

Global Configuration Mode Commands (threshold poll commands 0 - Z)

The Global Configuration Mode is used to configure basic system-wide parameters.

Command Modes

This section includes the commands **threshold poll packets-filtered-dropped interval** through **threshold poll tpo-rto-timeout**.

Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local] host_name(config)#
```

Important

The commands or keywords/variables that are available are dependent on platform type, product version, and installed license(s).

threshold poll packets-filtered-dropped interval

Configures the polling interval over which to count the filtered/dropped packets.

Product All

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll packets-filtered-dropped interval duration`

interval *duration*

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPacketsFilteredDropped** command in this mode.

Example

The following command configures the polling interval to 600 seconds for filtered/dropped packets:

```
threshold poll packets-filtered-dropped interval 600
```

threshold poll packets-forwarded-to-cpu interval

Configures the polling interval over which to count packets forwarded to active system CPUs in the system.

threshold poll pdg-current-active-sessions interval

Product All

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration**configure**

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description **threshold poll packets-forwarded-to-cpu interval** *duration***interval duration**

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPacketsForwarded** command in this mode.**Example**The following command configures the polling interval to *600* seconds for packets forwarded to active system CPUs in the system:

```
threshold poll packets-forwarded-to-cpu interval 600
```

threshold poll pdg-current-active-sessions interval

Configures the polling interval over which to count the total number of currently active Packet Data Gateway/Tunnel Termination Gateway (PDG/TTG) sessions.

Product PDG

TTG

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description **threshold poll pdg-current-active-sessions interval** *duration*

interval *duration*

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPDGCurrActSess** command in this mode.

Example

The following command configures the polling interval to *600* seconds for PDG/TTG sessions:

```
threshold poll pdg-current-active-sessions interval 600
```

threshold poll pdg-current-sessions interval

Configures the polling interval over which to count the total number of current Packet Data Gateway/Tunnel Termination Gateway (PDG/TTG) sessions, including inactive sessions.

Product PDG/TTG

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

threshold poll pdif-current-active-sessions interval

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description **threshold poll pdg-current-sessions interval** *duration*

interval *duration*

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPDGCurrSess** command in this mode.

Example

The following command configures the polling interval to *600* seconds for PDG/TTG sessions:

```
threshold poll pdg-current-sessions interval 600
```

threshold poll pdif-current-active-sessions interval

Configures the polling interval over which to count the total number of currently active Packet Data Interworking Function (PDIF) sessions.

Product PDIF

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description **threshold poll pdif-current-active-sessions interval** *duration*

interval *duration*

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines

This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPDIFCurrActSess** command in this mode.

Example

The following command configures the polling interval to *600* seconds for PDIF sessions:

```
threshold poll pdif-current-active-sessions interval 600
```

threshold poll pdif-current-sessions interval

Configures the polling interval over which to count the total number of current Packet Data Interworking Function (PDIF) sessions, including inactive sessions.

Product PDIF

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description **threshold poll pdif-current-sessions interval** *duration*

interval *duration*

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines

This command sets the time period over which to monitor the specified value for threshold crossing.

Important

All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important

To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPDIFCurrSess** command in this mode.

Example

The following command configures the polling interval to *600* seconds for PDIF sessions:

```
threshold poll pdif-current-sessions interval 600
```

threshold poll pdsn-init-rrq-rcvd-rate interval

Configures the polling interval over which to count the total number of current Packet Data Serving Node (PDSN) sessions, including inactive sessions.

Product

PDSN

Privilege

Security Administrator, Administrator

Command Modes

Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description

```
threshold poll pdsn-init-rrq-rcvd-rate interval duration
```

interval *duration*

Default: 0 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 60 through 60000.

Usage Guidelines

This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPDSNCallSetupRate** command in this mode.

Example

The following command configures the polling interval to *600* seconds for PDSN sessions:

```
threshold poll pdsn-init-rrq-rcvd-rate interval 600
```

threshold poll pdsn-svc-init-rrq-rcvd-rate interval

Configures the polling interval over which to count the total number of current Packet Data Serving Node (PDSN) sessions, including inactive sessions.

Product PDSN

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description **threshold poll pdsn-svc-init-rrq-rcvd-rate interval** *duration*

interval *duration*

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPDSNSvcCallSetupRate** command in this mode.

Example

The following command configures the polling interval to 600 seconds for PDSN sessions:

```
threshold poll pdsn-svc-init-rrq-rcvd-rate interval 600
```

threshold poll per-service-asngw-sessions interval

Configures the polling interval in seconds over which to count the number of PDP contexts per ASN-GW service in the system.

Product	ASN-GW
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description **threshold poll per-service-asngw-sessions interval** *duration*

interval *duration*

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPerServiceASNGWSessions** command in this mode.

Example

The following command configures the polling interval to *600* seconds for ASN-GW sessions:

```
threshold poll per-service-asngw-sessions interval 600
```

threshold poll per-service-ggsn-sessions interval

Configures the polling interval in seconds over which to count the number of PDP contexts per GGSN service in the system.

Product

GGSN

Privilege

Security Administrator, Administrator

Command Modes

Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description

```
threshold poll per-service-ggsn-sessions interval duration
```

interval *duration*

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines

This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPerServiceGGSNSessions** command in this mode.

Example

The following command configures the polling interval to 600 seconds for GGSN sessions:

```
threshold poll per-service-ggsn-sessions interval 600
```

threshold poll per-service-gprs-pdp-sessions interval

Configures the polling interval in seconds over which to count the number of 2G-activated PDP contexts per GPRS service.

Product	SGSN
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll per-service-gprs-pdp-sessions interval duration`

interval duration

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPerServiceGPRSPDPSessions** command in this mode.

Example

The following command configures the polling interval to 600 seconds for 2G PDP contexts:

```
threshold poll per-service-gprs-pdp-sessions interval 600
```

threshold poll per-service-gprs-sessions interval

Configures the polling interval in seconds over which to count the number of 2G-attached subscribers per GPRS service.

Product SGSN

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description **threshold poll per-service-gprs-sessions interval** *duration*

interval *duration*

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPerServiceGPRSSessions** command in this mode.

Example

The following command configures the polling interval to 600 seconds for 2G GPRS sessions:

```
threshold poll per-service-gprs-sessions interval 600
```

threshold poll per-service-ha-sessions interval

Configures the polling interval in seconds over which to count the number of HA sessions per Home Agent (HA) service in the system.

Product HA

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll per-service-ha-sessions interval duration`

interval duration

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPerServiceHASessions** command in this mode.

Example

The following command configures the polling interval to *600* seconds for HA sessions:

```
threshold poll per-service-ha-sessions interval 600
```

threshold poll per-service-lns-sessions interval

Configures the polling interval in seconds over which to count the number of L2TP Network Server (LNS) sessions per LNS service in the system.

Product LNS

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll per-service-lns-sessions interval duration`

interval duration

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPerServiceLNSSessions** command in this mode.

Example

The following command configures the polling interval to 600 seconds for LNS sessions:

```
threshold poll per-service-lns-sessions interval 600
```

threshold poll per-service-pdg-sessions interval

Configures the polling interval in seconds over which to count the number of Packet Data Gateway (PDG) sessions per PDG/TTG service in the system.

Product PDG/TTG

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll per-service-pdg-sessions interval duration`

interval duration

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPerServicePDGSessions** command in this mode.

Example

The following command configures the polling interval to 600 seconds for PDG/TTG sessions:

```
threshold poll per-service-pdg-sessions interval 600
```

threshold poll per-service-pdsn-sessions interval

Configures the polling interval in seconds over which to count the number of Packet Data Serving Node (PDSN) sessions per PDSN service in the system.

Product PDSN

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll per-service-pdsn-sessions interval duration`

interval duration

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPerServicePDSNSessions** command in this mode.

Example

The following command configures the polling interval to *600* seconds for PDSN sessions:

```
threshold poll per-service-pdsn-sessions interval 600
```

threshold poll per-service-samog-sessions interval

Configures the polling interval in seconds over which to count the number of S2a Mobility over GTP (SaMOG) contexts per SaMOG service in the system.

Product	SaMOG
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll per-service-samog-sessions interval duration`

interval duration

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPerServiceSAMOGSessions** command in this mode.

Example

The following command configures the polling interval to 600 seconds for SaMOG sessions:

```
threshold poll per-service-samog-sessions interval 600
```

threshold poll per-service-sgsn-pdp-sessions interval

Configures the polling interval in seconds over which to count the number of 3G-activated PDP contexts per SGSN service on the system.

Product SGSN

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll per-service-sgsn-pdp-sessions interval duration`

interval duration

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPerServiceSGSNPDPSessions** command in this mode.

Example

The following command configures the polling interval to *600* seconds for 3G PDP contexts:

```
threshold poll per-service-sgsn-pdp-sessions interval 600
```

threshold poll per-service-sgsn-sessions interval

Configures the polling interval in seconds over which to count the number of 3G-attached subscribers per SGSN service in the system.

Product SGSN

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll per-service-sgsn-sessions interval duration`

interval duration

Default: 300 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPerServiceSGSNSessions** command in this mode.

Example

The following command configures the polling interval to 600 seconds for SGSN sessions:

```
threshold poll per-service-sgsn-sessions interval 600
```

threshold poll phsgw-auth-failure interval

Configures the polling interval in seconds over which to count the number of Personal Handyphone System Gateway (PHSGW) authentication failures.

Product PHSGW

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll phsgw-auth-failure interval duration`

interval duration

Default: 0 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the `snmp trap enable ThreshPHSGWAuthFail` command in this mode.

Example

The following command configures the polling interval to 600 seconds for PHSGW authentication failures:

```
threshold poll phsgw-auth-failure interval 600
```

threshold poll phsgw-eapol-auth-failure interval

Configures the polling interval in seconds over which to count the number of authentication failures for a PHSGW service using Extensible Authentication Protocol Over LAN (EAPOL).

Product PHSGW

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll phsgw-eapol-auth-failure interval duration`

interval duration

Default: 0 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPHSGWEAPOLAuthFailure** command in this mode.

Example

The following command configures the polling interval to 600 seconds for PHSGW EAPOL failures:

```
threshold poll phsgw-eapol-auth-failure interval 600
```

threshold poll phsgw-handoff-denial interval

Configures the polling interval in seconds over which to count the number of handoff denials in PHSGW.

Product PHSGW

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description **threshold poll phsgw-handoff-denial interval** *duration*
interval *duration*

Default: 0 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPHSGWMaxEAPOLRetry** command in this mode.

Example

The following command configures the polling interval to *600* seconds for PHSGW handoff denials:

```
threshold poll phsgw-handoff-denial interval 600
```

threshold poll phsgw-max-eap-retry interval

Configures the polling interval in seconds over which to count the maximum number of Extensible Authentication Protocol (EAP) retries in PHSGW.

Product PHSGW

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description **threshold poll phsgw-max-eapol-retry interval** *duration*

interval *duration*

Default: 0 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPHSGWMaxEAPRetry** command in this mode.

Example

The following command configures the polling interval to *600* seconds for PHSGW EAP retries:

```
threshold poll phsgw-max-eapol-retry interval 600
```

threshold poll phsgw-max-eapol-retry interval

Configures the polling interval in seconds over which to count the maximum number of Extensible Authentication Protocol Over LAN (EAPOL) retries in PHSGW.

Product PHSGW

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description

```
threshold poll phsgw-max-eapol-retry interval duration
```

interval *duration*

Default: 0 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines

This command sets the time period over which to monitor the specified value for threshold crossing.

**Important**

All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

**Important**

To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPHSGWMaxEAPOLRetry** command in this mode.

Example

The following command configures the polling interval to 600 seconds for PHSGW EAPOL retries:

```
threshold poll phsgw-max-eapol-retry interval 600
```

threshold poll phsgw-network-entry-denial interval

Configures the polling interval in seconds over which to count the number of network entry denials in PHSGW.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPHSPCSmEntryDenial** command in this mode.

Example

The following command configures the polling interval to *600* seconds for PHSPC SM session denials:

```
threshold poll phspc-sm-entry-denial interval 600
```

threshold poll port-high-activity interval

Configures the polling interval in seconds over which to measure the overall percentage of port utilization.

Product

All

Privilege

Administrator Security Administrator

Command Modes

Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description

```
threshold poll port-high-activity interval seconds
```

interval *seconds*

Configures the threshold polling interval in multiples of 30 seconds. *seconds* is an integer from 30 through 60000. Default is 300 seconds.

Usage Guidelines

High port activity thresholds generate alerts or alarms based on the peak utilization percentage of each configured port during the specified polling interval. This threshold is configured on a per-port basis. Alerts or alarms are triggered for high port activity based on the following rules:

Enter condition: Actual percent peak utilization of a port is greater than or equal to the high threshold.

Clear condition: Actual percent peak utilization of a port is less than the low threshold.

If a trigger condition occurs within the polling interval, the alert or alarm will not be generated until the end of the polling interval. This threshold is configured on a per-port basis configured using the port *port-type slot#/port#* command syntax.

Important This command is not available on all platforms

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPortHighActivity** command in this mode.

Example

Use the following example to configure the polling interval over which to measure for high port activity to 300 seconds:

```
threshold poll port-high-activity interval 300
```

threshold poll port-rx-utilization interval

Configures the polling interval in seconds over which to measure the overall percentage of incoming traffic received over system ports.

Product

All

Privilege

Administrator Security Administrator

Command Modes

Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description

```
threshold poll port-rx-utilization interval seconds
```

interval *seconds*

Configures the threshold polling interval in multiples of 30 seconds. *seconds* is an integer from 30 to 60000. Default is 300 seconds.

Usage Guidelines

Receive port utilization thresholds generate alerts or alarms based on the utilization percentage of each configured port in relation to data received during the specified polling interval. This threshold is configured on a per-port basis configured using the port *port-type slot#/port#* command syntax.

Important This command is not available on all platforms

Important Ports configured for half-duplex do not differentiate between data received and data transmitted. (The transmitted and received percentages are combined.) Therefore, to avoid redundant alarms, it is recommended that only the receive **or** transmit utilization threshold be configured.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPortRxUtil** command in this mode.

Example

Use the following example to configure a threshold poll interval of 300 seconds (5 minutes)

```
threshold poll port-rx-utilization interval 300
```

threshold poll port-tx-utilization

Configures the polling interval in seconds over which to measure the overall percentage of outgoing traffic sent over system ports.

Product

All

Privilege

Administrator Security Administrator

Command Modes

Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description

```
threshold poll port-tx-utilization interval seconds
```

interval *seconds*

Configures the threshold polling interval in multiples of 30 seconds. *seconds* is an integer from 30 through 60000. Default is 300 seconds.

Usage Guidelines

Transmit port utilization thresholds generate alerts or alarms based on the utilization percentage of each configured port in relation to data transmitted during the specified polling interval. This threshold is configured on a per-port basis configured using the port *port-type slot#/port#* command syntax.

Important This command is not available on all platforms

Important Ports configured for half-duplex do not differentiate between data received and data transmitted. (The transmitted and received percentages are combined.) Therefore, to avoid redundant alarms, it is recommended that only the receive **or** transmit utilization threshold be configured.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPortTxUtil** command in this mode.

Example

Use the following example to configure a threshold poll interval of 300 seconds (5 minutes)

```
threshold poll port-tx-utilization interval 300
```

threshold poll ppp-setup-fail-rate interval

Configures the polling interval in seconds over which to measure for the percentage of point-to-point protocol (PPP) setup failures.

Product

All

Privilege

Security Administrator, Administrator

Command Modes

Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description

```
threshold poll ppp-setup-fail-rate interval duration
```

interval *duration*

Default: 900 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines

This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshPPPSetupFailRate** command in this mode.

Example

The following command configures the polling interval to *600* seconds for PPP setup failures:

```
threshold poll ppp-setup-fail-rate interval 600
```

threshold poll reg-reply-error interval

Configures the polling interval over which to measure number of registration reply errors for Home Agent (HA) services.

Product	HA
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll reg-reply-error interval duration`

interval *duration*

Default: 0 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshHASvcRegReplyError** command in this mode.

Example

The following command configures the polling interval to *600* seconds for HA registration errors:

```
threshold poll rereg-reply-error interval 600
```

threshold poll rereg-reply-error interval

Configures the polling interval over which to measure number of re-registration reply errors for HA services.

Product	HA
Privilege	Security Administrator, Administrator
Command Modes	Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `threshold poll rereg-reply-error interval duration`

interval *duration*

Default: 0 seconds.

Specifies the amount of time (in seconds) that comprises the polling interval.

duration must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold monitoring** and other threshold commands for additional information on the system's support for thresholds in this chapter.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshHASvcReregReplyError** command in this mode.

Example

The following command configures the polling interval to *600* seconds for HA re-registration reply errors:

```
threshold poll rereg-reply-error interval 600
```

threshold poll route-service interval

Configures the polling interval over which to count or measure the thresholding value for BGP route services on the system.

Restores the threshold polling interval value to its default value of 300 seconds.

interval *time*

Default: 300 seconds

Specifies the amount of time (in seconds) that comprises the polling interval.

time must be an integer from 30 through 60000.

Usage Guidelines This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold model** and **threshold monitoring** commands for additional information on the system's support for thresholding.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshASNGWSessions** command in this mode.

Example

The following command configures the polling interval for counting the total number of ASN-GW sessions across all the ASN-GW services on a system, to 600 seconds (10 minutes):

```
threshold poll total-asngw-sessions interval 600
```

threshold poll total-ggsn-sessions interval

Configures the polling interval over which to count or measure the thresholding value for the total number of sessions across all the GGSN services on a system to trigger an alert or alarm.

Product GGSN

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description

```
threshold poll total-ggsn-sessions interval time
default threshold poll total-ggsn-sessions interval
```

default

Restores the threshold polling interval value to its default value of 300 seconds.

interval *time*

Default: 300 seconds

Specifies the amount of time (in seconds) that comprises the polling interval.

time must be an integer from 30 through 60000.

Usage Guidelines

This command sets the time period over which to monitor the specified value for threshold crossing.

Important All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold model** and **threshold monitoring** commands for additional information on the system's support for thresholding.

Important To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshGGSNSessions** command in this mode.

Example

The following command configures the polling interval for counting the total number of GGSN sessions across all the GGSN services on a system, to 600 seconds (10 minutes):

```
threshold poll total-ggsn-sessions interval 600
```

threshold poll total-gprs-pdp-sessions interval

Configures the polling interval over which to count the total number of 2G-activated PDP contexts per GPRS sessions on the system.

threshold poll total-gprs-sessions interval**Product** SGSN**Privilege** Security Administrator, Administrator**Command Modes** Exec > Global Configuration**configure**

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description **threshold poll total-gprs-pdp-sessions interval** *time*
default threshold poll total-gprs-pdp-sessions interval**default**

Restores the threshold polling interval value to its default value of 300 seconds.

interval *time*

Default: 300 seconds

Specifies the amount of time (in seconds) that comprises the polling interval.

time must be an integer from 30 through 60000.**Usage Guidelines** This command sets the time period over which to monitor the specified value for threshold crossing.**Important** All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.Refer to the **threshold model** and **threshold monitoring** commands for additional information on the system's support for thresholding.**Important** To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshGPRSPDPSessions** command in this mode.**Example**

The following command configures the polling interval for counting the total number of 2G-activated PDP contexts per GPRS sessions, to 600 seconds (10 minutes):

```
threshold poll total-gprs-pdp-sessions interval 600
```

threshold poll total-gprs-sessions interval

Configures the polling interval over which to count the total number of 2G-attached subscribers on the system.

Product SGSN

**Important**

All configured polling intervals are rounded up to the closest multiple of 30. For example, if a polling interval is configured for 130 seconds, the system uses a polling interval of 150 seconds.

Refer to the **threshold model** and **threshold monitoring** commands for additional information on the system's support for thresholding.**Important**To enable an SNMP trap for monitoring this threshold use the **snmp trap enable ThreshSubscriberTotal** command in this mode.**Example**

The following command configures the polling interval for the total number of subscribers on a system, to 600 seconds (10 minutes):

```
threshold poll total-subscriber interval 600
```

threshold poll total-volume interval

The new CLI command is added to configure the volume monitoring window duration during which the threshold is checked.

Product

GGSN

Privilege Security Administrator, Administrator

Command Modes Exec > Global Configuration

configure

Entering the above command sequence results in the following prompt:

```
[local]host_name(config)#
```

Syntax Description `[default] threshold poll total-volume interval`

default

Configures this command with the default threshold setting. The default value is 15 minutes.

total-volume

Configures total-volume threshold interval.

threshold poll total-volume interval

Enter the polling interval in seconds in the range of 300 to 14400 seconds.

Usage Guidelines

The new CLI command is added to configure the volume monitoring window duration during which the threshold is checked. This CLI is disabled by default.

Example

The following command configures the poll total volume interval to 300 seconds.

```
threshold poll total-volume interval 300
```
