

# Supported Image Import Features for Software Management

Resource Manager Essentials (RME) 4.0.5, is a part of the CiscoWorks LMS 2.6. RME 4.0.6 is an incremental device support software released over RME 4.0.5. You can download LMS 2.6 from this location: <http://www.cisco.com/cgi-bin/tablebuild.pl/lms26>

You can download RME 4.0.6 from this location: <http://www.cisco.com/cgi-bin/tablebuild.pl/cw2000-rme>. The Readme for RME 4.0.6 is also available at the same location.

The following table lists the devices supported in the Software Management Import Image Features of RME 4.0.6. The table also lists the devices supported for Software Repository, Upgrade Analysis, and Supported Protocols.

- [Devices Supported in RME 4.0.6](#)

The following tables list the devices supported in the Software Management Import Image Features of RME 4.0.5. These tables also list the devices supported for Software Repository, Upgrade Analysis, and Supported Protocols.

This document is updated every time new device support is available for RME.

- [Access Servers Supported in RME 4.0.5](#)
- [Cable Products Supported in RME 4.0.5](#)
- [Content Networking Devices Supported in RME 4.0.5](#)
- [Interfaces and Modules Supported in RME 4.0.5](#)
- [Optical Platforms Supported in RME 4.0.5](#)
- [Routers Supported in RME 4.0.5](#)
- [Security and VPN Devices Supported in RME 4.0.5](#)
- [Switches Supported in RME 4.0.5](#)
- [Universal Gateways Supported in RME 4.0.5](#)
- [Voice Gateways Supported in RME 4.0.5](#)
- [Wireless LAN Products Supported in RME 4.0.5](#)

## Note:

- RME does not support End of Life (EoL) IOS image releases. For those devices that have EoL software images in them, upgrade to IOS supported software image versions which are not EoL images.
- You must configure the Telnet and SSH credentials in Device and Credential Repository (**Common Services > Device and Credentials > Device Management**), if Telnet and SSH are the connection protocols (see the device tables) for the device. Software Management uses these credentials while importing the image from the device to the RME server.
- It is not recommended to use SCP to transfer the .tar files in Cat2960, Cat3560, Cat3750 series switches.

## Devices Supported in RME 4.0.6

Device Type	Devices/Modules Supported	sysObjectID	Add/Import Images					Software Repository Synchronization	Upgrade Analysis		Connection Protocols	Image Transfer Protocols
			Cisco.com	Device	File System	URL	Network		Cisco.com	Repository

2. Support for this specific device is available at: <http://cisco.com/cgi-bin/tablebuild.pl/cw2000-rme>

3. Contact TAC (Technical Assistance Center) to access this support. You can also contact TAC at <http://www.cisco.com/public/support/tac/contacts.shtml>

4. After adding the device into the DCR, and whenever the device is switched between the Single and Multi Security Context Modes, the device should be deleted and added again into the DCR. This is due to change in the sysobjid and also because the number of configurations for the device varies when there is switching between the modes.

5. RME support for the device is untested. Support of this device category has already been tested in the earlier releases.

6. SWIM support for the device is untested. Support of this device category has already been tested in the earlier releases.
7. Software Management: Support for the module requires IP address of the parent Catalyst 6000 or 7600 device with proper Telnet credentials
8. SSH is untested.
