

Supported Device Table for DFM 2.0

Revised: 5 July 2005

The following tables list the devices supported by Device Fault Manager (DFM) 2.0. Devices are organized by device type. Each table lists the devices by family, model, and sysObjectIDs. DFM 1.x device classes are provided to help map the 1.x classes to the 2.x device types.

- [Table 13, Wireless](#)
- [Table 14, Third Party Servers](#)

The incremental device update (IDU) backend package is installed when you install Device Fault Manager 2.0. To see a list of all packages installed on your CiscoWorks server, from the CiscoWorks home page, select **Software Center > Software Update**. New versions of incremental device update packages may be available at www.cisco.com; you can download IDUs from Cisco.com by logging into Cisco.com and pointing your browser to: <http://www.cisco.com/cgi-bin/tablebuild.pl/cw2000-dfm>. The Readmes at this site list the devices that were added in each IDU.

Keep these points in mind when you view the device support table:

- This list contains the Cisco model names of all devices that are supported by DFM 2.0. Variants to the generic device (device model names that have unique extensions) are not supported unless they are specifically listed. The device support tables provide SysObjectIDs to help you verify which devices are supported.
- DFM does not support switch clusters. A switch cluster is a group of switches comprised of a master switch and slave switches. This relationship allows NMSs to query the master switch for information about the slave switches.

1. "Partial DFM support" indicates DFM will manage the device but may not report all device attributes because (1) the device operating system does not support one or more of the MIBs polled by DFM, and/or (2) the device MIB contains information that is not correctly populated.
2. DFM supports this device only if the latest DFM 2.0 IDU is installed. (To download this support, log into Cisco.com and point your browser to: <http://www.cisco.com/cgi-bin/tablebuild.pl/cw2000-dfm>.)
3. On the Catalyst 4503 and 4506, DFM supports the Supervisor Engine I and II running the CatOS operating system, and the Supervisor Engine III and IV running the IOS operating system.
4. On the Catalyst 4507, DFM supports the Supervisor Engine IV running the IOS operating system.
5. On the Catalyst 4006, DFM supports the Supervisor Engine III and IV running the IOS operating system.

- DFM will also classify Windows servers and domain controllers as Media Servers. Refer to Footnote 3.
- DFM supports this device only if the latest DFM 2.0 IDU is installed. (To download this support, log into Cisco.com and point your browser to: <http://www.cisco.com/cgi-bin/tablebuild.pl/cw2000-dfm>.)
- Windows Servers and Domain Controllers are classified as Media Servers if (1) CDP is enabled on them, OR (2) the HOST-RESOURCES-MIB attribute hrSWInstalledName is populated with the string *Unity*. (The latter indicates that it is a Unity Server, which DFM displays as a Media Server in the Host class.)
