

Site Log

A site log provides a historical record of all actions relevant to the Cisco uBR7200 series universal broadband router operation and maintenance. Keep your site log in a common place near the chassis where anyone who performs tasks has access to it. Site log entries might include the following:

- Installation progress—Make a copy of the [“Cisco uBR7200 Series Router Installation Checklist” section on page 3-1](#), and insert it into the site log. Make entries on the Installation Checklist as each procedure is completed.
- Upgrades and removal and replacement procedures—Use the site log as a record of system maintenance and expansion history. Each time a procedure is performed on the system, update the site log to reflect the following:
 - Port adapters installed, removed, or replaced
 - Cisco cable clock card installed, removed, or replaced (Cisco uBR7246VXR router)
 - Cable interface line cards installed, removed, or replaced
 - I/O controller removed and replaced
 - Network processing engine removed, replaced, or upgraded
 - Fan tray removed and replaced
 - Power supply removed or replaced
 - Redundant power supply installed
 - Chassis replaced
 - Subchassis and midplane replaced
 - Configuration changed; port adapters or cable interface line cards moved
 - Memory upgraded
 - Software upgraded
 - Corrective maintenance procedures performed
 - Intermittent problems
 - Related comments

[Table G-1](#) shows a sample site log page. Make copies of the sample or design your own site log to meet the needs of your site and equipment.
