

# IP SLAs Multicast Support

---

**Last Updated: November 5, 2012**

This module describes how to configure and schedule an IP Service Level Agreements (SLAs) multicast UDP jitter operation for measuring and reporting statistics such as one way latency, jitter, and packet loss for each multicast receiver in a user-specified multicast group. .

- [Finding Feature Information, page 1](#)
- [Prerequisites for IP SLAs Multicast Support, page 1](#)
- [Restrictions for IP SLAs Multicast Support, page 2](#)
- [Information About IP SLAs Multicast Support, page 2](#)
- [How to Configure IP SLAs Multicast Support, page 3](#)

## Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.

## Prerequisites for IP SLAs Multicast Support

- Time synchronization, such as that provided by Network Time Protocol (NTP), is required between the source and the target device in order to provide accurate one-way delay (latency) measurements. To configure NTP on the source and target devices, perform the tasks in the "Performing Basic System Management" chapter of the *Network Management Configuration Guide*. Time synchronization is not required for the one-way jitter and packet loss measurements. However, if the time is not synchronized between the source and target devices, one-way jitter and packet loss data will be returned, but values of "0" will be returned for the one-way delay measurements provided by the UDP jitter operation.

---

**Americas Headquarters:**  
Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA

- All devices must be part of the same VRF in order for IP SLAs multicast operations to succeed.
- The devices on which the responder and probe are to be configured must both be running Cisco software images that support the IP SLAs Multicast Support feature. Before configuring any IP SLAs application, use the **show ip sla application** command to verify that the operation type is supported on your software image.

## Restrictions for IP SLAs Multicast Support

The multicast UDP Jitter operation can provide only One Way (OW) data.

## Information About IP SLAs Multicast Support

- [Multicast UDP Jitter Operations, page 2](#)

## Multicast UDP Jitter Operations

A multicast UDP jitter operation measures and reports statistics, such as one way latency, jitter, and packet loss, for each multicast receiver in a user-specified multicast group. Multicast UDP jitter operations enable you to perform the following tasks:

- Analyze and evaluate the performance of a multicast network after deploying a new multicast network application or implementing new multicast-based protocols on the network.
- Check the network behavior for multicast before actually utilizing the multicast network for an important event.
- Take a proactive approach to monitoring a network to isolate possible problem areas.

The sender in a multicast UDP jitter operation sends UDP packets at a specified interval from the source device to a multicast IP address. During the initial configuration, a specified endpoint list provides a list of all the responders to be contacted for a given multicast operation. The multicast subsystem sends a unicast control packet to each of the multicast receivers in the endpoint list, utilizing the unicast path. A control message is sent to each receiver so that it can join the multicast group.

The IP SLAs multicast responder on the multicast receiver receives the UDP packets and records the time-stamp data.

A list of valid responders that have completed a successful IGMP join is maintained on the sender side. Once the responder list is received, multicast packet generation can proceed.

Because all multicast traffic is one way, from sender on the source to responder on the receiver, each responder that is part of the operation is responsible for performing local calculations and for storing the statistics. The statistics are sent back to the sender to be displayed at the end of each cycle of the operation (after all packets have been transmitted to the responder). Because the responder does not maintain a history of the statistics, and also releases all associated memory after sending the information to the sender, each scheduled operation (based on the frequency) is considered a new operation by the multicast responder, with no relationship to the previous one.

Multicast UDP jitter operations are supported in IPv4 networks.

# How to Configure IP SLAs Multicast Support

- [Configuring an IP SLAs Responder on the Destination Device, page 3](#)
- [Creating a List of Multicast Responders on the Source Device, page 4](#)
- [Configuring Multicast UDP Jitter Operations, page 5](#)
- [Scheduling IP SLAs Operations, page 10](#)

## Configuring an IP SLAs Responder on the Destination Device

The networking device to be used as the responder must be a Cisco device and you must have connectivity to that device through the network.

### SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ip sla responder**
4. **exit**

### DETAILED STEPS

Command or Action	Purpose
<b>Step 1 enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2 configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3 ip sla responder</b>  <b>Example:</b> Device(config)# ip sla responder	Temporarily enables IP SLAs Responder functionality on a Cisco device in response to control messages from source. <ul style="list-style-type: none"> <li>• Control is enabled by default.</li> </ul>
<b>Step 4 exit</b>  <b>Example:</b> Device(config)# exit	(Optional) Exits global configuration mode and returns to privileged EXEC mode.

## Creating a List of Multicast Responders on the Source Device

All responders to be added to the endpoint list (of responders) must first be configured on the destination device. For configuration information, see the "Configuring an IP SLAs Responder on the Destination Device" section.

### SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ip sla endpoint-list type ip** *template-name*
4. **description** *description*
5. **ip-address** *address* [-*address* | , ... , *address*] **port** *port*
6. **end**
7. **show ip sla endpoint-list** [**type ip** [*template-name*]]

### DETAILED STEPS

Command or Action	Purpose
<b>Step 1</b> <b>enable</b>  <b>Example:</b>  Device> enable	Enables privileged EXEC mode.  <ul style="list-style-type: none"> <li>Enter your password if prompted.</li> </ul>
<b>Step 2</b> <b>configure terminal</b>  <b>Example:</b>  Device# configure terminal	Enters global configuration mode.
<b>Step 3</b> <b>ip sla endpoint-list type ip</b> <i>template-name</i>  <b>Example:</b>  Device(config)# ip sla endpoint-list type ip mcast-rcvrs	Begins configuring an endpoint list and enters endpoint-list configuration mode.
<b>Step 4</b> <b>description</b> <i>description</i>  <b>Example:</b>  Device(config-epl)# description list of receivers	(Optional) Adds descriptive text to the template being configured.

Command or Action	Purpose
<b>Step 5</b> <code>ip-address address [-address   , ... , address] port port</code>  <b>Example:</b>  <pre>Device(config-epl)# ip-address 10.1.1.1-13 port 6500</pre>	Adds the IPv4 or IPv6 address of a multicast responder to the endpoint list being configured. <ul style="list-style-type: none"> <li>Repeat this command until all desired addresses are configured.</li> <li>Use the <b>no</b> from of this command to modify the endpoint list by removing one or more addresses.</li> </ul>
<b>Step 6</b> <code>end</code>  <b>Example:</b>  <pre>Device(config-epl)# end</pre>	Returns to privileged EXEC mode.
<b>Step 7</b> <code>show ip sla endpoint-list [type ip [template-name]]</code>  <b>Example:</b>  <pre>Device# show ip sla endpoint-list type ip mcast-rcvrs</pre>	(Optional) Displays the configuration of the endpoint list.

## Configuring Multicast UDP Jitter Operations

### Note

- The IP SLAs UDP jitter operation does not support the IP SLAs History feature (statistics history buckets) because of the large data volume involved with UDP jitter operations. Therefore, the following commands are not supported for UDP jitter operations: **history buckets-kept**, **history filter**, **history lives-kept**, **samples-of-history-kept**, and **show ip sla history**.
- The MIB used by IP SLAs (CISCO-RTTMON-MIB) limits the hours-of-statistics kept for the UDP jitter operation to two hours. Configuring a larger value using the **history hours-of-statistics hours** global configuration change will not increase the value beyond two hours. However, the Data Collection MIB can be used to collect historical data for the operation. For information, see the CISCO-DATA-COLLECTION-MIB at <http://www.cisco.com/go/mibs>.

**SUMMARY STEPS**

1. **enable**
2. **configure terminal**
3. **ip sla** *operation-number*
4. **udp-jitter** { *destination-ip-address* | *destination-hostname* } *destination-port* **endpoint-list** *endpoint-list* [**ssm**] [**source-ip** *ip-address*] [**source-port** *port-number*] [**num-packets** *number-of-packets*] [**interval** *interpacket-interval*]
5. **control retry** *retries*
6. **control timeout** *seconds*
7. **dscp** *dscp-value*
8. **tree-init** *number*
9. **history distributions-of-statistics-kept** *size*
10. **history enhanced** [*interval seconds*] [**buckets** *number-of-buckets*]
11. **frequency** *seconds*
12. **history hours-of-statistics-kept** *hours*
13. **owner** *owner-id*
14. **request-data-size** *bytes*
15. **history statistics-distribution-interval** *milliseconds*
16. **tag** *text*
17. **threshold** *milliseconds*
18. **timeout** *milliseconds*
19. **tos** *number*
20. **verify-data**
21. **vrf** *vrf-name*
22. **end**
23. **show ip sla configuration** [*operation-number*]

**DETAILED STEPS**

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>	Enables privileged EXEC mode.
	<b>Example:</b>  Device> enable	<ul style="list-style-type: none"> <li>Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b>	Enters global configuration mode.
	<b>Example:</b>  Device# configure terminal	

	Command or Action	Purpose
<b>Step 3</b>	<b>ip sla operation-number</b>  <b>Example:</b> Device(config)# ip sla 10	Begins configuration for an IP SLAs operation and enters IP SLA configuration mode.
<b>Step 4</b>	<b>udp-jitter</b> {destination-ip-address   destination-hostname} destination-port endpoint-list endpoint-list [ssm] [source-ip ip-address] [source-port port-number] [num-packets number-of-packets] [interval interpacket-interval]  <b>Example:</b> Device(config-ip-sla)# udp-jitter 239.1.1.1 5000 endpoint-list mcast-rcvrs source-ip 10.10.10.106 source-port 7012 num-packets 50 interval 25	Configures the IP SLAs operation as a multicast UDP jitter operation and enters multicast UDP jitter configuration mode.
<b>Step 5</b>	<b>control retry retries</b>  <b>Example:</b> Device(config-ip-sla-multicast-jitter-oper)# control retry 2	(Optional) Configures the number of times a sending device will resend a control protocol message.
<b>Step 6</b>	<b>control timeout seconds</b>  <b>Example:</b> Device(config-ip-sla-multicast-jitter)# control timeout 4	(Optional) Configures the number of seconds that the destination device will wait for a control protocol message.
<b>Step 7</b>	<b>dscp dscp-value</b>  <b>Example:</b> Device(config-ip-sla-multicast-jitter-oper)# dscp 10	(Optional) Configures the DSCP value for the operation.
<b>Step 8</b>	<b>tree-init number</b>  <b>Example:</b> Device(config-ip-sla-multicast-jitter-oper)# tree- init 1	(Optional) Sets up the multicast tree.
<b>Step 9</b>	<b>history distributions-of-statistics-kept size</b>  <b>Example:</b> Device(config-ip-sla-multicast-jitter-oper)# history distributions-of-statistics-kept 5	(Optional) Sets the number of statistics distributions kept per hop during an IP SLAs operation.

Command or Action	Purpose
<b>Step 10</b> <b>history enhanced</b> [ <i>interval seconds</i> ] [ <b>buckets</b> <i>number-of-buckets</i> ]  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# history enhanced interval 900 buckets 100	(Optional) Enables enhanced history gathering for an IP SLAs operation.
<b>Step 11</b> <b>frequency</b> <i>seconds</i>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# frequency 30	(Optional) Sets the rate at which a specified IP SLAs operation repeats.
<b>Step 12</b> <b>history hours-of-statistics-kept</b> <i>hours</i>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# history hours-of-statistics-kept 4	(Optional) Sets the number of hours for which statistics are maintained for an IP SLAs operation.
<b>Step 13</b> <b>owner</b> <i>owner-id</i>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# owner admin	(Optional) Configures the Simple Network Management Protocol (SNMP) owner of an IP SLAs operation.
<b>Step 14</b> <b>request-data-size</b> <i>bytes</i>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# request-data-size 64	(Optional) Sets the protocol data size in the payload of an IP SLAs operation's request packet.
<b>Step 15</b> <b>history statistics-distribution-interval</b> <i>milliseconds</i>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# history statistics-distribution-interval 10	(Optional) Sets the time interval for each statistics distribution kept for an IP SLAs operation.

	Command or Action	Purpose
<b>Step 16</b>	<b>tag</b> <i>text</i>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# tag TelnetPollServer1	(Optional) Creates a user-specified identifier for an IP SLAs operation.
<b>Step 17</b>	<b>threshold</b> <i>milliseconds</i>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# threshold 10000	(Optional) Sets the upper threshold value for calculating network monitoring statistics created by an IP SLAs operation.
<b>Step 18</b>	<b>timeout</b> <i>milliseconds</i>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# timeout 10000	(Optional) Sets the amount of time an IP SLAs operation waits for a response from its request packet.
<b>Step 19</b>	<b>tos</b> <i>number</i>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# tos 160	(Optional) In an IPv4 network only, defines the ToS byte in the IPv4 header of an IP SLAs operation.
<b>Step 20</b>	<b>verify-data</b>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# verify- data	(Optional) Causes an IP SLAs operation to check each reply packet for data corruption.
<b>Step 21</b>	<b>vrf</b> <i>vrf-name</i>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# vrf vpn-A	(Optional) Allows monitoring within Multiprotocol Label Switching (MPLS) VPNs using IP SLAs operations.
<b>Step 22</b>	<b>end</b>  <b>Example:</b>  Device(config-ip-sla-multicast-jitter-oper)# end	Returns to privileged EXEC mode.

Command or Action	Purpose
<b>Step 23</b> <code>show ip sla configuration</code> [ <i>operation-number</i> ]  <b>Example:</b>  Device# <code>show ip sla configuration 10</code>	(Optional) Displays configuration values including all defaults for all IP SLAs operations or a specified operation.

## Scheduling IP SLAs Operations

### Note

- All IP SLAs operations to be scheduled must be already configured.
- The frequency of all operations scheduled in a multioperation group must be the same.
- The list of one or more operation ID numbers to be added to a multioperation group is limited to a maximum of 125 characters in length, including commas (,).

### SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. Do one of the following:
  - `ip sla schedule operation-number` [**life** {**forever** | *seconds*}] [**start-time** {[*hh:mm:ss*] [*month day* | *day month*] | **pending** | **now** | **after** *hh:mm:ss*}] [**ageout** *seconds*] [**recurring**]
  - `ip sla group schedule group-operation-number operation-id-numbers schedule-period schedule-period-range` [**ageout** *seconds*] [**frequency** *group-operation-frequency*] [**life** {**forever** | *seconds*}] [**start-time**{*hh:mm[:ss]* [*month day* | *day month*] | **pending** | **now** | **after** *hh:mm[:ss]*}]
4. `exit`
5. `show ip sla group schedule`
6. `show ip sla configuration`

### DETAILED STEPS

Command or Action	Purpose
<b>Step 1</b> <code>enable</code>  <b>Example:</b>  Device> <code>enable</code>	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>

Command or Action	Purpose
<p><b>Step 2</b> <b>configure terminal</b></p> <p><b>Example:</b></p> <pre>Device# configure terminal</pre>	<p>Enters global configuration mode.</p>
<p><b>Step 3</b> Do one of the following:</p> <ul style="list-style-type: none"> <li>• <b>ip sla schedule</b> <i>operation-number</i> [<b>life</b> {<b>forever</b>   <i>seconds</i>}] [<b>start-time</b> {<i>hh:mm:ss</i>   <i>month day</i>   <i>day month</i>}   <b>pending</b>   <b>now</b>   <b>after</b> <i>hh:mm:ss</i>] [<b>ageout</b> <i>seconds</i>] [<b>recurring</b>]</li> <li>• <b>ip sla group schedule</b> <i>group-operation-number</i> <i>operation-id-numbers</i> <b>schedule-period</b> <i>schedule-period-range</i> [<b>ageout</b> <i>seconds</i>] [<b>frequency</b> <i>group-operation-frequency</i>] [<b>life</b> {<b>forever</b>   <i>seconds</i>}] [<b>start-time</b> {<i>hh:mm:ss</i>   <i>month day</i>   <i>day month</i>}   <b>pending</b>   <b>now</b>   <b>after</b> <i>hh:mm:ss</i>}]</li> </ul> <p><b>Example:</b></p> <pre>Device(config)# ip sla schedule 10 life forever start-time now</pre> <p><b>Example:</b></p> <pre>Device(config)# ip sla group schedule 1 3,4,6-9 life forever start-time now</pre>	<ul style="list-style-type: none"> <li>• Configures the scheduling parameters for an individual IP SLAs operation.</li> <li>• Specifies an IP SLAs operation group number and the range of operation numbers for a multioperation scheduler.</li> </ul>
<p><b>Step 4</b> <b>exit</b></p> <p><b>Example:</b></p> <pre>Device(config)# exit</pre>	<p>Exits to privileged EXEC mode.</p>
<p><b>Step 5</b> <b>show ip sla group schedule</b></p> <p><b>Example:</b></p> <pre>Device# show ip sla group schedule</pre>	<p>(Optional) Displays IP SLAs group schedule details.</p>
<p><b>Step 6</b> <b>show ip sla configuration</b></p> <p><b>Example:</b></p> <pre>Device# show ip sla configuration</pre>	<p>(Optional) Displays IP SLAs configuration details.</p>

- [Troubleshooting Tips, page 12](#)
- [What to Do Next, page 12](#)

## Troubleshooting Tips

- If the IP SLAs operation is not running and not generating statistics, add the **verify-data** command to the configuration of the operation (while configuring in IP SLA configuration mode) to enable data verification. When data verification is enabled, each operation response is checked for corruption. Use the **verify-data** command with caution during normal operations because it generates unnecessary overhead.
- Use the **debug ip sla trace** and **debug ip sla error** commands to help troubleshoot issues with an IP SLAs operation.

## What to Do Next

To add proactive threshold conditions and reactive triggering for generating traps (or for starting another operation) to an IP SLAs operation, see the “Configuring Proactive Threshold Monitoring” section.

operation)

To display and interpret the results of an IP SLAs operation, use the **show ip sla statistics** command. Check the output for fields that correspond to criteria in your service level agreement to determine whether the service metrics are acceptable.

# Configuration Examples for IP SLAs Multicast Support

- [Example: Multicast UDP Jitter Operation, page 12](#)

## Example: Multicast UDP Jitter Operation

```
Device# show ip sla endpoint-list

Endpoint-list Name: multicast
  Description:
    ip-address 192.0.2.1 port 1111
    ip-address 192.0.2.2 port 2222
    ip-address 192.0.2.3 port 3333

Device# show ip sla configuration 22

IP SLAs Infrastructure Engine-III
Entry number: 22
Owner:
Tag:
Operation timeout (milliseconds): 5000
Type of operation to perform: udp-jitter
Target address/Source address: 224.1.1.1/0.0.0.0
Target port/Source port: 2460/0
Type Of Service parameter: 0x0
Request size (ARR data portion): 32
Packet Interval (milliseconds)/Number of packets: 20/10
Verify data: No
Vrf Name:
Control Packets: enabled
Schedule:
  Operation frequency (seconds): 60 (not considered if randomly scheduled)
  Next Scheduled Start Time: Pending trigger
  Group Scheduled : FALSE
  Randomly Scheduled : FALSE
  Life (seconds): 3600
  Entry Ageout (seconds): never
  Recurring (Starting Everyday): FALSE
```

```

Status of entry (SNMP RowStatus): notInService
Threshold (milliseconds): 5000
Distribution Statistics:
  Number of statistic hours kept: 2
  Number of statistic distribution buckets kept: 1
  Statistic distribution interval (milliseconds): 20
Enhanced History:

sno      oper-id      dest-ip-addr      !<---Responders in endpoint list:
multicast
  1      976271337      192.0.2.1
  2      1632881300      192.0.2.2
  3      2138021658      192.0.2.3

## Feature Information for IPSLA Multicast Support

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.

**Table 1** *Feature Information for IPSLA Multicast Support*

Feature Name	Releases	Feature Information
IPSLA Multicast Support	15.2(4)M	This feature introduced the multicast UDP jitter operation for measuring and reporting statistics such as one way latency, jitter, and packet loss for each multicast receiver in a user-specified multicast group.
	15.3(1)S	
	Cisco IOS XE Release 3.8S	
	15.1(2)SG	
	Cisco IOS XE Release 3.4SG	
		The following commands were introduced or modified: <b>clock-tolerance ntp oneway</b> , <b>control (IP SLA)</b> , <b>dscp (IP SLA)</b> , <b>history distributions-of-statistics-kept</b> , <b>history enhanced</b> , <b>history hours-of-statistics-kept</b> , <b>ip-address (endpoint list)</b> , <b>operation-packet priority</b> , <b>owner</b> , <b>precision</b> , <b>show ip sla application</b> , <b>show ip sla configuration</b> , <b>show ip sla endpoint-list</b> , <b>show ip sla statistics</b> , <b>show ip sla statistics aggregated</b> , <b>tag (IP SLA)</b> , <b>timeout (IP SLA)</b> , <b>tos</b> , <b>tree-init</b> , <b>udp-jitter</b> , <b>verify-data (IP SLA)</b> , <b>vrf</b> .
