First introduced.	20.0

## Feature Description

Regions and Network Operations Center (NOC) uses Real Time Tool (RTT) to debug network issues and to understand user behavior. All call transactions in ePDG, P-GW, and SaMOG gets generated in RTT files. ePDG, P-GW, and SaMOG transfer RTT files to the external server through SSH File Transfer Protocol (SFTP). The comma-separated values (.CSV) format RTT files get transferred either in compressed or non-compressed format. Transfer happens based on the configuration to the external servers such as servers in the customer network either directly or through the Cisco Collector server.

**Note** RTT Record Schema and its procedure numbers are generalized for Gateway RTT. Contact your Cisco account representative for detailed information on the specific RTT Record Schema.

## How it Works

This section describes the RTT procedures and schema.

## RTT Record Schema

The following figure details the RTT schema for ePDG, P-GW and SaMOG. The first six IEs, Common IEs to IPv6RA IEs are common for ePDG, P-GW and SaMOG. The last two fields, Radius IEs and DHCP IEs are specific to SaMOG.

Figure 1: RTT Record Schema

RTT schema has a Header followed by eight blocks of Information Elements (IEs). There are 220 IEs that are grouped into 8 blocks. Schemas 1 to 170 are specific to ePDG. Schemas 1 to 170 + 10 (180) CUPS schemas are specific to P-GW and schemas 171 to 220 are specific to SaMOG. For more information on CUPS schemas, refer to the *Ultra Packet Core CUPS User Plane Administration Guide*. Contact your Cisco account representative for the complete list of RTT Record Schema IEs.

## Configuring RTT

This section provides RTT configuration information for ePDG, P-GW and SaMOG.

### Configuring RTT to Record and Produce Call Transactions

Use the following configuration to enable RTT to record and produce call transactions.

```
configure
  context context_name
    [ epdg-service | pgw-service | samog-service ] service_name
    [ no ] reporting-action event-record
  end
```

#### NOTES:

- **reporting-action event-record**: Enables event reporting through RTT.
- **no**: Disables event reporting through RTT.

### Configuring RTT under Session Event Module

Use the following configuration to configure the RTT feature in ePDG, P-GW and SaMOG.

```
configure
  context context_name
    session-event-module
      event transfer-mode push primary url URL_address file name file_name |
      rotation volume volume_size | rotation time rotation_time | compression
      compression_type | extension extension_type
      event use-harddisk
      event remove-file-after-transfer
      event push-interval interval_time
    end
```

#### NOTES:

- **transfer-mode**: Enables the transfer mode in RTT.
- **push primary url** *URL\_address*: Specifies the external server location where the records are transferred.
- **file name** *file\_name*: Specifies the RTT file name where the records are stored. *file\_name* can be an alphanumeric string of size 1 to 31.
- **rotation volume** *volume\_size*: The volume based on which the RTT file is generated. Enter an integer from 51200 to 62914560.
- **rotation time** *rotation\_time*: The time based on which the RTT file is generated. Enter an integer from 30 to 86400 seconds.

**Note** RTT files are internally generated, based on the rotation volume or rotation time.

- **compression**: Specifies the file compression type. If enabled, the RTT file is generated as a Gzip file, else it is generated as a normal file.
- **extension***extension\_type*: Specifies the RTT file extension (.csv).
- **event use-harddisk**: Specifies hard disk as the storage space for the RTT file generation.
- **event remove-file-after-transfer**: Specifies RTT files to be removed after pushing the files to the external server.
- **event push-interval**: Specifies the push interval time at which the RTT files are transferred to the external server.
