

Cisco Unity Connection Provisioning Interface (CUPI) API -- For End Users -- SSL Connection Check API

- [Introduction, on page 1](#)
- [Listing the SSL Connection Check API, on page 1](#)

Introduction

By default, the TCP/IP port 7443 is disabled. To enable or disable the port 7443, the following CLI command is used:

utils cuc jetty ssl enable/disable

This API is created to ensure SSL connection is allowed through the Jetty SSL port 7443.

Listing the SSL Connection Check API

This API request is initiated to check if port 7443 is enabled to allow SSL connections.

RequestURI :

```
GET https://<connection-hostname>/vmrest/sslconnectioncheck
```

Sample Response:

```
<sslconnectioncheck>
  <Response>true</Response>
</sslconnectioncheck>
```

JSON Example

Listing the SSL Connection Check API

```
https://<connection-hostname>/vmrest/sslconnectioncheck?json=1
