

Uploading the Cisco MSE/CMX ISO Image to the Cisco MSE 3365/Cisco CMX 3375

Note

Make sure the Serial over Lan (SoL) functionality is enabled on the Cisco Unified Communication System (UCS). To enable SoL on the Cisco UCS server, use the **set enabled yes** command. For more information on enabling SoL, refer to the Cisco UCS documentation on Cisco.com.

- Uploading Cisco CMX ISO Image to Cisco CMX 3375 Using Newer CIMC Versions, on page 1

Uploading Cisco CMX ISO Image to Cisco CMX 3375 Using Newer CIMC Versions

The Cisco CMX 3375 Appliance requires Cisco CMX Release 10.5.1 or later. Minimal configuration is done for the Cisco CMX as part of installation using the console. For hardware and software installation information, see the Cisco 3375 Appliance for Cisco Connected Mobile Experiences Installation Guide at: https://www.cisco.com/c/en/us/support/wireless/connected-mobile-experiences/ products-installation-guides-list.html

- Step 1 Download the Cisco CMX 10.5.1 image from Download Software on cisco.com.
- **Step 2** Power up the Cisco CMX 3375 appliance and configure the CIMC IP Address and user credentials.
- **Step 3** Log in to CIMC IP using Internert Explorer.
- **Step 4** In the left pane, click **Menu > Compute > BIOS**.
- **Step 5** From the **Configured Boot Mode** drop-down list, choose **Legacy**.

Save Change

- **Step 6** Follow the on screen instruction to reboot the system.
- Step 7 Click Configure Boot Order.
- **Step 8** In the **Configure Boot Order** window, click **Advanced** tab.
- Step 9 Click Add Virtual Media.
- **Step 10** Enter a name for the new virtual media.
- **Step 11** From the **Sub Type** drop-down list, choose **KVM MAPPED DVD**.
- Step 12 Click Save Changes.

The new virtual media is created and enabled.

- **Step 13** Use IE and open KVM. We recommend that you use JAVA Based KVM on IE or Firefox for more consistent results.
- Step 14 Click Virtual Media > Activate Virtual Devices.

- **Step 18** After the appliance is rebooted, press **F6** to enter **Boot Menu**.
- **Step 19** Select Cisco vKVM Mapped DVD.
- Step 20 Select Install using Current Console as the install method.
- Step 21 Click Proceed with install. Wait for 20 to 30 minutes for copying CMX file.

The system is rebooted after the file is copied. The system is loaded with Centos 7. Cisco CMX welcome window is displayed.

What to do next

For more information about configuring Cisco CMX, see Configuring Cisco CMX Release 10.5.x and Later.

Uploading the Cisco CMX/MSE ISO Image to the Cisco MSE 3365 Using Newer CIMC Versions

MSE 3365 Software Reset is a process used to load the MSE 3365 with a required image (MSE 8.x, or CMX 10.x). The MSE 3365 is a UCS-based device, and can be accessed through the Cisco Integrated Management Controller (CIMC) interface.

Before you begin

Java Version 1.6.0.14 must be installed on the client machine used to access your MSE 3365 device.

Step 1 Download the Cisco MSE ISO image from the Download Software page on cisco.com.

Step 2 Open a browser, and enter the IP address of your device to log in to to the Cisco Integrated Management Controller (CIMC) GUI interface (Address format is https://x.x.x.x).

The recovery process begins. The Select Install Method window is displayed.

Step 7 In the **Select Install Method** window that is displayed, choose any of the following options:

• Option 1: Install CMX using Serial—Respond to the prompt to press ENTER by starting an SSH session to the CIMC interface, as the KVM console does not permit you to press ENTER (With CSCuw32543). Use the following commands to initiate the SSH session:

ssh <cimc-ip-address>
connect host

You can see that the image is being copied from CDROM. The process can take up to forty-five minutes to copy.

What to do next

For more information about configuring Cisco CMX, see Configuring Cisco CMX Release 10.5.x and Later.

Uploading the Cisco CMX/MSE ISO Image to the Cisco MSE 3365 Using Older CIMC Versions

MSE 3365 Software Reset is a process used to load the MSE 3365 with a required image (MSE 8.x, or CMX 10.x). The MSE 3365 is a UCS-based device, and can be accessed through the Cisco Integrated Management Controller (CIMC) interface.

Before you begin

Java Version 1.6.0.14 must be installed on the client machine used to access your MSE 3365 device.

- Step 1 Download the Cisco MSE ISO image from the Download Software page on cisco.com.
- **Step 2** Open a browser, and enter the IP address of your device to log in to to the Cisco Integrated Management Controller (CIMC) GUI interface (Address format is https://x.x.x.x).

Figure 14: Cisco Integrated Management Controller Interface

- **Step 3** Click **Server** and in the **Server Summary** page, click **Launch KVM Console** and click **OK**. A mini executable file is downloaded.
- **Step 4** Open the file using javaws.exe from the bin folder of your Java installation. If a security error prevents you from installing the file, add the URL of the CIMC to the list of exception sites, using the steps below.
 - a) Choose Control Panel > Programs > Java.
 - b) Choose Security > Edit Site List > Add and add the CIMC URL.
 - c) Click OK.

The installation is initiated.

Step 5 In the KVM Console window that is displayed after the installation, click the **Virtual Media** tab.

Figure 15: KVM Console

Step 6 In the **Virtual Media** window that is displayed, click **Add Image**.
