Java Runtime Environment Minor Update

Use the JREUpdate.bat script to install a minor update of Java Runtime Environment (JRE) version on your Unified CVP Server. For example, you can install a minor update of JRE version 1.8.0_275 to 1.8.0_x.

Download the JREUpdate.zip from the following location:

<https://software.cisco.com/download/release.html?mdfid=270563413&softwareid=280840592&release=10.5%281%29&relind=AVAILABLE&rellifecycle=&reltype=latest>

Note The script does not support a major upgrade of JRE versions. For example, the script does not allow a major upgrade of JRE Version 1.8 to 1.9/1.10.

Procedure

- Step 1** Download and install the preferred Java Development Kit (JDK) version on your personal machine.
- Step 2** Copy the JRE folder from the installed JDK to a known location on the Unified CVP Server. For example, C:\JRE.
- Note** The jre folder is available in the JDK root folder. For example: C:\jdk1.8.0_275\jre.
- Step 3** Right-click the JREUpdate.zip file and extract the files to a known location on your Unified CVP Server. For example, C:\Cisco\CVP\bin.
- Step 4** Run this script from the command prompt: **C:\Cisco\CVP\bin >JREUpdate.bat apply C:\JRE.**
The script runs and Unified CVP JRE is updated to the new version.
- Step 5** Ensure that the script output displays the updated JRE version.
-

The JREUpdate.bat script takes a backup of the old JRE to C:\Cisco\CVP\jre.old folder location. To revert to the previous backup version of JRE, run this script from the command prompt:
C:\Cisco\CVP\bin>JREUpdate.bat revert .
