

# IGMP Profile Configuration Mode Commands

## Command Modes

The Internet Group Management Protocol (IGMP) Profile Configuration Mode is used to create and manage the IGMP parameters for an Ethernet interface.

Exec > Global Configuration > Context Configuration > IGMP Profile Configuration

**configure > context *context\_name* > ip igmp profile *profile\_name***

Entering the above command sequence results in the following prompt:

```
[context_name]host_name(config-igmp-profile-<profile_name>) #
```

### Important

Available commands or keywords/variables vary based on platform type, product version, and installed license(s).

- [default ip igmp, on page 1](#)
- [end, on page 2](#)
- [exit, on page 2](#)
- [ip igmp query, on page 2](#)
- [ip igmp require router-alert, on page 3](#)
- [ip igmp robustness, on page 3](#)
- [ip igmp unsolicited-report-interval, on page 4](#)
- [ip igmp version, on page 5](#)

## default ip igmp

Configures default IGMP parameters.

### Product

All

### Privilege

Security Administrator, Administrator

### Command Modes

Exec > Global Configuration > Context Configuration > IGMP Profile Configuration

**configure > context *context\_name* > ip igmp profile *profile\_name***

Entering the above command sequence results in the following prompt:

```
[context_name]host_name(config-igmp-profile-<profile_name>) #
```

**end**

**Syntax Description** `default ip igmp { query | require | robustness | unsolicited-report-interval | version }`

**Usage Guidelines** Specify the IGMP parameters for the default profile. Refer to the remaining command description in this chapter for additional information.

**Example**

To apply enable echo mode on this interface, use the following command:

`bfd echo`

**end**

Exits the current configuration mode and returns to the Exec mode.

**Product** All

**Privilege** Security Administrator, Administrator

**Syntax Description** `end`

**Usage Guidelines** Use this command to return to the Exec mode.

**exit**

Exits the current mode and returns to the parent configuration mode.

**Product** All

**Privilege** Security Administrator, Administrator

**Syntax Description** `exit`

**Usage Guidelines** Use this command to return to the parent configuration mode.

**ip igmp query**

Configures the maximum response time for IGMP queries.

**Product** All

**Privilege** Security Administrator, Administrator

**Command Modes** Exec > Global Configuration > Context Configuration > IGMP Profile Configuration

`configure > context context_name > ip igmp profile profile_name`

Entering the above command sequence results in the following prompt:

```
[context_name]host_name(config-igmp-profile-<profile_name>) #
```

---

**Syntax Description** **ip igmp query max-response-time seconds**

**max-response-time seconds**

Specify the maximum number of seconds that the system will wait for an IGMP response as an integer from 1 through 25.

---

**Usage Guidelines** Specify the maximum response time for IGMP queries.

**Example**

```
ip igmp query max-response-time 10
```

## ip igmp require router-alert

Sets the router alert flag to ON in IP IGMP packets.

---

**Product** All

---

**Privilege** Security Administrator, Administrator

---

**Command Modes** Exec > Global Configuration > Context Configuration > IGMP Profile Configuration

**configure > context context\_name > ip igmp profile profile\_name**

Entering the above command sequence results in the following prompt:

```
[context_name]host_name(config-igmp-profile-<profile_name>) #
```

---

**Syntax Description** [ no ] ip igmp require router-alert

**no**

Sets the router alert flag to OFF in IP IGMP packets.

---

**Usage Guidelines** Sets the router alert flag to ON in IP IGMP packets.

**Example**

```
ip igmp require router-alert
```

## ip igmp robustness

Sets the Robustness value in IP IGMP packets. The Robustness variable allows tuning for the expected packet loss on a subnet. If a subnet is expected to be lossy, the Robustness variable may be increased. IGMP is robust to packet losses. The Robustness variable should not be set to 1 (one).

**ip igmp unsolicited-report-interval**

<b>Product</b>	All
<b>Privilege</b>	Security Administrator, Administrator
<b>Command Modes</b>	Exec > Global Configuration > Context Configuration > IGMP Profile Configuration <b>configure &gt; context context_name &gt; ip igmp profile profile_name</b> Entering the above command sequence results in the following prompt: <code>[context_name]host_name(config-igmp-profile-&lt;profile_name&gt;)#</code>
<b>Syntax Description</b>	<b>ip igmp robustness value</b>  <b>value</b> Sets the robustness value as an integer from 1 through 10. Default: 2
<b>Usage Guidelines</b>	Sets the robustness value in IP IGMP packets.
<b>Example</b>	
<code>ip igmp robustness 7</code>	

## ip igmp unsolicited-report-interval

Sets the Unsolicited Report Interval which is the time between repetitions of a host's initial report of membership in a group.

<b>Product</b>	All
<b>Privilege</b>	Security Administrator, Administrator
<b>Command Modes</b>	Exec > Global Configuration > Context Configuration > IGMP Profile Configuration <b>configure &gt; context context_name &gt; ip igmp profile profile_name</b> Entering the above command sequence results in the following prompt: <code>[context_name]host_name(config-igmp-profile-&lt;profile_name&gt;)#</code>
<b>Syntax Description</b>	<b>ip igmp unsolicited-report-interval seconds</b>  <b>seconds</b> Specifies the number of seconds between repetitions of a host's initial report of membership in a group as an integer from 1 through 25. Default: 10
<b>Usage Guidelines</b>	Set the Unsolicited Report Interval which is the time between repetitions of a host's initial report of membership in a group.

**Example**

```
ip igmp unsolicited-report-interval 15
```

## ip igmp version

Sets the IGMP version to be supported by this interface.

<b>Product</b>	All
<b>Privilege</b>	Security Administrator, Administrator
<b>Command Modes</b>	Exec > Global Configuration > Context Configuration > IGMP Profile Configuration <b>configure &gt; context context_name &gt; ip igmp profile profile_name</b> Entering the above command sequence results in the following prompt: [context_name]host_name(config-igmp-profile-<profile_name>) #
<b>Syntax Description</b>	<b>ip igmp version { v1   v2   v3 }</b>  <b>v1   v2   v3</b> Specifies the IGMP Version number: <ul style="list-style-type: none"><li>• <b>v1</b>: Version 1, RFC 1112</li><li>• <b>v2</b>: Version 2, RFC 2236</li><li>• <b>v3</b>: Version 3, RFC 4604</li></ul>
<b>Usage Guidelines</b>	Set the IGMP version to be supported by this interface.

**Example**

```
ip igmp version v2
```

ip igmp version
