Firewall-and-NAT Action Configuration Mode Commands

Command Modes

The Firewall-and-NAT Action Configuration Mode enables configuring Stateful Firewall (FW) and Network Address Translation (NAT) actions.

Exec > ACS Configuration > Firewall-and-NAT Action Configuration

active-charging service *service_name* **> fw-and-nat action** *action_name*

Entering the above command sequence results in the following prompt:

```
[local]host_name(config-fw-and-nat-action)#
```

Important This configuration mode is only available in release 11.0 and later releases. This configuration mode must be used to configure Action-based Stateful Firewall and NAT features.

Important The commands or keywords/variables that are available are dependent on platform type, product version, and installed license(s).

end

Exits the current configuration mode and returns to the Exec mode.

Product All

Privilege Security Administrator, Administrator

Syntax Description `end`

Usage Guidelines Use this command to return to the Exec mode.

exit

Exits the current mode and returns to the parent configuration mode.

Product

All

Privilege

Security Administrator, Administrator

Syntax Description

exit

Usage Guidelines

Use this command to return to the parent configuration mode.

flow check-point

This command checkpoints all the flows matching the Firewall-and NAT action.

Product

NAT

Privilege

Security Administrator, Administrator

Command Modes

Exec > ACS Configuration > Firewall-and-NAT Action Configuration

active-charging service *service_name* **> fw-and-nat action** *action_name*

Entering the above command sequence results in the following prompt:

`[local]`*`host_name`*`(config-fw-and-nat-action)#`

Syntax Description

flow check-point [data-usage *data_usage* **[and | or] | time-duration** *duration* **[and | or]]**
{ default | no } flow check-point

default

Configures the default Firewall action.

no

Deletes the Firewall action configuration.

data-usage *data_usage*

Specifies the data usage in bytes.

data_usage must be an integer from 1 through 4294967295.

The maximum limit for data-usage is 4 GB.

time-duration *duration*

Specifies the time duration in seconds.

duration must be an integer from 1 through 86400.

The maximum limit for time-duration is 24 hours.

and | or

This option allows to configure only **data-usage** or **time-duration**, or a combination of **data-usage** and **time-duration**.

Usage Guidelines

Use this command to enable/disable the check-pointing of NATed flows and control the type of flows that need to be check pointed based on specified criteria. Check pointing is done only for TCP and UDP flows.

Example

The following command checkpoints flows with data-usage set to *5000* bytes and time duration set to *300* seconds:

```
flow check-point data-usage 5000 and time-duration 300
```
