

Supported Image Import Features for Software Management

The following tables list the devices supported in the Software Management Import Image feature of RME 4.0.3 (RME 4.0 Service Pack 3), and RME 4.0.4. These tables also list the devices supported for Software Repository, Upgrade Analysis, and Supported Protocols.

Note:

- You must configure the Telnet and SSH credentials in Device and Credential Repository (**Common Services > Device and Credentials > Device Management**), if Telnet and SSH are the connection protocols (see the device tables) for the device. Software Management uses these credentials while importing the image from the device to the RME server.
- RME does not support End of Life (EoL) IOS image releases. For those devices that have EoL software images in them, upgrade to IOS supported software image versions which are not EoL images.

1. If you have installed RME 4.0, you can download RME 4.0 SP 3, which is part of the CiscoWorks LMS 2.5 November 2005 Update. (To download this support, log into Cisco.com and point your browser to:
<http://www.cisco.com/kobayashi/sw-center/cw2000/lan-planner.shtml>).

2. This device is available as part of RME 4.0.4. If you have installed RME 4.0.3, you can download RME 4.0.4. To download this, log into Cisco.com and point your browser to: <http://www.cisco.com/cgi-bin/tablebuild.pl/cw2000-rme>

3. Contact TAC (Technical Assistance Center) to access this support. You can also contact TAC at <http://www.cisco.com/public/support/tac/contacts.shtml>

4. Support for this specific device is available at : <http://cisco.com/cgi-bin/tablebuild.pl/cw2000-rme>

5. After adding the device into the DCR, and whenever the device is switched between the Single and Multi Security Context Modes, the device should be deleted and added again into the DCR. This is due to change in the sysobjid and also because the number of configurations for the device varies when there is switching between the modes.
