## Set up Applications and Apply Licenses

---

**Note** This procedure applies to application licenses, not VMware licenses.

---

Follow these steps to access each application, perform first-time setup for some applications, and apply the licenses.

### Procedure

---

- Step 1** To access the administration portal for each individual application, browse to the IP address of application. Consider the following information:
- Optional. For Paging Server installations: Collect information about the application URL from the virtual machine console. The default first-time username and password are admin and changeMe.
  - Cisco Prime Collaboration Provisioning: Browse to the IP address and use globaladmin as the username.
- Step 2** After you purchase an application license, Cisco sends a Product Authorization Key (PAK) via mail or email. You can use the PAK to generate a license key for your specific installation using the Cisco Product License Registration portal at [www.cisco.com/go/license](http://www.cisco.com/go/license) or you can enter the information directly in Cisco Prime License Manager.
- Step 3** Apply license keys using the application administration portal. Refer to the following points for licensing information specific to whichever applications that you have installed:
- Cisco Prime Collaboration Provisioning: No license is required to use Cisco Prime Collaboration Provisioning Standard Edition. You may purchase an upgrade to Cisco Prime Collaboration Provisioning Advanced Edition if required.

- Paging Server: No license is required to use Basic Paging Server. You may purchase an upgrade to Advanced Edition if required.
  - Unified Communications Manager and Cisco Unity Connection: Browse the IP Address of Unified Communications Manager and click **Cisco Enterprise License Manager**. Select **License > Install License File** and follow instructions.  
**Note** Cisco Enterprise License Manager (ELM) is automatically installed as part of the Unified Communications manager installation.
  - For Cisco VCS, Expressway, TelePresence Server, and Conductor installations: After registering the license PAK two keys are provided—Release key and Option key. In the administration portal, select **Maintenance > Option keys**. Apply the Release key first, and then apply the Option key (s).
-
