

Viewing Mobility Group Statistics

- Viewing Mobility Group Statistics (GUI), on page 1
- Viewing Mobility Group Statistics (CLI), on page 2

Viewing Mobility Group Statistics (GUI)

Step 1 Choose **Monitor > Statistics > Mobility Statistics** to open the Mobility Statistics page.

This page contains the following fields

- Global Mobility Statistics
 - Rx Errors-Generic protocol packet receive errors, such as packet too short or format incorrect.
 - Tx Errors—Generic protocol packet transmit errors, such as packet transmission fail.
 - Responses Retransmitted—Mobility protocol that uses UDP and resends requests several times if it does not receive a response. Because of network or processing delays, the responder may receive one or more retry requests after it initially responds to a request. This text box shows a count of the response resends.
 - Handoff Requests Received—Total number of handoff requests received, ignored, or responded to.
 - Handoff End Requests Received—Total number of handoff end requests received. These requests are sent by the anchor or foreign controller to notify the other about the close of a client session.
 - State Transitions Disallowed—Policy enforcement module (PEM) that has denied a client state transition, usually resulting in the handoff being terminated.
 - Resource Unavailable—Necessary resource, such as a buffer, was unavailable, resulting in the handoff being terminated.

• Mobility Initiator Statistics

- Handoff Requests Sent—Number of clients that have associated to the controller and have been announced to the mobility group.
- Handoff Replies Received—Number of handoff replies that have been received in response to the requests sent.
- Handoff as Local Received-Number of handoffs in which the entire client session has been transferred.

- Handoff as Foreign Received—Number of handoffs in which the client session was anchored elsewhere.
- · Handoff Denys Received-Number of handoffs that were denied.
- Anchor Request Sent—Number of anchor requests that were sent for a three-party (foreign-to-foreign) handoff. The handoff was received from another foreign controller, and the new controller is requesting the anchor to move the client.
- Anchor Deny Received-Number of anchor requests that were denied by the current anchor.
- Anchor Grant Received—Number of anchor requests that were approved by the current anchor.
- Anchor Transfer Received—Number of anchor requests that closed the session on the current anchor and transferred the anchor back to the requestor.
- Mobility Responder Statistics
 - Handoff Requests Ignored—Number of handoff requests or client announcements that were ignored because the controller had no knowledge of that client.
 - Ping Pong Handoff Requests Dropped—Number of handoff requests that were denied because the handoff period was too short (3 seconds).
 - Handoff Requests Dropped—Number of handoff requests that were dropped due to either an incomplete knowledge of the client or a problem with the packet.
 - Handoff Requests Denied-Number of handoff requests that were denied.
 - Client Handoff as Local—Number of handoff responses sent while the client is in the local role.
 - Client Handoff as Foreign—Number of handoff responses sent while the client is in the foreign role.
 - Anchor Requests Received—Number of anchor requests received.
 - Anchor Requests Denied—Number of anchor requests denied.
 - Anchor Requests Granted—Number of anchor requests granted.
 - Anchor Transferred—Number of anchors transferred because the client has moved from a foreign controller to a controller on the same subnet as the current anchor.

Step 2 If you want to clear the current mobility statistics, click **Clear Stats**.

Viewing Mobility Group Statistics (CLI)

Step 1 See mobility group statistics by entering this command:

show mobility statistics

Step 2 Clear the current mobility statistics by entering this command:

clear stats mobility
