

PPPoE Client DDR Idle-Timer

The PPPoE Client DDR Idle-Timer feature supports the dial-on-demand routing (DDR) interesting traffic control list functionality of the dialer interface with a PPP over Ethernet (PPPoE) client, but also keeps original functionality (PPPoE connection up and always on after configuration) for those PPPoE clients that require it.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for PPPoE Client DDR Idle-Timer

Before configuring the PPPoE Client DDR Idle-Timer feature, you must understand the concept of DDR interesting packets and access control lists and PPPoE Stage Protocols. See the [Prerequisites for PPPoE Client DDR Idle-Timer](#) for links to the documents describing these concepts.

Information About PPPoE Client DDR Idle-Timer

DDR Functionality and the PPPoE Client

Before Cisco IOS Release 12.2(13)T, the DDR interesting traffic control list functionality of the dialer interface was not supported for PPPoE. However, the PPPoE Client DDR Idle-Timer feature, available as part of Cisco IOS Release 12.2(13)T, now supports this DDR functionality for a PPPoE client.

Protocol access lists and dialer access lists are central to the operation of DDR. Access lists are used as the screening criteria for determining when to initiate DDR calls. All packets are tested against the dialer access list. Packets that match a permit entry are deemed interesting. Packets that do not match a permit entry or that do match a deny entry are deemed uninteresting. When a packet is found to be interesting, either the dialer idle timer is reset (if the line is active) or a connection is attempted (assuming the line is available but not active). If a tested packet is deemed uninteresting, it will be forwarded if it is intended for a destination known to be on a specific interface and the link is active. However, such a packet will not initiate a DDR call and will not reset the idle timer. If dialer idle timer expires, the dialer interface calls a PPPoE function to tear down the connection.

A new command, **pppoe-client dial-pool-number**, allows configuring a DDR interesting traffic control list for PPPoE connections, but also keeps original connection functionality for those PPPoE clients that require it. If you do not require DDR, the PPPoE connection will be up and always on after configuration. If you do require DDR functionality, the connection will be brought up when interesting traffic comes in from the LAN interface and brought down after the dialer idle timer expires. Interesting traffic that comes from WAN interface will only reset the dialer idle timer.

Protocol access lists and dialer access lists have already been implemented in the dialer interface for the operation of DDR. For a PPPoE client, access lists are used as the screening criteria for determining if PPPoE Discovery initiation or a dialer idle timer reset is needed. But a protocol access list is not required for this feature; it depends on your network needs. An access-list can be configured and associated with dialer-list, or you can configure only the dialer list.

All packets destined to the dialer interface are tested against the dialer access list. Packets that match a permit entry are deemed interesting. Packets that do not match a permit entry or that do match a deny entry are deemed uninteresting. When a packet is found to be interesting, the dialer idle timer will be reset if the PPPoE session has already been set up, or a PPPoE Discovery will be attempted if there is no PPPoE session. If a tested packet is deemed uninteresting, it will not initiate PPPoE Discovery and will not reset the idle timer.

How to Configure PPPoE Client DDR Idle-Timer

Configure the PPPoE Client DDR Idle-Timer on an ATM PVC Interface

To configure the PPPoE client DDR idle-timer in interface-ATM-VC configuration mode, use the following commands:

SUMMARY STEPS

1. **enable**
2. **configure** {**terminal** | **memory** | **network**}
3. **interface atm** *atm-interface-number*
4. **pvc** *vpi/vci*
5. **pppoe-client dial-pool-number** *number* [**dial-on-demand**]
6. **exit**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables higher privilege levels, such as privileged EXEC mode. Enter your password if prompted.
Step 2	configure { terminal memory network }	Enters global configuration mode.
	Example: Router# configure terminal	
Step 3	interface atm <i>atm-interface-number</i> Example: Router# interface atm 2/0	Configures an ATM interface type and enters interface configuration mode.
Step 4	pvc <i>vpi/vci</i> Example: Router(config-if)# pvc 2/100	Creates an ATM permanent virtual circuit (PVC) and enters interface-ATM-VC configuration mode.
Step 5	pppoe-client dial-pool-number <i>number</i> [dial-on-demand] Example: Router(config-if-atm-vc)# pppoe-client dial-pool-number 1 dial-on-demand	Configures DDR interesting traffic control list functionality of the dialer interface with a PPPoE client. The optional dial-on-demand keyword enables DDR functionality on the PPPoE connection.
Step 6	exit Example: Router(config-if-atm-vc)# exit	Exits the configuration mode. Enter the exit command at each configuration mode to leave that mode.

What to Do Next

To support DDR functionality for the PPPoE client, DDR functionality must be configured. See the [Configure the Dialer Interface, on page 5](#) for the steps to do this.

Configure the PPPoE Client DDR Idle-Timer on an Ethernet Interface

To configure the PPPoE client DDR idle-timer on an Ethernet interface, use the following commands:

SUMMARY STEPS

1. **enable**
2. **configure** {terminal | memory | network}
3. **interface ethernet** *ethernet-number*
4. **pppoe enable**
5. **pppoe-client dial-pool-number** *number* [dial-on-demand]
6. **exit**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables higher privilege levels, such as privileged EXEC mode. • Enter your password if prompted.
Step 2	configure {terminal memory network} Example: Router# configure terminal	Enters global configuration mode.
Step 3	interface ethernet <i>ethernet-number</i> Example: Router# interface ethernet 1	Configures an Ethernet interface and enters interface configuration mode.
Step 4	pppoe enable Example: Router(config-if)# pppoe enable	Enables PPPoE sessions on an Ethernet interface.

	Command or Action	Purpose
Step 5	pppoe-client dial-pool-number <i>number</i> [dial-on-demand] Example: Router(config-if)# pppoe-client dial-pool-number 1 dial-on-demand	Configures DDR interesting traffic control list functionality of the dialer interface with a PPPoE client. The optional dial-on-demand keyword enables DDR functionality on the PPPoE connection.
Step 6	exit Example: Router(config-if-atm-vc)# exit	Exits the configuration mode. Enter the exit command at each configuration mode to leave that mode.

What to Do Next

To support DDR functionality for the PPPoE client, DDR functionality must be configured. See the [Configure the Dialer Interface, on page 5](#) section for the steps to do this.

Configure the Dialer Interface

To configure the dialer interface (required when using the **pppoe-client dial-pool-number** command), you must also configure the following commands:

SUMMARY STEPS

1. **enable**
2. **configure** {terminal | memory | network}
3. **interface dialer** *dialer-rotary-group-number*
4. **dialer idle-timeout** *seconds* [inbound | either]
5. **dialer hold-queue** *packets* [timeout *seconds*]
6. **dialer-group** *group-number*
7. **exit**
8. **dialer-list** *dialer-group* **protocol** *protocol-name* {permit | deny | list *access-list-number* | *access-group*}

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable	Enables higher privilege levels, such as privileged EXEC mode.

	Command or Action	Purpose
	Example: Router> enable	Enter your password if prompted.
Step 2	configure {terminal memory network} Example: Router# configure terminal	Enters global configuration mode.
Step 3	interface dialer <i>dialer-rotary-group-number</i> Example: Router# interface dialer 1	Defines a dialer rotary group and enters interface configuration mode.
Step 4	dialer idle-timeout <i>seconds</i> [inbound either] Example: Router(config-if)# dialer idle-timeout 180 either	Specifies the duration of idle time before a line is disconnected. inbound --Only inbound traffic will reset the idle timeout. either --Both inbound and outbound traffic will reset the idle timeout.
Step 5	dialer hold-queue <i>packets</i> [timeout seconds] Example: Router(config-if)# dialer hold-queue 100	Allows interesting outgoing packets to be queued until a modem connection is established. timeout --Amount of time, in seconds, to queue the packets.
Step 6	dialer-group <i>group-number</i> Example: Router(config-if)# dialer-group 1	Controls access by configuring an interface to belong to a specific dialing group.
Step 7	exit Example: Router(config-if)# exit	Leaves interface configuration mode and returns to global configuration mode.
Step 8	dialer-list <i>dialer-group</i> protocol <i>protocol-name</i> {permit deny list <i>access-list-number</i> <i>access-group</i> } Example: Router(config)# dialer-list 1 protocol ip permit	Defines a DDR dialer list for dialing by protocol or by a combination of a protocol and a previously defined access list. permit and deny--Configure access permissions. list --Specifies that an access list will be used for defining a granularity finer than an entire protocol.

Configuration Examples for PPPoE Client DDR Idle-Timer

This section provides configuration examples to match the identified configuration tasks in the previous sections. The dialer interface configurations for each interface type required by the **pppoe-client dial-pool-number** command are included in the following client configuration examples:

PPPoEoA Client Configuration Example

The following example shows how to configure the PPPoE client DDR idle-timer on an ATM PVC interface:

```
!  
vpdn enable  
no vpdn logging  
!  
vpdn-group 1  
  request-dialin  
  protocol pppoe  
!  
interface ATM2/0  
  pvc 2/100  
    pppoe-client dial-pool-number 1 dial-on-demand  
!  
interface Dialer1  
  ip address negotiated  
  ip mtu 1492  
  encapsulation ppp  
  dialer pool 1  
  dialer idle-timeout 180 either  
  dialer hold-queue 100  
  dialer-group 1  
!  
dialer-list 1 protocol ip permit  
!  
ip route 0.0.0.0 0.0.0.0 Dialer1
```

PPPoEoE Client Configuration Example

The following example shows how to configure the PPPoE client DDR idle-timer on an Ethernet interface:

```
!  
vpdn enable  
no vpdn logging  
!  
vpdn-group 1  
  request-dialin  
  protocol pppoe  
!  
interface Ethernet1  
  pppoe enable  
  pppoe-client dial-pool-number 1 dial-on-demand  
!  
interface Dialer1  
  ip address negotiated  
ip mtu 1492  
  encapsulation ppp  
  dialer pool 1  
  dialer idle-timeout 180 either  
  dialer hold-queue 100  
  dialer-group 1  
!  
dialer-list 1 protocol ip permit
```

```
!
ip route 0.0.0.0 0.0.0.0 Dialer1
```

Feature Information for PPPoE Client DDR Idle-Timer

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to . An account on Cisco.com is not required.

Table 1: Feature Information for PPPoE Client DDR Idle-Timer

Feature Name	Releases	Feature Information
PPPoE Client DDR Idle-Timer	12.2(13)T	The PPPoE Client DDR Idle-Timer feature supports the dial-on-demand routing (DDR) interesting traffic control list functionality of the dialer interface with a PPP over Ethernet (PPPoE) client, but also keeps original functionality (PPPoE connection up and always on after configuration) for those PPPoE clients that require it. This feature is supported on Cisco 806, Cisco 827, Cisco SOHO 70 series routers. The following commands were introduced or modified: pppoe-client dial-pool-number.
