

Supported Image Distribution Features for Software Management

Resource Manager Essentials (RME) 4.0.5, is a part of the CiscoWorks LMS 2.6. RME 4.0.6 is an incremental device support software released over RME 4.0.5. You can download LMS 2.6 from this location: <http://www.cisco.com/cgi-bin/tablebuild.pl/lms26>.

You can download RME 4.0.6 from this location: <http://www.cisco.com/cgi-bin/tablebuild.pl/cw2000-rme>. The Readme for RME 4.0.6 is also available at the same location.

The following tables list the devices supported in the Software Management Image Distribution Features of RME 4.0.6.

- [Devices Supported in RME 4.0.6](#)

The following tables list the devices supported in the Software Management Image Distribution Features of RME 4.0.5.

This document is updated every time new device support is available for RME.

Note: RME does not support End of Life (EoL) IOS image releases. For those devices that have EoL software images in them, upgrade to IOS supported software image versions which are not EoL images.

Notes:

- Retry and undo jobs are applicable only for Software Distribution feature.
- Job based password is applicable only for Software Distribution feature.
- TFTP protocol is used for Image transfer between Remote Staged device and Destination devices.
- The System Software can be used for all types of Software Distribution. The Bootloader/Kick Start Software can be used for Software Distribution using Devices (Basic and Advanced). The Mica Modem Firmware, Microcom Modem Firmware, and CIP2 software can be used only for Software Distribution using Devices (Basic).
- You must configure the Telnet and SSH credentials in Device and Credential Repository (**Common Services > Device and Credentials > Device Management**), if the connection protocols (see the device tables) are Telnet and SSH. Software Management uses these credentials while distributing the image from the RME server to the device. These credentials are also used while rebooting the device, if the MIB instrumentation for rebooting through SNMP is not available.
- It is not recommended to use SCP to transfer the .tar files in Cat2960, Cat3560, Cat3750 series switches.

Devices Supported in RME 4.0.6

Device Type	Devices/Modules Supported	sysObjectID	Supported Image Types for Distribution				Software Distribution					Jobs			Connection Protocols	Image Transfer Protocols
			System Software	Bootloader	Mica Modem Firmware	Microcom Modem Firmware	By devices [Basic]	By devices [Advanced]	By remote image staging	Use Remote Staging Devices	Retry	Undo	Based Password

1. Only TFTP will be used for image transfer and this is applicable for Run-From-RAM devices only.

2. This is applicable for Run-From-RAM devices only.

3. This is applicable for Run-From-Flash devices only.

4. This is applicable only for 801 to 805 series running an image that does not support OLD-CISCO-FLASH-MIB.

5. This is applicable only for 801 to 805, if the running image on the device does not support OLD-CISCO-FLASH-MIB, then Telnet and SSH will be used as the connection protocol.

2. WLSE system software, WLSE_SW is supported in RME.

3. Support for this specific device is available at: <http://cisco.com/cgi-bin/tablebuild.pl/cw2000-rme>4. Contact TAC (Technical Assistance Center) to access this support. You can also contact TAC at <http://www.cisco.com/public/support/tac/contacts.shtml>

5. After adding the device into the DCR, and whenever the device is switched between the Single and Multi Security Context Modes, the device should be deleted and added again into the DCR. This is due to change in the sysobjid and also because the number of configurations for the device varies when there is switching between the modes.
 6. RME support for the device is untested. Support of this device category has already been tested in the earlier releases.
 7. SWIM support for the device is untested. Support of this device category has already been tested in the earlier releases.
 8. Software Management: Support for the module requires IP address of the parent Catalyst 6000 or 7600 device with proper Telnet credentials
 9. Patch distribution by device flow and patch distribution by patch flow is supported.
 10. SSH is untested.
 11. Support for dual supervisor modules is untested.
