

About this Guide

Note

The terms “Unidirectional Path Switched Ring” and “UPSR” may appear in Cisco literature. These terms do not refer to using Cisco ONS 15xxx products in a unidirectional path switched ring configuration. Rather, these terms, as well as “Path Protected Mesh Network” and “PPMN,” refer generally to Cisco’s path protection feature, which may be used in any topological network configuration. Cisco does not recommend using its path protection feature in any particular topological network configuration.

This section explains the objectives, intended audience, and organization of this publication and describes the conventions that convey instructions and other information.

Document Objectives

The *Cisco ONS 15327 Procedure Guide, Release 5.0* explains how to install, turn up, configure, and maintain Cisco ONS 15327 nodes and networks. Use this document in conjunction with the appropriate publications listed in the [Related Documentation](#) section.

Audience

To use this publication, you should be familiar with Cisco or equivalent optical transmission hardware and cabling, telecommunications hardware and cabling, electronic circuitry and wiring practices, and preferably have experience as a telecommunications technician.

Document Organization

This guide provides procedures for installation, turn up, provisioning and acceptance of ONS 15327 nodes and ONS 15327 designed networks. It is organized in a Cisco recommended work flow sequence for new installations, in addition to allowing easy access to procedures and tasks associated with adds, moves, and changes for existing installations.

Verification procedures are provided, where necessary, to allow contract vendors to complete the physical installation and then turn the site over to craft personnel for verification, provisioning, turn up and acceptance. The front matter of the book is present in the following sequence:

1. Title Page
2. Table of Contents
3. List of Figures
4. List of Tables
5. List of Procedures
6. List of Tasks

The information in the book follows a task oriented hierarchy using the elements described below.

Chapter (Director Level)

The guide is divided into logical work groups (chapters) that serve as director entry into the procedures. For example, if you are arriving on site after a contractor has installed the shelf hardware, proceed to [Chapter 1, “Install Hardware”](#) and begin verifying installation and installing cards. You may proceed sequentially (recommended) or locate the work you want to perform from the list of procedures on the first page of every chapter (or turn to the List of Procedures). [Table 1](#) describes the guide chapters.

Table 1 *Cisco ONS 15327 Procedure Manual Chapters*

Title	Summary
Chapter 1, “Install Hardware”	Includes procedures to install the Cisco ONS 15327 shelf, cards, and fiber-optic cable.
Chapter 2, “Connect the PC and Log into the GUI”	Includes procedures to install the Cisco Transport Controller (CTC), set up a computer for different connection types, and log into the Cisco ONS 15327.
Chapter 3, “Turn Up Node”	Includes procedures to verify the card installation; create users and assign security; set up name, date, time and contact information; set up network access, firewall access, and timing; create protection groups; and provision Simple Network Management Protocol (SNMP).
Chapter 4, “Turn Up Network”	Includes procedures to verify the node turn up, and provision and test the following networks: point-to-point, linear ADM, bidirectional line switched ring (BLSR), and path protection. It also includes procedures for subtending rings.
Chapter 5, “Create Circuits and VT Tunnels”	Includes procedures to verify network turn up; create manually or automatically routed circuits or VT tunnels; create unidirectional circuits with multiple drops; create VT aggregation points, half circuits, Ethernet circuits, and overhead circuits.
Chapter 6, “Manage Alarms”	Includes procedures to document existing node data, view and delete alarms, view alarm-affected circuits and LCD alarm counts, manage alarm profiles, filter alarms, suppress alarms, and provision external alarms.
Chapter 7, “Monitor Performance”	Includes procedures to change the performance monitoring (PM) display, monitor performance, and manage remote monitoring (RMON) thresholds.
Chapter 8, “Manage Circuits”	Includes procedures to view circuits and cross-connect resource usage, modify and delete circuits and tunnels, convert and upgrade CTC and TL1 circuits, monitor circuits, and create a J1 path trace.
Chapter 9, “Change Node Settings”	Includes procedures to change node management information, CTC network access and view; change or delete card protection settings; delete SONET data communication channels (DCC); and change node timing, security, and Simple Network Management Protocol (SNMP).
Chapter 10, “Change Port Settings”	Includes procedures to change transmission settings on electrical and optical ports in a Cisco ONS 15327.

Table 1 Cisco ONS 15327 Procedure Manual Chapters (continued)

Title	Summary
Chapter 11, “Upgrade Cards and Spans”	Includes procedures to prevent an OC-N protection switch during cross-connect upgrades, upgrade or downgrade cards, and upgrade spans automatically or manually.
Chapter 12, “Convert Network Configurations”	Includes procedures to convert network configurations, modify a BLSR, and manage BLSR switches.
Chapter 13, “Add and Remove Nodes”	Includes procedures to add and remove nodes Cisco ONS 15327 nodes from bidirectional line switched rings (BLSRs) and path protection.
Chapter 14, “Maintain the Node”	Includes procedures to inspect and manage the air filter, backup and restore the database, restore the node to factory configuration, off-load the security audit trail log, initiate external switching commands, revert software, clean fiber connectors, reset the XTC card using CTC, view Ethernet card maintenance information, change the node timing reference, view the timing report, and edit, import, and export network element (NE) defaults.
Chapter 15, “Power Down the Node”	Includes the procedure to power down the node.
Chapter 16, “DLPs B1 to B99”	Includes all current tasks (DLPs) from B1 to B99.
Chapter 17, “DLPs B100 to B199”	Includes all current tasks from B100 to B199.
Chapter 18, “DLPs B200 to B299”	Includes all current tasks from B200 to B299.
Chapter 19, “DLPs B300 to B399”	Includes all current tasks from B300 to B399.
Appendix A, “CTC Information and Shortcuts”	Includes a description of the CTC views and window features.
Appendix B, “Alternate Installation Procedures”	Includes installation procedures that can be used in place of some of the procedures contained in Chapter 1, “Install Hardware.”

Non-Trouble Procedure (NTP)

Each NTP is a list of steps designed to accomplish a specific procedure. Follow the steps until the procedure is complete. If you need more detailed instructions, refer to the Detailed Level Procedure (DLP) specified in the procedure steps.

Note

Throughout this guide, NTPs are referred to as “procedures” and DLPs are termed “tasks.” Every reference to a procedure includes its NTP number and every reference to a task includes its DLP number.

Detailed Level Procedure (DLP)

The DLP (task) supplies additional task details to support the NTP. The DLP lists numbered steps that lead you through completion of a task. Some steps require that equipment indications be checked for verification. When the proper response is not obtained, a trouble clearing reference is provided.

Related Documentation

Document Conventions

This publication uses the following conventions:

Convention	Application
boldface	Commands and keywords in body text.
<i>italic</i>	Command input that is supplied by the user.
[]	Keywords or arguments that appear within square brackets are optional.
{ x x x }	A choice of keywords (represented by x) appears in braces separated by vertical bars. The user must select one.
Ctrl	The control key. For example, where Ctrl + D is written, hold down the Control key while pressing the D key.
screen font	Examples of information displayed on the screen.
boldface screen font	Examples of information that the user must enter.
< >	Command parameters that must be replaced by module-specific codes.

**Note**

Means *reader take note*. Notes contain helpful suggestions or references to material not covered in the document.

**Caution**

Means *reader be careful*. In this situation, the user might do something that could result in equipment damage or loss of data.

**Warning****IMPORTANT SAFETY INSTRUCTIONS**

This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents. Use the statement number provided at the end of each warning to locate its translation in the translated safety warnings that accompanied this device. Statement 1071

SAVE THESE INSTRUCTIONS**Waarschuwing****BELANGRIJKE VEILIGHEIDSINSTRUCTIES**

Dit waarschuwingssymbool betekent gevaar. U verkeert in een situatie die lichamelijk letsel kan veroorzaken. Voordat u aan enige apparatuur gaat werken, dient u zich bewust te zijn van de bij elektrische schakelingen betrokken risico's en dient u op de hoogte te zijn van de standaard praktijken om ongelukken te voorkomen. Gebruik het nummer van de verklaring onderaan de waarschuwing als u een vertaling van de waarschuwing die bij het apparaat wordt geleverd, wilt raadplegen.

Where to Find Safety and Warning Information

For safety and warning information, refer to the *Cisco Optical Transport Products Safety and Compliance Information* document that accompanied the product. This publication describes the international agency compliance and safety information for the Cisco ONS 15327 systems. It also includes translations of the safety warnings that appear in the ONS 15327 system documentation.

Obtaining Documentation

Cisco documentation and additional literature are available on Cisco.com. Cisco also provides several ways to obtain technical assistance and other technical resources. These sections explain how to obtain technical information from Cisco Systems.

Cisco.com

You can access the most current Cisco documentation at this URL:

<http://www.cisco.com/univercd/home/home.htm>

You can access the Cisco website at this URL:

Ordering Documentation

You can find instructions for ordering documentation at this URL:

http://www.cisco.com/univercd/cc/td/doc/es_inpk/pdi.htm

You can order Cisco documentation in these ways:

- Registered Cisco.com users (Cisco direct customers) can order Cisco product documentation from the Ordering tool:

<http://www.cisco.com/en/US/partner/ordering/index.shtml>

- Nonregistered Cisco.com users can order documentation through a local account representative by calling Cisco Systems Corporate Headquarters (California, USA) at 408 526-7208 or, elsewhere in North America, by calling 1 800 553-NETS (6387).

Cisco Optical Networking Product Documentation CD-ROM

Optical networking-related documentation, including Cisco ONS 15327 product documentation, is available in a CD-ROM package that ships with your product. The Optical Networking Product Documentation CD-ROM is updated periodically and may be more current than printed documentation.

Documentation Feedback

You can send comments about technical documentation to bug-doc@cisco.com.

Obtaining Technical Assistance

For all customers, partners, resellers, and distributors who hold valid Cisco service contracts, Cisco Technical Support provides 24-hour-a-day, award-winning technical assistance. The Cisco Technical Support Website on Cisco.com features extensive online support resources. In addition, Cisco Technical Assistance Center (TAC) engineers provide telephone support. If you do not hold a valid Cisco service contract, contact your reseller.

Cisco Technical Support Website

The Cisco Technical Support Website provides online documents and tools for troubleshooting and resolving technical issues with Cisco products and technologies. The website is available 24 hours a day, 365 days a year, at this URL:

<http://www.cisco.com/techsupport>

Access to all tools on the Cisco Technical Support Website requires a Cisco.com user ID and password. If you have a valid service contract but do not have a user ID or password, you can register at this URL:
<http://tools.cisco.com/RPF/register/register.do>

**Note**

Use the Cisco Product Identification (CPI) tool to locate your product serial number before submitting a web or phone request for service. You can access the CPI tool from the Cisco Technical Support Website by clicking the **Tools & Resources** link under Documentation & Tools. Choose **Cisco Product Identification Tool** from the Alphabetical Index drop-down list, or click the **Cisco Product Identification Tool** link under Alerts & RMAs. The CPI tool offers three search options: by product ID or model name; by tree view; or for certain products, by copying and pasting **show** command output. Search results show an illustration of your product with the serial number label location highlighted. Locate the serial number label on your product and record the information before placing a service call.

Submitting a Service Request

Using the online TAC Service Request Tool is the fastest way to open S3 and S4 service requests. (S3 and S4 service requests are those in which your network is minimally impaired or for which you require product information.) After you describe your situation, the TAC Service Request Tool provides recommended solutions. If your issue is not resolved using the recommended resources, your service request is assigned to a Cisco TAC engineer. The TAC Service Request Tool is located at this URL:

<http://www.cisco.com/techsupport/servicerequest>

For S1 or S2 service requests or if you do not have Internet access, contact the Cisco TAC by telephone. (S1 or S2 service requests are those in which your production network is down or severely degraded.) Cisco TAC engineers are assigned immediately to S1 and S2 service requests to help keep your business operations running smoothly.

To open a service request by telephone, use one of the following numbers:

Asia-Pacific: +61 2 8446 7411 (Australia: 1 800 805 227)

EMEA: +32 2 704 55 55

USA: 1 800 553-2447

For a complete list of Cisco TAC contacts, go to this URL:

<http://www.cisco.com/techsupport/contacts>

Definitions of Service Request Severity

To ensure that all service requests are reported in a standard format, Cisco has established severity definitions.

Severity 1 (S1)—Your network is “down,” or there is a critical impact to your business operations. You and Cisco will commit all necessary resources around the clock to resolve the situation.

Severity 2 (S2)—Operation of an existing network is severely degraded, or significant aspects of your business operation are negatively affected by inadequate performance of Cisco products. You and Cisco will commit full-time resources during normal business hours to resolve the situation.

Severity 3 (S3)—Operational performance of your network is impaired, but most business operations remain functional. You and Cisco will commit resources during normal business hours to restore service to satisfactory levels.

Severity 4 (S4)—You require information or assistance with Cisco product capabilities, installation, or configuration. There is little or no effect on your business operations.
