

CHAPTER 3

Configure Failover

Revised: May 31, 2011
OL-15762-03

The screenshot shows the Cisco Digital Media Manager web interface. The top navigation bar includes links for Home, My Profile, Administration, Sign Out, and Help. The main menu has tabs for Dashboard, Failover, Settings, Security, Users, Alerts, Services, and Licensing. The Failover Configuration page is active, showing the following sections:

- Digital Media Suite Cluster Settings:** Includes a Name* field, a radio button for Set As Master, and a Master FQDN* field.
- Digital Media Manager Failover Settings:** Includes a Management Interface section with Primary FQDN*, Secondary FQDN*, and Virtual FQDN* fields, and a Replication Interface section with Crossover and Switched radio buttons, Primary IP*, Secondary IP*, and Subnet Mask* fields.
- Show and Share Failover Settings:** Includes a Management Interface section with Primary FQDN*, Secondary FQDN*, and Virtual FQDN* fields, and a Replication Interface section with Crossover and Switched radio buttons, Primary IP*, Secondary IP*, and Subnet Mask* fields.

At the bottom of the configuration area are Save and Reset buttons. The footer of the page contains the copyright notice: © 2002-2011, Cisco Systems, Inc. All rights reserved. [Warranty and End-User License Agreement](#)

You can use features of DMS-Admin to configure failover for Cisco Show and Share. See *Failover Configuration Guide for Cisco Digital Media Suite 5.2.x* at <http://tools.cisco.com/squish/AaDa3>.
