CHAPTER 1

System Event Log Messages

- Information about System Event Log Messages, on page 1
- SEL File, on page 1
- SEL Policy, on page 1

Information about System Event Log Messages

The system event log (SEL) resides on the CIMC in NVRAM. It records most server-related events, such as over- and under-voltage, temperature events, fan events, events from the BIOS, and so on. It also records platform errors such as memory errors, CPU errors, and so on.

The SEL is mainly used for troubleshooting purposes. UCSM uses SEL records to provide mechanisms for proactive health monitoring of the system (for example, faults and error statistics).

Note For more information about the SEL, including how to view the SEL for each server and configure the SEL policy, see the Cisco UCS configuration guides accessible through the Cisco UCS B-Series Servers Documentation Roadmap.

SEL File

The SEL file is approximately 40 KB in size, and no further events are recorded when it is full. It must be cleared before additional events can be recorded.

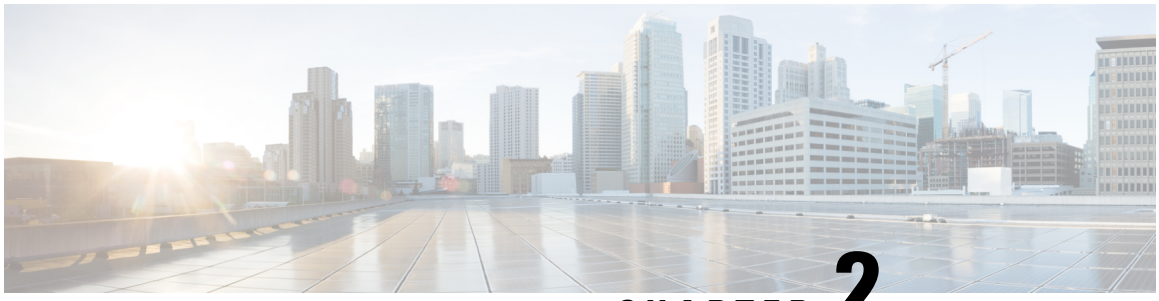
SEL Policy

The SEL policy can be configured to backup the SEL to a remote server, and, optionally to clear the SEL after a backup operation occurs. A back up operation can be triggered based upon the following actions defined by the user as a part of SEL backup policy.

- On SEL log full
- On change of server association

- On expiration of timer interval, and so on.

User can also manually backup or clear the SEL.



CHAPTER 2

SEM Faults in Cisco UCS Manager

• Cisco UCS SEM Faults, on page 3

Cisco UCS SEM Faults

fltFabricComputeSlotEpMisplacedInChassisSlot

Fault Code: F0156

Message: Server, vendor([vendor]), model([model]), serial([serial]) in slot [chassisId]/[slotId] presence: [presence]

Explanation:

This fault typically occurs when Cisco UCS Manager detects a server in a chassis slot that does not match what was previously equipped in the slot.

Recommended Action: If you see this fault, take the following actions:

1. If the previous server was intentionally removed and a new one was inserted, reacknowledge the server.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: server-moved
mibFaultCode: F0156
mibFaultName: fltFabricComputeSlotEpMisplacedInChassisSlot
moClass: fabric:ComputeSlotEp
Type: equipment
autoCleared: true
Affected MO: fabric/server/chassis-[chassisId]/slot-[slotId]
```

fltFabricComputeSlotEpServerIdentificationProblem

Fault Code: F0157

Message: Problem identifying server in slot [chassisId]/[slotId]

Explanation: This fault typically occurs when Cisco UCS Manager encountered a problem identifying the server in a chassis slot.

Recommended Action: If you see this fault, take the following actions:

1. Remove and reinsert the server.
2. Reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: server-identification-problem
mibFaultCode: F0157
mibFaultName: fltFabricComputeSlotEpServerIdentificationProblem
moClass: fabric:ComputeSlotEp
Type: equipment
autoCleared: true
Affected MO: fabric/server/chassis-[chassisId]/slot-[slotId]
```

fltVnicEtherConfig-failed

Fault Code: F0169

Message: Eth vNIC [name], service profile [name] failed to apply configuration

Explanation: This fault typically occurs when Cisco UCS Manager could not place the vNIC on the vCon.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the server was successfully discovered.
2. Verify that the correct type of adapters are installed on the server.
3. Confirm that the vCon assignment is correct.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: configuration-failed
mibFaultCode: F0169
mibFaultName: fltVnicEtherConfigFailed
moClass: vnic:Ether
Type: configuration
autoCleared: true
Affected MO: org-[name]/lan-conn-pol-[name]/ether-[name]
Affected MO: org-[name]/ls-[name]/ether-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]/ether-[name]
```

fltVnicFcConfig-failed

Fault Code: F0170

Message: FC vHBA [name], service profile [name] failed to apply configuration

Explanation: This fault typically occurs when Cisco UCS Manager could not place the vHBA on the vCon.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the server was successfully discovered.

2. Verify that the correct type of adapters are installed on the server.
3. Confirm that the vCon assignment is correct.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: configuration-failed
mibFaultCode: F0170
mibFaultName: fltVnicFcConfigFailed
moClass: vnic:Fc
Type: configuration
autoCleared: true
Affected MO: org-[name]/ls-[name]/fc-[name]
Affected MO: org-[name]/san-conn-pol-[name]/fc-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]/fc-[name]
```

fltProcessorUnitInoperable

Fault Code: F0174

Message: Processor [id] on server [chassisId]/[slotId] operability: [operability]Processor [id] on rack server [id] operability: [operability]Processor [id] on server [chassisId]/[slotId]/[serverInstanceId] operability: [operability]

Explanation: This fault occurs in the unlikely event that processor is inoperable.

Recommended Action: If you see this fault, take the following actions:

1. If the fault occurs on a blade server processor, remove the server from the chassis and then reinsert it.
2. In Cisco UCS Manager, decommission and then recommission the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: F0174
mibFaultName: fltProcessorUnitInoperable
moClass: processor:Unit
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]
Affected MO: sys/rack-unit-[id]/board/cpu-[id]
```

fltProcessorUnitThermalNonCritical

Fault Code: F0175

Message: Processor [id] on server [chassisId]/[slotId] temperature: [thermal]Processor [id] on server [id] temperature: [thermal]Processor [id] on server [chassisId]/[slotId]/[serverInstanceId] temperature: [thermal]

Explanation: This fault occurs when the processor temperature on a blade or rack server exceeds a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: info
Cause: thermal-problem
mibFaultCode: F0175
mibFaultName: fltProcessorUnitThermalNonCritical
moClass: processor:Unit
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]
Affected MO: sys/rack-unit-[id]/board/cpu-[id]
```

fltProcessorUnitThermalThresholdCritical

Fault Code: F0176

Message: Processor [id] on server [chassisId]/[slotId] temperature: [thermal]Processor [id] on server [id] temperature: [thermal]Processor [id] on server [chassisId]/[slotId]/[serverInstanceId] temperature: [thermal]

Explanation: This fault occurs when the processor temperature on a blade or rack server exceeds a critical threshold value. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.

- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: F0176
mibFaultName: fltProcessorUnitThermalThresholdCritical
moClass: processor:Unit
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]
Affected MO: sys/rack-unit-[id]/board/cpu-[id]
```

fltProcessorUnitThermalThresholdNonRecoverable

Fault Code: F0177

Message: Processor [id] on server [chassisId]/[slotId] temperature: [thermal]Processor [id] on server [id] temperature: [thermal]Processor [id] on server [chassisId]/[slotId]/[serverInstanceId] temperature: [thermal]

Explanation:

This fault occurs when the processor temperature on a blade or rack server has been out of the operating range, and the issue is not recoverable. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: thermal-problem
mibFaultCode: F0177
mibFaultName: fltProcessorUnitThermalThresholdNonRecoverable
moClass: processor:Unit
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]
Affected MO: sys/rack-unit-[id]/board/cpu-[id]
```

fltProcessorUnitVoltageThresholdNonCritical

Fault Code: F0178

Message: Processor [id] on server [chassisId]/[slotId] voltage: [voltage]Processor [id] on server [id] voltage: [voltage]Processor [id] on server [chassisId]/[slotId]/[serverInstanceId] voltage: [voltage]

Explanation: This fault occurs when the processor voltage is out of normal operating range, but hasn't yet reached a critical stage. Normally the processor recovers itself from this situation

Recommended Action: If you see this fault, take the following actions:

1. Monitor the processor for further degradation.
2. If the fault occurs on a blade server processor, remove the server from the chassis and then reinsert it.
3. In Cisco UCS Manager, decommission and then recommission the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: voltage-problem
mibFaultCode: F0178
mibFaultName: fltProcessorUnitVoltageThresholdNonCritical
moClass: processor:Unit
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]
Affected MO: sys/rack-unit-[id]/board/cpu-[id]
```

fltProcessorUnitVoltageThresholdCritical

Fault Code: F0179

Message: Processor [id] on server [chassisId]/[slotId] voltage: [voltage]Processor [id] on server [id] voltage: [voltage]Processor [id] on server [chassisId]/[slotId]/[serverInstanceId] voltage: [voltage]

Explanation: This fault occurs when the processor voltage has exceeded the specified hardware voltage rating.

Recommended Action: If you see this fault, take the following actions:

1. If the fault occurs on a blade server processor, remove the server from the chassis and then reinsert it.
2. In Cisco UCS Manager, decommission and then recommission the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: voltage-problem
mibFaultCode: F0179
mibFaultName: fltProcessorUnitVoltageThresholdCritical
moClass: processor:Unit
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]
Affected MO: sys/rack-unit-[id]/board/cpu-[id]
```

fltProcessorUnitVoltageThresholdNonRecoverable

Fault Code: F0180

Message: Processor [id] on server [chassisId]/[slotId] voltage: [voltage]Processor [id] on server [id] voltage: [voltage]Processor [id] on server [chassisId]/[slotId]/[serverInstanceId] voltage: [voltage]

Explanation: This fault occurs when the processor voltage has exceeded the specified hardware voltage rating and may cause processor hardware damage or jeopardy.

Recommended Action: If you see this fault, take the following actions:

1. If the fault occurs on a blade server processor, remove the server from the chassis and then reinsert it.
2. In Cisco UCS Manager, decommission and then recommission the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: voltage-problem
mibFaultCode: F0180
mibFaultName: fltProcessorUnitVoltageThresholdNonRecoverable
moClass: processor:Unit
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]
Affected MO: sys/rack-unit-[id]/board/cpu-[id]
```

fltStorageLocalDiskInoperable

Fault Code: F0181

Message: Local disk [id] on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]Local disk [id] on server [id] operability: [operability]. Reason: [operQualifierReason]Local disk [id] on storage enclosure [id] operability: [operability]. Reason: [operQualifierReason]Local disk [id] on chassis [id] operability: [operability]. Reason: [operQualifierReason]

Explanation: This fault occurs when the local disk has become inoperable.

Recommended Action: If you see this fault, take the following actions:

1. Insert the disk in a supported slot.
2. Remove and reinsert the local disk.
3. Replace the disk, if an additional disk is available.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: F0181

Affected MO: sys/rack-unit-[id]/enc-[id]/disk-[id]
```

fltStorageItemCapacityExceeded

Fault Code: F0182

Message: Disk usage for partition [name] on fabric interconnect [id] exceeded 70%

Explanation: This fault occurs when the partition disk usage exceeds 70% but is less than 90%.

Recommended Action: If you see this fault, take the following actions:

1. Reduce the partition disk usage to less than 70% by deleting unused and unnecessary files.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: capacity-exceeded
mibFaultCode: F0182
mibFaultName: fltStorageItemCapacityExceeded
moClass: storage:Item
Type: environmental
autoCleared: true
Affected MO: sys/switch-[id]/stor-part-[name]
```

fltStorageItemCapacityWarning

Fault Code: F0183

Message: Disk usage for partition [name] on fabric interconnect [id] exceeded 90%

Explanation:

This fault occurs when the partition disk usage exceeds 90%.

Recommended Action:

If you see this fault, take the following actions:

1. Reduce the partition disk usage to less than 90% by deleting unused and unnecessary files.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: capacity-exceeded
mibFaultCode: F0183
mibFaultName: fltStorageItemCapacityWarning
moClass: storage:Item
Type: environmental
autoCleared: true
Affected MO: sys/switch-[id]/stor-part-[name]
```

fltMemoryUnitDegraded

Fault Code: F0184

Message: DIMM [location] on server [chassisId]/[slotId] operability: [operability]DIMM [location] on server [id] operability: [operability]DIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] operability: [operability]

Explanation: This fault occurs when a DIMM is in a degraded operability state. This state typically occurs when an excessive number of correctable ECC errors are reported on the DIMM by the server BIOS.

Recommended Action: If you see this fault, take the following actions:

1. Monitor the error statistics on the degraded DIMM through Cisco UCS Manager. If the high number of errors persists, there is a high possibility of the DIMM becoming inoperable.
2. If the DIMM becomes inoperable, replace the DIMM.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: equipment-degraded
mibFaultCode: F0184
mibFaultName: fltMemoryUnitDegraded
moClass: memory:Unit
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/mem-[id]
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/mem-[id]
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/mem-[id]
```

fltMemoryUnitInoperable

Fault Code: F0185

Message: DIMM [location] on server [chassisId]/[slotId] operability: [operability]DIMM [location] on server [id] operability: [operability]DIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] operability: [operability]

Explanation: This fault typically occurs because an above threshold number of correctable or uncorrectable errors has occurred on a DIMM. The DIMM may be inoperable.

Recommended Action: If you see this fault, take the following actions:

1. If the SEL is enabled, review the SEL statistics on the DIMM to determine which threshold was crossed.
2. If necessary, replace the DIMM.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: F0185
mibFaultName: fltMemoryUnitInoperable
moClass: memory:Unit
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/mem-[id]
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/mem-[id]
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/mem-[id]
```

fltMemoryUnitThermalThresholdNonCritical

Fault Code: F0186

Message: DIMM [location] on server [chassisId]/[slotId] temperature: [thermal]DIMM [location] on server [id] temperature: [thermal]DIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] temperature: [thermal]

Explanation: This fault occurs when the temperature of a memory unit on a blade or rack server exceeds a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMemoryUnitThermalThresholdNonRecoverable

Fault Code: F0188

Message: DIMM [location] on server [chassisId]/[slotId] temperature: [thermal]DIMM [location] on server [id] temperature: [thermal]DIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] temperature: [thermal]

Explanation:

This fault occurs when the temperature of a memory unit on a blade or rack server has been out of the operating range, and the issue is not recoverable.Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltMemoryArrayVoltageThresholdNonCritical

Fault Code: F0189

Message: Memory array [id] on server [chassisId]/[slotId] voltage: [voltage]Memory array [id] on server [id] voltage: [voltage]Memory array [id] on server [chassisId]/[slotId]/[serverInstanceId] voltage: [voltage]

Explanation: This fault occurs when the memory array voltage is out of normal operating range, but hasn't yet reached a critical stage. Typically the memory array recovers itself from this situation.

Recommended Action: If you see this fault, take the following actions:

1. If the SEL is enabled, look at the SEL statistics on the DIMM to determine which threshold was crossed.
2. Monitor the memory array for further degradation.
3. If the fault occurs on a blade server memory array, remove the blade and re-insert into the chassis.
4. In Cisco UCS Manager, decommission and recommission the server.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMemoryArrayVoltageThresholdCritical

Fault Code: F0190

Message: Memory array [id] on server [chassisId]/[slotId] voltage: [voltage]Memory array [id] on server [id] voltage: [voltage]Memory array [id] on server [chassisId]/[slotId]/[serverInstanceId] voltage: [voltage]

Explanation: This fault occurs when the memory array voltage exceeds the specified hardware voltage rating

Recommended Action: If you see this fault, take the following actions:

1. If the SEL is enabled, look at the SEL statistics on the DIMM to determine which threshold was crossed.
2. Monitor the memory array for further degradation.
3. If the fault occurs on a blade server memory array, remove the blade and re-insert into the chassis.
4. In Cisco UCS Manager, decommission and recommission the server.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMemoryArrayVoltageThresholdNonRecoverable

Fault Code: F0191

Message: Memory array [id] on server [chassisId]/[slotId] voltage: [voltage]Memory array [id] on server [id] voltage: [voltage]Memory array [id] on server [chassisId]/[slotId]/[serverInstanceId] voltage: [voltage]

Explanation: This fault occurs when the memory array voltage exceeded the specified hardware voltage rating and potentially memory hardware may be in damage or jeopardy

Recommended Action: If you see this fault, take the following actions:

1. If the SEL is enabled, review the SEL statistics on the DIMM to determine which threshold was crossed.
2. Monitor the memory array for further degradation.
3. If the fault occurs on a blade server memory array, remove the server from the chassis and re-insert it.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltAdaptorUnitUnidentifiable-fru

Fault Code: F0200

Message: Adapter [id] in server [id] has unidentified FRU.Adapter [id] in server [chassisId]/[slotId] has unidentified FRU.Adapter [id] in server [chassisId]/[slotId]/[serverInstanceId] has unidentified FRU

Explanation: This fault typically occurs because Cisco UCS Manager has detected an unsupported adapter. For example, the model, vendor, or revision is not recognized.

Recommended Action: If you see this fault, take the following actions:

1. Verify that a supported adapter is installed.
2. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: unidentifiable-fru
mibFaultCode: F0200
mibFaultName: fltAdaptorUnitUnidentifiableFru
moClass: adaptor:Unit
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/adaptor-[id]

```

fltAdaptorUnitMissing

Fault Code: F0203

Message: Adapter [id] in server [id] presence: [presence]Adapter [id] in server [chassisId]/[slotId] presence: [presence]Adapter [id] in server [chassisId]/[slotId]/[serverInstanceId] presence: [presence]

Explanation: The adaptor is missing. Cisco UCS Manager raises this fault when any of the following scenarios occur:

- The endpoint reports there is no adapter in the adaptor slot.
- The endpoint cannot detect or communicate with the adapter in the adaptor slot.

Recommended Action: If you see this fault, take the following actions:

1. Make sure an adapter is inserted in the adaptor slot in the server.
2. Check whether the adaptor is connected and configured properly and is running the recommended firmware version.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltAdaptorUnitAdaptorReachability

Fault Code: F0206

Message: Adapter [id]/[id] is unreachableAdapter [chassisId]/[slotId]/[id] is unreachable

Explanation: Cisco UCS Manager cannot access the adapterwhose connectivty is discovered. This fault typically occurs as a result of one of the following issues:

- The server does not have sufficient power.
- The I/O module is not functional.

- The adapter firmware has failed.
- The adapter is not functional

Recommended Action: If you see this fault, take the following actions:

1. Check the POST results for the server. In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the **show post** command under the scope for the server.
2. In Cisco UCS Manager, check the power state of the server.
3. Verify that the physical server has the same power state.
4. If the server is off, turn the server on.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltAdaptorHostIfLink-down

Fault Code: F0207

Message: Adapter [transport] host interface [id]/[id]/[id] link state: [linkState]Adapter [transport] host interface [chassisId]/[slotId]/[id]/[id] link state: [linkState]Adapter [transport] host interface [chassisId]/[slotId]/[serverInstanceId] link state: [linkState]

Explanation: This fault typically occurs as a result of one of the following issues:

- The fabric interconnect is in End-Host mode, and all uplink ports failed.
- The server port to which the adapter is pinned failed.
- A transient error caused the link to fail.

Recommended Action: If you see this fault, take the following actions:

1. If an associated port is disabled, enable the port.
2. Reacknowledge the server with the adapter that has the failed link.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltAdaptorExtIfLink-down

Fault Code: F0209

Message: Adapter uplink interface [id]/[id]/[id] link state: [linkState]. Please verify connectivity to Fabric Interconnect. Acknowledging FEX might be required.Adapter uplink interface [chassisId]/[slotId]/[id]/[id] link state: [linkState]. Please verify connectivity to Fabric Interconnect. Acknowledging chassis might be required.

Explanation: The link for a network facing adapter interface is down. Cisco UCS Manager raises this fault when any of the following scenarios occur:

- Cisco UCS Manager cannot establish and/or validate the adapter's connectivity to any of the fabric interconnects.
- The endpoint reports a link down or vNIC down event on the adapter link.
- The endpoint reports an errored link state or errored vNIC state event on the adapter link.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the adapter is connected, configured properly, and is running the recommended firmware version.
2. If the server is stuck at discovery, decommission the server and reacknowledge the server slot.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltPortPIoLink-down

Fault Code: F0276

Message: [transport] port [portId] on chassis [id] oper state: [operState], reason: [stateQual][transport] port [slotId]/[aggrPortId]/[portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual][transport] port [slotId]/[portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]

Explanation: This fault occurs when a fabric interconnect port is in link-down state. This state impacts the traffic destined for the port.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the physical link is properly connected between the fabric interconnect and the peer component.
2. Verify that the configuration on the peer entity is properly configured and matches the fabric interconnect port configuration.
3. Unconfigure and re-configure the port.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltPortPIoFailed

Fault Code: F0277

Message: [transport] port [portId] on chassis [id] oper state: [operState], reason: [stateQual][transport] port [slotId]/[aggrPortId]/[portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual][transport] port [slotId]/[portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]

Explanation: This fault is raised on fabric interconnect ports and on server-facing ports on an IOM or a FEX module when UCSM detects that the port is not up and in failed state while it is expected to be up since it has been enabled by user and there is no known hardware failure or missing SFP issue and port license is valid. Additional reason is displayed by the fault description string.

Recommended Action: If you see this fault, Corrective action maybe taken based on reason information in the fault description whenever such a reason is displayed. If the fault description displays reason as "ENM source pinning failed" then it means that the fabric interconnect is operating in End-host Node Mode and the uplink port that this server facing port is pinned to is down or does not have appropriate VLAN configured. In case of such an error for an appliance port check the VLAN configuration on uplink port. A VLAN with same id as the one on the appliance port will also need to be configured on the uplink port. After setting the configuration right if you still see the fault then create a **show tech-support** file for Cisco UCS Manager and the chassis or FEX module, and then contact Cisco TAC.

fltPortPIoSfp-not-present

Fault Code: F0279

Message: [transport] port [portId] on chassis [id] oper state: [operState][transport] port [slotId]/[aggrPortId]/[portId] on fabric interconnect [id] oper state: [operState][transport] port [slotId]/[portId] on fabric interconnect [id] oper state: [operState]

Explanation: When a fabric interconnect port is not in an unconfigured state, an SFP is required for its operation. This fault is raised to indicate that the SFP is missing from a configured port.

Recommended Action: If you see this fault, insert a supported SFP into the port on the fabric interconnect. A list of supported SFPs can be found on www.Cisco.com.

fltFabricExternalPcDown

Fault Code: F0282

Message: [type] port-channel [portId] on fabric interconnect [switchId] oper state: [operState], reason: [stateQual][type] port-channel [portId] on fabric interconnect [switchId] oper state: [operState], reason:

[stateQual][type] port-channel [portId] on fabric interconnect [switchId] oper state: [operState], reason: [stateQual]

Explanation: This fault typically occurs when a fabric interconnect reports that a fabric port channel is operationally down.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the member ports in the fabric port channel are administratively up and operational. Check the link connectivity for each port.
2. If connectivity seems correct, check the operational states on the peer switch ports of the port channel members.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltDcxVcDown

Fault Code: F0283

Message: [transport] VIF [id] on server [chassisId] / [slotId] of switch [switchId] down, reason: [stateQual][transport] VIF [id] on server [id] of switch [switchId] down, reason: [stateQual][transport] VIF [id] on server [chassisId]/[slotId]/[serverInstanceId] of switch [switchId] down, reason: [stateQual]

Explanation: This fault typically occurs when a fabric interconnect reports one of the following connectivity states for a virtual interface:

- Down
- Errored
- Unavailable

Recommended Action: If you see this fault, take the following actions:

1. Verify that the uplink physical interface is up.
2. If the vNIC/vHBA is configured for a pin group, verify that the pin group targets are configured correctly.
3. In the Network Control Policy for the vNIC, verify that the 'Action on Uplink Fail' field is set to 'warning'.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltNetworkElementInoperable

Fault Code: F0291

Message: Fabric Interconnect [id] operability: [operability]

Explanation: This fault typically occurs when the fabric interconnect cluster controller reports that the membership state of the fabric interconnect is down, indicating that the fabric interconnect is inoperable.

Recommended Action: If you see this fault, take the following actions:

1. Verify that both fabric interconnects in the cluster are running the same Kernel and System software versions.
2. Verify that the fabric interconnects software version and the Cisco UCS Manager software versions are the same.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-inoperable
mibFaultCode: F0291
mibFaultName: fltNetworkElementInoperable
moClass: network:Element
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]
```

fltMgmtEntityDegraded

Fault Code: F0293

Message: Fabric Interconnect [id], HA Cluster interconnect link failure

Explanation: This fault occurs when one of the cluster links (either L1 or L2) of a fabric interconnect is not operationally up. This issue impacts the full HA functionality of the fabric interconnect cluster.

Recommended Action: If you see this fault, take the following actions:

1. Verify that both L1 and L2 links are properly connected between the fabric interconnects.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: link-down
mibFaultCode: F0293
mibFaultName: fltMgmtEntityDegraded
moClass: mgmt:Entity
Type: network
autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltMgmtEntityDown

Fault Code: F0294

Message: Fabric Interconnect [id], HA Cluster interconnect total link failure

Explanation: This fault occurs when both cluster links (L1 and L2) of the fabric interconnects are in a link-down state. This issue impacts the full HA functionality of the fabric interconnect cluster.

Recommended Action: If you see this fault, take the following actions:

1. Verify that both L1 and L2 links are properly connected between the fabric interconnects.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: link-down
mibFaultCode: F0294
mibFaultName: fltMgmtEntityDown
moClass: mgmt:Entity
Type: network
autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltDcxNsFailed

Fault Code: F0304

Message: Server [chassisId]/[slotId] (service profile: [assignedToDn]) virtual network interface allocation failed.Server [id] (service profile: [assignedToDn]) virtual network interface allocation failed.Server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) virtual network interface allocation failed.

Explanation: The adapter's vif-namespace activation failed due to insufficient resources. Cisco UCS Manager raises this fault when the number of deployed VIF resources exceeds the maximum VIF resources available on the adapter connected to the fabric interconnect.

Recommended Action: If you see this fault, take the following actions:

1. Check the NS "size" and "used" resources to determine by how many vNICs the adapter exceeded the maximum.
2. Unconfigure or delete all vNICs on the adapter above the maximum number.
3. Add additional fabric uplinks from the IOM to the corresponding fabric interconnect and reacknowledge the chassis. This increases the "NS size" on the adapter.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: insufficient-resources
mibFaultCode: F0304
mibFaultName: fltDcxNsFailed
moClass: dcx:Ns
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/adaptor-[id]/dcxns-[switchId]
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/adaptor-[id]/dcxns-[switchId]
Affected MO: sys/rack-unit-[id]/adaptor-[id]/dcxns-[switchId]
```

fltComputePhysicalInsufficientlyEquipped

Fault Code: F0305

Message: Server [id] (service profile: [assignedToDn]) has insufficient number of DIMMs, CPUs and/or adaptersServer [chassisId]/[slotId] (service profile: [assignedToDn]) has insufficient number of DIMMs, CPUs and/or adaptersServer [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) has insufficient number of DIMMs and/or CPUs

Explanation: This fault typically occurs because Cisco UCS Manager has detected that the server has an insufficient number of DIMMs, CPUs, and/or adapters.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the DIMMs are installed in a supported configuration.
2. Verify that an adapter and CPU are installed.
3. Reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: insufficiently-equipped
mibFaultCode: F0305
mibFaultName: fltComputePhysicalInsufficientlyEquipped
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalIdentityUnestablishable

Fault Code: F0306

Message: Server [id] (service profile: [assignedToDn]) has an invalid FRUServer [chassisId]/[slotId] (service profile: [assignedToDn]) has an invalid FRUServer [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) has an invalid FRU

Explanation: This fault typically occurs because Cisco UCS Manager has detected an unsupported server or CPU.

Recommended Action: If you see this fault, take the following actions:

1. Verify that a supported server and/or CPU is installed.
2. Verify that the Cisco UCS Manager capability catalog is up to date.
3. Reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: identity-unestablishable
mibFaultCode: F0306
mibFaultName: fltComputePhysicalIdentityUnestablishable
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputeBoardPowerError

Fault Code: F0310

Message: Motherboard of server [chassisId]/[slotId] (service profile: [assignedToDn]) power: [operPower]Motherboard of server [id] (service profile: [assignedToDn]) power: [operPower]Motherboard of server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) power: [operPower]

Explanation: This fault typically occurs when the server power sensors have detected a problem.

Recommended Action: If you see this fault, take the following actions:

1. Make sure that the server is correctly installed in the chassis and that all cables are secure.
2. If you reinstalled the server, reacknowledge it.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-problem
mibFaultCode: F0310
mibFaultName: fltComputeBoardPowerError
moClass: compute:Board
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board
Affected MO: sys/rack-unit-[id]/board
```

fltComputePhysicalPowerProblem

Fault Code: F0311

Message: Server [id] (service profile: [assignedToDn]) oper state: [operState]Server [chassisId]/[slotId] (service profile: [assignedToDn]) oper state: [operState]Server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) oper state: [operState]

Explanation: This fault typically occurs when the server power sensors have detected a problem.

Recommended Action: If you see this fault, take the following actions:

1. Make sure that the server is correctly installed in the chassis and that all cables are secure.
2. If you reinstalled the server, reacknowledge it.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-problem
mibFaultCode: F0311
mibFaultName: fltComputePhysicalPowerProblem
moClass: compute:Physical
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalThermalProblem

Fault Code: F0312

Message: Server [id] (service profile: [assignedToDn]) oper state: [operState]Server [chassisId]/[slotId] (service profile: [assignedToDn]) oper state: [operState]Server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) oper state: [operState]

Explanation: This fault typically occurs when the server thermal sensors have detected a problem.

Recommended Action: If you see this fault, take the following actions:

1. Make sure that the server fans are working properly.
2. Wait for 24 hours to see if the problem resolves itself.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: thermal-problem
mibFaultCode: F0312
mibFaultName: fltComputePhysicalThermalProblem
moClass: compute:Physical
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalBiosPostTimeout

Fault Code: F0313

Message: Server [id] (service profile: [assignedToDn]) BIOS failed power-on self testServer [chassisId]/[slotId] (service profile: [assignedToDn]) BIOS failed power-on self testServer [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) BIOS failed power-on self test

Explanation: This fault typically occurs when the server has encountered a diagnostic failure.

Recommended Action: If you see this fault, take the following actions:

1. Check the POST results for the server. In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the show post command under the scope for the server.
2. Reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-inoperable
mibFaultCode: F0313
mibFaultName: fltComputePhysicalBiosPostTimeout
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalDiscoveryFailed

Fault Code: F0314

Message: Server [id] (service profile: [assignedToDn]) discovery: [discovery]Server [chassisId]/[slotId] (service profile: [assignedToDn]) discovery: [discovery]Server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) discovery: [discovery]

Explanation: This fault typically occurs for one of the following reasons:

- The shallow discovery that occurs when the server associated with service profile failed.
- The server is down.
- The data path is not working.
- Cisco UCS Manager cannot communicate with the CIMC on the server.
- The server cannot communicate with the fabric interconnect.

Recommended Action: If you see this fault, take the following actions:

1. Check the FSM tab and the current state of the server and any FSM operations.
2. Check the error descriptions and see if any server components indicate a failure.
3. If the server or a server component has failed, do the following:

a. Check the operational state of the server.

b. If the server is not operable, re-acknowledge the server.

4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: discovery-failed
mibFaultCode: F0314
mibFaultName: fltComputePhysicalDiscoveryFailed
moClass: compute:Physical
Type: operational
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalAssociationFailed

Fault Code: F0315

Message: Service profile [assignedToDn] failed to associate with server [id]Service profile [assignedToDn] failed to associate with server [chassisId]/[slotId]Service profile [assignedToDn] failed to associate with server [chassisId]/[slotId]/[serverInstanceId]

Explanation: This fault typically occurs for one of the following reasons:

- The service profile could not be associated with the server.
- The server is down.
- The data path is not working.
- Cisco UCS Manager cannot communicate with one or more of the fabric interconnect, the server, or a component on the server.

Recommended Action: If you see this fault, take the following actions:

1. Check the FSM tab and the current state of the server and any FSM operations.
2. If the server is stuck in an inappropriate state, such as booting, power cycle the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: association-failed
mibFaultCode: F0315
mibFaultName: fltComputePhysicalAssociationFailed
moClass: compute:Physical
Type: configuration
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalInoperable

Fault Code: F0317

Message: Server [id] (service profile: [assignedToDn]) health: [operability]Server [chassisId]/[slotId] (service profile: [assignedToDn]) health: [operability]Server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) health: [operability]

Explanation: This fault typically occurs when the server has encountered a diagnostic failure.

Recommended Action: If you see this fault, take the following actions:

1. Check the POST results for the server.In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the show post command under the scope for the server.
2. Reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

```

fltComputePhysicalUnassignedMissing

Fault Code: F0318

Message: Server [id] missing (no profile)Server [chassisId]/[slotId] missing (no profile)Server [chassisId]/[slotId]/[serverInstanceId] (no profile) missing

Explanation: This fault typically occurs when the server, which is not associated with a service profile, was previously physically inserted in the slot, but cannot be detected by Cisco UCS Manager.

Recommended Action: If you see this fault, take the following actions:

1. If the server is physically present in the slot, remove and then reinsert it.
2. If the server is not physically present in the slot, insert it.
3. Reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: equipment-missing
mibFaultCode: F0318
mibFaultName: fltComputePhysicalUnassignedMissing
moClass: compute:Physical
```

```
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalAssignedMissing

Fault Code: F0319

Message: Server [id] missing (service profile: [assignedToDn])Server [chassisId]/[slotId] missing (service profile: [assignedToDn])Server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) missing

Explanation: This fault typically occurs when the server, which is associated with a service profile, was previously physically inserted in the slot, but cannot be detected by Cisco UCS Manager.

Recommended Action: If you see this fault, take the following actions:

1. If the server is physically present in the slot, remove and then reinsert it.
2. If the server is not physically present in the slot, reinsert it.
3. Reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-missing
mibFaultCode: F0319
mibFaultName: fltComputePhysicalAssignedMissing
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalUnidentified

Fault Code: F0320

Message: Server [id] (service profile: [assignedToDn]) has an invalid FRU: [presence]Server [chassisId]/[slotId] (service profile: [assignedToDn]) has an invalid FRU: [presence]Server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) has an invalid FRU: [presence]

Explanation: This fault typically occurs because Cisco UCS Manager has detected an unsupported server or CPU.

Recommended Action: If you see this fault, take the following actions:

1. Verify that a supported server and/or CPU is installed.
2. Verify that the Cisco UCS Manager capability catalog is up to date.
3. Reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: identity-unestablishable
mibFaultCode: F0320
mibFaultName: fltComputePhysicalUnidentified
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalUnassignedInaccessible

Fault Code: F0321

Message: Server [id] (no profile) inaccessibleServer [chassisId]/[slotId] (no profile) inaccessibleServer [chassisId]/[slotId]/[serverInstanceId] (no profile) inaccessible

Explanation: This fault typically occurs when the server, which is not associated with a service profile, has lost connection to the fabric interconnects. This fault occurs if there are communication issues between the server CIMC and the fabric interconnects.

Recommended Action: If you see this fault, take the following actions:

1. Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
2. If the fault does not clear after a brief time, remove the server and then reinsert it.
3. Reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: equipment-inaccessible
mibFaultCode: F0321
mibFaultName: fltComputePhysicalUnassignedInaccessible
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalAssignedInaccessible

Fault Code: F0322

Message: Server [id] (service profile: [assignedToDn]) inaccessibleServer [chassisId]/[slotId] (service profile: [assignedToDn]) inaccessibleServer [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) inaccessible

Explanation: This fault typically occurs when the server, which is associated with a service profile, has lost connection to the fabric interconnects. This fault occurs if there are communication issues between the server CIMC and the fabric interconnects.

Recommended Action: If you see this fault, take the following actions:

1. Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
2. If the fault does not clear after a brief time, remove the server and then reinsert it.
3. Reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: equipment-inaccessible
mibFaultCode: F0322
mibFaultName: fltComputePhysicalAssignedInaccessible
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltLsServerFailed

Fault Code: F0324

Message: Service profile [name] failed

Explanation: Server has failed. This fault typically occurs if the adapter power on self-test results in major and critical errors.

Recommended Action: If you see this fault, take the following actions:

1. Check the POST results for the server. In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the **show post** command under the scope for the server.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: server-failed
mibFaultCode: F0324
mibFaultName: fltLsServerFailed
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerDiscoveryFailed

Fault Code: F0326

Message: Service profile [name] discovery failed

Explanation: The shallow discovery that occurs when the server associated with service profile fails. If the server is up and the data path is working, this fault typically occurs as a result of one of the following issues:

- Cisco UCS Manager cannot communicate with the CIMC on the server.
- The server cannot communicate with the fabric interconnect.

Recommended Action: If you see this fault, take the following actions:

1. Check the FSM tab and view the current state of the server and any FSM operations.
2. Check the error descriptions and see if any server components indicate a failure.
3. If the server or a server component has failed, do the following:
   a. Check the operational state of the server.
   b. If the server is not operable, reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: discovery-failed
mibFaultCode: F0326
mibFaultName: fltLsServerDiscoveryFailed
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerConfigFailure

Fault Code: F0327

Message: Service profile [name] configuration failed due to [serverConfigIssues],[serverExtdConfigIssues],[networkConfigIssues],[storageConfigIssues],[vnicConfigIssues],[iscsiConfigIssues],[vnicConfigIssues2]

Explanation:

The named configuration qualifier is not available. This fault typically occurs because Cisco UCS Manager cannot successfully deploy the service profile due to a lack of resources that meet the named qualifier. For example, this fault can occur if the following occurs:

- The service profile is configured for a server adapter with vHBAs, and the adapter on the server does not support vHBAs.
- The service profile is created from a template which includes a server pool, and the server pool is empty.
- The local disk configuration policy in the service profile specifies the No Local Storage mode, but the server contains local disks.

Recommended Action: If you see this fault, take the following actions:

1. Check the status of the server pool associated with the service profile. If the pool is empty, add more blade servers to it.

2. Check the state of the server and ensure that it is in either the discovered or unassociated state.
3. If the server is associated or undiscovered, do one of the following:
   - Discover the server.
   - Disassociate the server from the current service profile.
   - Select another server to associate with the service profile.
4. Review each policy in the service profile and verify that the selected server meets the requirements in the policy.
5. If the server does not meet the requirements of the service profile, do one of the following:
   - Modify the service profile to match the server.
   - Select another server that does meet the requirements to associate with the service profile.
6. If you can verify that the server meets the requirements of the service profile, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: configuration-failure
mibFaultCode: F0327
mibFaultName: fltLsServerConfigFailure
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerMaintenanceFailed

Fault Code: F0329

Message: Service profile [name] maintenance failed

Explanation: Cisco UCS Manager currently does not use this fault.

Recommended Action: If you see this fault, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: maintenance-failed
mibFaultCode: F0329
mibFaultName: fltLsServerMaintenanceFailed
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerRemoved

Fault Code: F0330

Message: Service profile [name] underlying resource removed

Explanation: Cisco UCS Manager cannot access the server associated with the service profile. This fault typically occurs as a result of one of the following issues:

- The server has been physically removed from the slot.
- The server is not available.

Recommended Action: If you see this fault, take the following actions:

1. If the server was removed from the slot, reinsert the server in the slot.
2. If the server was not removed, remove and reinsert the server.**NOTE:** If the server is operable, this action can be disruptive to current operations.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-removed
mibFaultCode: F0330
mibFaultName: fltLsServerRemoved
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerInaccessible

Fault Code: F0331

Message: Service profile [name] cannot be accessed

Explanation: Cisco UCS Manager cannot communicate with the CIMC on the server. This fault typically occurs as a result of one of the following issues:

- The server port or ports have failed.
- The I/O module is offline.
- The BMC has failed.

Recommended Action: If you see this fault, take the following actions:

1. If Cisco UCS Manager shows that the CIMC is down, physically reseat the server.
2. If Cisco UCS Manager shows that the server ports have failed, attempt to enable them.
3. If the I/O module is offline, check for faults on that component.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: server-inaccessible
mibFaultCode: F0331
```

```
mibFaultName: fltLsServerInaccessible
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerAssociationFailed

Fault Code: F0332

Message: Service profile [name] association failed for [pnDn]

Explanation: The service profile could not be associated with the server. This fault typically occurs because Cisco UCS Manager cannot communicate with one or more of the following:

- Fabric interconnect
- CIMC on the server
- SAS controller driver
- Server

Recommended Action: If you see this fault, take the following actions:

1. Check the FSM tab for the server and service profile to determine why the association failed.
2. If the server is stuck in an inappropriate state, such as booting, power cycle the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: association-failed
mibFaultCode: F0332
mibFaultName: fltLsServerAssociationFailed
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltLsServerServer-unfulfilled

Fault Code: F0337

Message: Server [pnDn] does not fulfill Service profile [name] due to [configQualifier]

Explanation: The server no longer meets the qualification requirements of the service profile. This fault typically occurs as a result of one of the following issues:

- The server has been physically changed.
- A required component of the server has failed.

Recommended Action: If you see this fault, take the following actions:

1. Check the server inventory compare to the service profile qualifications.

2. If the server inventory does not match the service profile qualifications, do one of the following:
   - Associate the server with a different service profile.
   - Ensure the server has sufficient resources to qualify for the current service profile.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: server-failed
mibFaultCode: F0337
mibFaultName: fltLsServerServerUnfulfilled
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltEtherSwitchIntFIoSatellite-connection-absent

Fault Code: F0367

Message: No link between NIF port [chassisId]/[slotId]/[portId] and fabric interconnect [switchId]:[peerSlotId]/[peerPortId]

Explanation: This fault is raised when an I/O module fabric port, which links the I/O module port and the fabric interconnect, is not functional

Recommended Action: If you see this fault, take the following actions:

1. Verify the fabric interconnect-chassis topology. Make sure each I/O module is connected to only one fabric interconnect.
2. Ensure that the fabric interconnect server port is configured and enabled.
3. Ensure that the links are plugged in properly and reacknowledge the chassis.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: satellite-connection-absent
mibFaultCode: F0367
mibFaultName: fltEtherSwitchIntFIoSatelliteConnectionAbsent
moClass: ether:SwitchIntFIo
Type: connectivity

Affected MO: sys/fex-[id]/slot-[id]/[type]/port-[portId]
Affected MO: sys/switch-[id]/slot-[id]/[type]/port-[portId]
```

fltEtherSwitchIntFIoSatellite-wiring-problem

Fault Code: F0368

Message: Invalid connection between IOM port [chassisId]/[slotId]/[portId] and fabric interconnect [switchId]:[peerSlotId]/[peerPortId]

Explanation: This fault typically occurs as a result of a satellite wiring problem on the network-facing interface of an I/O module and Cisco UCS Manager detects that at least one IOM uplink is misconnected to one of the fabric interconnect ports.

Recommended Action: If you see this fault, take the following actions:

1. Verify the fabric interconnect-chassis topology. Make sure each I/O module is connected to only one fabric interconnect.
2. Ensure that the links are plugged in properly and re-acknowledge the chassis.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: satellite-mis-connected
mibFaultCode: F0368
mibFaultName: fltEtherSwitchIntFIoSatelliteWiringProblem
moClass: ether:SwitchIntFIo
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]/shared-io-module/[type]/port-[portId]
Affected MO: sys/chassis-[id]/slot-[id]/[type]/port-[portId]
Affected MO: sys/chassis-[id]/slot-[id]/shared-io-module/[type]/port-[portId]
Affected MO: sys/chassis-[id]/sw-slot-[id]/[type]/port-[portId]
Affected MO: sys/fex-[id]/slot-[id]/[type]/port-[portId]

```

fltEquipmentPsuPowerSupplyProblem

Fault Code: F0369

Message: Power supply [id] in chassis [id] power: [power]Power supply [id] in fabric interconnect [id] power: [power]Power supply [id] in fex [id] power: [power]Power supply [id] in server [id] power: [power]Power supply [id] in rack-enclosure [id] power: [power]

Explanation: This fault typically occurs when Cisco UCS Manager detects a problem with a power supply unit in a chassis, fabric interconnect or a FEX. For example, the PSU is not functional.

Recommended Action: If you see this fault, take the following actions:

1. Verify that the power cord is properly connected to the PSU and the power source.
2. Verify that the power source is 220 volts.
3. Verify that the PSU is properly installed in the chassis or fabric interconnect.
4. Remove the PSU and reinstall it.
5. Replace the PSU.
6. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-problem
mibFaultCode: F0369
mibFaultName: fltEquipmentPsuPowerSupplyProblem
moClass: equipment:Psu
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/psu-[id]
Affected MO: sys/fex-[id]/psu-[id]
Affected MO: sys/rack-enclosure-[id]/psu-[id]
Affected MO: sys/rack-unit-[id]/psu-[id]
Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentFanDegraded

Fault Code: F0371

Message: Fan [id] in Fan Module [tray]-[id] under chassis [id] operability: [operability]Fan [id] in fabric interconnect [id] operability: [operability]Fan [id] in fex [id] operability: [operability]Fan [id] in Fan Module [tray]-[id] under server [id] operability: [operability]Fan [id] in Fan Module [tray]-[id] under rack-enclosure [id] operability: [operability]

Explanation: This fault occurs when one or more fans in a fan module are not operational, but at least one fan is operational.

Recommended Action: If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the fan module.
2. Review the Cisco UCS Site Preparation Guide and ensure the fan module has adequate airflow, including front and back clearance.
3. Verify that the air flows are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace the faulty fan modules.
8. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentIOCardRemoved

Fault Code: F0376

Message: [side] IOM [chassisId]/[id] ([switchId]) is removed

Explanation:

This fault typically occurs because an I/O module is removed from the chassis. In a cluster configuration, the chassis fails over to the other I/O module. For a standalone configuration, the chassis associated with the I/O module loses network connectivity. This is a critical fault because it can result in the loss of network connectivity and disrupt data traffic through the I/O module.

Recommended Action:

If you see this fault, take the following actions:

1. Reinsert the I/O module and configure the fabric-interconnect ports connected to it as server ports and wait a few minutes to see if the fault clears.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical

Explanation:

This fault occurs if a fan Module slot is not equipped or removed from its slot

Recommended Action:

If you see this fault, take the following actions:

1. If the reported slot is empty, insert a fan module into the slot.
2. If the reported slot contains a fan module, remove and reinsert the fan module.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltEquipmentIOCardThermalProblem

Fault Code: F0379

Message: [side] IOM [chassisId]/[id] ([switchId]) operState: [operState]

Explanation:

This fault occurs when there is a thermal problem on an I/O module. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the I/O module.
2. Review the Cisco UCS Site Preparation Guide to ensure the I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace faulty I/O modules.

8. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentPsuVoltageThresholdNonCritical

Fault Code: F0387

Message: Power supply [id] in chassis [id] voltage: [voltage]Power supply [id] in fabric interconnect [id] voltage: [voltage]Power supply [id] in fex [id] voltage: [voltage]Power supply [id] in server [id] voltage: [voltage]Power supply [id] in rack-enclosure [id] voltage: [voltage]

Explanation:

This fault occurs when the PSU voltage is out of normal operating range, but hasn't reached to a critical stage yet. Normally the PSU will recover itself from this situation.

Recommended Action:

If you see this fault, take the following actions:

1. Monitor the PSU for further degradation.
2. Remove and reseat the PSU.

3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentIOCardFirmwareUpgrade

Fault Code: F0398

Message: Chassis controller in IOM [chassisId]/[id] ([switchId]) firmware upgrade problem: [upgradeStatus]

Explanation:

This fault typically occurs when an IOM upgrade fails.

Recommended Action:

If you see this fault, take the following actions:

1. On the FSM tab for the IOM, verify whether FSM for the upgrade completed successfully or failed.
2. If the FSM failed, review the error message in the FSM.
3. If the error message is self explanatory, verify the physical connectivity. For example, an error message could be No Connection to Endpoint or Link Down.
4. If the above action did not resolve the issue and the fault persists, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major

Affected MO: sys/fex-[id]/slot-[id]
```

fltEquipmentChassisUnsupportedConnectivity

Fault Code: F0399

Message: Current connectivity for chassis [id] does not match supported topology

Explanation:

This fault typically occurs when the current connectivity for a chassis does not match the configuration in the chassis discovery policy.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the correct number of links are configured in the chassis discovery policy.
2. Check the state of the I/O module links.
3. Reacknowledge the chassis.
4. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: unsupported-connectivity-configuration
mibFaultCode: F0399
mibFaultName: fltEquipmentChassisUnsupportedConnectivity
moClass: equipment:Chassis
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentChassisUnacknowledged

Fault Code: F0400

Message: Chassis [id] connectivity configuration: [configState]

Explanation:

This fault typically occurs when or more of the I/O module links from the chassis are unacknowledged.

Recommended Action:

If you see this fault, take the following actions:

1. Check the state of the I/O module links.
2. Reacknowledge the chassis.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: equipment-unacknowledged
```

```
mibFaultCode: F0400
mibFaultName: fltEquipmentChassisUnacknowledged
moClass: equipment:Chassis
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentIOCardUnsupportedConnectivity

Fault Code: F0401

Message: IOM [chassisId]/[id] ([switchId]) current connectivity does not match discovery policy or connectivity is unsupported: [configState]

Explanation:

This fault typically occurs when the current connectivity for an I/O module does not match the configuration in the chassis discovery policy.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the correct number of links are configured in the chassis discovery policy.
2. Check the state of the I/O module links.
3. Note that atleast 2 links are required to be connected between FEX and 61xx Fabric Interconnect
4. Reacknowledge the chassis.
5. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: unsupported-connectivity-configuration
mibFaultCode: F0401
mibFaultName: fltEquipmentIOCardUnsupportedConnectivity
moClass: equipment:IOCard
Type: connectivity
autoCleared: true

Affected MO: sys/fex-[id]/slot-[id]
```

fltEquipmentIOCardUnacknowledged

Fault Code: F0402

Message: IOM [chassisId]/[id] ([switchId]) connectivity configuration: [configState]

Explanation:

This fault typically occurs when an I/O module is unacknowledged.

Recommended Action:

If you see this fault, take the following actions:

1. Check the state of the I/O module links.
2. Reacknowledge the chassis.

3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: equipment-unacknowledged
mibFaultCode: F0402
mibFaultName: fltEquipmentIOCardUnacknowledged
moClass: equipment:IOCard
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fltEquipmentIOCardPeerDisconnected

Fault Code: F0403

Message: IOM [chassisId]/[id] ([switchId]) peer connectivity: [peerCommStatus]

Explanation:

This fault typically occurs when an I/O module is unable to communicate with its peer I/O module.

Recommended Action:

If you see this fault, take the following actions:

1. Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
2. If the fault does not clear after a few minutes, remove and reinsert the I/O module.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: equipment-disconnected
mibFaultCode: F0403
mibFaultName: fltEquipmentIOCardPeerDisconnected
moClass: equipment:IOCard
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fltEquipmentChassisIdentity

Fault Code: F0404

Message: Chassis [id] has a mismatch between FRU identity reported by Fabric/IOM vs. FRU identity reported by CMC

Explanation:

This fault typically occurs when the FRU information for an I/O module is corrupted or malformed.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: fru-problem

Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentChassisPowerProblem

Fault Code: F0408

Message: Power state on chassis [id] is [power]

Explanation:

This fault typically occurs when the chassis fails to meet the minimal power requirements defined in the power policy or when one or more power supplies have failed.

Recommended Action:

If you see this fault, take the following actions:

1. In Cisco UCS Manager, verify that all PSUs for the chassis are functional.
2. Verify that all PSUs are seated properly within the chassis and are powered on.
3. Physically unplug and replug the power cord into the chassis.
4. If all PSUs are operating at maximum capacity, either add more PSUs to the chassis or redefine the power policy in Cisco UCS Manager.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-problem
mibFaultCode: F0408
mibFaultName: fltEquipmentChassisPowerProblem
moClass: equipment:Chassis
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentChassisThermalThresholdCritical

Fault Code: F0409

Message: Thermal condition on chassis [id] is [thermal]

Explanation:

This fault occurs under the following conditions:

1. If a component within a chassis is operating outside the safe thermal operating range.
2. If the chassis controller in the IOM is unable to determine the thermal condition of a blade server, the **show tech-support** file for the chassis provides a more detailed report of the most severe thermal conditions currently applicable for that chassis.

Recommended Action:

If you see this fault, take the following actions:

1. Check the temperature readings for the blade servers and IOM and ensure they are within the recommended thermal safe operating range.
2. If the fault reports a "Thermal Sensor threshold crossing in blade" error for one or more blade servers, check if DIMM or processor temperature related faults have been raised against that blade.
3. If the fault reports a "Thermal Sensor threshold crossing in IOM" error for one or both the IOMs, check if thermal faults have been raised against that IOM. Those faults include details of the thermal condition.

4. If the fault reports a "Missing or Faulty Fan" error, check on the status of that fan. If it needs replacement, create a **show tech-support** file for the chassis and contact Cisco TAC.
5. If the fault reports a "No connectivity between IOM and blade" or "Thermal Sensor readings unavailable from blade" error, check if that blade server is operational and whether any faults have been raised against that blade server. In this situation, the chassis controller may go into a fail-safe operating mode and the fan speeds may increase as a precautionary measure.
6. If the above actions did not resolve the issue and the condition persists, create a **show tech-support** file for Cisco UCS Manager and the chassis and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: F0409
mibFaultName: fltEquipmentChassisThermalThresholdCritical
moClass: equipment:Chassis
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentChassisThermalThresholdNonCritical

Fault Code: F0410

Message: Thermal condition on chassis [id] is [thermal]

Explanation:

UCSM raises this fault under the following conditions:

1. If a component within a chassis is operating outside the safe thermal operating range.
2. If the chassis controller in the IOM is unable to determine the thermal condition of a blade server, the **show tech-support** file for the chassis provides a more detailed report of the most severe thermal conditions currently applicable for that chassis.

Recommended Action:

If you see this fault, take the following actions:

1. Check the temperature readings for the blade servers and IOM and ensure they are within the recommended thermal safe operating range.
2. If the fault reports a "Thermal Sensor threshold crossing in blade" error for one or more blade servers, check if DIMM or processor temperature related faults have been raised against that blade.
3. If the fault reports a "Thermal Sensor threshold crossing in IOM" error for one or both the IOMs, check if thermal faults have been raised against that IOM. Those faults include details of the thermal condition.
4. If the fault reports a "Missing or Faulty Fan" error, check on the status of that fan. If it needs replacement, create a **show tech-support** file for the chassis and contact Cisco TAC.
5. If the fault reports a "No connectivity between IOM and blade" or "Thermal Sensor readings unavailable from blade" error, check if that blade server is operational and whether any faults have been raised against that blade server. In this situation, the chassis controller may go into a fail-safe operating mode and the fan speeds may increase as a precautionary measure.

6. If the above actions did not resolve the issue and the condition persists, create a **show tech-support** file for Cisco UCS Manager and the chassis and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: thermal-problem
mibFaultCode: F0410
mibFaultName: fltEquipmentChassisThermalThresholdNonCritical
moClass: equipment:Chassis
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentChassisThermalThresholdNonRecoverable

Fault Code: F0411

Message: Thermal condition on chassis [id] is [thermal]

Explanation:

UCSM raises this fault under the following conditions:

1. If a component within a chassis is operating outside the safe thermal operating range.
2. If the chassis controller in the IOM is unable to determine the thermal condition of a blade server, the **show tech-support** file for the chassis provides a more detailed report of the most severe thermal conditions currently applicable for that chassis.

Recommended Action:

If you see this fault, take the following actions:

1. Check the temperature readings for the blade servers and IOM and ensure they are within the recommended thermal safe operating range.
2. If the fault reports a "Thermal Sensor threshold crossing in blade" error for one or more blade servers, check if DIMM or processor temperature related faults have been raised against that blade.
3. If the fault reports a "Thermal Sensor threshold crossing in IOM" error for one or both the IOMs, check if thermal faults have been raised against that IOM. Those faults include details of the thermal condition.
4. If the fault reports a "Missing or Faulty Fan" error, check on the status of that fan. If it needs replacement, create a **show tech-support** file for the chassis and contact Cisco TAC.
5. If the fault reports a "No connectivity between IOM and blade" or "Thermal Sensor readings unavailable from blade" error, check if that blade server is operational and whether any faults have been raised against that blade server. In this situation, the chassis controller may go into a fail-safe operating mode and the fan speeds may increase as a precautionary measure.
6. If the above actions did not resolve the issue and the condition persists, create a **show tech-support** file for Cisco UCS Manager and the chassis and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: thermal-problem
```

```

fltComputeBoardCmosVoltageThresholdCritical

Fault Code: F0424

Message: Possible loss of CMOS settings: CMOS battery voltage on server [chassisId]/[slotId] is [cmosVoltage]Possible loss of CMOS settings: CMOS battery voltage on server [id] is [cmosVoltage]Possible loss of CMOS settings: CMOS battery voltage on server [chassisId]/[slotId]/[serverInstanceId] is [cmosVoltage]

Explanation:

This fault is raised when the CMOS battery voltage has dropped to lower than the normal operating range. This could impact the clock and other CMOS settings.

Recommended Action:

If you see this fault, replace the battery.

Fault Details

```
Severity: major
Cause: voltage-problem
mibFaultCode: F0424
mibFaultName: fltComputeBoardCmosVoltageThresholdCritical
moClass: compute:Board
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board
Affected MO: sys/rack-unit-[id]/board

```

fltMgmtEntityElection-failure

Fault Code: F0428

Message: Fabric Interconnect [id], election of primary managemt instance has failed

Explanation:

This fault occurs in an unlikely event that the fabric interconnects in a cluster configuration could not reach an agreement for selecting the primary fabric interconnect. This impacts the full HA functionality of the fabric interconnect cluster.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the initial setup configuration is correct on both fabric interconnects.
2. Verify that the L1 and L2 links are properly connected between the fabric interconnects.
3. In the Cisco UCS Manager CLI, run the **cluster force primary** local-mgmt command on one fabric interconnect.
4. Reboot the fabric interconnects.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: election-failure
mibFaultCode: F0428
mibFaultName: fltMgmtEntityElectionFailure
moClass: mgmt:Entity
Type: management
autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltMgmtEntityHa-not-ready

Fault Code: F0429

Message: Fabric Interconnect [id], HA functionality not ready

Explanation:

This fault occurs if Cisco UCS Manager cannot discover or communicate with one or more chassis or rack servers to write the HA Cluster state. This impacts the full HA functionality of the fabric interconnect cluster.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the initial setup configuration is correct on both fabric interconnects.
2. Verify that the L1 and L2 links are properly connected between the fabric interconnects.

3. Verify that the IOMs and/or FEXes are reachable and the server ports are enabled and operationally up.
4. Verify that the chassis and/or rack servers are powered up and reachable
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltMgmtEntityVersion-incompatible

Fault Code: F0430

Message: Fabric Interconnect [id], management services, incompatible versions

Explanation:

This fault occurs if the Cisco UCS Manager software on the subordinate fabric interconnect is not the same release as that of the primary fabric interconnect. This impacts the full HA functionality of the fabric interconnect cluster.

Recommended Action:

If you see this fault, take the following actions:

1. Upgrade the Cisco UCS Manager software on the subordinate fabric interconnect to the same release as the primary fabric interconnect and verify that both fabric interconnects are running the same release of Cisco UCS Manager.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Explanation:

This fault occurs in the unlikely event that a fan in a fan module cannot be detected.

Recommended Action:

If you see this fault, take the following actions:

1. Insert/reinsert the fan module in the slot that is reporting the issue.
2. Replace the fan module with a different fan module, if available.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltEquipmentIOCardAutoUpgradingFirmware

Fault Code: F0435

Message: IOM [chassisId]/[id] ([switchId]) is auto upgrading firmware

Explanation:

This fault typically occurs when an I/O module is auto upgrading. Auto-upgrade occurs when the firmware version on the IOM is incompatible with the firmware version on the fabric interconnect.

Recommended Action:

If you see this fault, take the following actions:

1. If the IOM and fabric interconnects are not running the same firmware version, wait for the auto-upgrade to complete.
2. When the IOM upgrade is completed, verify that Cisco UCS Manager has cleared this fault.
3. If you see this fault after the IOM overall status changes to operable, create a **show tech-support** file and contact Cisco TAC.

fltFirmwarePackItemImageMissing

Fault Code: F0436

Message: [type] image with vendor [hwVendor], model [hwModel] and version [version] is deleted

Explanation:

This fault typically occurs when the image to which a firmware package item refers is missing.

Recommended Action:

If you see this fault, take the following actions:

1. In Cisco UCS Manager GUI, navigate to the Firmware Management > Images tab and determine whether the missing image is available or not.
2. If the image is present, click on it to verify the model and vendor.
3. If the image for the required model and vendor is not present, download that image or bundle from the Cisco.com website.
4. If the image is present and the fault persists, create a **show tech-support** file and contact Cisco TAC.

fltEtherSwitchIntFloSatellite-wiring-numbers-unexpected

Fault Code: F0440

Message: Chassis discovery policy conflict: Link IOM [chassisId]/[slotId]/[portId] to peer port [switchId]:[peerChassisId]/[peerSlotId]/[peerPortId] not configured

Explanation:

The configuration of the chassis discovery policy conflicts with the physical IOM uplinks. Cisco UCS Manager raises this fault when the chassis discovery policy is configured for more links than are physically cabled between the IOM uplinks on the chassis and the fabric interconnect.

Recommended Action:

If you see this fault, take the following actions:

1. Ensure that you cable at least the same number of IOM uplinks as are configured in the chassis discovery policy, and that you configure the corresponding server ports on the fabric interconnect.
2. Reacknowledge the chassis.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMgmtEntityManagement-services-failure

Fault Code: F0451

Message: Fabric Interconnect [id], management services have failed

Explanation:

This fault occurs in an unlikely event that management services fail on a fabric interconnect. This impacts the full HA functionality of the fabric interconnect cluster.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the initial setup configuration is correct on both fabric interconnects.
2. Verify that the L1 and L2 links are properly connected between the fabric interconnects.
3. Reboot the fabric interconnects.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMgmtEntityManagement-services-unresponsive

Fault Code: F0452

Message: Fabric Interconnect [id], management services are unresponsive

Explanation:

This fault occurs when management services on a fabric interconnect are unresponsive. This impacts the full HA functionality of the fabric interconnect cluster.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the initial setup configuration is correct on both fabric interconnects.
2. Verify that the L1 and L2 links are properly connected between the fabric interconnects.
3. Reboot the fabric interconnects.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

```

fltEquipmentChassisInoperable

Fault Code: F0456

Message: Chassis [id] operability: [operability]

Explanation:

This fault typically occurs for one of the following reasons:

- The fabric interconnect cannot communicate with a chassis. For a cluster configuration, this fault means that neither fabric interconnect can communicate with the chassis.
- The chassis has an invalid FRU.

Recommended Action:

If you see this fault, take the following actions:

1. In Cisco UCS Manager, reacknowledge the chassis that raised the fault.
2. Physically unplug and replug the power cord into the chassis.
3. Verify that the I/O modules are functional.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEtherServerIntFIoHardware-failure

Fault Code: F0458

Message: IOM [transport] interface [portId] on chassis [id] oper state: [operState], reason: [stateQual]Fabric Interconnect [transport] interface [portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]IOM [transport] interface [portId] on fex [id] oper state: [operState], reason: [stateQual]

Explanation:

This fault is raised on the IOM/FEX backplane ports when Cisco UCS Manager detects a hardware failure.

Recommended Action:

If you see this fault, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltDcxVcMgmt-vif-down

Fault Code: F0459

Message: IOM [chassisId] / [slotId] ([switchId]) management VIF [id] down, reason [stateQual]

Explanation:

This fault occurs when the transport VIF for an I/O module is down. Cisco UCS Manager raises this fault when a fabric interconnect reports the connectivity state on virtual interface as one of the following:

- Down
- Errored
- Unavailable

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the chassis discovery has gone through successfully. Check the states on all communicating ports from end to end.
2. If connectivity seems correct, decommission and recommission the chassis.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltSysdebugMEpLogMEpLogLog

Fault Code: F0460

Message: Log capacity on [side] IOM [chassisId]/[id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId] is [capacity]Log capacity on Management Controller on server [id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId]/[serverInstanceId] is [capacity]

Explanation:

This fault typically occurs because Cisco UCS Manager has detected that the system event log (SEL) on the server is approaching full capacity. The available capacity in the log is low. This is an info-level fault and can be ignored if you do not want to clear the SEL at this time.

Recommended Action:

If you see this fault, you can clear the SEL in Cisco UCS Manager if desired.

fltSysdebugMEpLogMEpLogFull

Fault Code: F0462

Message: Log capacity on [side] IOM [chassisId]/[id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId] is [capacity]Log capacity on Management Controller on server [id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId]/[serverInstanceId] is [capacity]

Explanation:

This fault typically occurs because Cisco UCS Manager could not transfer the SEL file to the location specified in the SEL policy. This is an info-level fault and can be ignored if you do not want to clear the SEL at this time.

Recommended Action:

If you see this fault, take the following actions:

1. Verify the configuration of the SEL policy to ensure that the location, user, and password provided are correct.

2. If you do want to transfer and clear the SEL and the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltComputePoolEmpty

Fault Code: F0463

Message: server pool [name] is empty

Explanation:

This fault typically occurs when the selected server pool does not contain any servers.

Recommended Action:

If you see this fault, take the following actions:

1. Verify the qualifier settings in the server pool policy qualifications. If the policy was modified after the server was discovered, reacknowledge the server.
2. Manually associate the service profile with a server.
3. If the server pool is not used, ignore the fault.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: F0463
mibFaultName: fltComputePoolEmpty
moClass: compute:Pool
Type: server
autoCleared: true
Affected MO: org-[name]/compute-pool-[name]
```

fltUuidpoolPoolEmpty

Fault Code: F0464

Message: UUID suffix pool [name] is empty

Explanation:

This fault typically occurs when a UUID suffix pool does not contain any UUID suffixes.

Recommended Action:

If you see this fault, take the following actions:

1. If the pool is in use, add a block of UUID suffixes to the pool.
2. If the pool is not in use, ignore the fault.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: F0464

Affected MO: org-[name]/uuid-pool-[name]
```

fltIppoolPoolEmpty

Fault Code: F0465

Message: IP pool [name] is empty

Explanation:

This fault typically occurs when an IP address pool does not contain any IP addresses.

Recommended Action:

If you see this fault, take the following actions:

1. If the pool is in use, add a block of IP addresses to the pool.
2. If the pool is not in use, ignore the fault.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: F0465

Affected MO: org-[name]/ip-pool-[name]
```

fltMacpoolPoolEmpty

Fault Code: F0466

Message: MAC pool [name] is empty

Explanation:

This fault typically occurs when a MAC address pool does not contain any MAC addresses.

Recommended Action:

If you see this fault, take the following actions:

1. If the pool is in use, add a block of MAC addresses to the pool.
2. If the pool is not in use, ignore the fault.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: F0466

Affected MO: org-[name]/mac-pool-[name]
```

fltFirmwareUpdatableImageUnusable

Fault Code: F0470

Message: backup image is unusable. reason: [operStateQual]

Explanation:

This fault typically occurs when the backup firmware image on an endpoint is unusable.

Recommended Action:

If you see this fault, take the following actions:

1. Review the fault and the error message on the FSM tab for the endpoint to determine why the firmware image is unusable.
2. If the firmware image is bad or corrupted, download another copy from the Cisco website and update the backup version on the endpoint with the new image.
3. If the image is present and the fault persists, create a **show tech-support** file and contact Cisco TAC.

fltFirmwareBootUnitCantBoot

Fault Code: F0471

Message: unable to boot the startup image. End point booted with backup image

Explanation:

This fault typically occurs when the startup firmware image on an endpoint is corrupted or invalid, and the endpoint cannot boot from that image.

Recommended Action:

If you see this fault, take the following actions:

1. Review the fault and the error message on the FSM tab for the endpoint to determine why the firmware image is unusable. The error message usually includes an explanation for why the endpoint could not boot from the startup image, such as Bad-Image or Checksum Failed.
2. If the firmware image is bad or corrupted, download another copy from the Cisco website and update the startup version on the endpoint with the new image.
3. If the fault persists, create a **show tech-support** file and contact Cisco TAC.

fltFcpoolInitiatorsEmpty

Fault Code: F0476

Message: FC pool [purpose] [name] is empty

Explanation:

This fault typically occurs when a WWN pool does not contain any WWNs.

Recommended Action:

If you see this fault, take the following actions:

1. If the pool is in use, add a block of WWNs to the pool.
2. If the pool is not in use, ignore the fault.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: F0476
mibFaultName: fltFcpoolInitiatorsEmpty
moClass: fcpool:Initiators
Type: server
autoCleared: true
Affected MO: org-[name]/wwn-pool-[name]
```

fltEquipmentIOCardInaccessible

Fault Code: F0478

Message: [side] IOM [chassisId]/[id] ([switchId]) is inaccessible

Explanation:

This fault typically occurs because an I/O module has lost its connection to the fabric interconnects. In a cluster configuration, the chassis fails over to the other I/O module. For a standalone configuration, the chassis associated with the I/O module loses network connectivity. This is a critical fault because it can result in the loss of network connectivity and disrupt data traffic through the I/O module.

Recommended Action:

If you see this fault, take the following actions:

1. Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical

```

fltDcxVIfLinkState

Fault Code: F0479

Message: Virtual interface [id] link state is down

Explanation:

This fault occurs when Cisco UCS cannot send or receive data through an uplink port.

Recommended Action:

If you see this fault, take the following actions:

1. Reenable the uplink port that failed.

2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltEquipmentFanModuleDegraded

Fault Code: F0480

Message: Fan module [tray]-[id] in chassis [id] operability: [operability]Fan module [tray]-[id] in server [id] operability: [operability]Fan module [tray]-[id] in fabric interconnect [id] operability: [operability]Fan module [tray]-[id] in rack-enclosure [id] operability: [operability]

Explanation:

This fault occurs when a fan module is not operational.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the fan module.
2. Review the Cisco UCS Site Preparation Guide to ensure the fan module has adequate airflow, including front and back clearance.
3. Verify that the air flows for the fan module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentIOCardPost-failure

Fault Code: F0481

Message: [side] IOM [chassisId]/[id] ([switchId]) POST failure

Explanation:

This fault typically occurs when an I/O module encounters errors during the Power On Self Test (POST). The impact of this fault varies according to the errors that were encountered during POST.

Recommended Action:

If you see this fault, take the following actions:

1. Check the POST results for the I/O module. In Cisco UCS Manager GUI, you can access the POST results from the General tab for the I/O module. In Cisco UCS Manager CLI, you can access the POST results through the show post command under the scope for the I/O module.
2. If the POST results indicate FRU error, check if UCS manager has raised fault for the FRU and follow recommended action for the fault.
3. Otherwise, reboot the I/O module.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-problem
mibFaultCode: F0481
mibFaultName: fltEquipmentIOCardPostFailure
moClass: equipment:IOCard

fltEquipmentFanPerfThresholdLowerNonRecoverable

Fault Code: F0484

Message: Fan [id] in Fan Module [tray]-[id] under chassis [id] speed: [perf]Fan [id] in fabric interconnect [id] speed: [perf]Fan [id] in Fan Module [tray]-[id] under server [id] speed: [perf]Fan [id] in Fan Module [tray]-[id] under rack-enclosure [id] speed: [perf]

Explanation:

This fault occurs when the fan speed reading from the fan controller is far below the desired fan speed, and the fan has likely failed.

Recommended Action:

If you see this fault, create a detailed **show tech-support** file for the chassis and replace the fan module. If necessary, contact Cisco TAC.

Fault Details

fltMemoryUnitIdentity-unestablishable

Fault Code: F0502

Message: DIMM [location] on server [chassisId]/[slotId] has an invalid FRUDIMM [location] on server [id] has an invalid FRUDIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] has an invalid FRU

Explanation:

This fault typically occurs because Cisco UCS Manager has detected unsupported DIMM in the server. For example, the model, vendor, or revision is not recognized.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, you may have unsupported DIMMs or DIMM configuration in the server. Create a **show tech-support** file and contact Cisco TAC.

fltEquipmentPsuOffline

Fault Code: F0528

Message: Power supply [id] in chassis [id] power: [power]Power supply [id] in fabric interconnect [id] power: [power]Power supply [id] in fex [id] power: [power]Power supply [id] in server [id] power: [power]Power supply [id] in rack-enclosure [id] power: [power]

Explanation:

This fault typically occurs when Cisco UCS Manager detects that a power supply unit in a chassis, fabric interconnect, or FEX is offline.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the power cord is properly connected to the PSU and the power source.
2. Verify that the power source is 220 volts.
3. Verify that the PSU is properly installed in the chassis or fabric interconnect.
4. Remove the PSU and reinstall it.
5. Replace the PSU.
6. If the above actions did not resolve the issue, note down the type of PSU, execute the **show tech-support** command, and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: equipment-offline
mibFaultCode: F0528
mibFaultName: fltEquipmentPsuOffline
moClass: equipment:Psu
Type: environmental
autoCleared: true

fltStorageRaidBatteryInoperable

Fault Code: F0531

Message: RAID Battery on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]RAID Battery on server [id] operability: [operability]. Reason: [operQualifierReason]RAID Battery on chassis [id] operability: [operability]. Reason: [operQualifierReason]

Explanation:

This fault occurs when the RAID backup unit is not operational.

Recommended Action:

If you see this fault, take the following actions:

1. If the backup unit is a battery, replace the battery.
2. If the backup unit is a supercapacitor type and the supercapacitor is missing, verify its presence and supply if missing.
3. If the backup unit is a supercapacitor type and the TFM is missing, verify its presence and supply if missing.
4. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

```

fltSysdebugMEpLogTransferError

Fault Code: F0532

Message: Server [chassisId]/[slotId] [type] transfer failed: [operState]Server [id] [type] transfer failed: [operState]

Explanation:

This fault occurs when the transfer of a managed endpoint log file, such as the SEL, fails.

Recommended Action:

If you see this fault, take the following actions:

1. If the fault is related to the SEL, verify the connectivity to the CIMC on the server.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltComputeRtcBatteryInoperable

Fault Code: F0533

Message: RTC Battery on server [chassisId]/[slotId] operability: [operability]

Explanation:

This fault is raised when the CMOS battery voltage is below the normal operating range. This impacts the system clock.

Recommended Action:

If you see this fault, replace the CMOS battery.

Fault Details

Severity: major
Cause: equipment-inoperable
mibFaultCode: F0533
mibFaultName: fltComputeRtcBatteryInoperable
moClass: compute:RtcBattery
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/rtc-battery
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/rtc-battery
Affected MO: sys/rack-unit-[id]/board/rtc-battery

fltMemoryBufferUnitThermalThresholdNonCritical

Fault Code: F0535

Message: Buffer Unit [id] on server [chassisId]/[slotId] temperature: [thermal]Buffer Unit [id] on server [id] temperature: [thermal]Buffer Unit [id] on server [chassisId]/[slotId]/[serverInstanceId] temperature: [thermal]

Explanation:

This fault occurs when the temperature of a memory buffer unit on a blade or rack server exceeds a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMemoryBufferUnitThermalThresholdNonRecoverable

Fault Code: F0537

Message: Buffer Unit [id] on server [chassisId]/[slotId] temperature: [thermal]Buffer Unit [id] on server [id] temperature: [thermal]Buffer Unit [id] on server [chassisId]/[slotId]/[serverInstanceId] temperature: [thermal]

Explanation:

This fault occurs when the temperature of a memory buffer unit on a blade or rack server has been out of the operating range, and the issue is not recoverable. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Affected MO: sys/rack-unit-[id]/board/iohub
```

fltEquipmentChassisIdentity-unestablishable

Fault Code: F0543

Message: Chassis [id] has an invalid FRU

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported chassis. For example, the model, vendor, or revision is not recognized.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, execute the **show tech-support** command and contact Cisco technical support.

Fault Details

```
Severity: major
Cause: identity-unestablishable
mibFaultCode: F0543
mibFaultName: fltEquipmentChassisIdentityUnestablishable
moClass: equipment:Chassis
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltSwVlanPortNsResourceStatus

Fault Code: F0549

Message: Vlan-Port Resource exceeded

Explanation:

This fault occurs when the total number of configured VLANs in the Cisco UCS instance has exceeded the allowed maximum number of configured VLANs on the fabric interconnect.

Recommended Action: If you see this fault, take the following actions:

1. In the Cisco UCS Manager CLI or Cisco UCS Manager GUI, check the port VLAN count to determine by how many VLANs the system is over the maximum.
2. Reduce the VLAN port count in one of the following ways:
   - Delete VLANs configured on the LAN cloud.
   - Delete VLANs configured on vNICs.
   - Unconfigure one or more vNICs.
   - Unconfigure one or more uplink Ethernet ports on the fabric interconnect.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltAdaptorExtEthIfMisConnect

Fault Code: F0625

Message: Adapter [id] eth interface [id] in server [id] mis-connected

Explanation:

The link for a network-facing adapter interface is misconnected. Cisco UCS Manager raises this fault when any of the following scenarios occur:

- Cisco UCS Manager detects a new connectivity between a previously configured switch port or FEX port and the adapter's external interface.
- Cisco UCS Manager detects a misconnected link between a fabric interconnect or FEX and its non-peer adapter's interface.

Recommended Action:

If you see this fault, take the following actions:

1. Check whether the adapter link is connected to a port that belongs to its peer fabric interconnect or FEX.
2. If that connectivity seems correct, reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltAdaptorHostEthIfMisConnect

Fault Code: F0626

Message: Adapter [id] eth interface [id] in server [id] mis-connected

Explanation:

The link for a network-facing host interface is misconnected. Cisco UCS Manager raises this fault when any of the following scenarios occur:

- Cisco UCS Manager detects a new connectivity between a previously configured switch port and the host Ethernet interface.
- Cisco UCS Manager detects a misconnected link between the host interface and its non-peer fabric interconnect.

Recommended Action:

If you see this fault, take the following actions:

1. Check whether the host Ethernet interface is connected to a port belonging to its peer fabric interconnect.
2. If connectivity seems correct, reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

```

fltPowerBudgetPowerBudgetCmcProblem

Fault Code: F0635

Message: Power cap application failed for chassis [id]

Explanation:

This fault typically occurs when the server CIMC has failed to enforce the configured power cap.

Recommended Action:

If you see this fault, take the following actions:

1. Check the power consumption of the chassis. If the chassis is consuming significantly more power than configured in the power cap, consider reducing the group cap so that the power consumption of other chassis consumption can be reduced to make up for the increase.
2. If the above action did not resolve the issue, create a **show tech-support** file for Cisco UCS Manager and the chassis and then contact Cisco TAC.

Fault Details

```

fltPowerBudgetPowerBudgetBmcProblem

Fault Code: F0637

Message: Power cap application failed for server [chassisId]/[slotId]Power cap application failed for server [id]

Explanation:

This fault typically occurs when the server CIMC or BIOS has failed to enforce the configured power cap.

Recommended Action:

If you see this fault, take the following actions:

1. Check the power consumption of the blade server. If the server is consuming significantly more power than configured in the power cap, switch to a manual per blade cap configuration. If the power consumption is still too high, consider reducing the group cap so that the power consumption of other chassis consumption can be reduced to make up for the increase.
2. If the power consumption is still too high, the CIMC or BIOS software is likely faulty.
3. Create a **show tech-support** file for Cisco UCS Manager and the chassis and then contact Cisco TAC.

Fault Details

Affected MO: sys/switch-[id]/budget
```

fltPowerBudgetPowerBudgetDiscFail

Fault Code: F0640

Message: Insufficient power available to discover server [chassisId]/[slotId]Insufficient power available to discover server [id]

Explanation:

This fault typically occurs when discovery fails due to unavailable power in the group.

Recommended Action:

If you see this fault, take the following actions:

1. Consider increasing the group cap.
2. Reduce the number of blade servers or chassis in the Cisco UCS instance.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-cap-fail
mibFaultCode: F0640
mibFaultName: fltPowerBudgetPowerBudgetDiscFail
moClass: power:Budget
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/budget
Affected MO: sys/chassis-[id]/blade-[slotId]/ext-board-[id]/budget
Affected MO: sys/chassis-[id]/budget

fltPowerGroupPowerGroupInsufficientBudget

Fault Code: F0642

Message: insufficient budget for power group [name]

Explanation:

This fault typically occurs when the group cap is insufficient to meet the minimum hardware requirements.

Recommended Action:

If you see this fault, take the following actions:

1. Consider increasing the group cap.
2. Reduce the number of blade servers or chassis in the Cisco UCS instance.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-cap-fail
mibFaultCode: F0642
mibFaultName: fltPowerGroupPowerGroupInsufficientBudget
moClass: power:Group
Type: environmental
autoCleared: true
Affected MO: sys/power-ep/group-[name]
```

fltPowerGroupPowerGroupBudgetIncorrect

Fault Code: F0643

Message: admin committed insufficient for power group [name], using previous value [operCommitted]

Explanation:

This fault typically occurs when the group cap is insufficient to meet the minimum hardware requirements. Under these circumstances, Cisco UCS Manager uses the previously entered group cap for provisioning.

Recommended Action:

If you see this fault, take the following actions:

1. Consider increasing the group cap.
2. Reduce the number of blade servers or chassis in the Cisco UCS instance.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-cap-fail
mibFaultCode: F0643
mibFaultName: fltPowerGroupPowerGroupBudgetIncorrect
moClass: power:Group
Type: environmental
autoCleared: true
Affected MO: sys/power-ep/group-[name]
```

fltLicenseInstanceGracePeriodWarning1

Fault Code: F0670

Message: One or more ports with license type [feature] on fabric-interconnect [scope] have started using license grace period.

Explanation:

At least one port on the fabric interconnect is running in the grace period. This fault typically occurs if one or more ports on the fixed module are enabled after all default licenses have been assigned to a port.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and being used on each fabric interconnect. In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: license-graceperiod-entered
mibFaultCode: F0670
mibFaultName: fltLicenseInstanceGracePeriodWarning1
moClass: license:Instance
Type: management
autoCleared: true
Affected MO: sys/license/feature-[name]-[vendor]-[version]/inst-[scope]
```

fltLicenseInstanceGracePeriodWarning2

Fault Code: F0671

Message: One or more ports with license type [feature] on fabric-interconnect [scope] are running in the grace period for more than 10 days

Explanation:

At least one port on the fabric interconnect has been running in the grace period for more than 10 days. This fault typically occurs if one or more ports on the fixed module are enabled after all default licenses have been assigned to ports and the unlicensed ports have been running for more than 10 days.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed on each fabric interconnect. In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: license-graceperiod-10days
mibFaultCode: F0671
```

```
mibFaultName: fltLicenseInstanceGracePeriodWarning2
moClass: license:Instance
Type: management
autoCleared: true
Affected MO: sys/license/feature-[name]-[vendor]-[version]/inst-[scope]
```

fltLicenseInstanceGracePeriodWarning3

Fault Code: F0672

Message: One or more ports with license type [feature] on fabric-interconnect [scope] are running in the grace period for more than 30 days

Explanation:

At least one port on the fabric interconnect has been running in the grace period for more than 30 days. This fault typically occurs if one or more ports on the fixed module are enabled after all default licenses have been assigned to ports and the unlicensed ports have been running for more than 30 days.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed on each fabric interconnect. In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: license-graceperiod-30days
mibFaultCode: F0672
mibFaultName: fltLicenseInstanceGracePeriodWarning3
moClass: license:Instance
Type: management
autoCleared: true
Affected MO: sys/license/feature-[name]-[vendor]-[version]/inst-[scope]
```

fltLicenseInstanceGracePeriodWarning4

Fault Code: F0673

Message: One or more ports with license type [feature] on fabric-interconnect [scope] are running in the grace period for more than 60 days

Explanation:

At least one port on the fabric interconnect has been running in the grace period for more than 60 days. This fault typically occurs if one or more ports on the fixed module are enabled after all default licenses have been assigned to ports and the unlicensed ports have been running for more than 60 days.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed on each fabric interconnect. In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect.

In the Cisco UCS Manager CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.

2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: license-graceperiod-60days
mibFaultCode: F0673
mibFaultName: fltLicenseInstanceGracePeriodWarning4
moClass: license:Instance
Type: management
autoCleared: true
Affected MO: sys/license/feature-[name]-[vendor]-[version]/inst-[scope]
```

fltLicenseInstanceGracePeriodWarning5

Fault Code: F0674

Message: One or more ports with license type [feature] on fabric-interconnect [scope] are running in the grace period for more than 90 days

Explanation:

At least one port on the fabric interconnect has been running in the grace period for more than 90 days. This fault typically occurs if one or more ports on the fixed module are enabled after all default licenses have been assigned to ports and the unlicensed ports have been running for more than 90 days.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed on each fabric interconnect. In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: license-graceperiod-90days
mibFaultCode: F0674
mibFaultName: fltLicenseInstanceGracePeriodWarning5
moClass: license:Instance
Type: management
autoCleared: true
Affected MO: sys/license/feature-[name]-[vendor]-[version]/inst-[scope]
```

fltLicenseInstanceGracePeriodWarning6

Fault Code: F0675

Message: One or more ports with license type [feature] on fabric-interconnect [scope] are running in the grace period for more than 119 days

Explanation:

At least one port on the fabric interconnect has been running in the grace period for more than 119 days. This fault typically occurs if one or more ports on the fixed module are enabled after all default licenses have been assigned to ports and the unlicensed ports have been running for more than 119 days.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed on each fabric interconnect. In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: license-graceperiod-119days
mibFaultCode: F0675
mibFaultName: fltLicenseInstanceGracePeriodWarning6
moClass: license:Instance
Type: management
autoCleared: true
Affected MO: sys/license/feature-[name]-[vendor]-[version]/inst-[scope]
```

fltLicenseInstanceGracePeriodWarning7

Fault Code: F0676

Message: Grace period of one or more ports with license type [feature] on fabric-interconnect [scope] is expired. Please acquire a license for the same.

Explanation:

At least one port on the fabric interconnect has been running in the grace period for more than 120 days. This fault typically occurs if one or more ports on the fixed module are enabled after all default licenses have been assigned to ports and the unlicensed ports have been running for more than 120 days. At this stage, the system licensing state is set to expired.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed on each fabric interconnect. In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. Disable the unlicensed ports to bring the number of enabled ports down to the number of total licenses.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC immediately to procure more licenses.

Fault Details

```
Severity: critical
Cause: license-graceperiod-expired
```

```
mibFaultCode: F0676
mibFaultName: fltLicenseInstanceGracePeriodWarning7
moClass: license:Instance
Type: management
autoCleared: true
Affected MO: sys/license/feature-[name]-[vendor]-[version]/inst-[scope]
```

fltLicenseFileBadLicenseFile

Fault Code: F0677

Message: license file [name] on fabric-interconnect [scope] can not be installed

Explanation:

The installation of a license file on the fabric interconnect failed. This fault typically occurs if the license file is badly formatted or its host ID does not match that of the fabric interconnect.

Recommended Action:

If you see this fault, take the following actions:

1. In the Cisco UCS Manager CLI, check the host IDs for both fabric interconnects. You can access the host ID information by entering the **show server-host-id detail** command under the license scope.
2. Match the host IDs with the contents of the license file. If the host ID matches that of one of the fabric interconnects, create a **show tech-support** file and contact Cisco TAC. If it does not match, contact Cisco TAC to obtain the correct license File.

Fault Details

```
Severity: critical
Cause: license-file-uninstallable
mibFaultCode: F0677
mibFaultName: fltLicenseFileBadLicenseFile
moClass: license:File
Type: management
autoCleared: false
Affected MO: sys/license/file-[scope]:[id]
```

fltLicenseFileFileNotDeleted

Fault Code: F0678

Message: license file [name] from fabric-interconnect [scope] could not be deleted

Explanation:

The deletion of a license file on the fabric interconnect has failed. This fault typically occurs if license framework is not able to delete a file.

Recommended Action:

If you see this fault, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: license-file-not-deleted
mibFaultCode: F0678
mibFaultName: fltLicenseFileFileNotDeleted
```

moClass: license:File
Type: management
autoCleared: false
Affected MO: sys/license/file-[scope]:[id]

fltMgmtIfMisConnect

Fault Code: F0688

Message: Management Port [id] in server [id] is mis connected

Explanation:

This fault occurs when the server and FEX connectivity changes.

Recommended Action:

If you see this fault, take the following actions:

1. Check the connectivity between the server and FEX.
2. If the connectivity was changed by mistake, restore it to its previous configuration.
3. If the connectivity change was intentional, reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltLsComputeBindingAssignmentRequirementsNotMet

Fault Code: F0689

Message: Assignment of service profile [name] to server [pnDn] failed

Explanation:

The server could not be assigned to the selected service profile. This fault typically occurs as a result of one of the following issues:

- The selected server does not meet the requirements of the service profile.
- If the service profile was configured for restricted migration, the selected server does not match the currently or previously assigned server.

Recommended Action:

If you see this fault, select a different server that meets the requirements of the service profile or matches the currently or previously assigned server.

Fault Details

```
Severity: minor
Cause: assignment-failed
mibFaultCode: F0689
mibFaultName: fltLsComputeBindingAssignmentRequirementsNotMet

Affected MO: org-[name]/tier-[name]/ls-[name]/pn-req
```

fltEquipmentFexPost-failure

Fault Code: F0702

Message: fex [id] POST failure

Explanation:

This fault typically occurs when a FEX encounters errors during the Power On Self Test (POST). The impact of this fault varies depending on which errors were encountered during POST.

Recommended Action:

If you see this fault, take the following actions:

1. Check the POST results for the FEX. In the Cisco UCS Manager GUI, you can access the POST results from the General tab for the FEX. In the Cisco UCS Manager CLI, you can access the POST results by entering the **show post** command under the scope for the FEX.
2. Reboot the FEX.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-problem
mibFaultCode: F0702
mibFaultName: fltEquipmentFexPostFailure
moClass: equipment:Fex
Type: equipment
autoCleared: true
Affected MO: sys/fex-[id]
```

fltEquipmentFexIdentity

Fault Code: F0703

Message: Fex [id] has a malformed FRU

Explanation:

This fault typically occurs when the FRU information for a FEX is corrupted or malformed.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: fru-problem
mibFaultCode: F0703
mibFaultName: fltEquipmentFexIdentity
moClass: equipment:Fex
Type: equipment
autoCleared: true
Affected MO: sys/fex-[id]
```

fltAdaptorHostEthIfMissing

Fault Code: F0708

Message: Connection to Adapter [id] eth interface [id] in server [id] missing

Explanation:

The link for a network-facing host interface is missing. Cisco UCS Manager raises this fault when it detects missing connectivity between a previously configured switch port and its previous peer host interface.

Recommended Action:

If you see this fault, take the following actions:

1. Check whether the adapter link is connected to a port that belongs to its non-peer fabric interconnect.
2. If that connectivity seems correct, reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: link-missing
mibFaultCode: F0708

sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/adaptor-[id]/host-eth-[id]
Affected MO: sys/rack-unit-[id]/adaptor-[id]/host-eth-[id]
```

fltPortPhysInvalid-sfp

Fault Code: F0713

Message: [transport] port [portId] on chassis [id] role : [ifRole] transceiver type:[xcvrType][transport] port [slotId]/[aggrPortId]/[portId] on fabric interconnect [id] role : [ifRole] transceiver type:[xcvrType][transport] port [slotId]/[portId] on fabric interconnect [id] role : [ifRole] transceiver type:[xcvrType]

Explanation:

This fault is raised against a fabric interconnect port, network-facing IOM port, or FEX module port if an unsupported transceiver type is inserted. The port cannot be used if it has an unsupported transceiver.

Recommended Action:

If you see this fault, replace the transceiver with a supported SFP type. Refer to the documentation on the Cisco website for a list of supported SFPs.

Fault Details

fltMgmtIfMissing

Fault Code: F0717

Message: Connection to Management Port [id] in server [id] is missing

Explanation:

This fault occurs when the connectivity between a server and FEX is removed or unconfigured.

Recommended Action:

If you see this fault, take the following actions:

1. Check the connectivity between the server and FEX.
2. If the connectivity was changed by mistake, restore it to its previous configuration.
3. If the connectivity change was intentional, reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltFabricEthLanPcEpDown

Fault Code: F0727

Message: [type] Member [slotId]/[aggrPortId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership][type] Member [slotId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership]

Explanation:

This fault typically occurs when a member port in an Ethernet port channel is down.

Recommended Action:

If you see this fault, take the following action:

1. Check the link connectivity on the upstream Ethernet switch.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltEquipmentIOCardThermalThresholdNonCritical

Fault Code: F0729

Message: [side] IOM [chassisId]/[id] ([switchId]) sensor: [inlet1Sensor] temperature: [thermal]

Explanation:

This fault occurs when the temperature of an I/O module has exceeded a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the I/O module.
2. Review the Cisco UCS Site Preparation Guide to ensure the chassis and I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis and I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentIOCardThermalThresholdCritical

Fault Code: F0730

Message: [side] IOM [chassisId]/[id] ([switchId]) sensor: [inlet1Sensor] temperature: [thermal]

Explanation:

This fault occurs when the temperature of an I/O module has exceeded a critical threshold value. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the I/O module.
2. Review the Cisco UCS Site Preparation Guide to ensure the chassis and I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis and I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace the faulty I/O modules.
8. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentIOCardThermalThresholdNonRecoverable

Fault Code: F0731

Message: [side] IOM [chassisId]/[id] ([switchId]) sensor: [inlet1Sensor] temperature: [thermal]

Explanation:

This fault occurs when the temperature of an I/O module has been out of the operating range, and the issue is not recoverable. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the I/O module.
2. Review the Cisco UCS Site Preparation Guide to ensure the chassis and I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis and I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace the faulty I/O modules.
8. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltFabricFcSanPcEpIncompatibleSpeed

Fault Code: F0734

Message: Member [slotId]/[portId] cannot be added to SAN Port-Channel [portId] on fabric interconnect [id], reason: [membership]

Explanation:

This fault typically occurs when the maximum supported Fibre Channel speed of a port in a Fibre Channel port channel is incompatible with the admin speed configured for the port channel.

Recommended Action:

If you see this fault, take one of the following actions:

- Change the admin speed of the port channel to match the maximum supported speed of the member ports in the port channel.
- Replace the expansion module in the fabric interconnect with one that matches the admin speed configured for the port channel.

Fault Details

fltExtmgmtIfMgmtifdown

Fault Code: F0736

Message: Management services on Fabric Interconnect [id] is [operState]

Explanation:

This fault occurs when a fabric interconnect reports that the operational state of an external management interface is down.

Recommended Action:

If you see this fault, take the following actions:

1. Check the state transitions of the external management interface on the fabric interconnect.

2. Check the link connectivity for the external management interface.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltPowerChassisMemberPowerGroupCapInsufficient

Fault Code: F0740

Message: Chassis [id] cannot be capped as group cap is low. Please consider raising the cap.

Explanation:

This fault typically occurs when an updated group cap is insufficient to meet the minimum hardware requirements and a chassis that has just been added to the power group cannot be capped as a result.

Recommended Action:

If you see this fault, take the following actions:

1. Consider increasing the group cap.
2. Reduce the number of blade servers or chassis in the Cisco UCS instance.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltPowerChassisMemberChassisFirmwareProblem

Fault Code: F0741

Message: Chassis [id] cannot be capped as at least one of the CMC or CIMC or BIOS firmware version is less than 1.4. Please upgrade the firmware for cap to be applied.

Explanation:

This fault typically occurs when the CIMC firmware on a server is an earlier release than Cisco UCS, Release 1.4.

Recommended Action:

If you see this fault, consider upgrading the CIMC firmware, and the entire Cisco UCS instance if necessary, to Cisco UCS, Release 1.4 or later.

fltPowerChassisMemberChassisPsuRedundanceFailure

Fault Code: F0743

Message: Chassis [id] was configured for redundancy, but running in a non-redundant configuration.

Explanation:

This fault typically occurs when chassis power redundancy has failed.

Recommended Action:

If you see this fault, take the following actions:

1. Consider adding more PSUs to the chassis.
2. Replace any non-functional PSUs.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltSysdebugAutoCoreFileExportTargetAutoCoreTransferFailure

Fault Code: F0747

Message: Auto core transfer failure at remote server [hostname]:[path] [exportFailureReason]

Explanation:

This fault occurs when Cisco UCS Manager cannot transfer a core file to a remote TFTP server. This is typically the result of one of the following issues:

- The remote TFTP server is not accessible.
- One or more of the parameters for the TFTP server that are specified for the core export target, such as path, port, and server name, are incorrect.

Recommended Action:

If you see this fault, take the following actions:

1. Verify the connectivity to the remote server.
2. Verify the path information of the remote server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltPowerBudgetTStateTransition

Fault Code: F0765

Message: Blade [chassisId]/[slotId] has been severely throttled. CIMC can recover if budget is redeployed to the blade or by rebooting the blade. If problem persists, please ensure that OS is ACPI compliantRack server [id] has been severely throttled. CIMC can recover if budget is redeployed to the blade or by rebooting the blade. If problem persists, please ensure that OS is ACPI compliant

Explanation:

This fault typically occurs when the processor T-state is used to severely throttle the CPU.

Recommended Action:

If you see this fault, take the following actions:

1. Redeploy the power budget for the affected power group, blade server, or chassis.
2. If the problem persists, reboot the blade server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltPowerPolicyPowerPolicyApplicationFail

Fault Code: F0766

Message: Insufficient budget to apply no-cap priority through policy [name]. Blades will continue to be capped

Explanation:

This fault occurs when a power policy cannot be applied to one or more blade servers. The affected blade servers cannot operate normally without power capping due to the limited power budget for those servers.

Recommended Action:

If you see this fault, take the following actions:

1. Increase the power budget for the blade servers in the power policy.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: no-cap-fail
mibFaultCode: F0766
mibFaultName: fltPowerPolicyPowerPolicyApplicationFail
moClass: power:Policy
Type: environmental
autoCleared: true
Affected MO: org-[name]/power-policy-[name]
Affected MO: policy-ep/system-policies/power-policy-[name]
```

fltMgmtIfNew

Fault Code: F0772

Message: New connection discovered on Management Port [id] in server [id]

Explanation:

This fault occurs when the connectivity between a server and a FEX is added or changed.

Recommended Action:

If you see this fault, take the following actions:

1. Check the connectivity between the server and FEX.
2. If the connectivity was changed by mistake, restore it to its previous configuration.
3. If the connectivity change was intentional, reacknowledge the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltAdaptorExtEthIfMissing

Fault Code: F0775

Message: Connection to Adapter [id] eth interface [id] in server [id] missing

Explanation:

The link for a network-facing adapter interface is misconnected. Cisco UCS Manager raises this fault when it detects that the connectivity between a previously configured port on a fabric interconnect or FEX and its prior peer network-facing adapter interface is misconnected or missing.

Recommended Action:

If you see this fault, take the following actions:

1. Check whether the adapter interface is connected to a port belonging to its peer fabric interconnect or FEX.
2. If the connectivity seems correct, reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltStorageLocalDiskSlotEpUnusable

Fault Code: F0776

Message: Local disk [id] on server [serverId] is not usable by the operating system

Explanation:

This fault occurs when the server disk drive is in a slot that is not supported by the storage controller.

Recommended Action:

If you see this fault, take the following actions:

1. Insert the server disk drive in a supported slot.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltFabricEthEstcPcEpDown

Fault Code: F0777

Message: [type] Member [slotId]/[aggrPortId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership][type] Member [slotId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership]

Explanation:

This fault typically occurs when a member port in an Ethernet port channel is down.

Recommended Action:

If you see this fault, take the following action:

1. Check the link connectivity on the upstream Ethernet switch.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltEquipmentFexIdentity-unestablishable

Fault Code: F0778

Message: Fex [id] has an invalid FRU

Explanation:

This fault typically occurs because Cisco UCS Manager detected an unsupported chassis. For example, the model, vendor, or revision is not recognized.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

Severity: major
Cause: identity-unestablishable

Explanation:

This fault occurs if a fan module is not operational.

Recommended Action:

If you see this fault, take the following actions:

1. Remove and reinstall the fan module. If multiple fans are affected by this fault, remove and reinstall one fan module at a time.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltLsmaintMaintPolicyUnresolvableScheduler

Fault Code: F0795

Message: Schedule [schedName] referenced by maintenance policy [name] does not exist

Explanation:

The schedule that is referenced by the maintenance policy does not exist. This fault typically occurs as a result of one of the following issues:

- The schedule does not exist.
- The schedule was deleted.

Recommended Action:

If you see this fault, take the following actions:

1. Check if the named schedule exists. If it is deleted or missing, try to create it.
2. If the named schedule is deleted or missing, recreate it.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltFabricVsanErrorDisabled

Fault Code: F0796

Message: VSAN [name] is [operState]

Explanation:

This fault typically occurs when the VSAN has an ID in the restricted range between 3840 and 4078, and Fibre Channel end host mode is enabled on the fabric interconnect.

Recommended Action:

If you see this fault, take the following actions:

1. Delete the port channels on the fabric interconnect.
2. Disable uplink trunking on the fabric-interconnect.
3. Configure the fabric interconnect for fibre channel switch mode.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

```

fltFabricVsanEpErrorDisabled

Fault Code: F0797

Message: [type] Port [slotId]/[portId] on fabric interconnect [switchId] has VSAN [id] in error disabled statePort channel [portId] on fabric interconnect [switchId] has VSAN [id] in error disabled state

Explanation:

This fault typically occurs when a port is assigned to a VSAN that has an ID in the restricted range between 3840 and 4078) or is VSAN 4079, which is reserved.

Recommended Action:

If you see this fault, take the following action:

1. If the VSAN ID is in the restricted range between 3840 and 4078, do the following:
   a. Delete the port channels on the fabric interconnect.
   b. Disable uplink trunking on the fabric-interconnect.
   c. Configure the fabric interconnect for fibre channel switch mode.
2. If the VSAN is VSAN 4079, which is reserved, assign the port to a non-reserved VSAN.

3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltPowerBudgetFirmwareMismatch

Fault Code: F0798

Message: Firmware on blade [chassisId]/[slotId] does not allow chassis level power capping. Please consider upgrading to at least 1.4 version

Explanation:

This fault typically occurs when the CIMC or BIOS firmware on a server is an earlier release than Cisco UCS, Release 1.4.

Recommended Action:

If you see this fault, consider upgrading the CIMC firmware, and the entire Cisco UCS instance if necessary, to Cisco UCS, Release 1.4 or later.

fltProcessorUnitIdentity-unestablishable

Fault Code: F0801

Message: Processor [id] on server [chassisId]/[slotId] has an invalid FRUProcessor [id] on server [id] has an invalid FRUProcessor [id] on server [chassisId]/[slotId]/[serverInstanceId] has an invalid FRU

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported CPU in the server. For example, the model, vendor, or revision is not recognized.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, you may have an unsupported CPU configuration in the server. Create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: identity-unestablishable
mibFaultCode: F0801
mibFaultName: fltProcessorUnitIdentityUnestablishable
moClass: processor:Unit
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]
Affected MO: sys/rack-unit-[id]/board/cpu-[id]
```

fltIqnpoolPoolEmpty

Fault Code: F0821

Message: iqn pool [name] is empty

Explanation:

This fault typically occurs when an IQN pool does not contain any IQNs.

Recommended Action:

If you see this fault, take the following actions:

1. If the pool is in use, add a block of IQNs to the pool.
2. If the pool is not in use, ignore the fault.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: F0821
mibFaultName: fltIqnpoolPoolEmpty
moClass: iqnpool:Pool
Type: server
autoCleared: true
Affected MO: org-[name]/iqn-pool-[name]
```

fltFabricDceSwSrvPcEpDown

Fault Code: F0831

Message: [type] Member [slotId]/[aggrPortId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership][type] Member [slotId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership]

Explanation:

This fault typically occurs when a member port in a fabric port channel is down.

Recommended Action:

If you see this fault, take the following action:

1. Check the link connectivity between the FEX or IOM and the fabric interconnect.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: membership-down

fltFabricEpMgrEpTransModeFail

Fault Code: F0832

Message: Port constraint violation on switch [id]: [confQual]

Explanation:

This fault occurs when at least one logical interface is misconfigured. This can happen when upgrading to a different type or series of fabric interconnect or when importing a configuration. The configuration must meet the following constraints:

- The first Fibre Channel port must be an odd port number. This constraint cannot be violated when upgrading from a Cisco UCS 6100 series fabric interconnect to a Cisco UCS 6200 series fabric interconnect.
- All FC ports must be configured contiguously with intervening unconfigured FC ports. This can happen during an upgrade from a Cisco UCS 6100 series fabric interconnect when you import the configuration from a Cisco UCS 6100 series fabric interconnect configuration into a Cisco UCS 6200 series fabric interconnect. For example, the Cisco UCS 6100 series fabric interconnect has an FC expansion module with ports FC2/1 through FC2/6 configured. When you import that configuration into a Cisco UCS 6200 series fabric interconnect, FC ports 2/7 through 2/16 remain unconfigured. You can correct this problem by configuring the missing FC ports.
- Ethernet and FC port ranges cannot overlap. This can happen when upgrading from a Cisco UCS 6100 series fabric interconnect to a Cisco UCS 6200 series fabric interconnect. For example, some Cisco UCS 6100 expansion modules have FC and Ethernet ports with the same ID, such as FC port 2/1 and Ethernet port 2/1.
- There must be at most one logical port per fabric interconnect ID/module ID/port ID. For example, a port cannot be configured as both Ethernet and FC. This can happen during an upgrade from a Cisco UCS 6100 series fabric interconnect. For example, some Cisco UCS 6100 expansion modules have FC and Ethernet ports with the same ID, such as FC port 2/1 and Ethernet port 2/1.
- Within a module, the port IDs of Ethernet ports must be lower than the smallest FC port ID. This means that all Ethernet ports must be on the left and all FC ports on the right. This can happen during an upgrade from a Cisco UCS 6140 fabric interconnect with 40 ports on the fixed module to a Cisco UCS 6248

fabric interconnect with 32 ports on the fixed module. For example, if the Cisco UCS 6248 is initially configured with Ethernet ports 1/1 through 1/16 and FC ports 1/17 through 1/32, and you import a a configuration from the Cisco UCS 6140 with Ethernet ports 1/1 through 1/32 unconfigured and Ethernet ports 1/33 through 1/40, the resulting configuration is Ethernet 1/1 through 1/16, FC 1/17 through 1/32, and Ethernet 1/33 through 1/40. This is not a valid configuration. You must delete ports 1/33 through 1/40 to correct the configuration.

- A non-unified Ethernet port cannot be configured as an FC port. Note the following:
  - This constraint cannot be violated when upgrading from a Cisco UCS 6100 series fabric interconnect to a Cisco UCS 6200 series fabric interconnect.
  - This constraint can be violated when downgrading from a Cisco UCS 6200 series fabric interconnect to a Cisco UCS 6100 series fabric interconnect.
  - This constraint can be violated when pre-provisioning a port on a Cisco UCS 6100 series fabric interconnect and then inserting an expansion module that does not match the requirement.
- A non-unified FC port cannot be configured as an Ethernet port. Note the following:
  - This constraint cannot be violated when upgrading from a Cisco UCS 6100 series fabric interconnect to a Cisco UCS 6200 series fabric interconnect.
  - This constraint can be violated when downgrading from a Cisco UCS 6200 series fabric interconnect to a Cisco UCS 6100 series fabric interconnect.
  - This constraint can be violated when pre-provisioning a port on a Cisco UCS 6100 series fabric interconnect and then inserting an expansion module that does not match the requirement.
- On a Cisco UCS 6100 series fabric interconnect, server ports cannot be configured on expansion modules. This constraint can be violated when downgrading from a Cisco UCS 6200 series fabric interconnect to a Cisco UCS 6100 series fabric interconnect.

Recommended Action:

If you see this fault, take the following action:

1. Create a list of all logical interfaces that are misconfigured and have caused an 'error-misconfigured' fault.
2. For each logical interface, note the reason listed in the fault for the misconfiguration.
3. Log into Cisco UCS Manager and correct each misconfigured logical interface. If you used the Cisco UCS Manager CLI, commit all changes.
4. Review any faults or error messages that describe additional misconfigurations and correct those errors.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical

moClass: fabric:EpMgr
Type: network
autoCleared: true
Affected MO: fabric/[id]
```

fltFabricVlanMisconfigured

Fault Code: F0833

Message: VLAN [name] is [operState] because of conflicting vlan-id with a fcoe-vlan

Explanation:

This fault typically occurs when VLAN has the same ID as an FCoE VLAN. This issue can cause disruption of traffic.

Recommended Action:

If you see this fault, take the following action:

1. Check the VLAN ID.
2. If the ID of the VLAN matches the ID of the FCoE VLAN assigned to a VLAN in the same fabric interconnect, change the ID of either the VLAN or the FCoE VLAN.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltFabricPloEpErrorMisconfigured

Fault Code: F0834

Message: Interface [name] is [operState]. Reason: [operStateReason]

Explanation:

This fault occurs when a logical interface is misconfigured. This can happen when upgrading to a different type or series of fabric interconnect or when importing a configuration.

Recommended Action:

If you see this fault, take the following action:

1. Create a list of all logical interfaces that are misconfigured and have caused an 'error-misconfigured' fault.
2. For each logical interface, note the reason listed in the fault for the misconfiguration.
3. Log into Cisco UCS Manager and correct each misconfigured logical interface. If you used the Cisco UCS Manager CLI, commit all changes.
4. Review any faults or error messages that describe additional misconfigurations and correct those errors.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltFabricEthLanEpMissingPrimaryVlan

Fault Code: F0835

Message: Primary vlan missing from fabric: [switchId], port: [slotId]/[aggrPortId]/[portId].Primary vlan missing from fabric: [switchId], port: [slotId]/[portId].

Explanation:

This fault occurs when an uplink port or port channel is configured with a primary VLAN that does not exist in the Cisco UCS instance.

Recommended Action:

If you see this fault, take the following action:

1. Update the configuration of the port or port channel to include a primary VLAN.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

Severity: major
Cause: missing-primary-vlan
mibFaultCode: F0835

fltFabricEthLanPcMissingPrimaryVlan

Fault Code: F0836

Message: Primary vlan missing from fabric: [switchId], port-channel: [portId].

Explanation:

This fault occurs when an uplink port or port channel is configured with a primary VLAN that does not exist in the Cisco UCS instance.

Recommended Action:

If you see this fault, take the following action:

1. Update the configuration of the port or port channel to include a primary VLAN.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: missing-primary-vlan
mibFaultCode: F0836
mibFaultName: fltFabricEthLanPcMissingPrimaryVlan
moClass: fabric:EthLanPc
Type: management
autoCleared: true
Affected MO: fabric/lan/[id]/pc-[portId]
```

fltVnicEtherPinningMismatch

Fault Code: F0840

Message: Hard pinning target for eth vNIC [name], service profile [name] does not have all the required vlans configured

Explanation:

This fault occurs when one or more VLANs required by vNIC in a service profile are not configured on the target uplink port or port channel for a hard-pinned LAN pin group.

Recommended Action:

If you see this fault, take the following actions:

1. In the LAN Uplinks Manager of the Cisco UCS Manager GUI, configure all of the VLANs in the vNIC in the target uplink port or port channel for the LAN pin group. If you prefer to use the Cisco UCS Manager CLI, navigate to scope **/eth-uplink/vlan** and create the required member ports for the LAN pin group.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: pinning-mismatch
mibFaultCode: F0840
mibFaultName: fltVnicEtherPinningMismatch
moClass: vnic:Ether
Type: configuration
autoCleared: true
Affected MO: org-[name]/lan-conn-pol-[name]/ether-[name]
Affected MO: org-[name]/ls-[name]/ether-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]/ether-[name]
```

fltVnicEtherPinningMisconfig

Fault Code: F0841

Message: Hard pinning target for eth vNIC [name], service profile [name] is missing or misconfigured

Explanation:

This fault occurs when one or more vNIC target uplink ports or port channels for a hard-pinned LAN pin group are either missing or misconfigured as the wrong port type.

Recommended Action:

If you see this fault, take the following actions:

1. Review the LAN pin group configuration.
2. Correct the configuration of the port and port channels in the pin group.
3. Ensure that all required vLANs are allowed on the target ports or port channels.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: pinning-misconfig
mibFaultCode: F0841
mibFaultName: fltVnicEtherPinningMisconfig
moClass: vnic:Ether
```

```
Type: configuration
autoCleared: true
Affected MO: org-[name]/lan-conn-pol-[name]/ether-[name]
Affected MO: org-[name]/ls-[name]/ether-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]/ether-[name]
```

fltProcessorUnitDisabled

Fault Code: F0842

Message: Processor [id] on server [chassisId]/[slotId] operState: [operState]Processor [id] on server [id] operState: [operState]Processor [id] on server [chassisId]/[slotId]/[serverInstanceId] operState: [operState]

Explanation:

This fault occurs in the unlikely event that a processor is disabled.

Recommended Action:

If you see this fault, take the following actions:

1. If this fault occurs on a blade server, remove and reinsert the server into the chassis.
2. In Cisco UCS Manager, decommission and recommission the blade server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-disabled
mibFaultCode: F0842
mibFaultName: fltProcessorUnitDisabled
moClass: processor:Unit
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]
Affected MO: sys/rack-unit-[id]/board/cpu-[id]
```

fltMemoryUnitDisabled

Fault Code: F0844

Message: DIMM [location] on server [chassisId]/[slotId] operState: [operState]DIMM [location] on server [id] operaState: [operState]DIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] operState: [operState]

Explanation:

This fault is raised when the server BIOS disables a DIMM. The BIOS could disable a DIMM for several reasons, including incorrect location of the DIMM or incompatible speed.

Recommended Action:

If you see this fault, refer to the Cisco UCS B-Series Troubleshooting Guide for information on how to resolve the DIMM issues.

Fault Details

```
Severity: major
```

```
Cause: equipment-disabled
mibFaultCode: F0844
mibFaultName: fltMemoryUnitDisabled
moClass: memory:Unit
Type: equipment
autoCleared: true

Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/mem-[id]
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/mem-[id]
```

fltFirmwareBootUnitActivateStatusFailed

Fault Code: F0856

Message: Activation failed and Activate Status set to failed.

Explanation:

This fault typically occurs for the following reasons: when firmware activation fails, or if the after activation running image is not the corresponding startup image.

- Firmware activation failed.
- The version of firmware running on the server after activation is not the version listed in Cisco UCS Manager as the startup image.

Recommended Action:

If you see this fault, take the following actions:

1. Go to FSM tab for the endpoint on which the fault is raised and review the error description for the reason that the activation failed.
2. If the FSM failed, review the error message in the FSM.
3. If possible, correct the problem described in the error message.
4. If the problem persists, create a **show tech-support** file and contact Cisco TAC.

fltFabricInternalPcDown

Fault Code: F0858

Message: [type] port-channel [portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]

Explanation:

This fault occurs when the transport VIF for a server is down. Cisco UCS Manager raises this fault when a fabric interconnect reports the connectivity state on virtual interface as one of the following:

- Down
- Errored
- Unavailable

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the blade server discovery was successful.
2. Check the states on all communicating ports from end to end.
3. If connectivity seems correct, decommission and recommission the server.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: operational-state-down
mibFaultCode: F0858
mibFaultName: fltFabricInternalPcDown
moClass: fabric:InternalPc
Type: network
autoCleared: true
Affected MO: fabric/server/sw-[id]/pc-[portId]
```

fltMgmtEntityDevice-1-shared-storage-error

Fault Code: F0863

Message: device [chassis1], error accessing shared-storage

Explanation:

This fault occurs in an unlikely event that the shared storage selected for writing the cluster state is not accessible. This fault is typically a transient fault. You might see this fault when one of the following occurs: (a) the Fabric Interconnect boots, (b) the IO Module is reset, (c) the rack server is reboot, or (d) system is upgraded/downgraded. If this fault is not cleared after the system returns to normal operation following the reboot/reset/upgrade/downgrade, then it may affect the full HA functionality of the Fabric Interconnect cluster.

Recommended Action:

If this fault is not cleared even after the system returns to normal operation, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: device-shared-storage-error
mibFaultCode: F0863
mibFaultName: fltMgmtEntityDevice1SharedStorageError
moClass: mgmt:Entity
Type: management
autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltMgmtEntityDevice-2-shared-storage error

Fault Code: F0864

Message: device [chassis2], error accessing shared-storage

Explanation:

This fault occurs in an unlikely event that the shared storage selected for writing the cluster state is not accessible. This fault is typically a transient fault. You might see this fault when one of the following occurs: (a) the Fabric Interconnect boots, (b) the IO Module is reset, (c) the rack server is reboot, or (d) system is upgraded/downgraded. If this fault is not cleared after the system returns to normal operation following the reboot/reset/upgrade/downgrade, then it may affect the full HA functionality of the Fabric Interconnect cluster.

Recommended Action:

If this fault is not cleared even after the system returns to normal operation, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: device-shared-storage-error
mibFaultCode: F0864
mibFaultName: fltMgmtEntityDevice2SharedStorageError
moClass: mgmt:Entity
Type: management
autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltMgmtEntityDevice-3-shared-storage error

Fault Code: F0865

Message: device [chassis3], error accessing shared-storage

Explanation:

This fault occurs in an unlikely event that the shared storage selected for writing the cluster state is not accessible. This fault is typically a transient fault. You might see this fault when one of the following occurs: (a) the Fabric Interconnect boots, (b) the IO Module is reset, (c) the rack server is reboot, or (d) system is upgraded/downgraded. If this fault is not cleared after the system returns to normal operation following the reboot/reset/upgrade/downgrade, then it may affect the full HA functionality of the Fabric Interconnect cluster.

Recommended Action:

If this fault is not cleared even after the system returns to normal operation, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: device-shared-storage-error
mibFaultCode: F0865
mibFaultName: fltMgmtEntityDevice3SharedStorageError
moClass: mgmt:Entity
Type: management
autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltMgmtEntityHa-ssh-keys-mismatched

Fault Code: F0866

Message: Fabric Interconnect [id], management services, mismatched SSH keys

Explanation:

This fault indicates that one of the following scenarios has occurred:

- The internal SSH keys used for HA in the cluster configuration are mismatched. This causes certain operations to fail.
- Another fabric interconnect is connected to the primary fabric interconnect in the cluster without first erasing the existing configuration in the primary.

Recommended Action:

If you see this fault, take the following actions:

1. Log into the Cisco UCS Manager CLI on the subordinate fabric interconnect.
2. Enter **connect local-mgmt**
3. Enter **erase configuration** to erase the configuration on the subordinate fabric interconnect and reboot it.
4. When the secondary fabric interconnect has rebooted, reconfigure it for the cluster.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: ha-ssh-keys-mismatched
mibFaultCode: F0866
mibFaultName: fltMgmtEntityHaSshKeysMismatched
moClass: mgmt:Entity
Type: management
autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltMgmtPmonEntryUCSM process failure

Fault Code: F0867

Message: UCSM process [name] failed on FI [switchId]

Explanation:

This fault occurs in an unlikely event of a Cisco UCS Manager process crash. Typically, the failed process restarts and recovers from the problem. Any pending operations are restarted after the process successfully restarts.

Recommended Action:

If you see this fault and the process does not restart successfully, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: ucsm-process-failure
mibFaultCode: F0867
mibFaultName: fltMgmtPmonEntryUCSMProcessFailure
moClass: mgmt:PmonEntry
Type: management
autoCleared: true
Affected MO: sys/mgmt-entity-[id]/[name]
```

fltComputeBoardPowerFail

Fault Code: F0868

Message: Motherboard of server [chassisId]/[slotId] (service profile: [assignedToDn]) power: [power]Motherboard of server [id] (service profile: [assignedToDn]) power: [power]Motherboard of server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) power: [power]

Explanation:

This fault typically occurs when CIMC is unable to turn ON the server power. This may indicate a hardware component failure.

Recommended Action:

If you see this fault, take the following actions

1. In case of a blade server, remove the blade server from the chassis and re-insert.
2. In case of a rack server, manually a/c power cycle the server.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: power-problem
mibFaultCode: F0868
mibFaultName: fltComputeBoardPowerFail
moClass: compute:Board
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board
Affected MO: sys/rack-unit-[id]/board
```

fltComputeABoardThermalProblem

Fault Code: F0869

Message: Motherboard [faultQualifier] of server [chassisId]/[slotId] (service profile: [assignedToDn]) thermal: [thermal]Motherboard of server [id] (service profile: [assignedToDn]) thermal: [thermal]Motherboard [faultQualifier] of server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) thermal: [thermal]

Explanation:

This fault typically occurs when the motherboard thermal sensors on a server detect a problem.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the server fans are working properly.
2. Wait for 24 hours to see if the problem resolves itself.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: F0869
mibFaultName: fltComputeABoardThermalProblem
moClass: compute:ABoard

Affected MO: sys/rack-unit-[id]/ext-board-[id]
```

fltVmVifLinkState

Fault Code: F0876

Message: Virtual interface [vifId] link is down; reason [stateQual]

Explanation:

This fault occurs when Cisco UCS cannot send or receive data through an uplink port.

Recommended Action:

If you see this fault, take the following actions:

1. Enable the failed uplink port.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: vif-down
mibFaultCode: F0876
mibFaultName: fltVmVifLinkState
moClass: vm:Vif
Type: management
autoCleared: true
Affected MO: vmm/computeEp-[uuid]/nic-[name]/sw-[phSwitchId]vif-[vifId]
Affected MO: vmm/hv-[uuid]/nic-[name]/sw-[phSwitchId]vif-[vifId]
Affected MO: vmm/vm-[uuid]/nic-[name]/sw-[phSwitchId]vif-[vifId]
```

fltEquipmentPsuPowerSupplyShutdown

Fault Code: F0881

Message: Power supply [id] in chassis [id] shutdown reason:[powerStateQualifier]Power supply [id] in rack-enclosure [id] shutdown reason:[powerStateQualifier]

Explanation:

This fault typically occurs when a power supply unit in a chassis, fabric interconnect, or a FEX is shut down, either due to higher than expected power current, higher than expected temperatures, or the failure of a fan.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.

6. Verify that the power cord is properly connected to the PSU and the power source.
7. Verify that the power source is 220 volts.
8. Verify that the PSU is properly installed in the chassis or fabric interconnect.
9. Remove the PSU and reinstall it.
10. Replace the PSU.
11. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-offline
mibFaultCode: F0881
mibFaultName: fltEquipmentPsuPowerSupplyShutdown
moClass: equipment:Psu
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/psu-[id]
Affected MO: sys/fex-[id]/psu-[id]
Affected MO: sys/rack-enclosure-[id]/psu-[id]
Affected MO: sys/rack-unit-[id]/psu-[id]
Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentPsuPowerThreshold

Fault Code: F0882

Message: Power supply [id] on chassis [id] has exceeded its power thresholdPower supply [id] on server [id] has exceeded its power thresholdPower supply [id] on rack-enclosure [id] has exceeded its power threshold

Explanation:

This fault occurs when a power supply unit is drawing too much current.

Recommended Action:

If you see this fault, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: power-problem
mibFaultCode: F0882
mibFaultName: fltEquipmentPsuPowerThreshold
moClass: equipment:Psu
Type: equipment
autoCleared: true

Affected MO: sys/rack-unit-[id]/psu-[id]
Affected MO: sys/switch-[id]/psu-[id]
```

fltEquipmentSwitchCardPowerOff

Fault Code: F0884

Message: Switch card is powered down.

Explanation:

This fault occurs when the switch card is powered down.

Recommended Action:

If you see this fault, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: power-down
mibFaultCode: F0884
mibFaultName: fltEquipmentSwitchCardPowerOff
moClass: equipment:SwitchCard
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]/slot-[id]
```

fltNetworkElementInventoryFailed

Fault Code: F0885

Message: Fabric Interconnect [id] inventory is not complete [inventoryStatus]

Explanation:

Cisco UCS Manager raises this fault when the management subsystem is unable to perform an inventory of the physical components, such as I/O cards or physical ports.

Recommended Action:

If you see this fault, take the following actions:

1. Ensure that both fabric interconnects in an HA cluster are running the same software versions.
2. Ensure that the fabric interconnect software is a version that is compatible with the Cisco UCS Manager software.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: inventory-failed
mibFaultCode: F0885
mibFaultName: fltNetworkElementInventoryFailed
moClass: network:Element
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]
```

fltAdaptorUnitExtnUnidentifiable-fru

Fault Code: F0900

Message: Adapter extension [id] in server [chassisId]/[slotId] has unidentified FRU

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported adapter unit extension, such as a pass-through adaptor. For example, the model, vendor, or revision is not recognized.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that a supported adapter unit extension is installed.
2. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: unidentifiable-fru
mibFaultCode: F0900
mibFaultName: fltAdaptorUnitExtnUnidentifiableFru
moClass: adaptor:UnitExtn
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/adaptor-[id]/adaptor-extn-[id]

sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/adaptor-[id]/adaptor-extn-[id]
Affected MO: sys/rack-unit-[id]/adaptor-[id]/adaptor-extn-[id]
```

fltAdaptorUnitExtnMissing

Fault Code: F0901

Message: Adapter extension [id] in server [chassisId]/[slotId] presence: [presence]

Explanation:

This fault typically occurs when an I/O adapter unit extension, such as a pass-through adapter, is missing. Cisco UCS Manager raises this fault when any of the following scenario occur:

- The endpoint reports there is no adapter unit extension, such as a pass-through adapter, plugged into the adapter slot.
- The endpoint cannot detect or communicate with the adapter unit extension plugged into the adapter slot.

Recommended Action:

If you see this fault, take the following actions:

1. Ensure the adapter unit extension is properly plugged into an adapter slot in the server.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: equipment-missing
mibFaultCode: F0901
mibFaultName: fltAdaptorUnitExtnMissing
moClass: adaptor:UnitExtn
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/adaptor-[id]/adaptor-extn-[id]

```

fltEquipmentFexFex-unsupported

Fault Code: F0902

Message: Fex [id] with model [model] is unsupported

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported FEX. For example, the model, vendor, or revision is not recognized.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that a supported FEX is installed.
2. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: fex-unsupported

```

fltVnicIScsiConfig-failed

Fault Code: F0903

Message: iSCSI vNIC [name], service profile [name] has duplicate iqn name [initiatorName]

Explanation:

This fault typically occurs when IScsi Vnics refer the same iqn name.

Recommended Action:

If you see this fault, take the following actions:

1. Make sure that iqn name unique per iSCSI vnic.
2. Using show identity iqn check if the iSCSI vnic is registered in the universe.
3. Try non disruptive actions such as changing description on the Service Profile to register the iqn in the universe.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: configuration-failed
mibFaultCode: F0903
mibFaultName: fltVnicIScsiConfigFailed

Affected MO: org-[name]/tier-[name]/ls-[name]/iscsi-[name]
```

fltPkiKeyRingStatus

Fault Code: F0909

Message: [name] Keyring's certificate is invalid, reason: [certStatus].

Explanation:

This fault occurs when certificate status of Keyring has become invalid.

Recommended Action:

None set.

Fault Details

```
Severity: major
Cause: invalid-keyring-certificate
mibFaultCode: F0909
mibFaultName: fltPkiKeyRingStatus
moClass: pki:KeyRing
Type: security
```

```
autoCleared: true
Affected MO: sys/pki-ext/keyring-[name]
```

fltPkiTPStatus

Fault Code: F0910

Message: [name] Trustpoint's cert-chain is invalid, reason: [certStatus].

Explanation:

This fault occurs when certificate status of TrustPoint has become invalid.

Recommended Action:

None set.

Fault Details

```
Severity: major
Cause: invalid-trustpoint-cert-chain
mibFaultCode: F0910
mibFaultName: fltPkiTPStatus
moClass: pki:TP
Type: security
autoCleared: true
Affected MO: sys/pki-ext/tp-[name]
```

fltComputePhysicalDisassociationFailed

Fault Code: F0915

Message: Failed to disassociate server [id]Failed to disassociate server [chassisId]/[slotId]Failed to disassociate server [chassisId]/[slotId]/[serverInstanceId]

Explanation:

This fault typically occurs for one of the following reasons:

- The server is down.
- The data path is not working.
- Cisco UCS Manager cannot communicate with one or more of the fabric interconnect, the server, or a component on the server.

Recommended Action:

If you see this fault, take the following actions:

1. Check the communication path to the server including fabric interconnect server ports, IOM link and the current state of the server
2. If the server is stuck in an inappropriate state, such as booting, power cycle the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: disassociation-failed
```

```
mibFaultCode: F0915
mibFaultName: fltComputePhysicalDisassociationFailed
moClass: compute:Physical
Type: configuration
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalNetworkMisconfigured

Fault Code: F0916

Message: Server [id] (service profile: [assignedToDn]) has mis-configured network vif resourcesServer [chassisId]/[slotId] (service profile: [assignedToDn]) has mis-configured network vif resourcesServer [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) has mis-configured network vif resources

Explanation:

This fault would occur when UCSM VIF-id Map is not the same as the VIF-id map deployed on the adaptor upon Full Backup->Restore etc.

Recommended Action:

If you see this fault, take the following actions:

1. Re-acknowledge the server. This will trigger Deep Discovery->Deep Association & will resolve the issue
2. If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

fltVnicEtherIfVlanAccessFault

Fault Code: F0932

Message: The named vlan [name] for vNIC [name] cannot be accessed from org [name]

Explanation:

This fault typically occurs when a Service Profile's vnic interface (LAN) is resolvable but the service profile does not have access to the vlan. In this case, the default vlan will be used.

Recommended Action:

This fault will be removed if you perform one of the following actions:

1. Change the vnic's interface name to a VLAN that you have access to.
2. If you wish to use the default vlan, change the vnic's interface name to default.
3. Configure access to the named vlan by creating a vlan permit or vlan group permit in the service profile's org (or a parent org).

Fault Details

```

fltVnicEtherIfInvalidVlan

Fault Code: F0934

Message: Invalid Vlan in the allowed vlan list

Explanation:

This fault typically occurs when a vnic of a service profile or a port profile contains an invalid vlan. an invalid vlan can be any one of the following:

1. an isolated vlan or a community vlan that is not associated to a valid primary vlan
2. a primary vlan without any of its assoicated secondary vlans allowed on the vnic
3. a vlan which has sharing-type or primary vlan name not matching to that of vlan in lan-side/appliance-side
4. a vlan which overlaps with FCoE vlan

Recommended Action:

This fault will be removed if you perform one of the following actions:

1. if invalid vlan is an isolated or community vlan then make sure it is mapped to a valid primary vlan.
2. if invalid vlan is a primary vlan then either allow any of its secondary vlans or delete it from vnic or port profile.
3. if invalid vlan is a vlan that does not match the sharing properties with the vlan of same vlan id in the lan-side/appliance-side, change the properties of this vlan to be the same as the other.
4. if invalid vlan is a vlan overlaps with FCoE vlan then configure a different vlan.

Fault Details

```

fltStorageVirtualDriveInoperable

Fault Code: F1007

Message: Virtual drive [id] on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]Virtual drive [id] on server [id] operability: [operability]. Reason: [operQualifierReason]Virtual drive [id] on chassis [id] operability: [operability]. Reason: [operQualifierReason]

Explanation:

This fault occurs when the virtual drive has become inoperable.

Recommended Action:

If you see this fault, take the following actions:

1. Verify the presence and health of disks that are used by the virtual drive.
2. If applicable, reseat or replace used disks.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-inoperable
mibFaultCode: F1007
mibFaultName: fltStorageVirtualDriveInoperable

fltStorageVirtualDriveDegraded

Fault Code: F1008

Message: Virtual drive [id] on server [chassisId]/[slotId] operability: [operability]. Reason: [operQualifierReason]Virtual drive [id] on server [id] operability: [operability]. Reason: [operQualifierReason]Virtual drive [id] on chassis [id] operability: [operability]. Reason: [operQualifierReason]

Explanation:

This fault occurs when the virtual drive has become degraded. The fault description will contain the physical drive state, which indicates the reason for the degradation.

Recommended Action:

If you see this fault, take the following actions:

1. If the drive is performing a consistency check operation, wait for the operation to complete.
2. Verify the presence and health of disks that are used by the virtual drive.
3. If applicable, reseat or replace used disks.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-degraded
mibFaultCode: F1008
mibFaultName: fltStorageVirtualDriveDegraded
moClass: storage:VirtualDrive
Type: equipment
autoCleared: true

```

fltAaaProviderGroupProvidergroup

Fault Code: F1026

Message: For [dn]: Server Group with name [name] already exist, You need to specify a unique name for this object.

Explanation:

This fault typically occurs because Cisco UCS Manager has detected multiple provider-groups with same name.

Recommended Action:

If you see this fault, take the following actions:

1. Need to delete the duplicate provider group configured causing this problem.

Fault Details

```
Severity: major
Cause: provider-group-already-exists
mibFaultCode: F1026
mibFaultName: fltAaaProviderGroupProvidergroup
moClass: aaa:ProviderGroup
Type: security
autoCleared: true
Affected MO: sys/ldap-ext/providergroup-[name]
Affected MO: sys/radius-ext/providergroup-[name]
Affected MO: sys/tacacs-ext/providergroup-[name]
```

fltAaaConfigServergroup

Fault Code: F1027

Message: For [dn]: [realm] Server Group with name [providerGroup] doesn't exist or is not deployed.

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported authentication method.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that server group configured for authentication is present.
2. If the server group is not configured, create the server group to use for authentication.

Fault Details

```
Severity: critical
Cause: invalid-server-group
mibFaultCode: F1027
mibFaultName: fltAaaConfigServergroup
moClass: aaa:Config
Type: security
autoCleared: true
Affected MO: sys/auth-realm/console-auth
Affected MO: sys/auth-realm/default-auth
Affected MO: sys/auth-realm/domain-[name]/domain-auth
```

fltAaaRoleRoleNotDeployed

Fault Code: F1028

Message: Role [name] can't be deployed. Error: [configStatusMessage]

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported role.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that total number of roles is less than maximum supported roles.
2. Verify that sum of privileges across all roles is less than maximum privileges sum.

Fault Details

```
Severity: critical
Cause: role-config-error
mibFaultCode: F1028
mibFaultName: fltAaaRoleRoleNotDeployed
moClass: aaa:Role
Type: security
autoCleared: true
Affected MO: sys/user-ext/role-[name]
```

fltAaaLocaleLocaleNotDeployed

Fault Code: F1029

Message: Locale [name] can't be deployed. Error: [configStatusMessage]

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported locale.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that total number of locale is less than maximum supported roles.

Fault Details

```
Severity: critical
Cause: locale-config-error
mibFaultCode: F1029
mibFaultName: fltAaaLocaleLocaleNotDeployed
moClass: aaa:Locale
Type: security
autoCleared: true
Affected MO: sys/user-ext/locale-[name]
```

fltAaaUserRoleUserRoleNotDeployed

Fault Code: F1030

Message: For user: [name] role [name] can't be assigned. Error: [configStatusMessage].For Ldap Group: [name] role [name] can't be assigned. Error: [configStatusMessage].

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported user role for ldap groups or local users.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the role is present .
2. Verify that the role is applied .
3. Verify that the role is compatible with locales assigned to ldap group or local user .

Fault Details

```
Severity: critical
Cause: user-role-config-error
mibFaultCode: F1030
mibFaultName: fltAaaUserRoleUserRoleNotDeployed
moClass: aaa:UserRole
Type: security
autoCleared: true
Affected MO: sys/ldap-ext/ldapgroup-[name]/role-[name]
Affected MO: sys/user-ext/remoteuser-[name]/role-[name]
Affected MO: sys/user-ext/user-[name]/role-[name]
```

fltAaaUserLocaleUserLocaleNotDeployed

Fault Code: F1031

Message: For user: [name] locale [name] can't be assigned. Error: [configStatusMessage].For Ldap Group: [name] locale [name] can't be assigned. Error: [configStatusMessage].

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported user locale for ldap groups or local users.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the locale is present .
2. Verify that the locale is applied .
3. Verify that the locale is compatible with roles assigned to ldap group or local user .

Fault Details

```
Severity: critical
Cause: user-locale-config-error
mibFaultCode: F1031
mibFaultName: fltAaaUserLocaleUserLocaleNotDeployed
moClass: aaa:UserLocale
Type: security
autoCleared: true
Affected MO: sys/ldap-ext/ldapgroup-[name]/locale-[name]
Affected MO: sys/user-ext/remoteuser-[name]/locale-[name]
Affected MO: sys/user-ext/user-[name]/locale-[name]
```

fltPkiKeyRingKeyRingNotDeployed

Fault Code: F1032

Message: Keyring [name] can't be deployed. Error: [configStatusMessage]

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an invalid Keyring.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the trust point configured for this keyring is present .
2. Verify that the trust point found above is applied .

Fault Details

```
Severity: critical
Cause: keyring-config-error
mibFaultCode: F1032
mibFaultName: fltPkiKeyRingKeyRingNotDeployed
moClass: pki:KeyRing
Type: security
autoCleared: true
Affected MO: sys/pki-ext/keyring-[name]
```

fltCommSnmpSyscontactEmpty

Fault Code: F1033

Message: UCS Manager cannot deploy an empty value of SNMP Syscontact when Callhome is enabled. The previous value [sysContact] for SNMP Syscontact has been retained.

Explanation:

This fault typically occurs when UCS Manager receives an invalid configuration from UCS Central wherein SNMP Syscontact is set to empty when Callhome is enabled.

Recommended Action:

If you see this fault, please ensure that the SNMP Syscontact field on UCS Central is configured correctly for the domain group corresponding to this UCSM.

Fault Details

```
Severity: warning
Cause: snmp-config-error
mibFaultCode: F1033
mibFaultName: fltCommSnmpSyscontactEmpty
moClass: comm:Snmp
Type: configuration
autoCleared: true
Affected MO: sys/svc-ext/snmp-svc
```

fltCommDateTimeCommTimeZoneInvalid

Fault Code: F1034

Message: Timezone:[timezone] is invalid

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported role.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that total number of roles is less than maximum supported roles.
2. Verify that sum of privileges across all roles is less than maximum privileges sum.

Fault Details

```
Severity: minor
Cause: timezone-file-not-exists
mibFaultCode: F1034
mibFaultName: fltCommDateTimeCommTimeZoneInvalid
moClass: comm:DateTime
Type: configuration
autoCleared: true
Affected MO: org-[name]/comm-pol-[name]/datetime-svc
Affected MO: sys/svc-ext/datetime-svc
```

fltAaaUserLocalUserNotDeployed

Fault Code: F1035

Message: Local User [name] can't be deployed. Error: [configStatusMessage]

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an invalid system user.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that local user name is not used by snmp users.

Fault Details

```
Severity: major
Cause: user-config-error
mibFaultCode: F1035
mibFaultName: fltAaaUserLocalUserNotDeployed
moClass: aaa:User
Type: security
autoCleared: true
Affected MO: sys/user-ext/user-[name]
```

fltCommSnmpUserSnmpUserNotDeployed

Fault Code: F1036

Message: SNMP User [name] can't be deployed. Error: [configStatusMessage]

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an invalid snmp user.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that snmp user name is not used by system users.
2. Verify that authentication type is not MD5.
3. Verify that AES is enabled.

Fault Details

```
Severity: major
Cause: snmp-user-config-error
mibFaultCode: F1036
mibFaultName: fltCommSnmpUserSnmpUserNotDeployed
moClass: comm:SnmpUser
Type: configuration
autoCleared: true
Affected MO: sys/svc-ext/snmp-svc/snmpv3-user-[name]
```

fltCommSvcEpCommSvcNotDeployed

Fault Code: F1037

Message: Communication Service configuration can't be deployed. Error: [configStatusMessage]

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an invalid communication policy confiuration.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that ports configured across all communication services is unique.

Fault Details

```
Severity: major
Cause: comm-svc-config-error
mibFaultCode: F1037
mibFaultName: fltCommSvcEpCommSvcNotDeployed
moClass: comm:SvcEp
Type: configuration
autoCleared: true
Affected MO: sys/svc-ext
```

fltComputeABoardPowerUsageProblem

Fault Code: F1040

Message: Motherboard [faultQualifier] of server [chassisId]/[slotId] (service profile: [assignedToDn]) powerUsage: [powerUsage]Motherboard of server [id] (service profile: [assignedToDn]) powerUsage: [powerUsage]Motherboard [faultQualifier] of server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) powerUsage: [powerUsage]

Explanation:

This fault typically occurs when the motherboard power consumption exceeds certain threshold limits. At that time the power usage sensors on a server detect a problem.

Recommended Action:

If you see this fault, take the following actions:

1. Create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: power-problem
mibFaultCode: F1040
mibFaultName: fltComputeABoardPowerUsageProblem
moClass: compute:ABoard
Type: environmental
autoCleared: true

Affected MO: sys/rack-unit-[id]/ext-board-[id]
```

fltSwVlanPortNsVLANCompNotSupport

Fault Code: F1056

Message: VLAN Port Count Optimization is not supported

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: critical
Cause: no-vlan-optimization
mibFaultCode: F1056
mibFaultName: fltSwVlanPortNsVLANCompNotSupport
moClass: sw:VlanPortNs
Type: network
autoCleared: true
Affected MO: sys/switch-[id]/vlan-port-ns
```

fltPolicyControlEpSuspendModeActive

Fault Code: F1057

Message: UCSM is suspended from receiving updates from UCS Central.

Explanation:

This fault occurs when UCSM enters into suspend state from receiving updates from UCS Central that it is registered with.

Recommended Action:

If you see this fault, take the following actions:

1. Please check if UCS Central is restored to a previous version or a policy roll-back has occured. You may have brought UCS in to manual suspension mode by using **set suspendstate on** command under the system->control-ep policy scope.
2. Please confirm the suspend state by using **show control-ep policy detail** under system scope. If you still want to receive the updates from UCS Central, you need to restore it back to a version compatible with UCSM or set the suspend state to off by acknowledging it by using **set ackstate acked** under policy-control scope.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: suspend-mode-entered
mibFaultCode: F1057
mibFaultName: fltPolicyControlEpSuspendModeActive
moClass: policy:ControlEp
Type: management
autoCleared: true
Affected MO: sys/control-ep-[type]
```

fltNetworkElementThermalThresholdCritical

Fault Code: F1080

Message: Fabric Interconnect [id] temperature: [thermal]

Explanation:

This fault occurs when the temperature of a Fabric Interconnect exceeds a critical threshold value. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the Fabric Interconnect.
2. Review the Cisco UCS Site Preparation Guide to ensure the Fabric Interconnects have adequate airflow, including front and back clearance.
3. Verify that the air flows are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
6. Replace faulty Fabric Interconnects.

7. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: F1080

fltFabricFcoeSanEpUnsupported

Fault Code: F1084

Message: FCoE uplink port [slotId]/[aggrPortId]/[portId] cannot be supported on springfields when FI is in eth endhost mode and FC switching modeFCoE uplink port [slotId]/[portId] cannot be supported on springfields when FI is in eth endhost mode and FC switching mode

Explanation:

This fault typically occurs when a Fcoe uplink port cannot be supported on a specific FI platform .

Recommended Action:

If you see this fault, take the following action:

1. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltFabricFcoeSanPcDown

Fault Code: F1085

Message: FCoE uplink port channel [portId] is down

Explanation:

This fault typically occurs when a Fcoe uplink port channel is down.

Recommended Action:

If you see this fault, take the following action:

1. Check the link connectivity on the upstream switch
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltFabricPinTargetDown

Fault Code: F1088

Message: Pin target is a non-existent interface

Explanation:

This fault typically occurs when a PinGroup has an unresolvable target.

Recommended Action:

If you see this fault, take the following action:

1. Check whether the PinGroup target is correctly provisioned.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

Severity: warning
Cause: invalid-target
mibFaultCode: F1088

moClass: fabric:PinTarget
Type: network
autoCleared: true
Affected MO: fabric/lan/lan-pin-group-[name]/target-[fabricId]
Affected MO: fabric/san/san-pin-group-[name]/target-[fabricId]

fltFabricExternalEpFcZoningEnable

Fault Code: F1089

Message: FC zoning is not supported from FI when connected to an uplink FC switch. Fabric: [switchId], Port: [slotId]/[portId].

Explanation:

This fault occurs when FC zoning is enabled from FI and at the same time FI is connected to an uplink FC switch.

Recommended Action:

FC zones should be configured either from UCSM or from the uplink FC switch. Disable FC zoning from UCSM or disconnect the uplink switch for clearing this fault.

fltFabricEthLanEpOverlapping-vlan

Fault Code: F1090

Message: On Fabric: [switchId], Port: [slotId]/[aggrPortId]/[portId] following overlapping VLANs detected: [overlappingVlans]On Fabric: [switchId], Port: [slotId]/[portId] following overlapping VLANs detected: [overlappingVlans]

Explanation:

This fault occurs when Overlapping Vlans occur due to mis configuration.

Recommended Action:

Ports configured on Vlans belonging to a group should not intersect with other ports of different network group belonging to Vlans which overlap .

fltFabricFcSanPcFc-portchannel-members-invalid

Fault Code: F1094

Message: FC port channel member ports should have same max speed

Explanation:

This fault typically occurs when admin speed of FC PortChannel is Auto while its member ports having different max speeds

Recommended Action:

When FC PortChannel admin speed is set to Auto, member ports should have same max speed

Fault Details

```
Severity: major
Cause: fc-portchannel-members-inconsistent-speed
mibFaultCode: F1094
mibFaultName: fltFabricFcSanPcFcPortchannelMembersInvalid
moClass: fabric:FcSanPc
Type: network
autoCleared: true
Affected MO: fabric/san/[id]/pc-[portId]
```

fltFabricVlanMisconfigured-mcast-policy

Fault Code: F1095

Message: VLAN [name] multicast policy [mcastPolicyName] is non-default.

Explanation:

This fault is raised when VLAN belonging to a Springfield fabric has a non-default multicast policy assigned to it.

Recommended Action:

If you see this fault, take the following action:

1. Un-assign multicast policy for the this vlan or change the multicast policy to default.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: vlan-mcast-policy-misconfigured

Affected MO: fabric/lan/net-[name]
```

fltMgmtConnectionDisabled

Fault Code: F1097

Message: Management Connection [type] in server [id] is not operational

Explanation:

This fault occurs when multiple management connections are acknowledegd.

Recommended Action:

If you see this fault, take the following actions:

1. Disable the management connection which is unused.
2. If new management connection needs to be used, decommission and recommission server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltMgmtConnectionUnused

Fault Code: F1098

Message: Management Connection [type] in server [id] is unused

Explanation:

This fault occurs when a management connection is not enabel

Recommended Action:

If you see this fault, you can enable the connection if none of the management connections are enabled. Else this can be ignored

fltMgmtConnectionUnsupportedConnectivity

Fault Code: F1099

Message: Unsupported connectivity for management connection [type] in server [id]

Explanation:

This fault typically occurs because Cisco UCS Manager has detected that the physical connectivity of the management port of the server is unsupported.

Recommended Action:

If you see this fault, take the following actions:

1. Connect the management port/s of the rack mount server to the Fabric Extender/s
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltCallhomeEpNoSnmpPolicyForCallhome

Fault Code: F1102

Message: UCS Manager cannot apply Callhome policy if SNMP Policy is not configured or if SNMP Syscontact has an empty value. The Callhome policy from UCS Central has not been applied.

Explanation:

This fault typically occurs when UCS Manager receives an invalid configuration from UCS Central wherein Callhome is configured on UCS Central but there is no SNMP Syscontact defined locally.

Recommended Action:

If you see this fault, please ensure that the SNMP Policy is configured on UCSM Manager, either locally or via UCS Central.

Fault Details

```
Severity: minor
Cause: callhome-config-error
mibFaultCode: F1102
mibFaultName: fltCallhomeEpNoSnmpPolicyForCallhome
moClass: callhome:Ep
Type: configuration

Affected MO: call-home
```

fltCapabilityCatalogueLoadErrors

Fault Code: F1103

Message: Load errors: File parse errors: [fileParseFailures], provider load failures: [providerLoadFailures], XML element load errors: [loadErrors].

Explanation:

The capability catalog failed to load fully. This may be caused by either a faulty UCSM image or a faulty catalog image.

Recommended Action:

If you see this fault, take the following actions:

1. Check the version of the capability catalog.
2. Contact Cisco TAC to see if there are known issues with the catalog and if there is a catalog image that will fix the known issues.

Fault Details

```
Severity: major
Cause: load-catalog-failed

fltExtmgmtArpTargetsArpTargetsNotValid

Fault Code: F1114

Message: Invalid ARP Targets configured for Management Interface Polling. Error: [configStatusMessage]

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an invalid ArpTargets Configuration.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that Arp target ip address and external management ip address are in the same subnet.
2. Verify that Arp target ip address is not the same as ip address of this system's fabric-interconnects.
3. Verify that Arp target ip address is not the same as virtual IP Address.

Fault Details

```

Type: management
autoCleared: true
Affected MO: sys/extmgmt-intf-monitor-policy/arp-target-policy
```

fltVnicFcPinningMisconfig

Fault Code: F1209

Message: Hard pinning target for vHBA [name], service profile [name] is missing or misconfigured

Explanation:

This fault occurs when one or more vNIC target uplink ports or port channels for a hard-pinned SAN pin group are either missing or misconfigured as the wrong port type.

Recommended Action:

If you see this fault, take the following actions:

1. Review the SAN pin group configuration.
2. Correct the configuration of the port and port channels in the pin group.
3. Ensure that all required vSANs are allowed on the target ports or port channels.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltExtpolClientGracePeriodWarning

Fault Code: F1211

Message: UCS domain [name] registered with UCS Central has entered into the grace period.

Explanation:

A UCS domain is registered with UCS Central without having a license. This fault typically occurs if this UCS domain is registered with UCS Central after all default (and procured) licenses are assigned to other UCS domains.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed on UCS Central. In the Cisco UCS Central GUI, you can access the licensing information from the Operations Management tab for the UCS Central. In the Cisco UCS Central CLI, you can access the licensing information by entering the **show usage detail** command under license scope from **service-reg** session.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

```

fltExtpolClientGracePeriodWarning2

Fault Code: F1212

Message: UCS Domain [name] registered with UCS Central is running in the grace period for more than 10 days

Explanation:

This UCS domain is registered with UCS Central without having a license. This fault typically occurs if this UCS domain is registered with UCS Central after all default (and procured) licenses are assigned to other UCS domains.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed on UCS Central. In the Cisco UCS Central GUI, you can access the licensing information from the Operations Management tab for the UCS Central. In the Cisco UCS Central CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltExtpolClientGracePeriodWarning3

Fault Code: F1213

Message: UCS Domain [name] registered with UCS Central is running in the grace period for more than 30 days

Explanation:

This UCS Domain registered with UCS Central has been running in the grace period for more than 30 days. This fault typically occurs if this UCS domain is registered with UCS Central after all default (and procured) licenses are assigned to other UCS domains and the unlicensed UCS Domains have been running for more than 120 days.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed on UCS Central. In the Cisco UCS Manager GUI, you can access the licensing information from the Operations Management tab for the UCS Central. In the Cisco UCS Central CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltExtpolClientGracePeriodWarning4

Fault Code: F1214

Message: UCS Domain [name] registered with UCS Central is running in the grace period for more than 60 days

Explanation:

This UCS Domain registered with UCS Central has been running in the grace period for more than 60 days. This fault typically occurs if this UCS domain is registered with UCS Central after all default (and procured) licenses are assigned to other UCS domains and the unlicensed UCS Domains have been running for more than 60 days.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed on UCS Central. In the Cisco UCS Central GUI, you can access the licensing information from the Operations Management tab for the UCS Central. In the Cisco UCS Central CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Affected MO: extpol/reg/clients/client-[id]
```

fltExtpolClientGracePeriodWarning5

Fault Code: F1215

Message: UCS Domain [name] registered with UCS Central is running in the grace period for more than 90 days

Explanation:

This UCS Domain registered with UCS Central has been running in the grace period for more than 90 days. This fault typically occurs if this UCS domains is registered with UCS Central after all default (and procured) licenses are assigned to other UCS domains and the unlicensed UCS Domains have been running for more than 90 days.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed by UCS Central. In the Cisco UCS Central GUI, you can access the licensing information from the Operations Management tab for the UCS Central. In the Cisco UCS Central CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Affected MO: extpol/reg/clients/client-[id]
```

fltExtpolClientGracePeriodWarning7

Fault Code: F1217

Message: Grace period for UCS Domain [name] registered with UCS Central has expired. Please acquire a license for the same.

Explanation:

This UCS Domain registered with UCS Central has been running in the grace period for more than 120 days. UCS domains are registered with UCS Central after all default (and procured) licenses are assigned to other UCS domains and the unlicensed UCS Domains have been running for more than 120 days. At this stage, the system licensing state is set to expired.

Recommended Action:

If you see this fault, take the following actions:

1. Check the number of licenses installed and consumed on UCS Central. In the Cisco UCS Central GUI, you can access the licensing information from the Operations Management tab for UCS Central. In the Cisco UCS Central CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. Disable the unlicensed UCS Domains to bring the number of enabled Domains down to the number of total licenses.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC immediately to procure more licenses.

Fault Details

```
Severity: critical
Cause: license-graceperiod-expired

Type: management
autoCleared: true
Affected MO: extpol/reg/clients/client-[id]
```

fltExtpolClientGracePeriodWarning1

Fault Code: F1218

Message: UCS Domain [name] is registered with UCS Central without a valid license.

Explanation:

This UCS domain is registered with UCS Central without having a license. This fault typically occurs if this UCS domain is registered with UCS Central without the initial activation license and after all default licenses are assigned to other UCS domains.

Recommended Action:

If you see this fault, take the following actions:

1. Check if the initial activation license is installed on UCS Central. In the Cisco UCS Central GUI, you can access the licensing information from the Operations Management tab for UCS Central. In the Cisco UCS Central CLI, you can access the licensing information by entering the **show usage detail** command under the license scope.
2. Disable the unlicensed UCS Domains to bring the number of enabled Domains down to the number of total licenses.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC immediately to procure more licenses.

```

fltStorageInitiatorDuplicate-fc-zone

Fault Code: F1220

Message: Duplicate FC zones are created for initiator [name], because the same target wwpn [duplicateTarget] is duplicately configured in both boot and storage connection policy.

Explanation:

Duplicate FC zones are created, because the same target wwpn is duplicately configured in both boot and storage connection policy.

Recommended Action:

If you see this fault, take the following action:

1. Remove the duplicate target wwpn from either boot policy or storage connection policy.

Fault Details

```
Severity: info
Cause: configuration-error
mibFaultCode: F1220
mibFaultName: fltStorageInitiatorDuplicateFcZone
moClass: storage:Initiator
Type: configuration
autoCleared: true
Affected MO: org-[name]/ls-[name]/grp-[name]/ini-[name]
```

```

```

fltStorageIniGroupSwitch-mode-disabled

Fault Code: F1221

Message: FC zones cannot be deployed because FI is not running in FC switch mode.

Explanation:

FC zones cannot be deployed because FI is not running in FC switch mode.

Recommended Action:

If you see this fault, take the following action:

1. If you want FC zones to be deployed, enable FC switch mode.
2. If FI is running FC end-host mode and you want this fault to be cleared, remove initiators from the initiator group.

Fault Details

```
Severity: warning
Cause: configuration-error
mibFaultCode: F1221
mibFaultName: fltStorageIniGroupSwitchModeDisabled
moClass: storage:IniGroup
Type: configuration
autoCleared: true
Affected MO: org-[name]/ls-[name]/grp-[name]
Affected MO: org-[name]/san-conn-pol-[name]/grp-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]/grp-[name]
```

fltPkiKeyRingModulus

Fault Code: F1222

Message: [name] Keyring's key modulus is invalid.

Explanation:

This fault occurs when keyring is created without modulus set.

Recommended Action:

None set.

Fault Details

```
Severity: major
Cause: invalid-keyring-modulus
mibFaultCode: F1222
mibFaultName: fltPkiKeyRingModulus
moClass: pki:KeyRing
Type: security
autoCleared: true
Affected MO: sys/pki-ext/keyring-[name]
```

fltAaaOrgLocaleOrgNotPresent

Fault Code: F1223

Message: Locale Org [name] can't be deployed. Error: [configStatusMessage]

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unidentified org reference.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the org dn referenced in this Org is exists, if not create the same.

Fault Details

```
Severity: warning
Cause: locale-org-config-error
mibFaultCode: F1223
mibFaultName: fltAaaOrgLocaleOrgNotPresent
moClass: aaa:Org
Type: security
autoCleared: true
Affected MO: sys/user-ext/locale-[name]/org-[name]
```

fltNetworkOperLevelExtraprimaryvlans

Fault Code: F1229

Message: Fabric Interconnect [id]: Number of primary vlans exceeds the max limit on the FI: Number of Primary Vlans: [primaryVlanCount] and Max primary vlans allowed: [maxPrimaryVlanCount]

Explanation:

This fault occurs when the fabric interconnect has more number of primary vlans than what is supported.

Recommended Action:

If you see this fault, take the following actions:

1. It is recommended that operator should delete the extra primary vlans than are there in the FI. System may appear to be normally functioning even with these extra primary vlans in place. However there may be performance issues observed as the system is operating above the recommended scale limits..
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: extra-primary-vlans

fltStorageFlexFlashVirtualDriveDegraded

Fault Code: F1260

Message: FlexFlash Virtual Drive RAID degraded on server [chassisId]/[slotId]. Reason: [raidState]FlexFlash Virtual Drive RAID degraded on server [id]. Reason: [raidState]

Explanation:

This fault occurs when the flexflash raid is degraded.

Recommended Action:

If you see this fault, take the following action:

1. Re-acknowledge the server by setting the flexflash scrub policy to yes. Please note that this action will erase all data in the card(s)
2. Verify the health of the controller/card(s). If the above action did not resolve the issue, replace the card(s)

Fault Details

```

Affected MO: sys/radius-ext/providergroup-[name]
Affected MO: sys/tacacs-ext/providergroup-[name]
```

fltFirmwareAutoSyncPolicyDefaultHostPackageMissing

Fault Code: F1284

Message: Default host firmware package is missing or deleted.

Explanation:

This fault typically occurs for the following reasons: when Auto Firmware Sync Policy is set Auto-acknowledge or User-acknowledge and default host firmware pack is not available.

- Auto Firmware Sync is not happening.
- Default host firmware package is missing or deleted.

Recommended Action:

If you see this fault, take the following actions:

1. Go to Servers tab and expand policies node. Select Host Firmware Packages under policies node.
2. If the FSM failed, review the error message in the FSM.
3. Create a host firmware package with name 'default'. If the problem persists, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: default-hostpack-missing

fltMgmtControllerUnsupportedDimmBlacklisting

Fault Code: F1328

Message: Dimm blacklisting is not supported on server [chassisId]/[slotId]Dimm blacklisting is not supported on server [id]

Explanation:

This fault typically occurs when the CIMC firmware on a server is an earlier release than Cisco UCS, Release 2.2.

Recommended Action:

If you see this fault, consider upgrading the CIMC firmware, and the entire Cisco UCS instance if necessary, to Cisco UCS, Release 2.2 or later.

fltFabricEthLanEpUdldLinkDown

Fault Code: F1358

Message: UDLD state for ether port [slotId]/[aggrPortId]/[portId] on fabric interconnect [switchId] is: [udldOperState].UDLD state for ether port [slotId]/[portId] on fabric interconnect [switchId] is: [udldOperState].

Explanation:

This fault occurs when an ethernet uplink port is unidirectional connected.

Recommended Action:

If you see this fault, take the following action:

1. Check the tx and rx connection of the uplink port.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltFirmwareStatusCimcFirmwareMismatch

Fault Code: F1365

Message: Aggregate blade CIMC firmware mismatch. Firmware: [cimcVersion]

Explanation:

This fault typically occurs when the CIMC firmware image on master and slave node in an aggregate blade does not match.

Recommended Action:

Update and activate master and slave CIMC to same firmware version.

Fault Details

```
Severity: critical
Cause: cimc-firmware-mismatch

fltSysdebugLogExportStatusLogExportFailure

Fault Code: F1369

Message: Log export to remote server failed from [switchId]:[exportFailureReason]

Explanation:

This fault occurs when Cisco UCS Manager cannot transfer a log file to a remote server. This is typically the result of one of the following issues:

- The remote server is not accessible.
- One or more of the parameters for the remote server that are specified for the log export target, such as path, username, password, ssh-key and server name, are incorrect.

Recommended Action:

If you see this fault, take the following actions:

1. Verify the connectivity to the remote server.
2. Verify the path information of the remote server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: server-error
mibFaultCode: F1369
mibFaultName: fltSysdebugLogExportStatusLogExportFailure
moClass: sysdebug:LogExportStatus
Type: sysdebug
autoCleared: true
Affected MO: sys/sysdebug/log-export-policy/log-export-status-[switchId]
```

fltVnicEtherVirtualization-netflow-conflict

Fault Code: F1380

Message: Netflow and VMQ/SRIOV-USNIC policies cannot be assigned to the same Eth vNIC

Explanation:

This fault typically occurs when a netflow src vnic is made a USNIC or VMQ vnic

Recommended Action:

If you see this fault, take the following actions:

1. Remove the vnic from a netflow session or remove the usnic/vmq policy
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: multiple-connection-policies

fltFabricVlanPrimaryVlanMissingForIsolated

Fault Code: F1382

Message: Primary Vlan can not be resolved for isolated vlan [name]

Explanation:

This fault typically occurs when Cisco UCS Manager encounters a problem resolving the primary VLAN ID corresponding to a particular isolated VLAN.

Recommended Action:

If you see this fault, take the following actions:

1. Associate the isolated VLAN with a valid primary VLAN.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: primary-vlan-missing-for-isolated
mibFaultCode: F1382

fltFabricVlanMismatch-a

Fault Code: F1384

Message: VLAN [name] has [overlapStateForA] with another vlan under lan-cloud/appliance-cloud for the fabric interconnect A

Explanation:

This fault typically occurs when private vlan properties of VLAN under one cloud conflicts with the private vlan properties of VLAN under another cloud for the fabric interconnect A. The cloud here means either a LAN cloud or an appliance cloud. This issue can stop the usage of this vlan.

Recommended Action:

If you see this fault, take the following action:

1. Check the sharing property of the VLAN under both clouds and fabric A referred by its VLAN ID.
2. If the sharing property of the VLAN does not match with the VLAN on the other cloud, then change the sharing property of either of the VLANs, so that it matches with each other.
3. If the VLAN is a isolated/community vlan, check the pubnwname property of the VLAN under both clouds referred by its VLAN ID.
4. If the pubnwname property of the isolated/community VLAN does not match with the isolated/community VLAN on the other cloud, then change the pubnwname property of either of the VLANs, so that it matches with each other.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltFabricVlanMismatch-b

Fault Code: F1385

Message: VLAN [name] has [overlapStateForB] with another vlan under lan-cloud/appliance-cloud for the fabric interconnect B

Explanation:

This fault typically occurs when private vlan properties of VLAN under one cloud conflicts with the private vlan properties of VLAN under another cloud for the fabric interconnect B. The cloud here means either a LAN cloud or an appliance cloud. This issue can stop the usage of this vlan.

Recommended Action:

If you see this fault, take the following action:

1. Check the sharing property of the VLAN under both clouds and fabric B referred by its VLAN ID.
2. If the sharing property of the VLAN does not match with the VLAN on the other cloud, then change the sharing property of either of the VLANs, so that it matches with each other.
3. If the VLAN is a isolated/community vlan, check the pubnwname property of the VLAN under both clouds referred by its VLAN ID.
4. If the pubnwname property of the isolated/community VLAN does not match with the isolated/community VLAN on the other cloud, then change the pubnwname property of either of the VLANs, so that it matches with each other.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltFabricVlanErrorAssocPrimary

Fault Code: F1386

Message: VLAN [name] is in error state because the associated primary vlan [assocPrimaryVlanState]

Explanation:

This fault typically occurs when there is an error in associated primary vlan of a secondary VLAN. This issue can stop the usage of this vlan.

Recommended Action:

If you see this fault, take the following action:

1. Check the pubnwname property of the VLAN.

2. If the pubnwname is not given or refers to a non-existing primary vlan, give a name of a primary vlan which is in good state.
3. If the pubnwname refers to a vlan which is not a primary vlan, then either change the referred vlan to be a primary vlan or give a different primary vlan.
4. If the pubnwname refers to a valid primary vlan, then check the state of the primary VLAN.
5. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

```

fltLsServerSvnicNotPresent

Fault Code: F1388

Message: Service profile [name] does not contain service vnics for netflow.

Explanation:

The service profile does not have service vnics, hence netflow will not function on this server. This fault typically occurs as a result of one of the following issues:

- Service profile has maximum number of vnics already created, hence cannot accomodate service vnics required for netflow.

Recommended Action:

If you see this fault, take the following actions:

1. If you have already enabled netflow, please reduce the number of vnics on the SP to accomodate service vnics.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Affected MO: sys/bkup-policy-cfg
```

fltNetworkOperLevelExtrasecondaryvlans

Fault Code: F1396

Message: Fabric Interconnect [id]: Number of secondary vlans exceeds the max limit on the FI: Number of secondary vlans: [secondaryVlanCount] and Max secondary vlans allowed: [maxSecondaryVlanCount]

Explanation:

This fault occurs when the fabric interconnect has more number of secondary vlans than what is supported.

Recommended Action:

If you see this fault, take the following actions:

1. It is recommended that operator should delete the extra secondary vlans that are there in the FI. System may appear to be normally functioning even with these extra secondary vlans in place. However there may be performance issues observed as the system is operating above the recommended scale limits..
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: extra-secondary-vlans

autoCleared: true
Affected MO: sys/switch-[id]/oper-level
```

fltSwVlanExtrasecondaryvlansperprimary

Fault Code: F1397

Message: Number of secondary vlans associated with the primary vlan [id] in Fabric Interconnect [switchId] exceeds the max limit: Number of secondary vlans: [secVlanPerPrimaryVlanCount].

Explanation:

This fault occurs when the fabric interconnect has more number of secondary vlans per primary vlan than what is supported.

Recommended Action:

If you see this fault, take the following actions:

1. It is recommended that operator should delete the extra secondary vlans on this primary vlan that are there in the FI. System may appear to be normally functioning even with these extra secondary vlans on this primary vlan in place. However there may be performance issues observed as the system is operating above the recommended scale limits..
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltCimcvmediaActualMountEntryVmediaMountFailed

Fault Code: F1404

Message: Server [chassisId]/[slotId] (service profile: [assignedToDn]) vmedia mapping [mappingName] has failed.Server [id] (service profile: [assignedToDn]) vmedia mapping [mappingName] has failed.Server [chassisId]/[slotId]/[serverInstanceId] (service profile: [assignedToDn]) vmedia mapping [mappingName] has failed.

Explanation:

None set.

Recommended Action:

If you see this fault, take the following actions:

1. Check the mount related details(remote server ip, port, path & file is reachable) and reack the server .

fltEquipmentTpmSlaveTpm

Fault Code: F1439

Message: Server [chassisId]/[slotId], has a TPM present on the Slave Board which will be unoperational.

Explanation:

This fault indicates the TPM is present on the slave board but it cannot be used by the server. In the case of an aggregate blade server, only the master board's TPM can be used.

Recommended Action:

There is no impact on server functionality although TPM from the slave board can be removed and used on a different server.

Fault Details

```
Severity: info
Cause: tpm-on-slave-board

fltStorageMezzFlashLifeConfiguration-error

Fault Code: F1448

Message: Flash Life on server [chassisId]/[slotId] flashStatus: [flashStatus]

Explanation:

This fault occurs when UCSM is not able to retrieve the Fusion-io life left due to an error.

Recommended Action:

If you see this fault, take the following actions:

1. Upgrade Fusion-io Firmware.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: info

```

fltStorageMezzFlashLifeDegraded

Fault Code: F1449

Message: Flash Life on server [chassisId]/[slotId] flashStatus: [flashStatus]

Explanation:

This fault occurs when the Fusion-io life left is 10 percent or less.

Recommended Action:

If you see this fault, take the following actions:

1. Continue to monitor the the Fusion-io life left and if it reaches 0 percent, the adapter might revert to read-only.

Fault Details

```
Severity: warning
Cause: equipment-degraded
mibFaultCode: F1449
mibFaultName: fltStorageMezzFlashLifeDegraded

fltStorageFlexFlashControllerMismatch

Fault Code: F1450

Message: FlexFlash Controller [id] on server [chassisId]/[slotId] has SD cards with different sizes.FlexFlash Controller [id] on server [id] has SD cards with different sizes.

Explanation:

This fault occurs when the flexflash SD Cards dont match in size.

Recommended Action:

If you see this fault, take the following action:

1. Remove one of the existing cards and replace it with another card that has the same size as the unremoved one.

Fault Details

```
Severity: major
Cause: equipment-unhealthy
mibFaultCode: F1450
mibFaultName: fltStorageFlexFlashControllerMismatch
moClass: storage:FlexFlashController

```

fltStorageFlexFlashCardUnhealthy

Fault Code: F1452

Message: FlexFlash Card [slotNumber] on server [chassisId]/[slotId] is unhealthy. Reason: [cardHealth]FlexFlash Card [slotNumber] on server [id] is unhealthy. Reason: [cardHealth]

Explanation: This fault occurs when the Flex Flash card is unhealthy.

Recommended Action: If you see this fault, take the following action:

1. Determine if the Flex Flash controller supports auto-sync; auto-sync is currently configured; and the Flex Flash controller is currently building the RAID group. If the RAID group is being built, wait until the

RAID group has been synchronized. Note that building the RAID-1 mirror may take multiple hours, depending on how much I/O the host OS is generating.

If the above action did not resolve the problem, configure Flex Flash auto-sync and wait until the RAID group has been rebuilt, which may take multiple hours.

2. If the above action did not resolve the problem, reset the Flex Flash controller.
3. If the above action did not resolve the problem, reformat the SD cards.
4. Verify the health of the card. If the above action did not resolve the issue, replace the card.
5. Re-acknowledge the server by setting the Flex Flash scrub policy to yes. Please note that this action will erase all data in the card(s).

fltMgmtInterfaceInbandUnsupportedServer

Fault Code: F1455

Message: [configMessage]

Explanation:

This fault occurs if there is an issue in Inband interface configuration.

Recommended Action:

If you see this fault check if the VLAN configured on Inband IP is created and the VLAN is present in the Inband Profile or IP address is configured

Fault Details

fltSwVlanPortNsResourceStatusWarning

Fault Code: F1464

Message: Total Available Vlan-Port Count on switch [switchId] is below 10%

Explanation:

None set.

Recommended Action:

None set.

Fault Details

Severity: warning
Cause: near-max-limit
mibFaultCode: F1464
mibFaultName: fltSwVlanPortNsResourceStatusWarning
moClass: sw:VlanPortNs
Type: management
autoCleared: true
Affected MO: sys/switch-[id]/vlan-port-ns

fltNetworkElementMemoryerror

Fault Code: F1465

Message: Fabric Interconnect [id] memory less than expected! Total Memory: [totalMemory] and Expected Memory: [expectedMemory]

Explanation:

This fault occurs when the total memory on FI is less than expected.

Recommended Action:

If you see this fault, take the following actions:

1. You will need to do a manual physical inspection of the DIMMs on the FI. Try removing and reinserting the DIMMs, and verify the Total Memory. If this does not resolve the issue, one of the DIMMs has gone bad and needs to be replaced.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: memory-error
mibFaultCode: F1465
mibFaultName: fltNetworkElementMemoryerror
moClass: network:Element
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]
```

fltComputePhysicalAdapterMismatch

Fault Code: F1467

Message: Server [id] (service profile: [assignedToDn]) has invalid adapter combinatonServer [chassisId]/[slotId] (service profile: [assignedToDn]) has invalid adapter combination

Explanation:

This fault typically occurs because Cisco UCS Manager has detected that the server has an invalid combination of Cisco VICs.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the valid adapter combinations are installed configuration.
2. Reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: adaptor-mismatch
mibFaultCode: F1467
mibFaultName: fltComputePhysicalAdapterMismatch

Affected MO: sys/rack-unit-[id]
```

fltNetworkElementRemoved

Fault Code: F1493

Message: Fabric Interconnect [id] operability: [operability]

Explanation:

This fault occurs when the fabric interconnect is removed in a clustering setup.

Recommended Action:

If you see this fault, take the following actions:

1. Reinsert the removed fabric interconnect back into the chassis (applicable to UCS-Mini only).
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-removed
mibFaultCode: F1493
mibFaultName: fltNetworkElementRemoved
moClass: network:Element
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]
```

fltPowerBudgetChassisPsuMixedMode

Fault Code: F1498

Message: Chassis [id] has a mix of high-line and low-line PSU input power sources.

Explanation:

This fault occurs when there is a mix of high-line and low-line PSU input power source.

Recommended Action:

If you see this fault, change all the PSU input power sources to have same mode

Fault Details

```
Severity: critical
Cause: psu-mixed-mode
mibFaultCode: F1498
mibFaultName: fltPowerBudgetChassisPsuMixedMode
moClass: power:Budget
Type: environmental
autoCleared: true

Affected MO: sys/rack-unit-[id]/ext-board-[id]/budget
Affected MO: sys/switch-[id]/budget
```

fltPowerBudgetPowerBudgetUnavailable

Fault Code: F1499

Message: Insufficient power available to power-on server [chassisId]/[slotId]Insufficient power available to power-on server [id]

Explanation:

This fault occurs when there is not enough power available to be allocated to a server.

Recommended Action:

If you see this fault, take the following actions:

1. Consider increasing the group cap.
2. Consider increasing the power available to a chassis by increasing PSUs connected and/or changing the PSU policy.
3. Reduce the number of blade servers powered-on and/or reduce the number of chassis in the Cisco UCS instance.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

Affected MO: sys/switch-[id]/budget
```

fltStorageLocalDiskInaccessible

Fault Code: F1519

Message: Storage LocalDisk [id] is inaccessible. Reason: [operQualifierReason]

Explanation:

This fault occurs when the local disk is abnormal or bad. The fault description will contain the physical drive state, which indicates the reason for the degradation.

Recommended Action:

If you see this fault, take the following actions:

1. Resolve the fault on LocalDisk

Fault Details

```
Severity: major
Cause: equipment-inaccessible
mibFaultCode: F1519
mibFaultName: fltStorageLocalDiskInaccessible
moClass: storage:LocalDisk
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]/disk-[id]

Affected MO: sys/rack-unit-[id]/enc-[id]/disk-[id]
```

fltEquipmentChassisInvalid-fru

Fault Code: F1558

Message: Chassis [id] has a empty value for FRU identity reported by CMC.

Explanation:

This fault typically occurs when the FRU information for a chassis has empty value.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: fru-problem
mibFaultCode: F1558
mibFaultName: fltEquipmentChassisInvalidFru
moClass: equipment:Chassis
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentSwitchIOCardRemoved

Fault Code: F1559

Message: [side] FI IOM [chassisId]/[id] ([switchId]) is removed

Explanation:

This fault typically occurs because an FI I/O module is removed from the chassis. In a cluster configuration, the chassis fails over to the other FI I/O module. For a standalone configuration, the chassis associated with the FI I/O module loses network connectivity. This is a critical fault because it can result in the loss of network connectivity and disrupt data traffic through the FI I/O module.

Recommended Action:

If you see this fault, take the following actions:

1. Reinsert the FI I/O module and configure the fabric-interconnect ports connected to it as server ports and wait a few minutes to see if the fault clears.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-removed
mibFaultCode: F1559
mibFaultName: fltEquipmentSwitchIOCardRemoved
moClass: equipment:SwitchIOCard
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/sw-slot-[id]
```

fltEquipmentSwitchIOCardThermalProblem

Fault Code: F1560

Message: [side] FI IOM [chassisId]/[id] ([switchId]) operState: [operState]

Explanation:

This fault occurs when there is a thermal problem on an FI I/O module. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the FI I/O module.
2. Review the Cisco UCS Site Preparation Guide to ensure the FI I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis are not obstructed.
4. Verify that the site cooling system is operating properly.

5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace faulty FI I/O modules.
8. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: F1560
mibFaultName: fltEquipmentSwitchIOCardThermalProblem
moClass: equipment:SwitchIOCard
Type: environmental
autoCleared: true
Affected MO: sys/chassis-[id]/sw-slot-[id]
```

fltEquipmentSwitchIOCardThermalThresholdNonCritical

Fault Code: F1561

Message: [side] FI IOM [chassisId]/[id] ([switchId]) sensor: [inlet1Sensor] temperature: [thermal]

Explanation:

This fault occurs when the temperature of an FI I/O module has exceeded a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the FI I/O module.
2. Review the Cisco UCS Site Preparation Guide to ensure the chassis and FI I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis and FI I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.

6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentSwitchIOCardThermalThresholdCritical

Fault Code: F1562

Message: [side] FI IOM [chassisId]/[id] ([switchId]) sensor: [inlet1Sensor] temperature: [thermal]

Explanation:

This fault occurs when the temperature of an FI I/O module has exceeded a critical threshold value. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the FI I/O module.
2. Review the Cisco UCS Site Preparation Guide to ensure the chassis and FI I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis and FI I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.

7. Replace the faulty FI I/O modules.
8. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentSwitchIOCardThermalThresholdNonRecoverable

Fault Code: F1563

Message: [side] FI IOM [chassisId]/[id] ([switchId]) sensor: [inlet1Sensor] temperature: [thermal]

Explanation:

This fault occurs when the temperature of an FI I/O module has been out of the operating range, and the issue is not recoverable. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the FI I/O module.
2. Review the Cisco UCS Site Preparation Guide to ensure the chassis and FI I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis and FI I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace the faulty FI I/O modules.

8. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

```

fltEquipmentSwitchIOCardPeerDisconnected

Fault Code: F1564

Message: FI IOM [chassisId]/[id] ([switchId]) peer connectivity: [peerCommStatus]

Explanation:

This fault typically occurs when an FI I/O module is unable to communicate with its peer FI I/O module.

Recommended Action:

If you see this fault, take the following actions:

1. Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
2. If the fault does not clear after a few minutes, remove and reinsert the FI I/O module.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: equipment-disconnected
mibFaultCode: F1564
mibFaultName: fltEquipmentSwitchIOCardPeerDisconnected
moClass: equipment:SwitchIOCard
Type: connectivity
autoCleared: true
Affected MO: sys/chassis-[id]/sw-slot-[id]
```

fltEquipmentSwitchIOCardIdentity

Fault Code: F1565

Message: [side] FI IOM [chassisId]/[id] ([switchId]) has a malformed FRU

Explanation:

This fault typically occurs when the FRU information for an FI I/O module is corrupted or malformed.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: fru-problem

Affected MO: sys/chassis-[id]/sw-slot-[id]
```

fltEquipmentSwitchIOCardCpuThermalThresholdCritical

Fault Code: F1566

Message: [side] FI IOM [chassisId]/[id] ([switchId]) processor temperature exceeded the limit

Explanation:

This fault typically occurs when the processor temperature in FI-IOM exceeds the limit.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the FI I/O module.
2. Review the Cisco UCS Site Preparation Guide to ensure the chassis and FI I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis and FI I/O module are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace the faulty FI I/O modules.
8. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.

fltStorageLocalDiskThermalIssueCritical

Fault Code: F1604

Message: Local disk [id] on server [chassisId]/[slotId] has thermal issue: [thermal]Local disk [id] on server [id] has thermal issue: [thermal]Local disk [id] on chassis [id] has thermal issue: [thermal]Local disk [id] on storage enclosure [id] has thermal issue: [thermal]

Explanation:

This fault occurs when the local drive is experiencing a critical thermal issue.

Recommended Action:

If you see this fault, take the following actions:

1. If only one drive is too hot, replace the drive.
2. If many drives are too hot, remove the server.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltFabricComputeMSlotEpMisplacedInChassisSlot

Fault Code: F1616

Message: Server, vendor([vendor]), model([model]), serial([serial]) in slot [chassisId]/[slotId]/[serverInstanceId] presence: [presence]

Explanation:

This fault typically occurs when Cisco UCS Manager detects a server in a slot that does not match what was previously equipped in the slot.

Recommended Action:

If you see this fault, take the following actions:

1. If the server was decommissioned, reacknowledge the server.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: server-moved
mibFaultCode: F1616
mibFaultName: fltFabricComputeMSlotEpMisplacedInChassisSlot
moClass: fabric:ComputeMSlotEp
Type: equipment
autoCleared: true
Affected MO: fabric/server/chassis-[chassisId]/cart-slot-[slotId]/ins-[serverInstanceId]
```

fltFabricComputeMSlotEpServerIdentificationProblem

Fault Code: F1617

Message: Problem identifying server [serverInstanceId] in slot [chassisId]/[slotId]

Explanation:

This fault typically occurs when Cisco UCS Manager encountered a problem identifying the server in a cartridge slot.

Recommended Action:

If you see this fault, take the following actions:

1. Remove and reinsert the cartridge.
2. Reacknowledge the server.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: server-identification-problem
mibFaultCode: F1617
mibFaultName: fltFabricComputeMSlotEpServerIdentificationProblem
moClass: fabric:ComputeMSlotEp

```

fltFabricCartridgeSlotEpMisplacedInChassisSlot

Fault Code: F1618

Message: Cartridge, vendor([vendor]), model([model]), serial([serial]) in slot [chassisId]/[slotId] presence: [presence]

Explanation:

This fault typically occurs when Cisco UCS Manager detects a cartridge in a chassis slot that does not match what was previously equipped in the slot.

Recommended Action:

If you see this fault, take the following actions:

1. If the previous cartridge was intentionally removed and a new one was inserted, reacknowledge the cartridge.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: cartridge-moved
mibFaultCode: F1618
mibFaultName: fltFabricCartridgeSlotEpMisplacedInChassisSlot
moClass: fabric:CartridgeSlotEp
Type: equipment
autoCleared: true
Affected MO: fabric/server/chassis-[chassisId]/cart-slot-[slotId]
```

fltStorageControllerNot-supported

Fault Code: F1620

Message: Controller [id] is not supported on chassis [id]

Explanation:

This fault occurs when the storage controller is not supported on this chassis.

Recommended Action:

Check whether the storage controller is in the list of supported controllers. Replace with a supported controller.

Fault Details

```
Severity: critical
Cause: not-supported
mibFaultCode: F1620
mibFaultName: fltStorageControllerNotSupported
moClass: storage:Controller
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/storage-[type]-[id]
Affected MO:

Affected MO: sys/chassis-[id]/storage-[type]-[id]
Affected MO: sys/rack-unit-[id]/board/storage-[type]-[id]
```

fltStorageVirtualDriveDeployment-failure

Fault Code: F1621

Message: Virtual drive [name] deployment failure. Reason: [configQualifierReason]

Explanation:

This fault indicates that UCSM found resources for a virtual drive but was unable to deploy it.

Recommended Action:

If you see this fault, take the following actions:

1. Verify the presence and health of disks that are used for the virtual drive deployment.
2. Alternatively, the fault can be cleared by deleting the DasScsiLun mo
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

Affected MO: sys/rack-unit-[id]/vd-container-[id]/vd-[id]
```

fltStorageVirtualDriveMissing

Fault Code: F1622

Message: Virtual drive [name] missing

Explanation:

This fault indicates that the virtual drive was successfully deployed but it was later deleted.

Recommended Action:

If you see this fault, take the following actions:

1. The presence of this fault means that UCSM will attempt to re-create the virtual drive when the next association FSM occurs.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-missing

```

fltStorageVirtualDriveMismatch

Fault Code: F1623

Message: Virtual drive [name] mismatch. Reason: [configQualifierReason]

Explanation:

This fault indicates that the virtual drive was successfully deployed but later, UCSM detected that the virtual drive did not match the configuration expected by UCSM.

Recommended Action:

If you see this fault, take the following actions:

1. To modify the DasScsiLun mo to match the actual virtual drive.
2. To use an LSI host utility to restore the virtual drive to the original configuration.
3. To to replace the failed or missing drive and use an LSI host utility to restore the virtual drive to the original configuration.
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltStorageVDMemberEpMismatch

Fault Code: F1624

Message: Virtual drive member [id] in a mismatched state. Reason: [operQualifierReason]

Explanation:

This fault indicates that a physical drive that is a member of the virtual drive is in a mismatched state.

Recommended Action:

If you see this fault, take the following actions:

1. Check the local disk referred by the VdMemberEp to see if it's expected beheavior.
2. If not expected, create a **show tech-support** file and contact Cisco TAC.

fltFirmwareBootUnitFirmwareBootFailed

Fault Code: F1627

Message: Endpoint firmware went faulty.

Explanation:

This fault typically occurs for the following reasons: when firmware activation fails, or if end-point booted up and went faulty.

- Firmware activation failed.
- The version of firmware running on the end-point went faulty.

Recommended Action:

If you see this fault, take the following actions:

1. Go to FSM tab or in cli for the endpoint on which the fault is raised and review the error description for the reason that the activation failed.
2. If the FSM failed, review the error message in the FSM.
3. If possible, correct the problem described in the error message.
4. If the problem persists, create a **show tech-support** file and contact Cisco TAC.

fltAaaDefaultAuthDefaultAuthNotDeployed

Fault Code: F1668

Message: DefaultAuth can't be deployed. Error: [configStatusMessage]

Explanation:

None set.

Recommended Action:

None set.

Fault Details

Severity: critical
Cause: defaultauth-config-error
mibFaultCode: F1668
mibFaultName: fltAaaDefaultAuthDefaultAuthNotDeployed
moClass: aaa:DefaultAuth
Type: security
autoCleared: true
Affected MO: sys/auth-realm/default-auth

fltAaaDomainDomainNotDeployed

Fault Code: F1669

Message: Domain [name] can't be deployed. Error: [configStatusMessage]

Explanation:

None set.

Recommended Action:

None set.

Fault Details

Severity: critical
Cause: domain-config-error
mibFaultCode: F1669
mibFaultName: fltAaaDomainDomainNotDeployed

```
moClass: aaa:Domain
Type: security
autoCleared: true
Affected MO: sys/auth-realm/domain-[name]
```

fltLsServerFAULT

Fault Code: F1671

Message: The UUID stored in Service Profile [name] does not match the UUID stored in server [pnDn]

Explanation:

Because of a recent UCSM upgrade that fixed a bug relating to a change in Smbios endianness, UCSM inventory has an updated UUID that matches the UUID stored in BIOS, but the UUID stored in the Service Profile has not been updated and hence does not match

Recommended Action:

If you see this fault, take any one of the following actions:

1. Disassociate and reassociate the service profile
2. Decommision and recommision the server
3. Set a new UUID for the server

Fault Details

```
Severity: info
Cause: fault
mibFaultCode: F1671
mibFaultName: fltLsServerFAULT
moClass: ls:Server
Type: server
autoCleared: true
Affected MO: org-[name]/ls-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]
```

fltMgmtBackupLocal Internal backup failed

Fault Code: F1672

Message: Local Internal backup failed while upgrade. Please re-trigger a manual backup.

Explanation:

This fault occurs when the local internal backup failed while upgrade

Recommended Action:

If you see this fault, take the following actions:

1. Please take a configuration backup

Fault Details

```
Severity: minor
Cause: local-internal-backup-failed
mibFaultCode: F1672
mibFaultName: fltMgmtBackupLocalInternalBackupFailed
```

```
moClass: mgmt:Backup
Type: management
autoCleared: true
Affected MO: sys/backup-[hostname]
```

fltVnicEtherCdn-config-not-applied

Fault Code: F1680

Message: CDN can not be applied for vnic [name] in Service Profile [name]

Explanation:

This fault typically occurs when CDN of a vnic is not applied due to adaptor hardware or firmware incompatibility

Recommended Action:

If you see this fault, take the following actions:

1. For a CDN supported adaptor, upgrade the firmware to a version where it is supported
2. For an unsupported adaptor, place the vnics manually on the supported adaptor only
3. In case CDN is not intended to be used, disable CDN in bios policy
4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: info
Cause: config-missing
mibFaultCode: F1680
mibFaultName: fltVnicEtherCdnConfigNotApplied
moClass: vnic:Ether
Type: configuration
autoCleared: true
Affected MO: org-[name]/lan-conn-pol-[name]/ether-[name]
Affected MO: org-[name]/ls-[name]/ether-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]/ether-[name]
```

fltComputePhysicalConnectivityDown

Fault Code: F1681

Message: Connectivity between the CIMC and one of the FIs is down. Connectivity may be down for expected reasons (e.g. FI/CIMC firmware upgrade).Connectivity between the CIMC and one of the FIs is down. Connectivity may be down for expected reasons (e.g. FI/CIMC firmware upgrade).Connectivity between the CIMC and one of the FIs is down. Connectivity may be down for expected reasons (e.g. FI/CIMC firmware upgrade).

Explanation:

This fault occurs if there are connectivity issues between the server's CIMC and one or both of the FIs. Please note that this management path loss will not impact the underlying OS communications.

Recommended Action:

If you see this fault, take the following actions:

1. Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur during or after a firmware upgrade.
2. If the fault does not clear after a brief time, please reset the CIMC. This will not impact OS communications.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: info

```

fltFabricFcSanNumOfVsanExceedLimit

Fault Code: F1694

Message: VSAN count for [dn] exceeds the limit.

Explanation:

This fault occurs when the number of VSANs exceed limit.

Recommended Action:

None set.

Fault Details

```
Severity: major
Cause: vsan-exceed-limit
mibFaultCode: F1694
mibFaultName: fltFabricFcSanNumOfVsanExceedLimit
moClass: fabric:FcSan
Type: configuration
autoCleared: true
Affected MO: fabric/san/[id]
```

fltSwVlanPortNsCompressedSetsExhaustedWarning

Fault Code: F1700

Message: Network configuration on switch [switchId] resulted in using up ALL of the optimization sets supported by hardware.

Explanation:

Cisco UCS Manager raises this fault when the fabric interconnect exhaust all of the Optimizatino sets to be programmed in hardware. This fault does not indicate any problem in the configuration. However, some current or future configuration may cause some error and appropriate alert will be shown. Only when you see any other alters, there could be a cause of concern.

Recommended Action:

If you see this fault, take the following actions:

1. Check if any configuration error is shown in UCSM and take actions recommended by those errors if any.

Fault Details

```
Severity: warning
Cause: compr-sets-exhausted
mibFaultCode: F1700
mibFaultName: fltSwVlanPortNsCompressedSetsExhaustedWarning
moClass: sw:VlanPortNs
Type: management
autoCleared: true
Affected MO: sys/switch-[id]/vlan-port-ns
```

fltNetworkElementKernelMemCricitalThreshold

Fault Code: F1701

Message: Fabric Interconnect [id] kernel low memory free reached critical level: [kernelMemFree] (MB).

Explanation:

This fault occurs when the kernel memory for the FI is below 100MB

Recommended Action:

If you see this fault:

1. Kernel LowFree memory dropped below the minimal watermark of 100 MB. Please collect tech-support info and contact Cisco Customer Support (TAC).
2. Also can log the memory footprint of the FI via "show system internal kernel meminfo"

Fault Details

```
Severity: major
Cause: kernel-mem-critical-threshold
mibFaultCode: F1701
mibFaultName: fltNetworkElementKernelMemCricitalThreshold
moClass: network:Element
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]
```

fltFlowctrlItemFlowctrlconfig

Fault Code: F1702

Message: Flow Control Policy: [name], has unsupported configuration. Priority Pause and Send/Receive Flow-control cannot be ON together, this policy configuration won't be applied until corrected.

Explanation:

This fault occurs when the flow-control policy has an unsupported config. This fault will be raised during upgrade/import operations.

Recommended Action:

If you see this fault, take the following actions:

1. Check the flow-control policy named in the fault message and correct the configuration on it to a supported configuration.

Fault Details

```
Severity: major
Cause: unsupported-policy-config
mibFaultCode: F1702
mibFaultName: fltFlowctrlItemFlowctrlconfig
moClass: flowctrl:Item
Type: configuration
autoCleared: true
Affected MO: fabric/lan/flowctrl/policy-[name]
```

fltNetworkElementSystemshutdown

Fault Code: F1703

Message: Fabric Interconnect [id] will reboot in 120 sec

Explanation:

This fault typically occurs when fans get removed or broken and the fabric interconnect will reboot.

Recommended Action:

If you see this fault, take the following actions:

1. Replace or Insert with a good fan.

Fault Details

```
Severity: critical
Cause: fan-removal
mibFaultCode: F1703
mibFaultName: fltNetworkElementSystemshutdown
moClass: network:Element
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]
```

fltMgmtHealthStatusHealthWarningIssue

Fault Code: F1704

Message: [healthQualifier] : Please check the Health tab for more details

Explanation:

This fault occurs when there is a warning health issue of a component (BMC/CIMC..)

Recommended Action:

If you see this fault, take the following actions:

1. create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltMgmtHealthStatusHealthMinorIssue

Fault Code: F1705

Message: [healthQualifier] : Please check the Health tab for more details

Explanation:

This fault occurs when there is a minor health issue of a component (BMC/CIMC..)

Recommended Action:

If you see this fault, take the following actions:

1. create a **show tech-support** file and contact Cisco TAC.

fltMgmtHealthStatusHealthMajorIssue

Fault Code: F1706

Message: [healthQualifier] : Please check the Health tab for more details[healthQualifier] : [description]

Explanation:

This fault occurs when there is a major health issue of a component (CMC/CIMC/FI)

Recommended Action:

If you see this fault, take the following actions:

1. If it is on CMC/CIMC component, create a **show tech-support** file and contact Cisco TAC.
2. If it is on FI with fault description starting with "SER Uncorrectable Error", then switch reboot is recommended. If this does not fix the problem, contact TAC.

fltMgmtHealthStatusHealthCriticalIssue

Fault Code: F1707

Message: [healthQualifier] : Please check the Health tab for more details

Explanation:

This fault occurs when there is a critical health issue of a component (BMC/CIMC)

Recommended Action:

If you see this fault, take the following actions:

1. create a **show tech-support** file and contact Cisco TAC.

fltComputePhysicalAdapterFirmwareNeedsUpdate

Fault Code: F1709

Message: Some of the adapters in Server [chassisId]/[slotId] needs firmware update to operate in 40G mode.These adapters are currently configured in 4x10G mode

Explanation:

None set.

Recommended Action:

If you see this fault, take the following actions:

1. Update the Adapter Firmware in the blade and acknowledge the Chassis

Fault Details

```
Severity: minor
Cause: connectivity-problem
mibFaultCode: F1709
mibFaultName: fltComputePhysicalAdapterFirmwareNeedsUpdate

Affected MO: sys/rack-unit-[id]
```

fltEquipmentIOCardDeprecated

Fault Code: F1713

Message: [side] IOM [chassisId]/[id] ([switchId]) is either deprecated or not supported

Explanation:

This fault typically occurs when the I/O module is deprecated.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is the right version. If necessary, update the catalog.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: fru-problem

autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fltFabricSwChPhEpUncleanConfiguration

Fault Code: F1719

Message: Chassis [chassisId] has unclean configuration

Explanation:

This fault typically occurs when there is a unclean configuration after decommission the Chassis.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that if service profile is completely disassociate.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-removed
mibFaultCode: F1719
mibFaultName: fltFabricSwChPhEpUncleanConfiguration
moClass: fabric:SwChPhEp
Type: equipment
autoCleared: true
Affected MO: fabric/server/chassis-ep-ven-[vendor]-mod[model]-ser-[serial]
```

fltFabricComputeSlotEpNotSupportedInChassisSlot

Fault Code: F1720

Message: Server in slot [chassisId]/[slotId] is not supported on this platform

Explanation: This fault typically occurs when Cisco UCS Manager detects a server in a chassis slot is not supported on the current platform.

Recommended Action: If you see this fault, take the following actions:

Remove the server.

Fault Details

```
Severity: critical
Cause: equipment-inoperable
mibFaultCode: F1720
mibFaultName: fltFabricComputeSlotEpNotSupportedInChassisSlot
moClass: fabric:ComputeSlotEp
Type: equipment
autoCleared: true
Affected MO: fabric/server/chassis-[chassisId]/slot-[slotId]
```

fltFabricDceSwSrvEpDown

Fault Code: F1721

Message: Chassis discovery detected on port [slotId]/[portId]. UCS-FI-M-6324 platform does not support chassis discovery on non-scalability port

Explanation: This fault typically occurs when a non-scalability port is configured as server port to discover non-Primary Chassis on UCS-FI-6324 platform.

Recommended Action: If you see this fault, try the alternate action described below:

1. Unconfigure the server ports and move the cables from the regular port(s) on FI to scalability ports.

Fault Details

fltStorageLocalDiskThermalIssueNonCritical

Fault Code: F1731

Message: Local disk [id] on server [chassisId]/[slotId] has thermal issue: [thermal]Local disk [id] on server [id] has thermal issue: [thermal]Local disk [id] on storage enclosure [id] has thermal issue: [thermal]

Explanation: This fault occurs when the local drive is experiencing a non critical thermal issue.

Recommended Action: If you see this fault, monitor other environmental events related to this server and ensure the temperature ranges are within recommended ranges. If the issue persists, take the following actions:

1. If only one drive is too hot, replace the drive.
2. If many drives are too hot, remove the server.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltEquipmentSystemIOControllerRemoved

Fault Code: F1744

Message: System IO Controller [chassisId]/[id] is removed

Explanation: This fault typically occurs because a System IO Controller is removed from the colusa chassis.This is a critical fault because it can result in the loss of network connectivity.

Recommended Action: If you see this fault, take the following actions:

1. Reinsert the System IO Controller and configure the fabric-interconnect ports connected to it as server ports and wait a few minutes to see if the fault clears.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-removed
mibFaultCode: F1744
mibFaultName: fltEquipmentSystemIOControllerRemoved
moClass: equipment:SystemIOController
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
```

fltComputeRackUnitFanSpeedConfigurationFailed

Fault Code: F1745

Message: Server [id] (service profile: [assignedToDn]) Fan Speed Policy failed: [fanSpeedConfigStatus]

Explanation: This fault typically occurs because the set fan speed policy is not sufficient

Recommended Action: If you see this fault, take the following actions:

1. Increase the value of the fan speed policy in power control policy to a higher value.

Fault Details

```
Severity: info
Cause: equipment-degraded
mibFaultCode: F1745
mibFaultName: fltComputeRackUnitFanSpeedConfigurationFailed
moClass: compute:RackUnit
Type: equipment
autoCleared: true
Affected MO: sys/rack-unit-[id]
```

fltFabricEthLanNumOfVLANCompGrpExceedLimit

Fault Code: F1748

Message: VLAN compression group count for [dn] exceeds the limit.

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: major
Cause: vlan-comp-grp-count-exceeds-limit
mibFaultCode: F1748
mibFaultName: fltFabricEthLanNumOfVLANCompGrpExceedLimit
moClass: fabric:EthLan
Type: configuration
autoCleared: true
Affected MO: fabric/lan/[id]
```

fltFabricMulticastPolicySameOrEmptyPeerQuerierIp

Fault Code: F1749

Message: FI-B querier IP [querierIpAddrPeer] is empty or same as FI-A.

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: fi-b-querier-ip-empty-or-same-as-primary
mibFaultCode: F1749
mibFaultName: fltFabricMulticastPolicySameOrEmptyPeerQuerierIp
moClass: fabric:MulticastPolicy
Type: configuration
autoCleared: true
Affected MO: org-[name]/mc-policy-[name]
```

fltAdaptorUnitDeprecated

Fault Code: F1753

Message: Adapter [id] in server [id] may be deprecated or not supported.Adapter [id] in server [chassisId]/[slotId] may be deprecated or not supported.Adapter [id] in server [chassisId]/[slotId]/[serverInstanceId] may be deprecated or not supported.

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an adapter that is deprecated in the current release.

Recommended Action:

If you see this fault, take the following actions:

1. Verify if the adapter is supported in the release and not deprecated
2. If the above action(s) did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: deprecated
mibFaultCode: F1753
mibFaultName: fltAdaptorUnitDeprecated
moClass: adaptor:Unit
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/adaptor-[id]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/adaptor-[id]
Affected MO: sys/rack-unit-[id]/adaptor-[id]
```

fltMgmtInterfaceInbandPinningInvalid

Fault Code: F1754

Message: [configMessage]

Explanation:

This fault occurs if the server interface is not pinned to any uplink.

Recommended Action:

If you see this fault check if there is any operational uplink that is configured with all VLANs specified in the Inband Profile

Fault Details

```
Severity: warning
Cause: invalid-pinning
mibFaultCode: F1754
mibFaultName: fltMgmtInterfaceInbandPinningInvalid

fltNetworkOperLevelExtravif

Fault Code: F1756

Message: Fabric Interconnect [id]: Number of VIFs configured exceeds the max limit on the FI: Number of VIFs configured: [vifCount] and Max VIFs allowed: [maxVifCount]

Explanation: This fault occurs when the fabric interconnect has more number of Virtual Interfaces (VIF) than what is supported.

Recommended Action: If you see this fault, take the following actions:

1. It is recommended that operator should delete the extra Virtual Interfaces(VIF) than are there in the FI. System may appear to be normally functioning even with these extra VIFs in place. However there may be performance issues observed as the system is operating above the recommended scale limits..
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: extra-vif
mibFaultCode: F1756
mibFaultName: fltNetworkOperLevelExtravif
moClass: network:OperLevel
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]/oper-level
```

fltNetworkElementDeprecated

Fault Code: F1757

Message: Fabric Interconnect [id] operability: [operability]

Explanation: This fault typically occurs when the fabric interconnect model is deprecated.

Recommended Action: If you see this fault, take the following actions:

1. Downgrade to the previous work release and plan your upgrade with a non-deprecated fabric interconnect model.

Fault Details

```
Severity: critical
Cause: equipment-deprecated
mibFaultCode: F1757
mibFaultName: fltNetworkElementDeprecated
moClass: network:Element
Type: equipment
```

```
autoCleared: true
Affected MO: sys/switch-[id]
```

fltFabricNetGroupNativeVlanNotFound

Fault Code: F1758

Message: Native VLAN [nativeNet] for VLAN group [name] cannot be found among the member vlans in the VLAN group.

Explanation:

This fault typically occurs when the native VLAN of the VLAN group is not found among the member vlans in the VLAN group.

Recommended Action:

If you see this fault, take the following action:

1. Create the member Vlan in the VLAN group.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: native-vlan-not-found
mibFaultCode: F1758
mibFaultName: fltFabricNetGroupNativeVlanNotFound
moClass: fabric:NetGroup
Type: network
autoCleared: true
Affected MO: fabric/lan/[id]/net-group-[name]
Affected MO: fabric/lan/net-group-[name]
```

fltEquipmentChassisChassislimit-exceeded

Fault Code: F1761

Message: Chassis limit exceeded for this platform with the addition of chassis [id]

Explanation: This fault typically occurs because Cisco UCS Manager detects that the number of chassis present in the system exceeds the maximum number supported on the platform.

Recommended Action: If you see this fault, take the following actions:

1. Verify the maximum number of chassis supported in the platform from the release notes. If the number of chassis in the system is less than the maximum number supported, and the fault is still observed, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: chassis-limit-exceeded
mibFaultCode: F1761
mibFaultName: fltEquipmentChassisChassislimitExceeded
moClass: equipment:Chassis
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltMgmtEntityDevice-1-shared-storage-connect error

Fault Code: F1766

Message: device [chassis1], error connecting to shared-storage management interface

Explanation:

This fault occurs in an unlikely event that the shared storage selected for writing the cluster state is not accessible. This fault is typically a transient fault. You might see this fault when one of the following occurs: (a) the Fabric Interconnect boots, (b) the IO Module is reset, (c) the rack server is reboot, or (d) system is upgraded/downgraded. If this fault is not cleared after the system returns to normal operation following the reboot/reset/upgrade/downgrade, then it may affect the full HA functionality of the Fabric Interconnect cluster.

Recommended Action:

If this fault is not cleared even after the system returns to normal operation, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: device-shared-storage-error
mibFaultCode: F1766
mibFaultName: fltMgmtEntityDevice1SharedStorageConnectError
moClass: mgmt:Entity
Type: management
autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltMgmtEntityDevice-2-shared-storage-connect error

Fault Code: F1767

Message: device [chassis2], error connecting to shared-storage management interface

Explanation:

This fault occurs in an unlikely event that the shared storage selected for writing the cluster state is not accessible. This fault is typically a transient fault. You might see this fault when one of the following occurs: (a) the Fabric Interconnect boots, (b) the IO Module is reset, (c) the rack server is reboot, or (d) system is upgraded/downgraded. If this fault is not cleared after the system returns to normal operation following the reboot/reset/upgrade/downgrade, then it may affect the full HA functionality of the Fabric Interconnect cluster.

Recommended Action:

If this fault is not cleared even after the system returns to normal operation, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: device-shared-storage-error
mibFaultCode: F1767

moClass: mgmt:Entity
Type: management
autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltSwEthLanBorderVlan-limit-exceeded

Fault Code: F1778

Message: Maximum allowed VLANs limit has been exceeded, please delete the extra VLANs to ensure proper system functioning.

Explanation:

This fault typically occurs after upgrade, if the maximum allowed VLANs limit has changed in the new release.

Recommended Action:

If you see this fault, take the following actions:

1. Delete the extra VLANs in order to meet the limits defined in the new release. Current count and max allowed count details can be seen in UCSM CLI under 'system/upgrade-validation' scope.
2. Note: The VLANs associated with FCoE VSANs are also counted towards the overall max VLAN limit.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: max-vlan-limit-exceeded
mibFaultCode: F1778
mibFaultName: fltSwEthLanBorderVlanLimitExceeded
moClass: sw:EthLanBorder
Type: network
```

```
autoCleared: true
Affected MO: sys/switch-[id]/border-eth
```

fltMgmtEntityMgmt-db-version-mismatch

Fault Code: F1781

Message: Management database version mismatch detected failover may not complete

Explanation:

None set.

Recommended Action:

None set.

Fault Details

```
Severity: major
Cause: replication-failure
mibFaultCode: F1781
mibFaultName: fltMgmtEntityMgmtDbVersionMismatch
moClass: mgmt:Entity
Type: management
autoCleared: true
Affected MO: sys/mgmt-entity-[id]
```

fltEquipmentTpmTpmMismatch

Fault Code: F1784

Message: Server [id], has a TPM mismatch.

Explanation:

This fault is raised due to incompatible CPU/TPM combination

Recommended Action:

If you see this fault, please check the TPM model used

1. Read fault summary and determine course of action.

Fault Details

```
Severity: warning
Cause: tpm-mismatch
mibFaultCode: F1784
mibFaultName: fltEquipmentTpmTpmMismatch
moClass: equipment:Tpm
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/Tpm-[id]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/Tpm-[id]
Affected MO: sys/rack-unit-[id]/board/Tpm-[id]
```

fltEquipmentSharedIOModuleInaccessible

Fault Code: F1792

Message: Shared IO Module [id] of chassis [chassisId] is offline

Explanation:

This fault typically occurs because a Shared I/O module has lost its connection to the fabric interconnects. This is a critical fault because it can result in the loss of network connectivity and disrupt data traffic.

Recommended Action:

If you see this fault, take the following actions:

1. Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-inaccessible

Affected MO: sys/chassis-[id]/slot-[id]/shared-io-module
```

fltEquipmentChassisInaccessible-b

Fault Code: F1793

Message: Chassis not reachable from B side

Explanation:

This fault typically occurs because a Shared I/O module has lost its connection to B side FI. This is a major fault because it can result in the loss of network connectivity and disrupt data traffic on B side.

Recommended Action:

If you see this fault, take the following actions:

1. Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-inaccessible
mibFaultCode: F1793
mibFaultName: fltEquipmentChassisInaccessibleB
moClass: equipment:Chassis
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentChassisInaccessible-a

Fault Code: F1794

Message: Chassis not reachable from A side

Explanation:

This fault typically occurs because a Shared I/O module has lost its connection to A side FI. This is a major fault because it can result in the loss of network connectivity and disrupt data traffic on A side.

Recommended Action:

If you see this fault, take the following actions:

1. Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-inaccessible
mibFaultCode: F1794
mibFaultName: fltEquipmentChassisInaccessibleA
moClass: equipment:Chassis
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]
```

fltEquipmentSystemIOControllerThermalProblem

Fault Code: F1795

Message: System IO Controller [id] on Chassis [chassisId], operState: [operState]

Explanation:

This fault occurs when there is a thermal problem on an System I/O Controller module. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the I/O module.
2. Review the Cisco UCS Site Preparation Guide to ensure the I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis are not obstructed.
4. Verify that the site cooling system is operating properly.

5. Power off unused servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace faulty I/O modules.
8. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: F1795
mibFaultName: fltEquipmentSystemIOControllerThermalProblem
moClass: equipment:SystemIOController

```

fltEquipmentSystemIOControllerUnacknowledged

Fault Code: F1796

Message: System IO Controller [id] or its component in Chassis [chassisId] is replaced or re-inserted. Acknowledge the SIOC

Explanation:

System IO Controller is in un-acknowledged state. Cisco UCS Manager raises this fault when any of the following scenarios occur:

- Cisco UCS Manager detects a that the SystemIOController or its adapter is re-inserted or replaced.

Recommended Action:

If you see this fault, take the following actions:

1. Reacknowledge the SIOC.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-unacknowledged

fltFabricFcUserZoneConfigFailure

Fault Code: F1826

Message: FC User Zone [name] configuration failed as it reached max user defined or system zone configuration limit

Explanation:

Cisco UCS Manager cannot successfully deploy the FC User defined Zone due to a lack of resource that meet the named qualifier. This fault typically occurs as a result of exceeding the user defined zone limit or system zone limit

Recommended Action:

If you see this fault, take the following actions:

1. If the User defined zone count is above the limit, then free up any unused user defined zone.
2. If the User defined zone count is below the limit, but the system FC Zone count exceeds 8000, then try to free up unused zones from the service profile.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

Type: configuration
autoCleared: true
Affected MO: fabric/fc-estc/zone-profile-[name]/zone-[name]
```

fltStorageEnclosureThermalIssueNonCritical

Fault Code: F1831

Message: HDD MotherBoard on [id] has a thermal problem: [thermal]

Explanation:

This fault occurs when there is a thermal problem on an HDD MotherBoard module. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the I/O module.
2. Review the Cisco UCS Site Preparation Guide to ensure the I/O modules have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Replace faulty I/O modules.
8. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
9. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

fltFabricNetGroupRefNetSanGroupUnresolvable

Fault Code: F1873

Message: Network/SAN group does not exist or not permitted

Explanation:

This fault occurs when NetGroup/SanGroup referenced by the netGroupRef/SanGroupRef doesn't exist or netGroupRef/SanGroupRef MO are not in the same Org as Network Group/San Group.

Recommended Action:

If you see this fault, take the following actions:

1. Check if the NetGroup/SanGroup exists if not create one.
2. Check if the NetGroup/SanGroup is in the same Org as netGroupRef/SanGroupRef.

Fault Details

```
Severity: major
Cause: network-san-group-does-not-exist
mibFaultCode: F1873
mibFaultName: fltFabricNetGroupRefNetSanGroupUnresolvable
moClass: fabric:NetGroupRef
Type: configuration
autoCleared: true
Affected MO: fabric/lan/profiles/vnic-[name]/net-group-ref-[name]
Affected MO: org-[name]/lan-conn-pol-[name]/ether-[name]/net-group-ref-[name]
Affected MO: org-[name]/lan-conn-templ-[name]/net-group-ref-[name]
Affected MO: org-[name]/ls-[name]/ether-[name]/net-group-ref-[name]
Affected MO: org-[name]/san-conn-templ-[name]/net-group-ref-[name]
Affected MO: org-[name]/tier-[name]/ls-[name]/ether-[name]/net-group-ref-[name]
Affected MO:

```

fltAdaptorUnitPci-config-issue

Fault Code: F1892

Message: Adapter [id] in server [chassisId]/[slotId] is not visible to host

Explanation:

The adapter is not visible to the host OS. Cisco UCS Manager raises this fault when any of the following scenarios occur:

- The PCIe connecitivity to the chassis adapter is not configured for the server.
- Corresponding SIOC is missing.
- Single Server Dual SIOC connectivity is applied, and CIMC/BIOS firmware version does not support this feature.

Recommended Action:

If you see this fault, take the following actions:

1. Check if the corresponding SIOC is inserted in the chassis.
2. Check if CIMC/BIOS are running recommended firmware version.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: pci-config-issue
mibFaultCode: F1892
mibFaultName: fltAdaptorUnitPciConfigIssue
moClass: adaptor:Unit
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/adaptor-[id]

Affected MO: sys/rack-unit-[id]/adaptor-[id]
```

fltNetworkElementEvacuationon

Fault Code: F1893

Message: Fabric Interconnect [id] operEvacState: [operEvacState]

Explanation:

This fault typically occurs when the fabric interconnect is evacuated.

Recommended Action:

If you see this fault, take the following actions:

1. Ensure that the Evacuation option is switched off for the fabric interconnects.

Fault Details

```
Severity: info
Cause: fabric-evacuated
mibFaultCode: F1893
mibFaultName: fltNetworkElementEvacuationon
moClass: network:Element
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]
```

fltNetworkLimitUnicast-mac

Fault Code: F1894

Message: No. of unicast mac addresses ([actualCount]) on switch [id] has reached the upper limit([upperLimit]). Will get cleared when the count reaches the lower limit ([lowerLimit])

Explanation:

This fault typically occurs when number of unicast mac addreses on the fabric interconnect has exreched an upper threshold. It gets cleared when the numbers reaches a lower threshold

Recommended Action:

None set.

Fault Details

```
Severity: critical
Cause: unicast-mac-exhausted
mibFaultCode: F1894
mibFaultName: fltNetworkLimitUnicastMac

fltNetworkLimitPvlifvlanmbr

Fault Code: F1896

Message: No. of PV LifVlanMbr count ([actualCount]) in the asic [asicNumber] corresponding to ports (eth [slotNumber]/[startPortNumber] through eth [slotNumber]/[endPortNumber]) on switch [id] has reached the upper limit ([upperLimit]). Will get cleared when the count reaches the lower limit ([lowerLimit])

Explanation:

This fault typically occurs when number of PV LifVlanMbr on a particular asic in the fabric interconnect has reached an upper threshold. It gets cleared when the numbers reaches a lower threshold

Recommended Action:

If you see this fault, take the following actions:

1. The user needs to remove the chassis from the current asic and move to a different asic

Fault Details

```
Severity: warning
Cause: pvlif-vlan-mbr-exhausted
mibFaultCode: F1896
mibFaultName: fltNetworkLimitPvlifvlanmbr
moClass: network:Limit

fltEquipmentInventoryStatusHardwareMismatch

Fault Code: F1901

Message: Adaptor unit inventory mismatchPass through adaptor unit extension inventory mismatchGraphics card inventory mismatchSecurity unit inventory mismatchStorage controller inventory mismatchCPU inventory mismatchDIMM inventory mismatchMini storage inventory mismatch

Explanation:

UCSM raises this fault under the following conditions:

1. If any server hardware component is changed in a rack server without decommissioning the server.
2. If any server hardware component is changed in a non-rack server and the server is not acknowledged.

Recommended Action:

If you see this fault, take the following actions:

1. For rack servers, decommission and recommission the server if any hardware component is changed.
2. For non-rack servers, acknowledge the server if any hardware component is changed.
3. If no hardware component was changed, Create a **show tech-support** file and contact Cisco TAC.

```

fltVnicEtherPrimaryVlanMissing

Fault Code: F1907

Message: Hard pinning target for eth vNIC [name], service profile [name] does not have the corresponding primary VLAN configured

Explanation:

This fault occurs when secondary VLAN configured on a vNIC has no corresponding primary VLAN configured on the target uplink port or port channel for a hard-pinned LAN pin group.

Recommended Action:

If you see this fault, take the following actions:

1. Review the LAN pin group configuration.
2. Correct the configuration of the port and port channels in the pin group.
3. In the LAN Uplinks Manager of the Cisco UCS Manager GUI, configure primary VLANs in the target uplink port or port channel for the corresponding secodary VLAN configured in the vNIC.

4. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltVnicEtherNetSanGroupMisconfigured

Fault Code: F1908

Message: Network/SAN group has been misconfigured

Explanation:

This fault occurs when native vlan of a vnicEtherIf and native vlan of a netGroup assigned to a vNIC are not same.

Recommended Action:

If you see this fault, take the following actions:

1. Change the native vlan on the vnicEtherIf or the NetGroup to be same.

Fault Details

```
Severity: major
Cause: network-san-group-misconfigured
mibFaultCode: F1908
mibFaultName: fltVnicEtherNetSanGroupMisconfigured

Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltComputePhysicalHardwareInventoryMismatch

Fault Code: F1913

Message: Server [id] hardware inventory mismatch. Decommission and recommission the server to clear the faultServer [chassisId]/[slotId] hardware inventory mismatch. Acknowledge the server to clear the fault

Explanation:

UCSM raises this fault under the following conditions:

1. If any server hardware component is changed in a rack server without decommissioning the server.
2. If any server hardware component is changed in a non-rack server and the server is not acknowledged.

Recommended Action:

If you see this fault, take the following actions:

1. For rack servers, decommission and recommission the server if any hardware component is changed.
2. For non-rack servers, acknowledge the server if any hardware component is changed.
3. If no hardware component was changed, Create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical

```

fltComputePhysicalPciConfigMismatch

Fault Code: F1914

Message: Mismatch in PCIe configuration of the chassis adapters

Explanation:

UCSM raises this fault under the following conditions:

1. If the SIOC is replaced and the new SIOC is running pre 3.1.3 CMC firmware that does not support Single Server Dual SIOC connectivity for the chassis.

Recommended Action:

If you see this fault, take the following actions:

1. Re-trigger chassis profile association, to update the SIOC firmware and reconfigure server SIOC Connectivity
2. If SIOC was not replaced, Create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: pci-config-mismatch

fltStorageEnclosureDiskSlotEpSecond-controller-absent

Fault Code: F1915

Message: Slot [id]/[id]/[id] ownership is automatically unassigned because of unavailability of second storage controller in the server.

Explanation:

This fault indicates that a disk slot ownership is automatically unassigned because there were no second controller attached to the server.

Recommended Action:

If you see this fault, take the following actions:

1. Add a second controller to the server (or) change the ownership in disk zoning policy

Fault Details

```
Severity: minor
Cause: equipment-second-controller-absent

```

fltAdaptorUnitUnConnectedAdaptorReachability

Fault Code: F1926

Message: Adapter [id]/[id] is unreachableAdapter [chassisId]/[slotId]/[id] is unreachable

Explanation:

Cisco UCS Manager cannot access the adapter whose connectivity is not discovered. This fault typically occurs as a result of one of the following issues:

- The server does not have sufficient power.
- The I/O module is not functional.
- The adapter firmware has failed.
- The adapter is not functional
- The adapter is not connected to UCSM

Recommended Action:

If you see this fault, take the following actions:

1. Check the POST results for the server. In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the **show post** command under the scope for the server.
2. In Cisco UCS Manager, check the power state of the server.
3. Verify that the physical server has the same power state.
4. If the server is off, turn the server on.
5. If the server is not connected to UCSM, connect it if it needs to be managed by UCSM.
6. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Affected MO: org-[name]/tier-[name]/ls-[name]/fc-[name]

fltNetworkLimitIftmcpv

Fault Code: F1965

Message: VP grouping switch resources are exhausted

Explanation:

This fault typically occurs when VP grouping switch resources are exhausted

Recommended Action:

If you see this fault, take the following actions:

1. Reduce the number of VNICs / VLans in the system

Fault Details

```
Severity: critical
Cause: iftmc-pv-exhausted
mibFaultCode: F1965
mibFaultName: fltNetworkLimitIftmcpv
moClass: network:Limit
Type: management
autoCleared: true
Affected MO: sys/switch-[id]/limit-type-[type]-asic-[asicNumber]
```

fltNetworkLimitDvif

Fault Code: F1966

Message: No. of Dvif count ([actualCount]) on switch [id] has reached the upper limit([upperLimit]). Will get cleared when the count reaches the lower limit ([lowerLimit])

Explanation:

This fault typically occurs when number of DVIF on the fabric interconnect has exreched an upper threshold. It gets cleared when the numbers reaches a lower threshold

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: dvif-exhausted
mibFaultCode: F1966
mibFaultName: fltNetworkLimitDvif
moClass: network:Limit
Type: management
autoCleared: true
Affected MO: sys/switch-[id]/limit-type-[type]-asic-[asicNumber]
```

fltFabricVsanReserved

Fault Code: F1967

Message: VSAN [name] is [configOverlap] because fcoeVlan-id [fcoeVlan] is in the reserved VLAN range

Explanation:

This fault typically occurs when the VSAN has the fcoeVlan ID in the reserved VLAN range.

Recommended Action:

If you see this fault, take the following actions:

1. Check the VSAN ID.
2. If the fcoeVlan ID of the VSAN is in the reserved range, recreate it outside the reserved VLAN range or change the reserved range.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: vsan-misconfigured
mibFaultCode: F1967
mibFaultName: fltFabricVsanReserved
moClass: fabric:Vsan
Type: network
autoCleared: true

Affected MO: fabric/san/net-[name]
```

fltFabricVlanReserved

Fault Code: F1968

Message: VLAN [name] is [configOverlap] because vlan-id [id] is in the reserved VLAN range

Explanation:

This fault typically occurs when VLAN is in the reserved VLAN range.

Recommended Action:

If you see this fault, take the following action:

1. Check the VLAN ID.
2. If the ID of the VLAN is in the reserved range, recreate the VLAN outside the reserved VLAN range or change the reserved range.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltEtherServerIntFIoError-disabled

Fault Code: F1979

Message: Port [slotId]/[portId] is error-disabled! Slow-Drain feature is [slowDrainAdminState], if enabled, you can try selecting the 'Correct Slow-Drain congestion' option on the IOM.

Explanation:

This fault shows that the port might've been error-disabled due to SlowDrain feature (if enabled).

Recommended Action:

If you see this fault, take the following actions:

1. Verify whether the SlowDrain QoS feature has been enabled globally. If yes, select the 'Correct Slow-Drain congestion' option under the IOM.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: interface-failed
mibFaultCode: F1979

```

fltEquipmentIOCardSlow-drain-recovery-fail

Fault Code: F1980

Message: Slow-drain recovery failed for IOM [chassisId]/[id] ([switchId])! Please retry the operation.

Explanation:

This fault typically occurs because a Slow-Drain recovery operation that was triggered on an I/O module could not complete successfully.

Recommended Action:

If you see this fault, take the following actions:

1. Retry the operation and verify if this fault clears within a few minutes.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: slow-drain-recovery-failure
mibFaultCode: F1980
mibFaultName: fltEquipmentIOCardSlowDrainRecoveryFail

Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/slot-[id]
Affected MO: sys/fex-[id]/slot-[id]
```

fltCloudDeviceConnectorEpIntersightNotClaimed

Fault Code: F1981

Message: [description]

Explanation:

This fault occurs when Intersight management is enabled and UCSM device is unclaimed.

Recommended Action:

None set.

Fault Details

```
Severity: info
Cause: unclaimed-device
mibFaultCode: F1981
mibFaultName: fltCloudDeviceConnectorEpIntersightNotClaimed
moClass: cloud:DeviceConnectorEp
Type: equipment
autoCleared: true
Affected MO: sys/cloud-mgmt/device-connector
```

fltComputePhysicalPersistentMemoryDetected

Fault Code: F1994

Message: Persistent Memory module detected on Server [id]. Acknowledge the server to clear the faultPersistent Memory module detected on Server [chassisId]/[slotId]. Acknowledge the server to clear the fault

Explanation:

UCSM raises this fault under the following conditions:

1. If persistent-memory module is detected in a rack or non-rack server and the server is not acknowledged.

Recommended Action:

If you see this fault, take the following actions:

1. For both rack and non-rack server, acknowledge the server if persistent memory module is detected.
2. If no persistent memory module exists in the server, Create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: persistent-memory-detection
mibFaultCode: F1994
mibFaultName: fltComputePhysicalPersistentMemoryDetected
moClass: compute:Physical
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]
Affected MO: sys/rack-unit-[id]
```

fltMemoryPersistentMemoryUnitDegraded

Fault Code: F1998

Message: Persistent Memory DIMM [location] on server [chassisId]/[slotId] operability: [operability]Persistent Memory DIMM [location] on server [id] operability: [operability]Persistent Memory DIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] operability: [operability]

Explanation:

This fault occurs when a Persistent Memory DIMM is in a degraded operability state. This state typically occurs when an excessive number of correctable ECC errors are reported on the Persistent Memory DIMM by the server BIOS.

Recommended Action:

If you see this fault, take the following actions:

1. Monitor the error statistics on the degraded Persistent Memory DIMM through Cisco UCS Manager. If the high number of errors persists, there is a high possibility of the Persistent Memory DIMM becoming inoperable.
2. If the Persistent Memory DIMM becomes inoperable, replace the Persistent Memory DIMM
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: equipment-degraded
mibFaultCode: F1998
mibFaultName: fltMemoryPersistentMemoryUnitDegraded
```

```
moClass: memory:PersistentMemoryUnit
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/pmemory-[id]
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/pmemory-[id]
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/pmemory-[id]
```

fltMemoryPersistentMemoryUnitIdentity-unestablishable

Fault Code: F1999

Message: Persistent Memory DIMM [location] on server [chassisId]/[slotId] has an invalid FRUPersistent Memory DIMM [location] on server [id] has an invalid FRUPersistent Memory DIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] has an invalid FRU

Explanation:

This fault typically occurs because Cisco UCS Manager has detected unsupported Persistent Memory DIMM in the server. For example, the model, vendor, or revision is not recognized.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, you may have unsupported Persistent Memory DIMM or Persistent Memory DIMM configuration in the server. Create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: warning
Cause: identity-unestablishable
mibFaultCode: F1999
mibFaultName: fltMemoryPersistentMemoryUnitIdentityUnestablishable
moClass: memory:PersistentMemoryUnit

```

fltMemoryPersistentMemoryUnitInoperable

Fault Code: F2000

Message: Persistent Memory DIMM [location] on server [chassisId]/[slotId] operability: [operability]Persistent Memory DIMM [location] on server [id] operability: [operability]Persistent Memory DIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] operability: [operability]

Explanation:

This fault typically occurs because an above threshold number of correctable or uncorrectable errors has occurred on a Persistent Memory DIMM The Persistent Memory DIMM may be inoperable.

Recommended Action:

If you see this fault, take the following actions:

1. If the SEL is enabled, review the SEL statistics on the Persistent Memory DIMM to determine which threshold was crossed.
2. If necessary, replace the Persistent Memory DIMM
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: F2000
mibFaultName: fltMemoryPersistentMemoryUnitInoperable

fltMemoryPersistentMemoryUnitDisabled

Fault Code: F2001

Message: Persistent Memory DIMM [location] on server [chassisId]/[slotId] operState: [operState]Persistent Memory DIMM [location] on server [id] operaState: [operState]Persistent Memory DIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] operState: [operState]

Explanation:

This fault is raised when the server BIOS disables a Persistent Memory DIMM The BIOS could disable a Persistent Memory DIMM for several reasons, including incorrect location of the Persistent Memory DIMM or incompatible speed.

Recommended Action:

If you see this fault, refer to the Cisco UCS B-Series Troubleshooting Guide for information on how to resolve the Persistent Memory DIMM issues.

Fault Details

```
Severity: major
Cause: equipment-disabled
mibFaultCode: F2001
mibFaultName: fltMemoryPersistentMemoryUnitDisabled
moClass: memory:PersistentMemoryUnit
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/pmemory-[id]

Affected MO: sys/rack-unit-[id]/board/memarray-[id]/pmemory-[id]
```

fltMemoryPersistentMemoryUnitThermalThresholdNonCritical

Fault Code: F2002

Message: Persistent Memory DIMM [location] on server [chassisId]/[slotId] temperature: [thermal]Persistent Memory DIMM [location] on server [id] temperature: [thermal]Persistent Memory DIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] temperature: [thermal]

Explanation:

This fault occurs when the temperature of a memory unit on a blade or rack server exceeds a non-critical threshold value, but is still below the critical threshold. Be aware of the following possible contributing factors:

- Temperature extremes can cause Cisco UCS equipment to operate at reduced efficiency and cause a variety of problems, including early degradation, failure of chips, and failure of equipment. In addition, extreme temperature fluctuations can cause CPUs to become loose in their sockets.
- Cisco UCS equipment should operate in an environment that provides an inlet air temperature not colder than 50F (10C) nor hotter than 95F (35C).
- If sensors on a CPU reach 179.6F (82C), the system will take that CPU offline.

Recommended Action:

If you see this fault, take the following actions:

1. Review the product specifications to determine the temperature operating range of the server.
2. Review the Cisco UCS Site Preparation Guide to ensure the servers have adequate airflow, including front and back clearance.
3. Verify that the air flows on the Cisco UCS chassis or rack server are not obstructed.
4. Verify that the site cooling system is operating properly.
5. Power off unused blade servers and rack servers.
6. Clean the installation site at regular intervals to avoid buildup of dust and debris, which can cause a system to overheat.
7. Use the Cisco UCS power capping capability to limit power usage. Power capping can limit the power consumption of the system, including blade and rack servers, to a threshold that is less than or equal to the system's maximum rated power. Power-capping can have an impact on heat dissipation and help to lower the installation site temperature.
8. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltMemoryPersistentMemoryConfigurationNot-matching

Fault Code: F2005

Message: Persistent Memory configuration not matching

Explanation:

This fault typically occurs because the Persistent Memory configuration is not matching with the goal configuration in the associated policy.

Recommended Action:

If you see this fault, take one of the following actions based on the requirement:

1. Either configure the server through host OS such that it matches with the goal.
2. Or, change the goal configuration to match all the associated servers' configuration
3. Or, remove the association with the persistent memory policy
4. Or, force configure the goal configuation on all the associated servers
5. Or, if this fault is ignored then it would be tried when the force configuration on the policy is applied next time
6. If the above actions except the last one did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Affected MO: sys/rack-unit-[id]/board/pmemory-config
```

fltMemoryPersistentMemoryConfigurationNs-not-matching

Fault Code: F2006

Message: Persistent Memory namespaces in policy not matching

Explanation:

This fault typically occurs because the Persistent Memory configuration is not able to find one or more namespaces on the server corresponding to the logical namespace configuration in the associated policy.

Recommended Action:

If you see this fault, take one of the following actions based on the requirement:

1. Either configure the missing namespaces in the server through host OS such that it matches with the goal.

2. Or, force configure the policy configuation on all the associated servers
3. Or, if this fault is ignored then it would be tried when other configuration on the policy is applied next time
4. Or, remove the association with the persistent memory policy
5. If the above actions except the last one did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

```

fltMemoryPersistentMemoryConfigResultConfig-error

Fault Code: F2007

Message: Persistent Memory configuration failed with error code: [configResult] and error description: [configErrorDesc]

Explanation:

This fault typically occurs when the Persistent Memory configuration has failed to apply on the server and resulted in an error

Recommended Action:

If you see this fault, take one of the following actions based on the requirement:

1. Please check the error code and description to find the where the issue occurred.
2. Also, check if the policy configuration matches with the server configuration and see if the policy configuration needs any change
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: equipment-config-error
mibFaultCode: F2007
mibFaultName: fltMemoryPersistentMemoryConfigResultConfigError

```

fltMemoryPersistentMemoryNamespaceConfigResultConfig-error

Fault Code: F2008

Message: Persistent Memory Namespace [name] configuration failed with error: [configStatus]

Explanation:

This fault typically occurs when the Persistent Memory Namespace configuration has failed to apply on the server and resulted in an error

Recommended Action:

If you see this fault, take one of the following actions based on the requirement:

1. Please check the error description to find the where the issue occurred.
2. Also, check if the policy configuration matches with the server configuration and see if the policy configuration needs any change
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor

```

fltMemoryPersistentMemoryNamespaceNot-matching

Fault Code: F2009

Message: Persistent Memory namespace not matching with the namespace in the policy or not present in the policy

Explanation:

This fault typically occurs because the Persistent Memory configuration found one or more namespaces that does not have the logical namespace configuration in the associated policy.

Recommended Action:

If you see this fault, take one of the following actions based on the requirement:

1. Either, ignore this fault, since the namespace would exists in the server and would not be managed by UCSM

2. Or, configure the missing logical namespaces in the associated policy so that it configures on all associated servers.
3. Or, remove the association with the persistent memory policy
4. If the above actions except the first one did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board
Affected MO: sys/rack-unit-[id]/board
```

fltEquipmentPsuUnsupported

Fault Code: F2014

Message: Power supply [id] on chassis [id] is not supportedPower supply [id] on server [id] is not supportedPower supply [id] on rack-enclosure [id] is not supported

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported PSU. For example, the model, vendor, or revision is not recognized.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that a supported PSU is installed.
2. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
3. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

Affected MO: sys/switch-[id]/psu-[id]
```

fltPciEquipSlotUnsecure

Fault Code: F2015

Message: PCIe Adapter [id] in server [id] is unsecure

Explanation:

Cisco UCS Manager raises this fault when it detects an un-secure PCIe adapter in the server.

Recommended Action:

If you see this fault, take the following actions:

1. Check the system manually for security failures and reacknowledge the server.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: unsecure-adaptor
mibFaultCode: F2015
mibFaultName: fltPciEquipSlotUnsecure
moClass: pci:EquipSlot
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/equipped-slot-[id]

Affected MO: sys/rack-unit-[id]/equipped-slot-[id]
```

fltStorageItemFilesystemcleanwitherrors

Fault Code: F2016

Message: Partition [name] on fabric interconnect [id] is clean but with errors. Please execute reboot e2fsck to clear the fault.

Explanation:

This fault occurs when the partition develops faults

Recommended Action:

If you see this fault, take the following actions:

1. Create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: minor
Cause: equipment-degraded
mibFaultCode: F2016
mibFaultName: fltStorageItemFilesystemcleanwitherrors
moClass: storage:Item
Type: equipment
autoCleared: true
Affected MO: sys/switch-[id]/stor-part-[name]
```

fltFirmwareSecureFPGAUnsecuredFPGA

Fault Code: F2023

Message: Endpoint FPGA firmware Unsecured.

Explanation:

This fault typically occurs for the following reasons: when running FPGA firmware on switch is unsecured.

- FPGA Firmware unsecure.
- The secure FPGA version has to be triggered.

Recommended Action:

If you see this fault, take the following actions:

1. Go to FSM tab or in cli for the endpoint on which the fault is raised and review the error description for the reason that the activation failed.
2. If the FSM failed, review the error message in the FSM.
3. If possible, correct the problem described in the error message.
4. If the problem persists, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: major

fltEquipmentIOCardFabric-port-count-exceed

Fault Code: F2056

Message: Fabric Extender N9K-C93180YC-FX3 does not support more than 16 active fabric ports. Please reduce number of active fabric ports for FEX [chassisId].

Explanation:

UCSM raises this fault under the following conditions:

1. When there are more than 16 active fabric ports towards N9K-C93180YC-FX3 fabric extender.

Recommended Action:

If you see this fault, take the following actions:

1. Reduce active fabric ports to less or equal to 16 fabric ports towards N9K-C93180YC-FX3 fabric extender.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

fltMemoryUnitPeer-dimm-disabled

Fault Code: F2058

Message: DIMM [location] on server [chassisId]/[slotId] operability: [operability]DIMM [location] on server [id] operability: [operability]DIMM [location] on server [chassisId]/[slotId]/[serverInstanceId] operability: [operability]

Explanation:

This fault typically occurs when a DIMM gets disabled because of Peer (Memory disabled -Other DIMM failed in same Channel) . The DIMM may be disabled.

Recommended Action:

If you see this fault, take the following actions:

1. If the SEL is enabled, review the SEL statistics on the DIMM to determine which threshold was crossed.
2. If necessary, replace the peer DIMM in the same channel.
3. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```

fltEquipmentCrossFabricModuleRemoved

Fault Code: F2080

Message: XFM in chassis-[chassisId]/xfm-slot-[id] is removed

Explanation:

This fault typically occurs because a XFM is removed from the X-Series chassis.This is a critical fault because it can result in the loss of connectivity with peripherals connected inside the PCIe node

Recommended Action:

If you see this fault, take the following actions:

1. Reinsert the XFM and wait a few minutes to see if the fault clears.
2. If the above actions did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: equipment-removed
mibFaultCode: F2080
mibFaultName: fltEquipmentCrossFabricModuleRemoved
moClass: equipment:CrossFabricModule
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/xfm-slot-[id]
```

fltEquipmentCrossFabricModuleIdentity

Fault Code: F2081

Message: XFM in chassis-[chassisId]/xfm-slot-[id] has a malformed FRU

Explanation:

This fault typically occurs when the FRU information for an XFM is corrupted or malformed.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, create a **show tech-support** file and contact Cisco TAC.

Fault Details

```
Severity: critical
Cause: fru-problem
mibFaultCode: F2081
mibFaultName: fltEquipmentCrossFabricModuleIdentity
moClass: equipment:CrossFabricModule
Type: equipment
```

```
autoCleared: true
Affected MO: sys/chassis-[id]/xfm-slot-[id]
```

fltEquipmentCrossFabricModuleDeprecated

Fault Code: F2082

Message: XFM in chassis-[chassisId]/xfm-slot-[id] has an invalid FRU

Explanation:

This fault typically occurs because Cisco UCS Manager has detected an unsupported XFM. For example, the model, vendor, or revision is not recognized.

Recommended Action:

If you see this fault, take the following actions:

1. Verify that the capability catalog in Cisco UCS Manager is up to date. If necessary, update the catalog.
2. If the above action did not resolve the issue, execute the **show tech-support** command and contact Cisco technical support.

Fault Details

```
Severity: critical
Cause: fru-problem
mibFaultCode: F2082
mibFaultName: fltEquipmentCrossFabricModuleDeprecated
moClass: equipment:CrossFabricModule
Type: equipment
autoCleared: true
Affected MO: sys/chassis-[id]/xfm-slot-[id]
```

fltAdaptorUnitPcieUnstableLink

Fault Code: F2083

Message: Unstable PCIE link is detected for adapter [id] in server [id].Unstable PCIE link is detected for adapter [id] in server [chassisId]/[slotId].Unstable PCIE link is detected for adapter [id] in server [chassisId]/[slotId]/[serverInstanceId].

Explanation: Server PCIE link used by the adapter is unstable. Cisco UCS Manager raises this fault when it detects adapter PCIE link becomes unstable.

Recommended Action: If you see this fault, take the following actions:

1. Create a **show tech-support** file and contact Cisco TAC.
2. To recover from the error condition, reboot the server.

Note For single wired managed rack server, if the error happens on the single wired managed adapter, power cycle the server to recover from the error.

Fault Details

```
Severity: critical
Cause: pcie-unstable-link
mibFaultCode: F2083

fltAdaptorUnitAsicFatalErr

Fault Code: F2084

Message: Fatal adapter ASIC error is detected for adapter [id] in server [id].Fatal adapter ASIC error is detected for adapter [id] in server [chassisId]/[slotId].Fatal adapter ASIC error is detected for adapter [id] in server [chassisId]/[slotId]/[serverInstanceId].

Explanation: Fatal ASIC Error has occurs in the adapter. Cisco UCS Manager raises this fault when it detects adapter fatal ASIC errors.

Recommended Action: If you see this fault, take the following actions:

1. Create a **show tech-support** file and contact Cisco TAC.
2. To recover from the error condition, reboot the server.

Note For single wired managed rack server, if the error happens on the single wired managed adapter, power cycle the server to recover from the error.

Fault Details

```
Severity: critical

Affected MO: sys/rack-unit-[id]/adaptor-[id]
```

fltAdaptorUnitFcpuErr

Fault Code: F2085

Message: FCPU error is detected for adapter [id] in server [id].FCPU error is detected for adapter [id] in server [chassisId]/[slotId].FCPU error is detected for adapter [id] in server [chassisId]/[slotId]/[serverInstanceId].

Explanation:

FCPU Error has occurs in the adapter. Cisco UCS Manager raises this fault when it detects adapter FCPU errors.

Recommended Action:

If you see this fault, take the following actions:

1. Create a **show tech-support** file and contact Cisco TAC.
2. To recover from the error condition, reboot the server.

Note For single wired managed rack server, if the error happens on the single wired managed adapter, power cycle the server to recover from the error.

Fault Details

```
Severity: critical
Cause: fcpu-error
mibFaultCode: F2085
mibFaultName: fltAdaptorUnitFcpuErr

```

fltNetworkLimitUnicast-mac-threshold

Fault Code: F2086

Message: No. of unicast mac addresses ([actualCount]) on switch [id] has reached 75% of the upper limit([upperLimit]). Will get cleared when the count reaches lesser than 75% of upper limit

Explanation:

This fault typically occurs when number of unicast mac addreses on the fabric interconnect has exreched an 75% of Upper threshold. It gets cleared when the numbers reaches lesser than 75% of upper threshold

Recommended Action:

None set.

Fault Details

```
Severity: warning
Cause: unicast-mac-threshold-limit
mibFaultCode: F2086

```

fltAaaUserEpPasswordEncryptionKeyNotSet

Fault Code: F2087

Message: The password encryption key has not been set.

Explanation:

This fault typically occurs because a password encryption key is not set on the system. The password encryption key is used for protecting credentials when a user exports the system's configurations

Recommended Action:

If you see this fault, take the following actions:

1. Scope to security, and run the command "set password-encryption-key".

Fault Details

```
Severity: major
Cause: password-encryption-key-not-set
mibFaultCode: F2087

tcaAdaptorSecondsSinceLastResetDeltaMin

Fault Code: F35021

Message: Threshold Crossed: adaptor:FcIfEventStats property: secondsSinceLastResetDeltaMin

Explanation:

Recommended Action:

Fault Details

```
Severity: info
Cause: threshold-crossed
mibFaultCode: F35021
mibFaultName: tcaAdaptorSecondsSinceLastResetDeltaMin
moClass: adaptor:FcIfEventStats
Type: generic
autoCleared: true
```

```
Affected MO: sys/chassis-[id]/blade-[slotId]/adaptor-[id]/host-fc-[id]/fc-if-event-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/adaptor-[id]/host-fc-[id]/fc-if-event-stats
Affected MO: sys/rack-unit-[id]/adaptor-[id]/host-fc-[id]/fc-if-event-stats
```

tcaAdaptorSecondsSinceLastResetDeltaMax

Fault Code: F35022

Message: Threshold Crossed: adaptor:FcIfEventStats property: secondsSinceLastResetDeltaMax

Explanation:

Recommended Action:

Fault Details

```
Severity: info
Cause: threshold-crossed
mibFaultCode: F35022
mibFaultName: tcaAdaptorSecondsSinceLastResetDeltaMax
moClass: adaptor:FcIfEventStats
Type: generic

tcaProcessorMirroringInterSockErrors

Fault Code: F38788

Message: Threshold Crossed: processor:ErrorStats property: mirroringInterSockErrors

Explanation:

Recommended Action:

Fault Details

```
Severity: info
Cause: threshold-crossed
mibFaultCode: F38788
mibFaultName: tcaProcessorMirroringInterSockErrors
moClass: processor:ErrorStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]/error-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/cpu-[id]/error-stats
```

tcaProcessorSparingErrors

Fault Code: F38797

Message: Threshold Crossed: processor:ErrorStats property: sparingErrors

Explanation:

Recommended Action:

Fault Details

```
Severity: info
Cause: threshold-crossed
mibFaultCode: F38797
mibFaultName: tcaProcessorSparingErrors
moClass: processor:ErrorStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]/error-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/cpu-[id]/error-stats
```

tcaProcessorSmiLinkCorrErrors

Fault Code: F38806

Message: Threshold Crossed: processor:ErrorStats property: smiLinkCorrErrors

Explanation:

Recommended Action:

Fault Details

```
Severity: info
Cause: threshold-crossed
mibFaultCode: F38806
mibFaultName: tcaProcessorSmiLinkCorrErrors
moClass: processor:ErrorStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]/error-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/cpu-[id]/error-stats
```

tcaProcessorSmiLinkUncorrErrors

Fault Code: F38815

Message: Threshold Crossed: processor:ErrorStats property: smiLinkUncorrErrors

Explanation:

Recommended Action:

Fault Details

```
Severity: info
Cause: threshold-crossed
mibFaultCode: F38815
mibFaultName: tcaProcessorSmiLinkUncorrErrors
moClass: processor:ErrorStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/cpu-[id]/error-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/cpu-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/cpu-[id]/error-stats
```

tcaMemoryEccMultibitErrors

Fault Code: F38829

Message: Threshold Crossed: memory:ErrorStats property: eccMultibitErrors

Explanation:

Recommended Action:

Fault Details

```
Severity: info
Cause: threshold-crossed
mibFaultCode: F38829
mibFaultName: tcaMemoryEccMultibitErrors
moClass: memory:ErrorStats
```

Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/mem-[id]/error-stats
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/pmemory-[id]/error-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/mem-[id]/error-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/pmemory-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/mem-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/pmemory-[id]/error-stats

tcaMemoryEccSinglebitErrors

Fault Code: F38838

Message: Threshold Crossed: memory:ErrorStats property: eccSinglebitErrors

Explanation:

Recommended Action:

Fault Details

Severity: info
Cause: threshold-crossed
mibFaultCode: F38838
mibFaultName: tcaMemoryEccSinglebitErrors
moClass: memory:ErrorStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/mem-[id]/error-stats
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/pmemory-[id]/error-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/mem-[id]/error-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/pmemory-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/mem-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/pmemory-[id]/error-stats

tcaMemoryAddressParityErrors

Fault Code: F38847

Message: Threshold Crossed: memory:ErrorStats property: addressParityErrors

Explanation:

Recommended Action:

Fault Details

Severity: info
Cause: threshold-crossed
mibFaultCode: F38847
mibFaultName: tcaMemoryAddressParityErrors
moClass: memory:ErrorStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/mem-[id]/error-stats
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/pmemory-[id]/error-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/mem-[id]/error-stats

Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/pmemory-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/mem-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/pmemory-[id]/error-stats

tcaMemoryMismatchErrors

Fault Code: F38856

Message: Threshold Crossed: memory:ErrorStats property: mismatchErrors

Explanation:

Recommended Action:

Fault Details

Severity: info
Cause: threshold-crossed
mibFaultCode: F38856
mibFaultName: tcaMemoryMismatchErrors
moClass: memory:ErrorStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/mem-[id]/error-stats
Affected MO: sys/chassis-[id]/blade-[slotId]/board/memarray-[id]/pmemory-[id]/error-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/mem-[id]/error-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/memarray-[id]/pmemory-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/mem-[id]/error-stats
Affected MO: sys/rack-unit-[id]/board/memarray-[id]/pmemory-[id]/error-stats

tcaComputeBufferOverflowErrors

Fault Code: F38909

Message: Threshold Crossed: compute:PCIeFatalReceiveStats property: bufferOverflowErrors

Explanation:

Recommended Action:

Fault Details

Severity: info
Cause: threshold-crossed
mibFaultCode: F38909
mibFaultName: tcaComputeBufferOverflowErrors
moClass: compute:PCIeFatalReceiveStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/pciefat-receive-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/pciefat-receive-stats
Affected MO: sys/rack-unit-[id]/board/pciefat-receive-stats

tcaComputeFmTempSenRearL

Fault Code: F39032

Message: Threshold Crossed: compute:MbTempStats property: fmTempSenRearL

Explanation:

Recommended Action:

Fault Details

```
Severity: info
Cause: threshold-crossed
mibFaultCode: F39032
mibFaultName: tcaComputeFmTempSenRearL
moClass: compute:MbTempStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/temp-stats
Affected MO: sys/chassis-[id]/blade-[slotId]/ext-board-[id]/temp-stats
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/temp-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/ext-board-[id]/temp-stats
Affected MO: sys/rack-unit-[id]/board/temp-stats
Affected MO: sys/rack-unit-[id]/ext-board-[id]/temp-stats
```

tcaComputeFmTempSenRearLMin

Fault Code: F39034

Message: Threshold Crossed: compute:MbTempStats property: fmTempSenRearLMin

Explanation:

Recommended Action:

Fault Details

```
Severity: info
Cause: threshold-crossed
mibFaultCode: F39034
mibFaultName: tcaComputeFmTempSenRearLMin
moClass: compute:MbTempStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/temp-stats
Affected MO: sys/chassis-[id]/blade-[slotId]/ext-board-[id]/temp-stats
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/temp-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/ext-board-[id]/temp-stats
Affected MO: sys/rack-unit-[id]/board/temp-stats
Affected MO: sys/rack-unit-[id]/ext-board-[id]/temp-stats
```

tcaComputeFmTempSenRearLMax

Fault Code: F39035

Message: Threshold Crossed: compute:MbTempStats property: fmTempSenRearLMax

Explanation:

Recommended Action:

Fault Details

Severity: info
Cause: threshold-crossed
mibFaultCode: F39035
mibFaultName: tcaComputeFmTempSenRearLMax
moClass: compute:MbTempStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/temp-stats
Affected MO: sys/chassis-[id]/blade-[slotId]/ext-board-[id]/temp-stats
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/temp-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/ext-board-[id]/temp-stats
Affected MO: sys/rack-unit-[id]/board/temp-stats
Affected MO: sys/rack-unit-[id]/ext-board-[id]/temp-stats

tcaComputeFmTempSenRearLAvg

Fault Code: F39036

Message: Threshold Crossed: compute:MbTempStats property: fmTempSenRearLAvg

Explanation:

Recommended Action:

Fault Details

Severity: info
Cause: threshold-crossed
mibFaultCode: F39036
mibFaultName: tcaComputeFmTempSenRearLAvg
moClass: compute:MbTempStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/temp-stats
Affected MO: sys/chassis-[id]/blade-[slotId]/ext-board-[id]/temp-stats
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/temp-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/ext-board-[id]/temp-stats
Affected MO: sys/rack-unit-[id]/board/temp-stats
Affected MO: sys/rack-unit-[id]/ext-board-[id]/temp-stats

tcaComputeFmTempSenRearR

Fault Code: F39040

Message: Threshold Crossed: compute:MbTempStats property: fmTempSenRearR

Explanation:

Recommended Action:

Fault Details

Severity: info
Cause: threshold-crossed
mibFaultCode: F39040
mibFaultName: tcaComputeFmTempSenRearR
moClass: compute:MbTempStats
Type: server
autoCleared: true

Affected MO: sys/chassis-[id]/blade-[slotId]/board/temp-stats
Affected MO: sys/chassis-[id]/blade-[slotId]/ext-board-[id]/temp-stats
Affected MO: sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/board/temp-stats
Affected MO:
sys/chassis-[id]/cartridge-[slotId]/server-[serverInstanceId]/ext-board-[id]/temp-stats
Affected MO: sys/rack-unit-[id]/board/temp-stats
Affected MO: sys/rack-unit-[id]/ext-board-[id]/temp-stats

tcaComputeFmTempSenRearRMin

Fault Code: F39042

Message: Threshold Crossed: compute:MbTempStats property: fmTempSenRearRMin

Explanation:

Recommended Action:

Fault Details

Severity: info
Cause: threshold-crossed
mibFaultCode: F39042
mibFaultName: tcaComputeFmTempSenRearRMin
moClass: compute:MbTempStats
Type: server
autoCleared: true
Affected MO: sys/chassis-[id]/blade-[slotId]/board/temp-stats
Affected MO: sys/chassis-[id]/blade-[slotId]/ext-board-[id]/temp-stats
