels, on page 2463

About Call Home Messages

When you configure Call Home to send messages, Cisco UCS Manager executes the appropriate command line interface (CLI) show command and attaches the command output to the message.

Cisco UCS delivers Call Home messages in the following formats:

- The short text format—A one- or two-line description of the fault that is suitable for pagers or printed reports.
- Full text format—Fully formatted message with detailed information that is suitable for human reading.
- XML machine readable format—Uses Extensible Markup Language (XML) and Adaptive Messaging Language (AML) XML schema definition (XSD). The AML XSD is published on the Cisco.com website at https://www.cisco.com/. The XML format enables communication with the Cisco Systems Technical Assistance Center.

Cisco UCS Faults that Raise Call Home Alerts

If Smart Call Home is configured in the Cisco UCS instance, every fault listed in this section raises a Smart Call Home event to the Cisco Smart Call Home system.

Note All Cisco UCS Manager faults that raise Call Home alerts are documented in “Cisco UCS Faults” The type of Call Home alert is included in the CallHome line of the Fault Details section for each fault.

You can also find additional information about Call Home faults in the Unified Computing System (UCS) section of Monitoring Details for Cisco SMARTnet Service with Smart Call Home.

Faults Raised by a Fabric Interconnect

Diagnostic Faults Raised by a Fabric Interconnect

TestFabricPort

Details

Severity: Major

Customer Notification: Yes

Service Request: Yes, if ports_failed > 25%

Cisco UCS Manager CLI: show diagnostic result module all

Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because one or more of the ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. The network connectivity to the devices connected on the failed ports is affected.

Recommended Action

If you see this fault, take the following actions:

1. If the failed port or ports are located in an expansion module, remove and re-insert the module.

   Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.
2. Remove and re-insert the SFP or SFP+ and ensure the SFP or SFP+ is seated properly.
3. Insert the suspected faulty SFP or SFP+ into a working port. If the working port becomes faulty, then the SFP or SFP+ is faulty. Consider replacing the faulty SFP or SFP+.
4. If the SFP or SFP+ is working, then the module hardware is faulty.
   a. a. If the fixed module is affected, consider replacing the fabric interconnect.
   b. b. If an expansion module is affected, consider replacing the faulty module.

   Schedule a downtime for the Cisco UCS instance to replace the hardware.

TestForwardingEngine

Details

Severity: Major

Customer Notification: Yes

Service Request: Yes, if ports_failed > 25%

Cisco UCS Manager CLI: show diagnostic result module all

Call Home Support: 3.0, 3.1

Explanation

One or more ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. The network connectivity to the devices connected on the failed ports is affected.

Recommended Action

If you see this fault, take the following actions:

1. If the failed port or ports are located in an expansion module, remove and re-insert the module.

   Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

2. Remove and re-insert the SFP or SFP+ and ensure the SFP or SFP+ is seated properly.
3. Insert the suspected faulty SFP or SFP+ into a working port. If the working port becomes faulty, then the SFP or SFP+ is faulty. Consider replacing the faulty SFP or SFP+.
4. If the SFP or SFP+ is working, then the module hardware is faulty.
   a. If the fixed module is affected, consider replacing the fabric interconnect.
   b. If an expansion module is affected, consider replacing the faulty module.

   Schedule a downtime for the Cisco UCS instance to replace the hardware.

TestForwardingEnginePort

Details

Severity: Major

Customer Notification: Yes

Service Request: Yes, if ports_failed > 25%

Cisco UCS Manager CLI: show diagnostic result module all

Call Home Support: 3.0, 3.1

Explanation

One or more ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. the network connectivity to the devices connected on the failed ports is affected.

Recommended Action

If you see this fault, take the following actions:

1. If the failed port or ports are located in an expansion module, remove and re-insert the module.

   Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

2. Remove and re-insert the SFP or SFP+ and ensure the SFP or SFP+ is seated properly.
3. Insert the suspected faulty SFP or SFP+ into a working port. If the working port becomes faulty, then the SFP or SFP+ is faulty. Consider replacing the faulty SFP or SFP+.
4. If the SFP or SFP+ is working, then the module hardware is faulty.
   a. If the fixed module is affected, consider replacing the fabric interconnect.

b. If an expansion module is affected, consider replacing the faulty module.

Schedule a downtime for the Cisco UCS instance to replace the hardware.

TestFrontPort

Details

Severity: Major

Customer Notification: Yes

Service Request: Yes, if ports_failed > 25%

Cisco UCS Manager CLI: show diagnostic result module all

Call Home Support: 3.0, 3.1

Explanation

One or more ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. The network connectivity to the devices connected on the failed ports is affected.

Recommended Action

If you see this fault, take the following actions:

1. Move the devices connected on the affected ports to other functional ports of the fabric interconnect or to another fabric interconnect.
2. If the failed port or ports are located in an expansion module, do the following:
   a. Remove and re-insert the module.

      Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

   b. If the problem persists and if all of the ports are required to be functional on the fabric interconnect, schedule a downtime and replace the expansion module.
3. If the failed port or ports are located in the fixed module and all ports are required to be functional on the fabric interconnect, schedule a downtime and replace the fabric interconnect.

TestInbandPort

Details

Severity: Major

Customer Notification: Yes

Service Request: Yes

Cisco UCS Manager CLI: show diagnostic result module all

Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because the inband connectivity to the fabric interconnect is experiencing a failure. The fabric interconnect uses inband connectivity for the control plane protocols to connect to

peers such as servers, LAN switches, and SAN switches. Examples of these control plane protocols include DCX, STP, LACP, and FSPF. If a fabric interconnect cannot run the appropriate control plane protocols, it can no longer function and the Cisco UCS Manager shuts down all of the ports on the fabric interconnect to avoid topology problems.

Recommended Action

If you see this fault, schedule a downtime and replace the fabric interconnect.

TestFabricEngine

Details

Severity: Major

Customer Notification: Yes

Service Request: Yes

Cisco UCS Manager CLI: show diagnostic result module all

Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because the fabric ASIC has reported a major failure. Connectivity among all of the ports depends upon the fabric ASIC. Therefore, the Cisco UCS Manager shuts down all ports on the fabric interconnect.

Recommended Action

If you see this fault, schedule a downtime and replace the fabric interconnect.

TestSPROM

Details

Severity: Major

Customer Notification: Yes

Service Request: Yes

Cisco UCS Manager CLI: show diagnostic result module all

Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs when the Cisco UCS Manager cannot bring the affected module online because the module type is unidentified. For the expansion modules, the Cisco UCS Manager determines the module type from information stored in the module SPROM. If you see this error, the checksum calculation for the SPROM content has most likely failed.

This fault can only occur on the expansion modules. It cannot occur on the fixed module.

Recommended Action

If you see this fault, take the following actions:

1. Move the devices connected on the affected ports to other functional ports of the fabric interconnect or to another fabric interconnect:
2. Remove and re-insert the module to ensure that all pins are in good contact with the backplane.

Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

3. If the problem persists after multiple re-insertions, schedule a downtime and replace the faulty module.

TestOBFL

Details

Severity: Minor

Customer Notification: Yes

Service Request: Yes

Cisco UCS Manager CLI: show diagnostic result module all

Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because the onboard fault logging (OBFL) flash has failed. The Cisco UCS Manager logs hardware failure messages to this flash component. That logging function is lost. However, other logs, such as the syslog, are not affected and can continue to work normally.

This fault does not affect the normal operation of the fabric interconnect. The fault can only occur on the fixed module. It cannot occur on the expansion modules.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at http://www.cisco.com/tac. Also refer to the *Release Notes for Cisco UCS Manager and the Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

TestLED

Details

Severity: Minor

Customer Notification: Yes

Service Request: No

Cisco UCS Manager CLI: show diagnostic result module all

Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs when the Cisco UCS Manager cannot access the LED controls on a module. However, because the LED control uses the same transport mechanism that controls other key components on a module, this fault can indicate other failures. This fault can be caused by a bent pin on the module or fabric interconnect.

This fault can only occur on the expansion modules. It cannot occur on the fixed module.

Recommended Action

If you see this fault, take the following actions:

1. Move the devices connected on the affected ports to other functional ports of the fabric interconnect or to another fabric interconnect:

2. Remove and re-insert the module to ensure that all pins are in good contact with the backplane.

   Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

3. If this failure continues after re-insertion, insert this module into a known good fabric interconnect to determine whether the same failure occurs.

4. If the problem persists, schedule a downtime and replace the faulty module.

Environmental Faults Raised by a Fabric Interconnect

Temperature Alarm

Details

Severity: Major

Customer Notification: Yes

Service Request: No

Cisco UCS Manager CLI: show environment

Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because the temperature sensor reports that the affected chassis has exceeded the major or minor threshold value and is at a dangerously high temperature. If the operating temperature is not reduced, the system shuts down the affected chassis to avoid causing permanent damage. The chassis is powered back on after the temperature returns to a reasonable level.

Each chassis needs at least seven functional fans to maintain operating temperature.

Recommended Action

If you see this fault, take the following actions:

1. If the fault report includes **fan_failure_found**, do the following:

   a. In either the Cisco UCS Manager CLI or the Cisco UCS Manager GUI, check the status of the affected fan to determine whether the temperature-related alarm is due to the failure of a fan.

   b. Ensure that a minimum of seven fans are installed in the chassis and are functioning properly.

   c. Check the fan-related syslog messages to see the exact reason for the failure. For example, the fan may have become non-operational.

   d. Replace the faulty fan to resolve the issue.

2. If the fault report includes **temp_current >= maj_threshold or temp_current =< min_threshold**, do the following:

   a. In either the Cisco UCS Manager CLI or the Cisco UCS Manager GUI, view the acceptable temperature and voltage parameters and determine how much of the outlet or inlet temperature has reached or exceeded over the major or minor threshold value.

   b. Verify the following to ensure that the site where the chassis is installed meets the site guidelines:

      - The area is dry, clean, well-ventilated and air-conditioned.

- The air conditioner is working correctly and maintains an ambient temperature of 0 to 40 degrees C.
- The chassis is installed in an open rack whenever possible. If the installation on an enclosed rack is unavoidable, ensure that the rack has adequate ventilation.
- The ambient airflow is unblocked to ensure normal operation. If the airflow is blocked or restricted, or if the intake air is too warm, an over temperature condition can occur.
- The clearance around the ventilation openings of the chassis are at least 6 inches (15.24 cm).
- The chassis is not in an overly congested rack or is not directly next to another equipment rack. Heat exhaust from other equipment can enter the inlet air vents and cause an over temperature condition.
- The equipment near the bottom of a rack is not generating excessive heat that is drawn upward and into the intake ports of the chassis. The warm air can cause an over temperature condition.
- The cables from other equipment does not obstruct the airflow through the chassis or impair access to the power supplies or the cards. Route the cables away from any field-replaceable components to avoid disconnecting cables unnecessarily for equipment maintenance or upgrades.

PowerSupplyFailure

Details

Severity: Major

Customer Notification: Yes

Service Request: Yes

Cisco UCS Manager CLI: show environment

Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because a failure was recorded in the affected power supply unit and the affected component is working with only one power supply unit.

Recommended Action

If you see this fault, take the following actions:

1. Check the power supply unit that has the problem, as follow:
   - In the Cisco UCS Manager CLI, execute the show environment power command
   - In the Cisco UCS Manager GUI, view the PSUs tab of the Chassis node on the Equipment tab.
2. Verify that the power cord is properly connected to the power supply and to the power source.
3. Ensure that the fabric interconnect is supplied with 220V (this is the only supported power supply configuration).
4. Ensure that the power supply is properly inserted and plugged in.

5. If problem persists, remove and re-insert the power-supply unit.
6. If the power supply light is still not green and the status continues to show fail or shutdown, replace the faulty power supply unit.

TEMPERATURE_ALARM --- Sensor

Details

Severity: Major

Customer Notification: Yes

Service Request: Yes

Cisco UCS Manager CLI: show environment

Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because the Cisco UCS Manager cannot access a temperature sensor. As a result, the Cisco UCS Manager cannot monitor or regulate the temperature for the affected component. The affected temperature sensor could be for a chassis, power supply, or module.

Recommended Action

If you see this fault, take the following actions:

1. View the logs to determine the set of sensors that has failed, as follow:
   - In the Cisco UCS Manager CLI, execute the show logging command
   - In the Cisco UCS Manager GUI, view the logs under the Faults, Events, and Audit Log node on the Admin tab.
2. If the failed sensors are on an expansion module or a power supply, do the following:
   a. Remove and re-insert the power supply or module.

      Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

   b. If the failure continues to persist after multiple re-insertions, replace the faulty power supply unit or the module.
3. If the failed sensors are on the fixed module, replace the fabric interconnect as it can no longer regulate and monitor the chassis temperature.

TestFAN -- fan speed speed out of range >= expected. speed rpm

Details

Severity: Major

Customer Notification: Yes

Service Request: No

Cisco UCS Manager CLI: show environment

Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because the Cisco UCS Manager has detected a fan that is running at a speed that is too slow or too fast. A malfunctioning fan can affect the operating temperature of the chassis.

Recommended Action

If you see this fault, take the following actions:

1. If the fan is running below the expected speed, ensure that the fan blades are not blocked.
2. If the fan is running above the expected speed, remove and re-insert the fan.

Multiple fans missing or failed

Details

Severity: Major

Customer Notification: Yes

Service Request: No

Cisco UCS Manager CLI: show environment

Explanation

This fault typically occurs because the Cisco UCS Manager has detected multiple fan failures. The malfunctioning fans can result in high operating temperatures, affect performance, and cause the Cisco UCS Manager to shut down the affected component.

Recommended Action

If you see this fault, take the following actions:

1. If the chassis fans have failed, do the following:
   a. Check the fan status.
   b. Ensure that at least seven fans are installed and functioning properly.
   c. Check the fan-related syslog messages to see the exact reason for the failure. The fans may have become non-operational.
   d. Replace the faulty fans to resolve the issue.
2. If the power supply fans have failed and the power supply is operational, do the following:
   a. Check the fan status.
   b. Remove and re-insert the power supply and verify whether the fan is operational.
   c. If the problem persists, replace the power-supply.

One fan missing or failed

Details

Severity: Minor

Customer Notification: Yes

Service Request: No

Cisco UCS Manager CLI: show environment

Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because the Cisco UCS Manager has determined that a single fan is missing or has failed. A single missing or malfunctioning fan does not affect performance. A minimum of seven fans are required for a chassis to be operational.

Recommended Action

If you see this fault, take the following actions:

1. If the chassis fans have failed, do the following:
   a. Check the fan status.
   b. Ensure that at least seven fans are installed and functioning properly.
   c. Check the fan-related syslog messages to see the exact reason for the failure. The fan may have become non-operational.
   d. Replace the faulty fan to resolve the issue.
2. If the power supply fans have failed and the power supply is operational, do the following:
   a. Check the fan status.
   b. Remove and re-insert the power supply and verify whether the fan is operational.
   c. If the problem persists, replace the power-supply.

Faults Raised by Syslog

No license installed for feature, is on grace license, will expire in DD HH

Details

Severity: Major

Customer Notification: Yes

Service Request: No

Cisco UCS Manager CLI: show logging

Call Home Support: 3.0, 3.1

Explanation

The evaluation license installed for the affected feature is running under a grace period. The grace period expires on the date shown in the log at which time the Cisco UCS Manager disables the feature. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

The impact on performance depends upon whether the affected feature is implemented.

Recommended Action

If you see this fault, obtain a permanent license for the affected feature through one of the following channels:

- Contact your local Cisco sales representative.
- Use the ordering tool at https://www.cisco.com/c/en/us/buy.html.

License for feature, will expire in HH MM

Details

Severity: Major

Customer Notification: Yes

Service Request: No

Cisco UCS Manager CLI: show logging

Call Home Support: 3.0, 3.1

Explanation

The evaluation license installed for the affected feature expires within the number of hours and minutes listed in the alert. When that period expires, the Cisco UCS Manager disables the feature. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

Recommended Action

If you see this fault, obtain a permanent license for the affected feature through one of the following channels:

- Contact your local Cisco sales representative.
- Use the ordering tool at https://www.cisco.com/c/en/us/buy.html.

License has expired for feature

Details

Severity: Major

Customer Notification: Yes

Service Request: No

Cisco UCS Manager CLI: show logging

Call Home Support: 3.0, 3.1

Explanation

The evaluation license installed for the affected feature has expired, and the Cisco UCS Manager has disabled the feature. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

Recommended Action

If you see this fault, obtain a permanent license for the affected feature through one of the following channels:

- Contact your local Cisco sales representative.

- Use the ordering tool at https://www.cisco.com/c/en/us/buy.html.

License file is missing for feature

Details

Severity: Major

Customer Notification: Yes

Service Request: No

Cisco UCS Manager CLI: show logging

Call Home Support: 3.0, 3.1

Explanation

The previously installed license for the affected feature is missing from the fabric interconnect configuration storage, and the Cisco UCS Manager has disabled the feature. This issue can occur in rare circumstances such as flash corruption. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

Recommended Action

If you see this fault, re-install the license from the license backup.

Cisco UCS Faults and Call Home Priority Levels

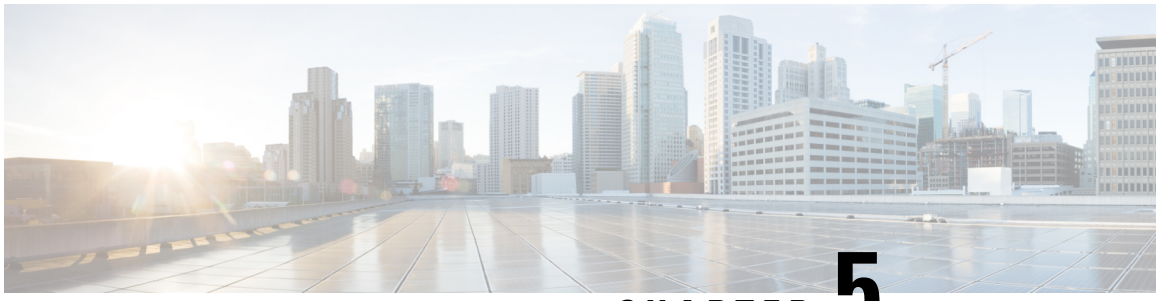
Because Call Home is present across several Cisco product lines, Call Home has developed its own standardized priority levels. The following table describes how the underlying Cisco UCS fault levels map to the Call Home priority levels.

Table 1: Mapping of Cisco UCS Faults and Call Home Priority Levels

dsfdsUCS Fault	Call Home Priority	SCH Priority
—	(9) Catastrophic	—
—	(8) Disaster	—
—	(7) Fatal	—
(6) Critical	(6) Critical	Major
(5) Major	(5) Major	Major
(4) Minor	(4) Minor	Minor
(3) Warning	(3) Warning	Minor
—	(2) Notification	Minor
(1) Info	(1) Normal	Minor

When Call Home information is communicated in an e-mail format, the priority levels and faults appear in the following places.

- The SCH priority is communicated in the e-mail subject line.
- The Call Home priority is communicated as a “Severity Level:” header to the e-mail message.
- The UCS fault information is attached in the body of the e-mail.
- The UCS fault severity is identified within the attachment as “severity=”.



CHAPTER 5

Transient Faults

- Troubleshooting Transient Faults, on page 2465
- Initial Setup and Discovery Faults, on page 2465
- Virtual Machine Startup Faults, on page 2469

Troubleshooting Transient Faults

Transient faults can occur during initial set up and discovery or when a server or virtual machine starts up. You can typically ignore these transient faults, as Cisco UCS Manager clears them automatically.

Initial Setup and Discovery Faults

The table describes the transient faults that you may see during the initial setup and discovery process. The Cisco UCS Manager clears these faults. If you see them during the initial setup or discovery process, you can safely ignore these faults.

Table 2: Transient Faults that Occur during Initial Setup and Discovery Process

Fault Code	Fault Text	Description
F16581	[FSM:STAGE:RETRY:]: user configuration to	The FSM could not send the user configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F16745	[FSM:STAGE:RETRY:]: QoS Classification Definition classification configuration on	The FSM could not send the quality of the service configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F16725	[FSM:STAGE:RETRY:]: VM profile configuration on external VM	The FSM could not send the VM profile configuration to the the subordinate fabric interconnect during the initial cluster configuration or the setup.

Fault Code	Fault Text	Description
F16580	[FSM:STAGE:RETRY:]: realm configuration to [illegible]	The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F16724	[FSM:STAGE:RETRY:]: external VM manager configuration on local [illegible]	The FSM could not send the VM manager configuration to the primary fabric interconnect during the initial cluster configuration or the setup.
F16579	[FSM:STAGE:RETRY:]: external aaa server configuration to [illegible]	The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F16749	[FSM:STAGE:RETRY:]: Uplink eth port configuration on [illegible]	The FSM could not send the eth-uplink configuration to the fabric interconnects during the initial cluster configuration or the setup.
F16749	[FSM:STAGE:RETRY:]: internal network configuration on [illegible]	The FSM could not send the internal network configuration to the fabric interconnects during the initial cluster configuration or the setup.
F16749	[FSM:STAGE:RETRY:]: Uplink fc port configuration on [illegible]	The FSM could not send the fibre channel uplink configuration to the fabric interconnects during the initial cluster configuration or the setup.
F16680	[FSM:STAGE:RETRY:]: Enable virtual interface on local fabric [illegible]	The FSM could not send the virtual interface configuration to the fabric interconnects during the initial cluster configuration or the setup.
F16579	[FSM:STAGE:RETRY:]: keyring configuration on [illegible]	The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.

Fault Code	Fault Text	Description
F16539	[FSM:STAGE:RETRY:]: Fabric interconnect mode configuration to primary (FSM-STAGE:sam:dme:FabricCloudSwitchModeConfigPe)	The FSM could not send the end-host mode configuration on to the primary fabric interconnect during the initial cluster configuration or the setup.
F0429	Fabric Interconnect A, HA functionality not ready	The cluster configuration cannot be completed until the chassis discovery is completed.
F0400	Chassis 1 connectivity configuration: un-acknowledged	Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. Cisco UCS Manager reacknowledges the chassis to activate the other links.
F0401	IOM 1/2 (B) current connectivity does not match discovery policy: unsupported-connectivity	Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. Cisco UCS Manager can clear this fault when the communication is established between the chassis and the fabric interconnect with that link.
F0440	Chassis discovery policy conflict: Link IOM 1/2/2 to fabric interconnect B:1/1 not configured	Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. Until the discovery is successful with that link, the remaining links cannot be marked as active. Cisco UCS Manager can clear this fault when the communication is established between the chassis and the fabric interconnect with that link.
F0332	AssociatePnuOSLocalDiskConfig fails with Service-Unavailable	During discovery, the server association failed due to an error when configuring the local disk controller. The associated remote invocation error code is 4106.

Fault Code	Fault Text	Description
F0277	ether port 1 on fabric interconnect B oper state: link-up, reason: FEX not configured	Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. Until the discovery is successful with that link, the remaining links cannot be marked as active.
F0276	ether port 4 on fabric interconnect B oper state: link-down, reason: Link failure or not-connected	One or more of the links on the chassis flapped during the initial discovery. This fault is generated when the link is down during the flapping.
F0206	Adapter 1/2/1 is unreachable	During discovery, the adapter information cannot be accessed from the server. This fault clears as soon as the information is available.
F0283	VIF 1 / 2 B-42/44 down, reason: Bound Physical Interface Down	The internal VIF that Cisco UCS Manager uses during discovery failed.
F0367	No link between IOM port 1/1/2 and fabric interconnect A:1/2	The ethernet server ports flapped on the fabric interconnect during the initial discovery, because the discovery policy was configured for more than one link. Cisco UCS Manager clears this fault when the initial discovery succeeds with one link and the other links can be marked as active.
F0399	Current connectivity for chassis 1 does not match discovery policy: unsupported-connectivity	Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. Until the discovery is successful with that link, the remaining links cannot be marked as active.
F16520	[FSM:STAGE:RETRY:]: Identify pre-boot environment agent on server 1/2 (FSM:STAGE:sam:dme:ComputeBladeDiscoverPnOS:Identify)	The FSM failed to identify the pre-boot environment on the server during discovery.

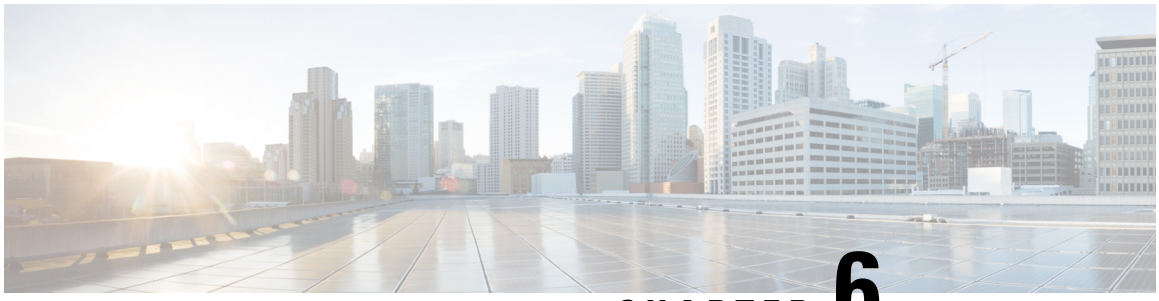
Fault Code	Fault Text	Description
F77960	[FSM:STAGE:REMOTE-ERROR]: Result: end-point-unavailable Code: unspecified Message: Waiting for BIOS POST Completion information from IBMC(sam:dme:ComputeBladeDiscoverBiosPostCompletion)	The FSM did not receive a response from the server during discovery and is waiting for the BIOS POST completion information.
F0320	Server 1/1 (service profile:) has an invalid FRU: mismatch-identity-unestablishable	Cisco UCS Manager could not identify the FRUs from the servers during initial discovery.
F77959	[FSM:STAGE:REMOTE-ERROR]: Result: unidentified-fail Code: ERR-0505-IBMC-fru-retrieval-error Message: Could not get Fru from 7f060101, dn=fabric/server/chassis-1/slot-1 (sam:dme:FabricComputeSlotEpIdentify:ExecuteLocal)	Cisco UCS Manager could not identify the FRUs from the servers during initial discovery.
F16406	[FSM:STAGE:RETRY:]: triggering chassis discovery via IOM [FSM:STAGE:sam:dme:EquipmentChassisDiscoverChassis)	In a cluster configuration, after Cisco UCS Manager discovers the chassis through the I/O module connected to the primary fabric interconnect, it raises discovery through the I/O module connected to the secondary fabric interconnect. F0401

Virtual Machine Startup Faults

When you power on a virtual machine on a server that has network adaptors connected to a distributed virtual wwitch through a port profile, the Events tab of the VMware vCenter may display the following event:

```
Virtual machine powered On with vNICs connected to dvPorts that have a
port level configuration, which might be different from the dvPort group
configuration.
```

If you see this event, you can safely ignore it.



CHAPTER 6

System Event Log Messages

- Information about System Event Log Messages, on page 2471
- SEL File, on page 2471
- SEL Policy, on page 2471

Information about System Event Log Messages

The system event log (SEL) resides on the CIMC in NVRAM. It records most server-related events, such as over- and under-voltage, temperature events, fan events, events from the BIOS, and so on. It also records platform errors such as memory errors, CPU errors, and so on.

The SEL is mainly used for troubleshooting purposes. UCSM uses SEL records to provide mechanisms for proactive health monitoring of the system (for example, faults and error statistics).

Note For more information about the SEL, including how to view the SEL for each server and configure the SEL policy, see the Cisco UCS configuration guides accessible through the Cisco UCS B-Series Servers Documentation Roadmap.

SEL File

The SEL file is approximately 40 KB in size, and no further events are recorded when it is full. It must be cleared before additional events can be recorded.

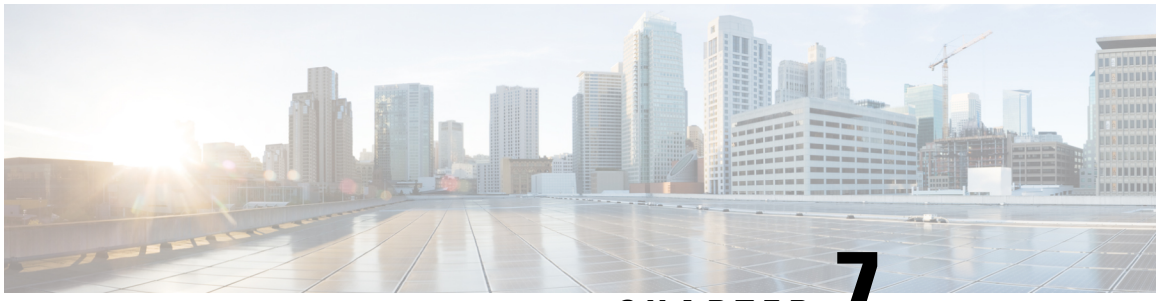
SEL Policy

The SEL policy can be configured to backup the SEL to a remote server, and, optionally to clear the SEL after a backup operation occurs. A back up operation can be triggered based upon the following actions defined by the user as a part of SEL backup policy.

- On SEL log full
- On change of server association

- On expiration of timer interval, and so on.

User can also manually backup or clear the SEL.



CHAPTER 7

Baseboard Management Controller Messages

- Baseboard Management Controller Messages, on page 2473
- SEL Device, on page 2473
- Sensor Data Record Device, on page 2474
- Event Receiver Device, on page 2475
- BMC Commands, on page 2475
- SEL Record Examples, on page 2479

Baseboard Management Controller Messages

The Baseboard Management Controller (BMC) provides the interface to the System Event Log (SEL). The SEL can be accessed from the system side as well as from other external interfaces. The BMC uses a message handler to route messages between the different interfaces. It also monitors and manages the system board, including temperatures and voltages.

SEL Device

The SEL is a nonvolatile repository for system events. The SEL device is separate from the event receiver device and accepts commands to manage the contents.

SEL Event Record Format

The SEL messages are logged as a 16 byte string that contains the information about the change that triggered the message.

- Byte 1 and 2 is the record ID.
- Byte 3 is the record type.
- Bytes 4, 5, 6, and 7 is the timestamp
- Bytes 8 and 9 is the generator ID.
- Byte 10 is the version of the event message format.
- Byte 11 is the sensor type.

- Byte 12 is the sensor number.
- Byte 13 is either the event dir (assertion/deassertion event) or the event type.
- Byte 14, 15, and 16 are links to the event data field contents and determines whether the sensor class is about threshold, discrete, or original equipment manufacturer (OEM) settings.

Sensor Initialization Agent

The Sensor Initialization Agent is not a logical device, but a collection of functions and services specific to handling SDR information. The Sensor Initialization Agent works directly with the content of SDRs, in particular, with the sensor data records and the device locator records.

The agent uses the SDR information for sensor and IPMB device initialization during system startup. The agent interprets sensor data records and is directed by the init required fields to load thresholds to sensors that have the threshold initialization required bit set in the SDR records. Other bits in the record direct the agent to enable sensors and devices that come up with sensors, events, or both disabled.

The agent function runs at system power-up and at any system hard resets. We recommend that you run the agent function when the BMC first receives standby power.

In systems that implement power management, the system management software takes additional steps to restore intermediate settings after the system has powered up.

Sensor Data Record Device

The Sensor Data Record (SDR) device provides the interface to the sensor data records. A set of commands store and retrieve sensor data records. The SDR device provides a set of commands for discovering, configuring, and accessing sensors.

SDR Repository Interface

The SDR repository holds sensor, device locator, and entity association records for all sensors in the platform management subsystem. The BMC provides this interface to the SDR repository. The sensor data records can be accessed by using SDR commands.

Modal and Nonmodal SDR Repositories

There are two SDR repository implementations: modal and nonmodal.

A modal SDR repository is only updated when the controller is in SDR repository update mode. SDR information is kept in nonvolatile storage devices. Lengthy write operations during update can be required, which can interfere with other controller operations. For example, the SDR repository can be stored in a flash device that also holds a portion of the management controller code. A modal SDR repository implementation allows the functions associated with that code to be temporarily unavailable during the update process.

A nonmodal SDR repository can be written to at any time. Writing to the SDR does not impact the operation of other commands in the management controller.

Event Receiver Device

Event messages are special messages sent to management controllers when they detect significant or critical system management events. This includes messages for events such as temperature threshold exceeded, voltage threshold exceeded, power fault, and so on. The device generating an event message notifies the system by sending the message to the event receiver device.

Messages from the event receiver device are directly written into the system event log. The appropriate **Add SEL Entry** command is sent directly to the SEL device.

BMC Commands

SEL, SDR, and event commands are designed so that the devices that implement those command sets are isolated from the contents of the message. The devices do not interpret the messages. The event receiver device receives and routes event messages. The SEL devices retrieve and store log entries. The SDR devices retrieve and store sensor data records.

SEL Device Commands

These are the available SEL device commands:

Table 3: SEL Device Commands

Command	Description
Get SEL Info	This command returns the number of entries in the SEL, the SEL command version, and the timestamp for the most recent entry and delete or clear.
Get SEL Allocation Info	This command returns the number of possible allocation units, the amount of usable free space (in allocation units), the allocation unit size (in bytes), and the size of the largest contiguous free region (in allocation units). The allocation unit size is the number of bytes in which storage is allocated. For example, if a 16 byte record is to be added, and the SEL has a 32 byte allocation unit size, the record takes up 32 bytes of storage.
Reserve SEL	This command sets the present owner of the SEL, as identified by the software ID or by the requester slave address from the command. The reservation process provides a limited amount of protection at repository access from the Intelligent Platform Management Interface (IPMB) when records are being deleted or incrementally read.

Command	Description
Get SEL Entry	This command retrieves entries from the SEL. The record data field in the response returns the 16 bytes of data from the SEL event record.
Add SEL Entry	This command enables the BIOS to add records to the system event log. Normally, the SEL device and the event receiver service are incorporated into the same management controller. In this case, BIOS or the system SMI handler adds its own events to the SEL by formatting an event message and sending it to the SEL device rather than by using this command.
Partial Add SEL Entry	This command is a version of the **Add SEL Entry** command. It allows the record to be incrementally added to the SEL. This command must be preceded by a **Reserve SEL** command. The first partial add must be to offset 0000h, and subsequent partial adds must be done sequentially, with no gaps or overlap between the adds.
Delete SEL Entry	This command deletes the specified entry in the SEL.
Clear SEL	This command erases the SEL contents. This process can take several seconds, based on the type of storage device. The command also shows the status of the erasure.
Get SEL Time	This command returns the time from the SEL device,which uses it for event timestamps.
Set SEL Time	This command initializes the time setting in the SEL device, which uses it for event timestamps.
Get Auxiliary Log Status	This command allows remote software to know whether new information has been added to machine check architecture (MCA) log. The MCA log is a storage area that can be implemented in Intel Itanium-based computer systems and holds information from an MCA handler running from system firmware.
Set Auxiliary Log Status	This command can be used by system software or firmware to set the status returned by the Get Auxiliary Log Status command. Some implementations mght use a private mechanism to set this status, in which case this command can not be provided even if the Get Auxiliary Log Status command is provided.

SDR Repository Device Commands

The following commands control the SDR repository device actions:

Table 4: SDR Repository Device Commands

Command	Description
Get SDR Repository Info	This command returns the SDR command version for the SDR repository. It also returns a timestamp for the last add, delete, or clear commands.
Get SDR Repository Allocation Info	This command returns the number of possible allocation units, the amount of usable free space (in allocation units), the allocation unit size (in bytes), and the size of the largest contiguous free region (in allocation units). The allocation unit size is the number of bytes in which storage is allocated. For example, if a 20 byte record is to be added, and the SDR repository has a 16 byte allocation unit size, then the record would take up 32 bytes of storage.
Reserve SDR Repository	This command sets the present owner of the repository, as identified by the software ID or the requester slave address from the command. The reservation process provides a limited amount of protection on repository access from the IPMB when records are being deleted or incrementally read.
Get SDR	This command returns the sensor record specified by the record ID. The command also accepts a byte range specification that allows a selected portion of the record to be retrieved (incremental read). The **Reserve SDR Repository** command must be issued first for an incremental read to an offset other than 0000h. (The **Get SDR Repository** Info command should be used to verify the version of the SDR repository before sending other SDR repository commands. The command format and operation could change between versions.)
Add SDR	This command adds the specified sensor record to the SDR repository and returns its record ID. The data passed in the request must contain all of the SDR data.
Partial Add SDR	This command is a version of the **Add SDR** command that allows the record to be incrementally added to the repository. This command must be preceded by a **Reserve SDR Repository** command. The first partial add must be to offset 0000h, and partial adds must be done sequentially, with no gaps or overlap between the adds.

Command	Description
Delete SDR	This command deletes the sensor record specified by record ID. The requester ID and the reservation ID must also match the owner of the SDR repository.
Clear SDR Repository	This command clears all records from the SDR repository and reinitializes the SDR repository subsystem. The requestor ID and reservation ID information must match the present owner of the SDR repository. We recommend that this command not be used within your utilities and system management software.
Get SDR Repository Time	This command returns the time setting from the SDR repository device, which the SDR repository devices uses for tracking when changes to the SDR repository are made.
Set SDR Repository Time	This command initializes the time setting in the SDR repository device, which the SDR repository devices uses for tracking when changes to the SDR repository are made.
Enter SDR Repository Update Mode	This command enters a mode that allows a subset of normal commands. Available commands are **Get Device ID**, **Get SDR**, **Add SDR**, **Partial Add SDR** and **Clear SDR Repository**.
Exit SDR Repository Update Mode	This command exits the SDR repository update mode and restores normal use of all commands.
Run Initialization Agent	This command runs the initialization agent and can also check the status of the agent.

Event Receiver Commands

The following commands can be executed on the event receiver device:

Table 5: Event Receiver Commands

Command	Description
Set Event Receiver	This is a global command to tell a controller where to send event messages. The slave address and LUN of the event receiver must be provided. A value FFh for the event receiver slave address disables the generation of event messages.
Get Event Receiver	This is a global command to retrieve the present setting for the event receiver slave address and LUN.

Command	Description
Platform Event Message	This command is a request for the BMC to process event data that the command contains. The data is logged to the SEL.

SEL Record Examples

Examples that are reported to the SEL Repository are provided here. The raw record contains 16 bytes and are dislayed in the examples as hexadecimal values. Following the arrow is the translation of the data. The |-pipes are separators for ease of reading the translation.

Device Presence Changes

These are examples of presence assertions. This shows a boot-up process.

CHAPTER 8

BIOS Messages

- POST Error Messages and Handling, on page 2481
- BIOS Message Severities, on page 2481
- BIOS Message Format, on page 2482
- BIOS Messages and Codes, on page 2482
- Cisco BIOS Messages and Codes, on page 2490

POST Error Messages and Handling

The BIOS outputs the current boot progress codes to the System Event Log (SEL) and to the UCS Manager. Progress codes are 32 bit quantities plus optional data. The 32 bits include class, subclass, and operation information. The class and subclass fields point to the type of hardware that is being initialized. The operation field represents the specific initialization activity.

Based on the data bit availability to display progress codes, a progress code can be customized to fit the data width. The higher the data bit, the higher the granularity of information that can be sent on the progress port. The progress codes can be reported by the system BIOS or optional ROMs.

BIOS Message Severities

BIOS messages have these severities:

- Minor—The system continues booting in a degraded state. The user might want to replace the unit. The POST Error Pause option setting in the BIOS setup does not have any effect on this error.
- Major—The POST Error Pause option setting in the BIOS setup determines whether the error manager pauses the system to allow the user to take immediate corrective action or the system continues the booting process.

Note For the **0048 Password check failed** message, the system halts, and after the next reset or reboot, displays the error code on the screen.

When the F2 key is pressed on the keyboard, the error message is displayed on the screen, and an error is logged to the SEL with the error code. The system cannot boot unless the error is resolved. The faulty part must be replaced, and the system must be restarted.

BIOS Message Format

The table describes the format used in BIOS messages.

Table 6:

Generator ID	Sensor Type Code	Sensor number	Type code	Event Data1	Event Data2	Event Data3
33h (BIOS POST)	**0Fh** (System Firmware Progress)	**0Fh** (System Firmware Progress)	**6Fh** (Sensor Specific Offset)	**A0h** (OEM Codes in Data2 and Data3)	**xxh** (Low Byte of POST Error Code)	**xxh** (Low Byte of POST Error Code)

BIOS Messages and Codes

The table lists messages that are from the baseline Intel BIOS and are present in the Cisco version of the BIOS.

Table 7: List of BIOS messages and codes

Error Code	Severity	Error Message	Possible Needed Response
9687	Fatal	DXE core component encountered a illegal software state error.	Replace faulty part and restart.
8565	Major	DIMM_C2 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_C2.
8567	Major	DIMM_D2 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_D2.

Error Code	Severity	Error Message	Possible Needed Response
85A2	Major	DIMM_B1 uncorrectable ECC error encountered.	Replace DIMM_B1.
85AB	Major	DIMM_F2 uncorrectable ECC error encountered.	Replace DIMM_F2.
9000	Major	Unspecified processor component has encountered a non-specific error.	Restart. If failure, replace.
0xB6A3	Major	DXE boot services driver unrecognized.	Restart. If failure, replace.
8604	Minor	Chipset reclaim of noncritical variables complete.	Restart. If failure, replace.
9223	Minor	Keyboard component was not detected.	Restart. If failure, replace.
9266	Minor	Local console component encountered a controller error.	Restart. If failure, replace.
9286	Minor	Remote console component encountered a controller error.	Restart. If failure, replace.
94C6	Minor	LPC component encountered a controller error.	Restart. If failure, replace.
95A7	Minor	PCI component encountered a read error.	Restart. If failure, replace.
9609	Minor	Unspecified software component encountered a start error.	Restart. If failure, replace.
0xA028	Minor	Processor component encountered a high-voltage error.	Restart. If failure, replace.
0xA501	Minor	ATA/ATPI ATA SMART is disabled.	Enable.
192	Fatal	Processor 0x cache size mismatch detected.	Replace faulty part and restart.

Error Code	Severity	Error Message	Possible Needed Response
194	Fatal	Processor 0x family mismatch detected.	Replace faulty part and restart.
196	Fatal	Processor 0x model mismatch.	Replace faulty part and restart.
197	Fatal	Processor 0x speeds mismatched.	Replace faulty part and restart.
198	Fatal	Processor 0x family is not supported.	Replace faulty part and restart.
9667	Fatal	PEI module component encountered an illegal software state error.	Replace faulty part and restart.
96A7	Fatal	DXE boot services driver component encountered an illegal software state error.	Replace faulty part and restart.
960000000	Fatal	SMM driver component encountered an illegal software state error.	Replace faulty part and restart.
0xA421	Fatal	PCI component encountered a SERR error.	Replace faulty part and restart.
0xA5A1	Fatal	PCI Express component encountered a SERR error.	Replace faulty part and restart.
12	Major	CMOS date / time not set.	Set the time and date. how?
48	Major	Password check failed.	Verify user password. Restart. If failure, apply admin password. Replace if necessary.
113	Major	Fixed media SAS RAID firmware cannot run properly.	Reflash firmware. Restart. If failure, replace.
140	Major	PCI component encountered a PERR error.	Restart. If failure, replace.
141	Major	PCI resource conflict.	Restart. If failure, replace.

Error Code	Severity	Error Message	Possible Needed Response
146	Major	PCI out of resources error.	Review resource allocation. Remove unneeded resources. Restart. If failure, replace.
195	Major	Processor 0x Intel QPI speed mismatch.	Restart. If failure, replace.
019F	Major	Processor and chipset stepping configuration is unsupported.	Restart. If failure, replace.
5220	Major	CMOS/NVRAM configuration cleared	Reset configurations. Restart. If failure, replace.
5221	Major	Passwords cleared by jumper.	Reset passwords. Restart. If failure, replace.
5224	Major	Password clear jumper is set.	Restart. If failure, replace.
8160	Major	Processor 01 unable to apply microcode update.	Restart. If failure, replace.
8161	Major	Processor 02 unable to apply microcode update.	Restart. If failure, replace.
8190	Major	Watchdog timer failed on last boot.	Restart. If failure, replace.
8198	Major	OS boot watchdog timer failure.	Reset timer. If failure, replace.
8300	Major	Baseboard management controller failed self test.	Restart. If failure, replace.
84F2	Major	Baseboard management controller failed to respond.	Restart. If failure, replace.
84F3	Major	Baseboard management controller in update mode.	Complete update, then restart.
84F4	Major	Sensor data record empty.	Review files. If none, restart.
8500	Major	Memory component could not be configured in the selected RAS mode.	Restart. If failure, replace.
8501	Major	DIMM population error.	Restart. If failure, replace.

Error Code	Severity	Error Message	Possible Needed Response
8502	Major	CLTT configuration failure error.	Restart. If failure, replace.
8520	Major	DIMM_A1 failed self test (BIST).	Replace DIMM_A1.
8521	Major	DIMM_A2 failed self test (BIST).	Replace DIMM_A2.
8522	Major	DIMM_B1 failed self test (BIST).	Replace DIMM_B1.
8523	Major	DIMM_B2 failed self test (BIST).	Replace DIMM_B2.
8524	Major	DIMM_C1 failed self test (BIST).	Replace DIMM_C1.
8525	Major	DIMM_C2 failed self test (BIST).	Replace DIMM_C2.
8526	Major	DIMM_D1 failed self test (BIST).	Replace DIMM_D1.
8527	Major	DIMM_D2 failed self test (BIST).	Replace DIMM_D2.
8528	Major	DIMM_E1 failed self test (BIST).	Replace DIMM_E1
8562	Major	DIMM_B1 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_B1
8563	Major	DIMM_B2 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_B2.
8564	Major	DIMM_C1 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_C1.
8566	Major	DIMM_D1 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_D1.

Error Code	Severity	Error Message	Possible Needed Response
8568	Major	DIMM_E1 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_E1.
8569	Major	DIMM_E2 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_E2.
856A	Major	DIMM_F1 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_F1.
856B	Major	DIMM_F2 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_F2.
85A0	Major	DIMM_A1 uncorrectable ECC error encountered.	Replace DIMM_A1.
85A1	Major	DIMM_A2 uncorrectable ECC error encountered.	Replace DIMM_A2.
85A3	Major	DIMM_B2 uncorrectable ECC error encountered.	Replace DIMM_B2.
85A4	Major	DIMM_C1 uncorrectable ECC error encountered.	Replace DIMM_C1.
85A5	Major	DIMM_C2 uncorrectable ECC error encountered.	Replace DIMM_C2.
85A6	Major	DIMM_D1 uncorrectable ECC error encountered.	Replace DIMM_D1.
85A7	Major	DIMM_D2 uncorrectable ECC error encountered.	Replace DIMM_D2.
85A8	Major	DIMM_E1 uncorrectable ECC error encountered.	Replace DIMM_E1.
85A9	Major	DIMM_E2 uncorrectable ECC error encountered.	Replace DIMM_E2.
85AA	Major	DIMM_F1 uncorrectable ECC error encountered.	Replace DIMM_F1.

Error Code	Severity	Error Message	Possible Needed Response
92A3	Major	Serial port component was not detected.	Restart if component exists. If failure, replace. If no component, add.
92A9	Major	Serial port component encountered a resource conflict error.	Restart. If failure, replace.
94C9	Major	LPC component encountered a resource conflict error.	Restart. If failure, replace.
0xA022	Major	Processor component encountered a mismatch error.	Restart. If failure, replace.
0xA5A4	Major	PCI Express IBIST error.	Restart. If failure, replace.
0108	Minor	Keyboard component encountered a locked error.	Unlock the keyboard. how?
0109	Minor	Keyboard component encountered a stuck key error.	Restart. If failure, replace.
0193	Minor	Processor 0x stepping mismatch.	Restart. If failure, replace.
8180	Minor	Processor 0x microcode update not found.	Restart. If failure, replace.
84FF	Minor	System event log full.	Export event log and delete files.
9226	Minor	Keyboard component encountered a controller error.	Restart. If failure, replace.
9243	Minor	Mouse component was not detected.	Restart.
9246	Minor	Mouse component encountered a controller error.	Restart.
9268	Minor	Local uonsole component encountered an output error.	Restart.

Error Code	Severity	Error Message	Possible Needed Response
9269	Minor	Local uonsole component encountered a resource conflict error.	Restart.
9287	Minor	Remote uonsole component encountered an input error.	Restart.
9288	Minor	Remote uonsole component encountered an output error.	Restart.
92C6	Minor	Serial port controller error.	Restart. If failure, replace.
92C7	Minor	Serial port component encountered an input error.	Restart. If failure, replace.
92C8	Minor	Serial port component encountered an output error.	Restart. If failure, replace.
9506	Minor	ATA/ATPI component encountered a controller error.	Restart. If failure, replace.
95A6	Minor	PCI component encountered a controller error.	Restart. If failure, replace.
95A8	Minor	PCI component encountered a write error.	Restart. If failure, replace.
9641	Minor	PEI Core component encountered a load error.	Restart. If failure, replace.
96AB	Minor	DXE boot services driver component encountered invalid configuration.	Restart. If failure, replace.
0xA000	Minor	TPM device not detected.	Add TPM device, otherwise replace.
0xA001	Minor	TPM device missing or not responding.	Add TPM device if needed, otherwise replace.
0xA002	Minor	TPM device failure.	Replace TMP device.
0xA003	Minor	TPM device failed self test.	Replace TPM device.

Error Code	Severity	Error Message	Possible Needed Response
0xA027	Minor	Processor component encountered a low-voltage error.	Proceed but monitor. If other errors appear, replace.
0xA500	Minor	ATA/ATPI ATA bus SMART not supported.	Add, then restart. If fails again, replace.
0xA5A0	Minor	PCI Express component encountered a PERR error.	Restart. If fails again, replace.
0xA6A0	Minor	DXE boot services driver Not enough memory available to shadow a legacy option ROM.	Proceed if shadow memory is not required. Otherwise, remove unnecessary options to free memory.

Cisco BIOS Messages and Codes

The table describes additional messages unique to the Cisco BIOS.

Table 8: Additional messages unique to Cisco BIOS

Code	Severity	message	Added/Changed	Action
E000	Major	Memory RAS mirror fail.	Added.	Replace failed DIMMs.
E001	Major	Memory RAS spare fail.	Added.	Replace failed DIMMs.
E00A	Major	Memory BMC SPD read fail.	Added.	Replace failed DIMMs.
E1xx	Major	DIMM xx disabled.	Changed from 854x.	Replace any failed DIMMs and verify DIMMs in valid configuration
E2xx	Major	DIMM xx component encountered a Serial Presence Detection (SPD) fail error.	Changed from 856x.	Replace failed DIMM.
E3xx	Major	DIMM xx encountered a mismatch error.	Added.	Replace mismatched DIMM.

Code	Severity	message	Added/Changed	Action
E4xx	Major	DIMM xx failed self test (BIST).	Changed from 852x.	Replace failed DIMM.
E500	Major	Memory-other DIMM failed.	Added.	Replace failed DIMM.
E600	Major	Memory-invalid population.	Added.	Replace failed DIMM.
E700	Major	Memory-mismatch population.	Added.	Replace failed DIMM.
E800	Major	Memory-SPD error.	Added.	Replace failed DIMM.
E900	Major	Memory-platform specific.	Added.	Replace failed DIMM.
D000	Fatal (blade will not boot)	Unsupported SPI flash.	Added.	Blade manufactured with wrong SPI flash part. Return materials authorization (RMA) the blade.
