

P2P Advertisement Server Group Configuration Mode Commands

The P2P Advertisement Server Group Configuration Mode is used to configure the P2P ad-server group and the application(s) to which advertisements need to be matched. The type of advertisement flow will be configured per application.

Command Modes	Exec > ACS Configuration > P2P Advertisement Server Group Configuration		
	active-charging service service_name > p2p-ads-group ads_group_name		
	Entering the above command sequence results in the following prompt:		
	<pre>[local]host_name(config-acs-p2p-ads) #</pre>		
1			
Important	The commands or keywords/variables that are available are dependent on platform type, product version, and installed license(s).		
(
Important	For information on common commands available in this configuration mode, refer to the Common Commands chapter.		
	 ad-source, on page 1 map-to-application , on page 2 		
ad-source			
	This command allows to configure the P2P advertisement source that can be a HTTP host or SSL server.		

Product	ADC	
Privilege	Security Administrator, Administrator	
Command Modes	Exec > ACS Configuration > P2P Advertisement Server Group Configuration	
	active-charging service service_name > p2p-ads-group ads_group_name	

	Entering the above command sequence results in the following prompt:
	<pre>[local]host_name(config-acs-p2p-ads)#</pre>
Syntax Description	[no] ad-source operator http_host_name/ssl_server_name
	no
	If previously configured, disables the configured ad-source.
	operator
	Specifies how to match.
	operator must be one of the following:
	• =: Equals
	• contains: Contains
	• ends-with: Ends with
	• starts-with: Starts with
	http_host_name/ssl_server_name
	Specifies the name of the HTTP host or SSL server to match and must be an alphanumeric string of 1 through 127 characters. SSL supports the Server Name indication (SNI) field.
Usage Guidelines	This command allows to configure the P2P advertisement source that can be a HTTP host or SSL server when the user runs an active application session. The ad-source can be server name indication for HTTPS flows and host name for HTTP-based ad flows.
(

Example

The following command matches the ad-source string ending with *admob.com*:

ad-source ends-with admob.com

map-to-application

This command allows to configure the P2P advertisement application that will map the advertisement group to the corresponding application/protocol.

Product	ADC
Privilege	Security Administrator, Administrator

Command Modes	Exec > ACS Configuration > P2P Advertisement Server Group Configuration	
	active-charging service service_name > p2p-ads-group ads_group_name	
	Entering the above command sequence results in the following prompt:	
	<pre>[local]host_name(config-acs-p2p-ads)#</pre>	
Syntax Description	[no] map-to-application { p2p_list } +	
	no	
	If previously configured, disables the application/protocol mapping.	
	p2p_list	
	Specifies the list of protocols/applications supported in the P2P plugin.	
	+	
	More than one protocol/application supported in the P2P plugin can be entered within a single command.	
Usage Guidelines	This command allows to configure the P2P advertisement application that will map the advertisement group to the application protocol.	
	The maximum number of map-to-application rule lines that can be configured is equal to the number of the applications present in $p2p_list$ supported by P2P plugin.	
	Example	
	The following command maps the ads-group to the <i>slacker-radio</i> application:	

map-to-application slacker-radio
