

Readme for CiscoWorks Device Fault Manager 3.0.4 on Windows

This Readme is for CiscoWorks Device Fault Manager (DFM) 3.0.4 on Windows. It contains the following sections:

- [Description, page 1](#)
- [Related Documentation, page 2](#)
- [New Device Support, page 2](#)
- [Hardware and Software Requirements, page 5](#)
- [Downloading DFM 3.0.4, page 5](#)
- [Installing DFM 3.0.4, page 5](#)
- [Known DFM 3.0.4 Problems, page 7](#)
- [Resolved DFM Problems, page 8](#)

Description

DFM 3.0.4 is a collection of updated files necessary to provide support for the devices listed in [New Device Support, page 2](#).

Caution

You cannot remove DFM 3.0.4 after installing it; to return to your original configuration, you will have to uninstall and reinstall DFM. Therefore, you should save your configuration before installing DFM 3.0.4 as described in [Installing DFM 3.0.4, page 5](#).

DFM 3.0.4 contains only the updated files, not a complete DFM image.

Americas Headquarters:
Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA

Related Documentation

Information about DFM is available from Cisco.com. Go to http://www.cisco.com/en/US/products/sw/cscowork/ps2421/tsd_products_support_series_home.html.

Note

You should print out and read this document before installing DFM 3.0.4.

New Device Support

Table 1 lists the devices supported in Device Fault Manager 3.0.4.

For a list of all devices supported in Device Fault Manager 3.0.2 or 3.0.3, see the common LMS SDT, *Supported Devices Tables for LMS 3.0 December 2007 Update* on Cisco.com. To access this, go to:

http://www.cisco.com/en/US/docs/net_mgmt/ciscoworks_lan_management_solution/3.0.1/device_support/table/lms301sdt.html

Table 1 Device Support Provided in DFM 3.0.4

Device Type	Devices/ Modules Supported	sysObjectID	Class
Cisco Carrier Routing System	Cisco CRS-1 4-Slot Single-Shelf System	1.3.6.1.4.1.9.1.822	Router

Cisco ASA-5500 Series Adaptive Security Appliances	Cisco ASA-5580 Adaptive Security Appliance Security Context	1.3.6.1.4.1.9.1.915	Firewall
Cisco ASA-5500 Series Adaptive Security Appliances	Cisco ASA-5580 Adaptive Security Appliance System Context	1.3.6.1.4.1.9.1.916	Firewall

Hardware and Software Requirements

DFM 3.0.4 can be installed on DFM 3.0.2 or 3.0.3. [Installing DFM 3.0.4, page 5](#), provides instructions on how to verify the DFM version that is on your system.

For information on installing DFM, refer to the documents on Cisco.com at the URL:

http://www.cisco.com/en/US/products/sw/cscowork/ps2421/prod_installation_guides_list.html

Downloading DFM 3.0.4

DFM 3.0.4 files are downloaded in a compressed form. To prevent overwriting of files in existing directories as well as ensure that adequate disk space is available, you should download the files to a temporary working area of your server, and then uncompress the files.

Note

You can also use the Common Services Device Update function to download DFM 3.0.4. For more information, from the Common Services home page, select **Software Center > Software Update** and click **Help**.

-
- Step 1** Make sure you have adequate free space, then, from the DFM download page at <http://www.cisco.com/cgi-bin/tablebuild.pl/cw2000-dfm>, click the link to `cwdfm3_0_4_win.zip`, and follow the instructions to download the zip file to a temporary working area of your server.
- Step 2** Unzip all files into the temporary working area.
-

Installing DFM 3.0.4

Caution

You cannot remove DFM 3.0.4 after installing it; to return to your original configuration, you will have to uninstall and reinstall DFM. Therefore, you should save your configuration before installing DFM 3.0.4 as described in [Step 1](#).

-
- Step 1** Make sure that you have a backup of your configuration, in case you need to revert back to it. (DFM 3.0.4 cannot be uninstalled.)
- Step 2** Verify that DFM 3.0.2 or 3.0.3 is installed:
- a. From the Common Services home page, select **Software Center > Software Update**.
 - b. In the Products Installed table, verify that the Device Fault Manager row lists Version 3.0.2 or 3.0.3.
- Step 3** Move to the directory in which the unzipped DFM files reside, and run the installation script by double-clicking `cwdfm3_0_4_win.exe`.
- Step 4** Follow the prompts in the installation script. The options displayed by the installation script depend on your configuration.
- Step 5** When the installation is finished, click **Finish** to exit the installer.

Step 6 Verify the installation:

- a. From the Common Services home page, select **Software Center > Software Update**.
- b. In the Products Installed table, click Device Fault Manager.
- c. In the Patches Installed table, verify that the version corresponding to Device Fault Manager is 3.0.4.
You may have to stop and restart the CiscoWorks daemon manager. This is required if you applied DFM 3.0.4 to the following scenario:
 - a. You were running DFM 3.0 with Device Support Patch, and then
 - b. You upgraded to DFM 3.0.2 or 3.0.3

If either of these scenarios apply to you, stop and restart the CiscoWorks daemon manager:

```
# net stop crmdmgtd  
# net start crmdmgtd
```

**Note**

You must run these commands if these scenarios apply to you. Otherwise, some previously-supported devices may not be managed.

Step 7 Rediscover any devices that are in the Unsupported state using **Device Management > Rediscover/Delete** from the DFM home page.**Step 8** Remove the distribution files from the temporary working area on your server.

Known DFM 3.0.4 Problems

The following table describe the known problems in DFM 3.0.4. Unless otherwise specified, there is no workaround for these problems.

For a list of known problems in Device Fault Manager 3.0.2 or 3.0.3, refer to the Readmes. You can view them on Cisco.com by going to:

http://www.cisco.com/en/US/products/sw/cscowork/ps2421/prod_installation_guides_list.html

For the status of other DFM bugs that are due to device-specific problems, refer the documents on Cisco.com at this URL:

http://www.cisco.com/en/US/products/sw/cscowork/ps2421/prod_release_notes_list.html.

Table 2 Known Problems in DFM 3.0.4

Bug ID	Summary	Explanation
CSCso70605	IDU20 and IDU21: Warning alert is not generated for Operationally Down Card.	When the Module Status is set to 3 for 1.3.6.1.4.1.9.5.1.3.1.1.10, Warning alert should be generated for an Operationally Down Card as per the Syntax of the MIB. It is not generated. But a Critical alarm is generated when the Module Status is set to 4.
CSCso70635	IDU20: In Normal state, a Critical alert is generated for Temperature.	When the value for chassisTempAlarm is set as 2 for this OID, Critical alert is generated for the following devices: <ul style="list-style-type: none"> • 2960-PD-8TT-L - 1.3.6.1.4.1.9.1.952 • 2960-24LT-L - 1.3.6.1.4.1.9.1.951 Alerts must not be generated and the status must be Normal.
CSCso70617	IDU20: Card Operationally Down alarm is displaying two events instead of one.	When a card operationallydown alarm is generated for 1.3.6.1.4.1.9.9.117.1.2.1.1.2, AAD is displaying two events instead of one.
CSCso52084	Support for revised MIB values should be provided.	Alerts are not generated for the Environment components like temperature, power, fan, and voltage of some revised Mib values. Warning alert is not generated for Fan in IDU21. Support for revised MIB values should be provided.
CSCsv07021	IDU21: While migrating to DFM304 oid2type_Cisco.conf file is being overwritten.	During the restoration of the backup from DFM2.0.10 or DFM3.0.1 or DFM3.0.3 to DFM 3.0.4, oid2type_Cisco.conf is being overwritten in DFM3.0.4. As a result, all the IDU21 supported devices go to Unknown state.

Resolved DFM Problems

The following tables describe DFM problems that are resolved in DFM 3.0.4.

Table 3 *Problems Resolved in DFM 3.0.4*

Bug ID	Summary	Explanation
CSCsq55397	Notification trap community cannot be customized.	This problem has been resolved.
CSCsq80950	Editing Notification Groups makes the Java Process run; but Notification Group Edit window is not displayed.	This problem has been resolved.
CSCsq88500	DFM Traps are not generated for Cleared Alerts in LMS 3.0.	This problem has been resolved.
CSCsr25953	DFM is unable to manage ATM interfaces.	This problem has been resolved.
CSCsi01966	LMS3K-5K: SNMP Timeouts on rediscovering the learning devices at 40%.	This problem has been resolved.
CSCsm86515	Unable to enable All debugging through GUI.	This problem has been resolved.
CSCsk28660	Primary key for epm_alarm table and FHDeleteDevice is not unique.	This problem has been resolved.
