

CHAPTER 6

Provision Transponder and Muxponder Cards

This chapter explains how to provision transponder (TXP), muxponder (MXP), Xponder (GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE), and ADM-10G cards. The provisioning must be performed before you provision the dense wavelength division multiplexing (DWDM) network and create circuits.

Note

The procedures and tasks described in this chapter for the Cisco ONS 15454 platform is applicable to the Cisco ONS 15454 M2 and Cisco ONS 15454 M6 platforms, unless noted otherwise.

Note

Unless otherwise specified, “ONS 15454” refers to both ANSI and ETSI shelf assemblies.

Before You Begin

Before performing any of the following procedures, investigate all alarms and clear any trouble conditions. Refer to the *Cisco ONS 15454 DWDM Troubleshooting Guide* as necessary.

Caution

Provisioning TXP and MXP cards can be service affecting. You should make all changes during a scheduled maintenance window.

This section lists the chapter procedures (NTPs). Turn to a procedure for applicable tasks (DLPs).

1. [NTP-G128 Manage Pluggable Port Modules, page 6-3](#)—Complete this procedure to provision a multirate pluggable port module (PPM), provision or change the optical line rate of a PPM, or delete a PPM. PPMs provide the fiber interface to the TXP, MXP, and ADM-10G cards. With the exception of the TXP_MR_10G card, all TXPs, MXPs, and ADM-10G cards accept PPMs.
2. [NTP-G33 Create a Y-Cable Protection Group, page 6-21](#)—As needed, complete this procedure for TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP cards that will be protected with Y-cable protection.
3. [NTP-G199 Create a Splitter Protection Group for the OTU2_XP Card, page 6-24](#)—As needed, complete this procedure to create a splitter protection group for an OTU2_XP card.
4. [NTP-G198 Create 1+1 Protection for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards, page 6-26](#)—As needed, complete this procedure to create 1+1 protection for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.

5. [NTP-G98 Provision the 2.5G Multirate Transponder Card Line Settings and PM Parameter Thresholds, page 6-28](#)—As needed, complete this procedure to change the transmission settings for TXP_MR_2.5G and TXPP_MR_2.5G cards.
6. [NTP-G96 Provision the 10G Multirate Transponder Card Line Settings, PM Parameters, and Thresholds, page 6-48](#)—As needed, complete this procedure to change the transmission settings for TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C cards.
7. [NTP-G292 Provision the 40G Multirate Transponder Card Line Settings, PM Parameters, and Thresholds, page 6-72](#)—As needed, complete this procedure to change the transmission settings for 40E-TXP-C and 40ME-TXP-C cards.
8. [NTP-G170 Provision the ADM-10G Card Peer Group, Ethernet Settings, Line Settings, PM Parameters, and Thresholds, page 6-92](#)—As needed, complete this procedure to provision the transmission settings for ADM-10G cards.
9. [NTP-G333 Add an ADM-10G card to an Existing Topology, page 6-116](#)—As needed, complete this procedure to add an ADM-10G card to an existing topology.
10. [NTP-G97 Modify the 4x2.5G Muxponder Card Line Settings and PM Parameter Thresholds, page 6-117](#)—As needed, complete this procedure to change the transmission settings for MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C cards.
11. [NTP-G99 Modify the 2.5G Data Muxponder Card Line Settings and PM Parameter Thresholds, page 6-138](#)—As needed, complete this procedure to change the transmission settings for MXP_MR_2.5G and MXPP_MR_2.5G cards.
12. [NTP-G148 Modify the 10G Data Muxponder Card Line Settings and PM Parameter Thresholds, page 6-156](#)—As needed, complete this procedure to change the transmission settings for MXP_MR_10DME_C, MXP_MR_10DME_L, and MXP_MR_10DMEX_C cards.
13. [NTP-G293 Modify the 40G Muxponder Card Line Settings and PM Parameter Thresholds, page 6-178](#)—As needed, complete this procedure to change the transmission settings for 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C cards.
14. [NTP-G281 Manage the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Channel Group Settings, page 6-201](#)—As needed, complete this procedure to change the channel group settings for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
15. [NTP-G283 Manage the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card CFM Settings, page 6-212](#)—As needed, complete this procedure to change the CFM settings for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
16. [NTP-G285 Manage the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card EFM Settings, page 6-225](#)—As needed, complete this procedure to change the EFM settings for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
17. [NTP-G287 Manage the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card REP Settings, page 6-230](#)—As needed, complete this procedure to change the REP settings for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
18. [NTP-G165 Modify the GE_XP, 10GE_XP, GE_XPE, 10GE_XPE Cards Ethernet Parameters, Line Settings, and PM Thresholds, page 6-236](#)—As needed, complete this procedure to change the transmission settings for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
19. [NTP-G314 Add a GE_XP or 10GE_XP Card on a FAPS Ring, page 6-279](#)—As needed, complete this procedure to add a GE_XP or 10GE_XP Card on a FAPS Ring.

20. [NTP-G197 Provision the OTU2_XP Card Line Settings, PM Parameters, and Thresholds, page 6-282](#)—As needed, complete this procedure to change the transmission settings for OTU2_XP cards.
21. [NTP-G162 Change the ALS Maintenance Settings, page 6-304](#)—As needed, complete this procedure to change the automatic laser shutdown settings for a TXP or MXP card.
22. [NTP-G192 Force FPGA Update, page 6-305](#)—As needed, complete this procedure to force an upgrade of the FPGA image on the MXP_MR_10DME_C, MXP_MR_10DME_L, and MXP_MR_10DMEX_C cards.
23. [NTP-G196 Force FPGA Update When the Card is Part of a Protection Group, page 6-307](#)—As needed, complete this procedure to force an upgrade of the FPGA image on the MXP_MR_10DME_C, MXP_MR_10DME_L, and MXP_MR_10DMEX_C cards when the card is part of a protection group.
24. [NTP-G232 Enabling Error Decorrelator, page 6-308](#)—As needed, complete this procedure to enable error decorrelator on a TXP_MR_10EX_C, MXP_2.5G_10EX_C, or MXP_MR_10DMEX_C card.

**Note**

Cisco ONS 15454 DWDM supports IBM's 5G DDR (Double Data Rate) InfiniBand¹ interfaces.

NTP-G128 Manage Pluggable Port Modules

Purpose	Complete this procedure to provision a multirate PPM, provision the optical line rate of a multirate PPM, or delete a single-rate or multirate PPM.
Tools/Equipment	None
Prerequisite Procedures	DLP-G63 Install an SFP or XFP, page 4-74
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

If a single-rate PPM is installed, the PPM screen will autoprovision and no further steps are necessary.

**Note**

When you autoprovision a PPM, initial alarm and TCA defaults are supplied by Cisco Transport Controller (CTC) depending on your port and rate selections and the type of PPM. These default values can be changed after you install the PPM.

**Note**

The hardware device that plugs into a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, or OTU2_XP card faceplate to provide a fiber interface to the card is called a Small Form-factor Pluggable (SFP or XFP). In CTC, SFPs and XFPs are called pluggable port modules (PPMs). SFPs/XFPs are hot-swappable input/output devices that plug into a port to link the port with the fiber-optic network. Multirate PPMs have provisionable port rates and payloads. For more information about SFPs and XFPs, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

1. 5G DDR InfiniBand is referred to as IB_5G.

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 to log into an ONS 15454 on the network. If you are already logged in, continue with Step 2.
- Step 2** Click the **Alarms** tab:
- Verify that the alarm filter is not turned on. See the “[DLP-G128 Disable Alarm Filtering](#)” task on page 10-26 as necessary.
 - Verify that no unexplained conditions appear. If unexplained conditions appear, resolve them before continuing. Refer to the *Cisco ONS 15454 DWDM Troubleshooting Guide*.
- Step 3** If you are provisioning a MXP_MR_2.5G or MXPP_MR_2.5G card, complete the “[DLP-G235 Change the 2.5G Data Muxponder Card Mode](#)” task on page 6-5. If not, continue with Step 4
- Step 4** If you are provisioning a MXP_MR_10DME_C, MXP_MR_10DME_L, or MXP_MR_10DMEX_C card, complete the “[DLP-G332 Change the 10G Data Muxponder Port Mode](#)” task on page 6-6. If not, continue with Step 5.
- Step 5** If you are provisioning a GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE card, complete the “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8. If not, continue with Step 6.
- Step 6** If you are provisioning a OTU2_XP card, complete the “[DLP-G452 Change the OTU2_XP Card Mode](#)” task on page 6-10. If not, continue with Step 7.
- Step 7** If you are provisioning a PPM on an ADM-10G card, complete the “[DLP-G411 Provision an ADM-10G PPM and Port](#)” task on page 6-9. If not, continue with Step 8.
- Step 8** Complete the “[DLP-G277 Provision a Multirate PPM](#)” task on page 6-11 for TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP ports with multirate PPMs. If you already preprovisioned the multirate PPM ([DLP-G273 Preprovision an SFP or XFP Slot](#), page 4-75), skip this step and continue with Step 9.
- Step 9** If you are provisioning an IBM ETR_CLO (External Time Reference – Control Link Oscillator) or InterSystem Coupling Link (ISC) service on the PPM, complete “[DLP-G274 Verify Topologies for ETR_CLO and ISC Services](#)” task on page 6-12. Otherwise, continue with Step 10.
- Step 10** Complete the “[DLP-G278 Provision the Optical Line Rate](#)” task on page 6-14 to assign a line rate to a TXP, MXP, or OTU2_XP port after the PPM is provisioned. (This task is not performed for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.)
- Step 11** If you need to delete a PPM at any point in this procedure, complete the “[DLP-G280 Delete a PPM](#)” task on page 6-19.

Stop. You have completed this procedure.

DLP-G235 Change the 2.5G Data Muxponder Card Mode

Purpose	This task changes the card mode for MXP_MR_2.5G and MXPP_MR_2.5G muxponder cards. The card mode determines which PPMs can be provisioned for the card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_2.5G or MXPP_MR_2.5G card where you want to change the card settings.
- Step 2** Click the **Provisioning > Line > SONET (ANSI)** or **SDH (ETSI)** tabs.
- Step 3** Locate the Trunk port table row and verify that the Service State column value is OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI). If the service state is correct, continue with [Step 6](#). If not, complete the following steps:
- Click the **Admin State** table cell and choose **OOS,DSBLD (ANSI)** or **Locked,Maintenance (ETSI)**.
 - Click **Apply**, then **Yes**.
- Step 4** Click the **Provisioning > Line > Client** tabs.
- Step 5** Locate the Trunk port table row and verify that the Service State column value is OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI). If the service state is correct, continue with Step 6. If not, complete the following steps:
- Click the **Admin State** table cell and choose **OOS,DSBLD (ANSI)** or **Locked,Maintenance (ETSI)**.
 - Click **Apply**, then **Yes**.
- Step 6** Click the **Provisioning > Card** tabs.
- Step 7** Change the Card Mode as needed:
- FC-GE—Choose this option if you will provision any of the following PPM port rates: FC1G (Ports 1-1 and 2-1 only), FC2G (Port 1-1 only), FICON1G (Ports 1-1 and 2-1 only), FICON2G (Port 1-1 only), and ONE_GE (Ports 1-1 through 8-1).
 - Mixed—Choose this option if you will provision any of the following PPM port rates: FC1G and ONE_GE (Port 1-1 only), ESCON (Ports 5-1 through 8-1 only)
 - ESCON—Choose this option if you will provision the ESCON PPM on Ports 1-1 through 8-1.

Note

The Provisioning > Card tab also has the display-only Tunable Wavelengths field. This field shows the supported wavelengths of the trunk port after the card is installed in the format: *first wavelength-last wavelength-frequency spacing-number of supported wavelengths*. For example, 1529.55nm-1561.83nm-50GHz-82.

- Step 8** Click **Apply**.

Step 9 Return to your originating procedure (NTP).

DLP-G332 Change the 10G Data Muxponder Port Mode

Purpose	This task changes the port mode for the MXP_MR_10DME_C, MXP_MR_10DME_L, and MXP_MR_10DMEX_C muxponder cards. The port mode determines which PPMs can be provisioned on the ports.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note The MXP_MR_10DME_C, MXP_MR_10DME_L, and MXP_MR_10DMEX_C cards have two port mode groups, one for Ports 1 through 4, and the second for Ports 5 through 8. To change the port mode, all ports within the selected port group must be in OOS (out-of-service) service state. Ports in the second port group do not need to be in OOS service state if you are not changing the port mode for the second port group. Before you change the port mode, you must also ensure that any PPM port rate provisioned for the selected port group is deleted (see [“DLP-G280 Delete a PPM” task on page 6-19](#)).

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_10DME_C, MXP_MR_10DME_L, or MXP_MR_10DMEX_C card where you want to change the port mode.
- Step 2** Click the **Provisioning > Card** tabs.
- Step 3** Change the port mode as described in [Table 6-1](#).

Note The PPM port rates are provisioned in the [“DLP-G277 Provision a Multirate PPM” task on page 6-11](#).

Table 6-1 10G Data Muxponder Card Port Modes

Parameter	Description	Options
Port 1-4 Mode	Sets the mode of operation for Ports 1-1 through 4-1.	Chose one of the following: - FC-GE_ISC—Choose this option if you will provision any of the following PPM port rates: FC1G (Ports 1-1 through 4-1), FC2G (Ports 1-1 and 3-1 only), FICON1G (Ports 1-1 through 4-1), FICON2G (Ports 1-1 and 3-1 only), ONE_GE (Ports 1-1 through 4-1), ISC3 COMPAT (Ports 1-1 through 4-1), ISC3 PEER 1G (Ports 1-1 through 4-1), and ISC3 PEER 2G (Ports 1-1 and 3-1 only). - FC4G—Choose this option if you will provision an FC4G or FICON4G PPM (Port 1-1 only).
Port 5-8 Mode	Sets the mode of operation for Ports 5-1 through 8-1.	Chose one of the following: - FC-GE_ISC—choose this option if you will provision any of the following PPM port rates: FC1G (Ports 5-1 through 8-1), FC2G (Ports 5-1 and 7-1 only), FICON1G (Ports 5-1 through 8-1), FICON2G (Ports 5-1 and 7-1 only), ONE_GE (Ports 5-1 through 8-1), ISC3 COMPAT (Ports 5-1 through 8-1), ISC3 PEER 1G (Ports 5-1 through 8-1), and ISC3 PEER 2G (Ports 5-1 and 7-1 only). - FC4G—choose this option if you will provision an FC4G or FICON4G PPM port rate (Port 5-1 only).

**Note**

The Provisioning > Cards tab also has a display-only Tunable Wavelengths field which shows the wavelengths supported by the card. If a MXP_MR_10DME_C card is installed, the 32 C-band wavelengths appear. If the MXP_MR_10DME_L card is installed, the 32 L-band wavelengths appear. If the MXP_MR_10DMEX_C card is installed, the 82 C-band wavelengths appear.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

**Note**

Loopbacks on MXP-MR-10DME are not applicable when Fiber Channel switches are present.

**Note**

If the Fiber Channel switch version is not present then the Distance Extension settings are not supported.

DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode

Purpose	This task changes the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE card mode. 10GE_XP and 10GE_XPE cards can be provisioned as a Layer 2 Ethernet switch or a 10G Ethernet TXP. GE_XP and GE_XPE cards can be provisioned as a Layer 2 Ethernet switch, 10G Ethernet MXP, or 20G Ethernet MXP.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the card mode.
- Step 2** In card view, click **Provisioning > Ether Ports > Ports**.
- Step 3** Verify that any provisioned client or trunk ports have an **OOS-MA,DSBLD** (ANSI) or **Locked-enabled,disabled** (ETSI) service state in the Service State column. If so, continue with [Step 4](#). If not, complete the following substeps.
- For the first port that is not out of service, in the Admin State column, choose **OOS,DSBLD** (ANSI) or **Locked,disabled** (ETSI).
 - Repeat [Step a](#) for each port that is not out of service.
 - Click **Apply**.
- Step 4** Click the **Provisioning > Card** tabs.
- Step 5** Choose one of the card modes shown in [Table 6-2](#).

Table 6-2 *GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Modes*

Mode	Cards	Description
L2 over DWDM	GE_XP 10GE_XP GE_XPE 10GE_XPE	Provisions the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE as a Layer 2 switch.
10GE TXP	10GE_XP 10GE_XPE	Provisions the 10GE_XP or 10GE_XPE as a 10 Gigabit Ethernet transponder. Traffic received on the 10GE client Port 1-1 is sent to 10 Gigabit Ethernet trunk Port 3-1, and traffic received on 10 Gigabit Ethernet client Port 2-1 is sent to 10 Gigabit Ethernet trunk Port 4-1.

Table 6-2 *GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Modes*

Mode	Cards	Description
10GE MXP	GE_XP GE_XPE	Provisions the GE_XP or GE_XPE as a 10 Gigabit Ethernet muxponder. Traffic received on Gigabit Ethernet client Ports 1-1 through 10-1 is multiplexed and sent to 10 Gigabit Ethernet trunk Port 21-1, and traffic received on Gigabit Ethernet client Ports 11-1 through 20-1 is multiplexed and sent to 10 Gigabit Ethernet trunk Port 22-1.
20GE MXP	GE_XP GE_XPE	Provisions the GE_XP or GE_XPE as a 20 Gigabit Ethernet muxponder. Traffic received on Gigabit Ethernet client Ports 1-1 through 20-1 is multiplexed and sent to 10 Gigabit Ethernet trunk Port 21-1. Trunk port 22-1 is not used.

The GE-XP and GE-XPE cards operating in 10GE MXP mode and configured for 100% traffic flow, do not drop frames when up to nine ports are in use. However, when all the ten ports are in use, some frames are dropped. When the tenth port is to be used, configure the Committed Info Rate (CIR) at 55% on any one of the ports. For more information about configuring the CIR, see the [“DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings” task on page 6-238](#).

Step 6 Click **Apply**, then click **Yes** in the confirmation dialog box.

Step 7 Return to your originating procedure (NTP).

DLP-G411 Provision an ADM-10G PPM and Port

Purpose	This task provisions a fixed-rate PPM and port on an ADM-10G PPM card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the ADM-10G card where you want to provision PPM settings.
- Step 2** Click the **Provisioning > Pluggable Port Modules** tabs.
- Step 3** In the Pluggable Port Modules area, click **Create**. The Create PPM dialog box appears.
- Step 4** In the Create PPM dialog box, complete the following:
- PPM—Choose the SFP you want to install from the drop-down list.
 - PPM Type—Choose the number of ports supported by your SFP from the drop-down list. If only one port is supported, **PPM (1 port)** is the only option.
- Step 5** Click **OK**. The newly created PPM appears in the Pluggable Port Modules area. The row in the Pluggable Port Modules area turns white and the Actual Equipment Type column lists the equipment name.
- Step 6** In the Pluggable Ports area, click **Create**. The Create Ports dialog box appears.

- Step 7** In the Create Ports dialog box, complete the following:
- **Port**—Choose the port you want to configure from the drop-down list.
 - **Port Type**—Choose the port type, such as OC-3, OC-12, OC-48, or ONE-GE from the drop-down list.
 - Ports 1 - 8 can only be OC-3, OC-12, or ONE_GE
 - Ports 9 - 12 can on be OC-3 or OC-12
 - Ports 13 - 16 can only be OC-3, OC-12, or OC-48
- Step 8** Click **OK**. The newly created port appears in the Pluggable Ports area. The port type you provisioned is listed in the Rate column.
- Step 9** If you want to provision a PPM or another port, repeat Steps 4 through 8.
- Step 10** Return to your originating procedure (NTP).

DLP-G452 Change the OTU2_XP Card Mode

Purpose	This task changes the OTU2_XP card mode. The card mode determines which PPMs can be provisioned for the card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Caution

Changing the card configuration to 10G Ethernet LAN Phy to WAN Phy automatically replaces the current port configurations (Ports 1 and 3) to 10G Ethernet and OC192. This resets and reboots the OTU2_XP card.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the OTU2_XP card where you want to change the card mode.
- Step 2** In card view, click the **Provisioning > Line > Ports** tab.
- Step 3** Verify that all provisioned client or trunk ports have an OOS-MA, DSBLD (ANSI) or Locked-enabled, disabled (ETSI) service state in the Service State column. If so, continue with [Step 4](#). If not, complete the following substeps.
- a. For the first port that is not out of service, in the Admin State column, choose **OOS, DSBLD (ANSI)** or **Locked, disabled (ETSI)**.
 - b. Repeat Step [a](#) for each port that is not out of service.
 - c. Click **Apply**.
- Step 4** Click the **Provisioning > Card** tab.
- Step 5** Change the Card Configuration as needed:
- **Transponder**—Choose this option to provision the OTU2_XP card as a transponder. Port pairs 1-3 and 2-4 are both configured as transponders. This is the default card configuration.

- **Standard Regen**—Choose this option to provision the OTU2_XP card as a standard regenerator (with E-FEC only on one port). Port pairs 1-3 and 2-4 are both configured as regenerators.
- **Enhanced FEC**—Choose this option to provision the OTU2_XP card as an E-FEC regenerator (with E-FEC on two ports). Port pair 3-4 is configured as enhanced regenerator. Ports 1 and 2 are not used.
- **Mixed**—Choose this option to provision the OTU2_XP card as a transponder and a standard regenerator (mixed configuration). One of the port pair (1-3 or 2-4) is configured as a transponder and the other port pair as a standard regenerator.
- **10G Ethernet LAN Phy to WAN Phy**—Choose this option to provision the OTU2_XP card to enable the 10G Ethernet LAN Phy to WAN Phy conversion. Port pair 1-3 supports LAN Phy to WAN Phy conversion. Port pair 2-4 can be configured either as a transponder or a standard regenerator.

Note If you revert to the previous release (release earlier than 9.10), be sure to disable the 10G Ethernet LAN Phy to WAN Phy conversion feature. If you do not disable the 10G Ethernet LAN Phy to WAN Phy feature, an error message stating that the user needs to disable 10G Ethernet LAN Phy to WAN Phy feature before reverting to the previous release is displayed.

Note [Table 6-140 on page 6-295](#) lists the Ethernet variables supported on Ports 1 and 3 of the OTU2_XP card that has the 10G Ethernet LAN Phy to WAN Phy enabled. When the card is in the 10G Ethernet LAN Phy to WAN Phy mode, no 10G FC RMONS are supported on Ports 2 and 4.

For more information on OTU2_XP card configuration rules, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

Step 6 Click **Apply**. Then click **Yes** in the confirmation dialog box.

Step 7 Return to your originating procedure (NTP).

DLP-G277 Provision a Multirate PPM

Purpose	This task provisions a multirate PPM on a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, or OTU2_XP card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note If the PPM was preprovisioned using the “[DLP-G273 Preprovision an SFP or XFP Slot](#)” task on [page 4-75](#) this task is unnecessary, unless the PPM has an Out-of-Service and Autonomous Management, Unassigned (OOS-AUMA,UAS) (ANSI) or unlocked-disabled, unassigned (ETSI) service state.

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, or OTU2_XP card where you want to provision PPM settings.
- Step 2** Click the **Provisioning > Pluggable Port Modules** tabs.
- Step 3** In the Pluggable Port Modules area, click **Create**. The Create PPM dialog box appears.
- Step 4** In the Create PPM dialog box, complete the following:
- **PPM**—Choose the PPM slot number where the SFP is installed from the drop-down list.
 - **PPM Type**—Choose the number of ports supported by your SFP from the drop-down list. If only one port is supported, **PPM (1 port)** is the only option.
- Step 5** Click **OK**. The newly created port appears in the Pluggable Port Modules area. The row in the Pluggable Port Modules area turns white and the Actual Equipment Type column lists the equipment name.
- Step 6** If you want to provision a PPM on another port, repeat Steps 3 through 5. If not, continue with [Step 7](#).
- Step 7** Return to your originating procedure (NTP).
-

DLP-G274 Verify Topologies for ETR_CLO and ISC Services

Purpose	This task verifies that the DWDM network topology can support the IBM ETR_CLO and ISC services.
Tools/Equipment	Cisco TransportPlanner site plan
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** Display your site plan in Cisco TransportPlanner.
- Step 2** Verify that the topology where you plan to run the ETR_CLO or ISC service can support the service. The following topologies support ETR_CLO or ISC:
- **Single span**—Two terminal sites with no intermediate sites in between and one of the following sets of cards installed:
 - 32MUX-O and 32DMX-O cards
 - 32WSS and 32DMX cards
 - 32WSS and 32-DMX-O cards
 - 40-MUX-C and 40-DMX-C/40-DMX-CE cards
 - 40-WSS-C/40-WSS-CE and 40-DMX-C/40-DMX-CE cards

[Figure 6-1](#) shows a single-span topology as displayed in Cisco TransportPlanner.

Figure 6-1 Single-Span Topology

- Point-to-Point—Two terminal sites with one of the following sets of cards installed:
 - 32MUX-O and 32DMX-O cards
 - 32WSS and 32DMX cards
 - 32WSS and 32-DMX-O cards
 - 40-MUX-C and 40-DMX-C/40-DMX-CE cards
 - 40-WSS-C/40-WSS-CE and 40-DMX-C/40-DMX-CE cards

Line amplifiers can be installed between the terminal sites, but intermediate (traffic terminating) sites cannot be installed. [Figure 6-2](#) shows a point-to-point topology as shown in Cisco TransportPlanner.

Figure 6-2 Point-to-Point Topology

- Two hubs—Two hub nodes in a ring with one of the following sets of cards installed:
 - 32MUX-O and 32DMX-O cards
 - 32WSS and 32DMX cards
 - 32WSS and 32-DMX-O cards
 - 40-MUX-C and 40-DMX-C/40-DMX-CE cards
 - 40-WSS-C/40-WSS-CE and 40-DMX-C/40-DMX-CE cards

Line amplifiers can be installed between the hubs. [Figure 6-3](#) shows two hub nodes with no line amplifier nodes installed. [Figure 6-4](#) shows two hub nodes with line amplifier nodes installed.

Figure 6-3 Hubs with No Line Amplifiers

Figure 6-4 Hubs with Line Amplifiers

Step 3 Return to your originating procedure (NTP).

DLP-G278 Provision the Optical Line Rate

Purpose	This task provisions the line rate for TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30 DLP-G277 Provision a Multirate PPM, page 6-11 DLP-G274 Verify Topologies for ETR_CLO and ISC Services, page 6-12 , if you are provisioning an ETR_CLO service.
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

The optical line rate for cards with single-rate PPMs is provisioned automatically when you complete the “[DLP-G277 Provision a Multirate PPM](#)” task on [page 6-11](#) if the trunk port is out of service. If the optical line rate was provisioned automatically, you do not need to complete this task for the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, MXP_2.5G_10EX_C, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP card. If the trunk port was in-service when you provisioned the PPM, complete this task to provision the optical line rate manually for those cards.

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP card where you want to provision PPM ports. If the data rate that you are provisioning is DV-6000, HDTV, ESCON, SDI/D1 Video, ISC1, ISC3 (for TXP_MR_2.5G and TXPP_MR_2.5G cards), or ETR_CLO, complete the following steps. Otherwise, continue with [Step 4](#).
- Click the **Provisioning > OTN > OTN Lines** tabs.
 - In the ITU-T G.709 OTN field for the respective PPM, choose **Disable**.
 - In the FEC field for the respective PPM, choose **Disable**.
 - Click **Apply**.
- Step 2** For the TXP_MR-10G card, click the **Provisioning > Data Rate Selection** tabs. For all other cards, go to [Step 4](#).
- Step 3** In the Data Rate Selection area, click **Create** and choose the type of port from the drop-down list. The supported port types are SONET (including 10G Ethernet WAN Phy) and 10G Ethernet LAN Phy.
- Step 4** Click the **Provisioning > Pluggable Port Modules** tabs.
- Step 5** In the Pluggable Ports area, click **Create**. The Create Port dialog box appears.
- Step 6** In the Create Port dialog box, complete the following:
- Port—Choose the port and port number from the drop-down list. The first number indicates the PPM in the Pluggable Port Modules area, and the second number indicates the port number on the PPM. For example, the first PPM with one port appears as 1-1 and the second PPM with one port appears as 2-1. The PPM number can be 1 to 4, but the port number is always 1.
 - Port Type—Choose the type of port from the drop-down list. The port type list displays the supported port rates on your PPM. See [Table 6-3 on page 6-16](#) for definitions of the supported rates on the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP card.
- Step 7** Click **OK**. The row in the Pluggable Ports area turns white if the physical SFP is installed and light blue if the SFP is not installed.
If the optical parameter values differ from the NE Default settings, change the port state to In-Service (for ANSI) or Unlocked (for ETSI) to synchronize the values with the NE Default settings.
- Step 8** Repeat [Steps 5](#) through [7](#) to configure the rest of the port rates as needed.

Table 6-3 PPM Port Types

Card	Port Type
TXP_MR_2.5G TXPP_MR_2.5G	• OC-3/STM1—155 Mbps • OC-12/STM4—622 Mbps • OC-48/STM16—2.48 Gbps • ONE_GE—One Gigabit Ethernet 1.125 Gbps • ESCON—Enterprise System Connection 200 Mbps (IBM signal) • DV6000—Proprietary signal from video vendor • SDI_D1_VIDEO—Serial Digital Interface and Digital Video signal type 1 • HDTV—High Definition Television • PASS-THRU—Not specified • FC1G—Fibre Channel 1.06 Gbps • FC2G—Fibre Channel 2.125 Gbps • FICON1G—Fiber connectivity 1.06 Gbps (IBM signal) • FICON2G—Fiber connectivity 2.125 Gbps (IBM signal) • ETR_CLO—External Time Reference—Control Link Oscillator • ISC compat—InterSystem Coupling Link 1 (ISC1) • ISC peer—InterSystem Coupling Link 3 (ISC3) • DVB-ASI — Proprietary signal from video vendor. Digital Video Broadcast - Asynchronous Serial Interface • ISC1— InterSystem Channel 1 Gbps (IBM signal)
MXP_2.5G_10G MXP_2.5G_10E MXP_2.5G_10E_C MXP_2.5G_10E_L MXP_2.5G_10EX_C	• OC-48/STM16—2.48 Gbps¹
TXP_MR_10G ²	• SONET (OC-192)/SDH (STM-64) including 10G Ethernet WAN Phy • 10G Ethernet LAN Phy
TXP_MR_10E TXP_MR_10E_C TXP_MR_10E_L TXP_MR_10EX_C	• SONET (OC-192)/SDH (STM-64) including 10G Ethernet WAN Phy—10 Gbps • 10G Ethernet LAN Phy—10 Gbps Ethernet • 10G Fibre Channel—10 Gbps Fibre Channel • (TXP_MR_10EX_C only) IB_5G

Table 6-3 PPM Port Types (continued)

Card	Port Type
40E-TXP-C 40ME-TXP-C	• SONET (OC-768)/SDH (STM-256) • 40G Ethernet LAN Phy • OTU3
MXP_MR_2.5G MXPP_MR_2.5G	If the card mode is FC_GE: • FC1G ISL—Fibre Channel 1.06 Gbps (Ports 1-1 and 2-1) • FC2G ISL—Fibre Channel 2.125 Gbps (Port 1-1 only) • FICON1G ISL—Fiber connectivity 1.06 Gbps (IBM signal) (Ports 1-1 and 2-1) • FICON2G ISL—Fiber connectivity 2.125 Gbps (IBM signal) (Port 1-1 only) • ONE_GE—One Gigabit Ethernet 1.125 Gbps (Ports 1-1 and 2-1 only) If the card mode is Mixed: • FC1G ISL—Fibre Channel 1.06 Gbps (Port 1-1 only) • FICON1G ISL—Fiber connectivity 1.06 Gbps (IBM signal) (Port 1-1 only) • ONE_GE—One Gigabit Ethernet 1.125 Gbps (Port 1-1 only) • ESCON—Enterprise System Connection 200 Mbps (IBM signal) (Ports 5-1 through 8-1) If the card mode is ESCON: • ESCON—Enterprise System Connection 200 Mbps (IBM signal) (Ports 1-1 through 8-1)

Table 6-3 PPM Port Types (continued)

Card	Port Type
MXP_MR_10DME_C MXP_MR_10DME_L MXP_MR_10DMEX_C	If the port mode is FC_GE_ISC: - FC1G—Fibre Channel 1.06 Gbps (Ports 1-1 through 8-1) - FC2G—Fibre Channel 2.125 Gbps (Ports 1-1, 3-1, 5-1, and 7-1 only; ports are not available if the port that follows—2-1, 4-1, 6-1, or 8-1—has a PPM provisioned.) - FICON1G—Fiber connectivity 1.06 Gbps (IBM signal) FICON2G—Fiber connectivity 2.125 Gbps (IBM signal) (Ports 1-1, 3-1, 5-1, and 7-1 only; ports are not available if the port that follows—2-1, 4-1, 6-1, or 8-1—has a PPM provisioned.) - ONE_GE—One Gigabit Ethernet 1.125 Gbps (Ports 1-1 through 8-1) - ISC COMPAT (Ports 1-1 through 8-1) - ISC3 PEER 1G (Ports 1-1 through 8-1) - ISC3 PEER 2G (Ports 1-1, 3-1, 5-1, and 7-1 only; ports are not available if the port that follows—2-1, 4-1, 6-1, or 8-1—has a PPM provisioned.) If the port mode is FC4G: - FC4G—Fibre Channel 4.25 Gbps (Ports 1-1 or 5-1 only; ports are not available if any of the three ports that follow has a PPM provisioned.) - FICON4G—Fiber connectivity 4.25 Gbps (IBM signal) (Ports 1-1 or 5-1 only; ports are not available if any of the three ports that follow has a PPM provisioned.)
40G-MXP-C 40E-MXP-C 40ME-MXP-C	- SONET (OC-192)/SDH (STM-64) - FC8G - FC10G - TEN_GE - OTU2

Table 6-3 PPM Port Types (continued)

Card	Port Type
GE_XP 10GE_XP GE_XPE 10GE_XPE	- GE_XP and GE_XPE client ports¹ 10GE_XP and 10GE_XPE client and trunk ports; GE_XP and GE_XPE trunk ports¹
OTU2_XP	- SONET (including 10G Ethernet WAN Phy)—10 Gbps 10G Ethernet LAN Phy—10 Gbps Ethernet 10G Fiber Channel—10 Gbps Fibre Channel - IB_5G—InfiniBand 5 Gbps Note If you have an OTU2 signal in which the OPU2 has been generated by multiplexing four ODU1 signals, choose SONET as the port rate. This allows the OTU2 signal to be transported transparently in standard or E-FEC regenerator configuration.

1. Automatically provisioned when the PPM is created if the trunk port is out of service.
2. Provisioned on the Data Rate Selection tab.

Step 9 Return to your originating procedure (NTP).

DLP-G280 Delete a PPM

Purpose	This task deletes PPM provisioning for SFPs or XFPs installed on TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, or OTU2_XP card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G63 Install an SFP or XFP, page 4-74 or DLP-G273 Preprovision an SFP or XFP Slot, page 4-75 DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

Before deleting a PPM, delete the PPM from the provisioning pane.

Note

This task does not apply to the TXP_MR_10G card. To change the TXP_MR_10G data rate, complete the “[DLP-G365 Provision the TXP_MR_10G Data Rate](#)” task on page 6-49.

**Note**

You cannot delete a PPM if the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or ADM-10G card is part of a regenerator group. For OTU2_XP card, you cannot delete a PPM if the card configuration is in Standard Regen or Enhanced FEC mode.

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, or OTU2_XP card where you want to delete PPM settings.
- Step 2** Verify that the PPM port Service State is **OOS,DSBLD**. If the PPM port is **OOS,DSBLD**, go to Step 3. If it is not OOS,DSBLD, follow the tasks in [NTP-G128 Manage Pluggable Port Modules, page 6-3](#), to change the Service State of the PPM port to **OOS,DSBLD**.
- Step 3** Click the **Provisioning > Pluggable Port Modules** tabs.
- Step 4** To delete a PPM and the associated ports:
- In the Pluggable Port Modules area, click the PPM that you want to delete. The highlight changes to dark blue.
 - Click **Delete**. The Delete PPM dialog box appears.
 - Click **Yes**. The PPM provisioning is removed from the Pluggable Port Modules area and the Pluggable Ports area.

**Note**

You cannot delete a PPM until its port is in the OOS,DSBLD state. You cannot delete a client port if the client is in the In Service and Normal (IS-NR) (ANSI) or Unlocked-enabled (ETSI) service state, is in a protection group, has a generic communications channel (GCC) or data communications channel (DCC), is a timing source, has circuits or overhead circuits, or transports Link Management Protocol channels or links. You can delete a client port (except the last port) if the trunk port is in service and the client port is in the OOS,DSBLD (ANSI) or Locked-enabled,disabled (ETSI) service state. You can delete the last client port only if the trunk port is in a OOS,DSBLD (ANSI) or Locked-enabled,disabled (ETSI) service state for all cards except the MXP_MR_2.5G, MXPP_MR_2.5G, MXP_MR_10DME_C, MXP_MR_10DME_L, and MXP_MR_10DMEX_C cards. For more information about port states, refer to the “Administrative and Service States” appendix in the *Cisco ONS 15454 DWDM Reference Manual*.

-
- Step 5** Verify that the PPM provisioning is deleted:
- In the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, or OTU2_XP card view, CTC shows an empty port after the PPM is deleted.
 - If the SFP or XFP is physically present when you delete the PPM provisioning, CTC transitions to the deleted state, the ports (if any) are deleted, and the PPM is represented as a gray graphic in CTC. The SFP or XFP can be provisioned again in CTC, or the equipment can be removed. If the equipment is removed, the graphic disappears.
- Step 6** If you need to remove the PPM hardware (the SFP or XFP), complete the [“DLP-G64 Remove an SFP or XFP” task on page 4-76](#).
- Step 7** Return to your originating procedure (NTP).
-

NTP-G33 Create a Y-Cable Protection Group

Purpose	This procedure creates a Y-cable protection group between the client ports of two TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP cards. For additional information about Y-cable protection, see the “Transponder and Muxponder Cards” chapter in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .
Tools/Equipment	Installed TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP card Cisco TransportPlanner Traffic Matrix
Prerequisite Procedures	“NTP-G15 Install the Common Control Cards” in the <i>Cisco ONS 15454 Hardware Installation Guide</i> “NTP-G14 Install DWDM Equipment” in the <i>Cisco ONS 15454 Hardware Installation Guide</i> DLP-G46 Log into CTC, page 3-30 NTP-G139 Verify Cisco Transport Planner Reports and Files, page 4-3
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

Y-cable protection is available for the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards when they are provisioned in 10GE MXP, 20GE MXP, or 10GE TXP mode. Y-cable protection cannot be provisioned for the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards when they are provisioned in L2-over-DWDM mode. Y-cable protection is available for the OTU2_XP card when it is provisioned in the TXP card mode. Y-cable protection is not supported on IB_5G.

Note

If you are provisioning Y-cable protection for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards, the Ethernet mode must be set to 1000 and 10000 Mbps respectively. To provision the Ethernet mode, see the “[DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings](#)” task on page 6-238.

Note

There is a traffic hit of upto a couple hundred milliseconds on the MXP_MR_2.5G and MXP_MR_10DME cards in Y-cable configuration when a fiber cut or SFP failure occurs on one of the client ports.

Note

For SONET or SDH payloads, Loss of Pointer Path (LOP-P) alarms can occur on a split signal if the ports are not in a Y-cable protection group.

- Step 1** View the Cisco TransportPlanner Traffic Matrix (see [Table 4-1 on page 4-4](#)) for your site. Verify the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP cards that need Y-cable protection groups. (Cards requiring Y-cable protection are indicated with “Y-Cable” in the Traffic Matrix table Protection Type column. Refer to the *Cisco TransportPlanner DWDM Operations Guide* for more information.)
- Step 2** Verify that the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP cards are installed according to the requirements specified in [Table 4-7 on page 4-111](#). [Table 6-4](#) lists the protection types available in the ONS 15454 for DWDM client cards.

Table 6-4 Protection Types

Protection Type	Cards	Description and Installation Requirements
Y-cable	MXP_2.5_10G MXP_2.5_10E MXP_2.5_10E_C MXP_2.5_10E_L TXP_MR_10EX_C TXP_MR_10G TXP_MR_10E TXP_MR_10E_C TXP_MR_10E_L TXP_MR_2.5G 40E-TXP-C 40ME-TXP-C MXP_MR_2.5G MXP_MR_10DME_C MXP_MR_10DME_L MXP_MR_10DMEX_C 40G-MXP-C 40E-MXP-C 40ME-MXP-C GE_XP ¹ 10GE_XP ² GE_XPE 10GE_XPE OTU2_XP	Pairs a working transponder or muxponder card or port with a protect transponder or muxponder card or port. The protect port must be on a different card than the working port and it must be the same card type as the working port. The working and protect port numbers must be the same, that is, Port 1 can only protect Port 1, Port 2 can only protect Port 2, and so on. Note The working and protect card must be in the same shelf for a multishelf node.

Table 6-4 **Protection Types**

Protection Type	Cards	Description and Installation Requirements
Splitter	TXPP_MR_2.5G MXPP_MR_2.5G	A splitter protection group is automatically created when a TXPP_MR_2.5G or MXPP_MR_2.5G card is installed. You can edit the splitter protection group name.
	OTU2_XP	A splitter protection group is configurable for the OTU2_XP card. You can create a splitter protection group on Ports 3 and 4 of the OTU2_XP card using the “NTP-G199 Create a Splitter Protection Group for the OTU2_XP Card” procedure on page 6-24.
1+1	GE_XP 10GE_XP GE_XPE 10GE_XPE	In the Layer 2 (L2) card mode 1+1 protection is provided to protect the card against client port and card failure.

1. When provisioned in 10GE MXP or 20GE MXP card mode.
2. When provisioned in 10GE TXP card mode.

- Step 3** Verify that pluggable ports are provisioned for the same payload and payload rate on the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP cards where you will create the Y-cable protection group:
- a. Display the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP card in card view.
 - b. Click the **Provisioning > Pluggable Port Module** tab.
 - c. Verify that a pluggable port is provisioned in the Pluggable Port Module area, and the payload type and rate is provisioned for it in the Pluggable Ports area. If they are not the same, for example, if the pluggable port and rate are not the same, you must either delete the provisioned rate and create a new rate to match using the [“DLP-G273 Preprovision an SFP or XFP Slot”](#) task on page 4-75 or replace the pluggable port (SFP or XFP) using the [“DLP-G64 Remove an SFP or XFP”](#) task on page 4-76.
- Step 4** In node view (single-shelf mode) or shelf view (multishelf mode), click the **Provisioning > Protection** tabs.
- Step 5** In the Protection Groups area, click **Create**.
- Step 6** In the Create Protection Group dialog box, enter the following:
- Name—Type a name for the protection group. The name can have up to 32 alphanumeric (a-z, A-Z, 0-9) characters. Special characters are permitted. For TL1 compatibility, do not use question mark (?), backslash (\), or double quote (") characters.
 - Type—Choose **Y Cable** from the drop-down list.
 - Protect Port—From the drop-down list, choose the port that will be the standby or protection port to the active port. The list displays the available transponder or muxponder ports. If transponder or muxponder cards are not installed, no ports appear in the drop-down list.
- After you choose the protect port, a list of available working ports appear in the Available Ports list. If no cards are available, no ports appear. If this occurs, you can not complete this task until you install the physical cards or preprovision the ONS 15454 slots using the [“DLP-G353 Preprovision a Slot”](#) task on page 4-55.
- Step 7** From the Available Ports list, select the port that will be protected by the port you selected in Protect Ports. Click the top arrow button to move the port to the Working Ports list.

Step 8 Complete the remaining fields:

- **Revertive**—Check this check box if you want traffic to revert to the working port after failure conditions remain corrected for the amount of time entered in the Reversion Time field.
- **Reversion time**—If Revertive is checked, select a reversion time from the drop-down list. The range is 0.5 to 12.0 minutes. The default is 5.0 minutes. Reversion time is the amount of time that will elapse before the traffic reverts to the working card. The reversion timer starts after conditions causing the switch are cleared.

**Note**

The Bidirectional switching option is available for Y-cable protection groups only in the following cases:

- On the MXP_MR_10DME card when ISC3_PEER_1G/ISC3_PEER_2G is the client payload.
- On the MXP_MR_10DME and MXP_MR_2.5G cards when Fibre Channel is the client payload. In this case Bidirectional switching is:
 - Automatically enabled when Distance Extension is enabled.
 - Automatically disabled when Distance Extension is disabled.

The Bidirectional switching option is available for all SONET and SDH 1+1 protection groups.

Step 9 Click **OK**.**Step 10** Repeat this procedure for every Y-cable protection group indicated in the Cisco TransportPlanner Traffic Matrix.

Stop. You have completed this procedure.

NTP-G199 Create a Splitter Protection Group for the OTU2_XP Card

Purpose	This procedure creates a splitter protection group between the trunk ports of an OTU2_XP card. For additional information about splitter protection, see the “Transponder and Muxponder Cards” chapter in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .
Tools/Equipment	Installed OTU2_XP card Cisco TransportPlanner Traffic Matrix
Prerequisite Procedures	“NTP-G15 Install the Common Control Cards” in the <i>Cisco ONS 15454 Hardware Installation Guide</i> “NTP-G14 Install DWDM Equipment” in the <i>Cisco ONS 15454 Hardware Installation Guide</i> DLP-G46 Log into CTC, page 3-30 NTP-G139 Verify Cisco Transport Planner Reports and Files, page 4-3
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

A splitter protection group is automatically created when a TXPP_MR_2.5G, MXPP_MR_2.5G, or PSM card is installed. You can edit the splitter protection group name for these cards. The splitter protection group is deleted when you delete the TXPP_MR_2.5G, MXPP_MR_2.5G, or PSM card.

**Note**

Splitter protection is available for the OTU2_XP card when it is provisioned in Transponder configuration only. In a splitter-protected Transponder configuration, Port 1 is the client port, Port 3 is the working trunk port, and Port 4 is the standby trunk port.

**Note**

For SONET or SDH payloads, Loss of Pointer Path (LOP-P) alarms can occur on a split signal if the ports are not in a splitter protection group.

- Step 1** View the Cisco TransportPlanner Traffic Matrix (see [Table 4-1 on page 4-4](#)) for your site. Verify which OTU2_XP card needs a splitter protection group. (Cards requiring splitter protection are indicated with “Splitter” in the Traffic Matrix table Protection Type column. Refer to the *Cisco TransportPlanner DWDM Operations Guide* for more information.)
- Step 2** Verify that the OTU2_XP card is installed according to the requirements specified in [Table 4-7 on page 4-111](#).
- Step 3** Verify that the pluggable port (SFP or XFP) slot is provisioned for the same payload rate as the pluggable port on the OTU2_XP card where you will create the splitter protection group:
 - a. Display the OTU2_XP card in card view.
 - b. Click the **Provisioning > Pluggable Port Module** tabs.
 - c. Verify that a pluggable port (SFP or XFP) slot is provisioned in the Pluggable Port Module area, and that the payload rate of the pluggable port (SFP or XFP) slot is same as the payload rate of the pluggable port on the OTU2_XP card provisioned in the Pluggable Ports area. If they are not the same, you must either delete the provisioned rate and create a new rate to match using the [“DLP-G273 Preprovision an SFP or XFP Slot” task on page 4-75](#) or replace the pluggable port (SFP or XFP) using the [“DLP-G64 Remove an SFP or XFP” task on page 4-76](#).
- Step 4** In node view (single-shelf mode) or shelf view (multishelf view), click the **Provisioning > Protection** tabs.
- Step 5** In the Protection Groups area, click **Create**.
- Step 6** In the Create Protection Group dialog box, enter the following:
 - Name—Type a name for the protection group. The name can have up to 32 alphanumeric (a-z, A-Z, 0-9) characters. Special characters are permitted. For TL1 compatibility, do not use question mark (?), backslash (\), or double quote (") characters.
 - Type—Choose **Splitter** from the drop-down list.
 - Protect Card—From the drop-down list, choose the port that will be the standby or protection port to the active port. The list displays the available OTU2_XP ports. If transponder or muxponder cards are not installed or if the trunk ports of the card are part of a regenerator group, no ports appear in the drop-down list.

After you choose the protect port, a list of available working ports appear in the Available Cards list. If no cards are available, no ports appear. If this occurs, you cannot complete this task until you install the physical cards or preprovision the ONS 15454 slots using the [“DLP-G353 Preprovision a Slot” task on page 4-55](#).

Step 7 From the Available Cards list, select the port that will be protected by the port you selected in Protect Cards. Click the top arrow button to move the port to the Working Cards list.

Step 8 Complete the remaining fields:

- **Revertive**—Check this check box if you want traffic to revert to the working port after failure conditions remain corrected for the amount of time entered in the Reversion Time field.
- **Reversion time**—If Revertive is checked, select a reversion time from the drop-down list. The range is 0.5 to 12.0 minutes. The default is 5.0 minutes. Reversion time is the amount of time that will elapse before the traffic reverts to the working card. The reversion timer starts after conditions causing the switch are cleared.

Note The Bidirectional Switching option is not applicable for splitter protection groups.

Step 9 Click **OK**.

Step 10 Repeat this procedure for every splitter protection group indicated in the Cisco TransportPlanner Traffic Matrix.

Stop. You have completed this procedure.

NTP-G198 Create 1+1 Protection for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards

Purpose	This procedure creates a 1+1 protection group to protect against client port and card failure of GE_XP, 10GE_XP, GE_XPE, 10GE_XPE cards. For additional information about 1+1 protection, see the “Transponder and Muxponder Cards” chapter in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .
Tools/Equipment	None
Prerequisite Procedures	“NTP-G15 Install the Common Control Cards” in the <i>Cisco ONS 15454 Hardware Installation Guide</i> “NTP-G14 Install DWDM Equipment” in the <i>Cisco ONS 15454 Hardware Installation Guide</i> NTP-G139 Verify Cisco Transport Planner Reports and Files, page 4-3
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 Complete the [“DLP-G46 Log into CTC” task on page 3-30](#) at the node where you want to protect the card against client port and card failure. If you are already logged in, continue with [Step 2](#).

- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed according to the requirements specified in [Table 4-7 on page 4-111](#).
- Step 3** Complete the [NTP-G242 Create an Internal Patchcord Manually, page 4-116](#) by selecting the Trunk to Trunk (L2) option, at the trunk port where you want to create 1+1 protection.
- Step 4** Complete the “[DLP-G461 Create a 1+1 Protection Group for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards](#)” task on [page 6-27](#) to create a protection group.
- Step 5** Configure the standby port behavior, by setting the Protection Action to **None** or **Squelch**. For detailed information on how to configure the standby port behavior, see the, “[DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings](#)” task on [page 6-238](#).

**Note**

Do not enable squelch in a 1 + 1 protection group, if the 100FX, 100LX, and ONS-SE-ZE-EL SFP are used in the protection group and is connected to the peer via the parallel cable (not Y-cable).

**Note**

When you configure L2 1 + 1 protection on 10GE_XP and 10GE_XPE cards, set the Protection Action to **None** on the client ports. Setting the Protection Action as **Squelch** results in unexpected switching behavior.

- Step 6** Configure the standby and active port speed, by setting the mode parameter to Auto or 1000 or any other values. For detailed information on how to configure the standby port behavior, see the “[DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings](#)” task on [page 6-238](#).
- Stop. You have completed this procedure.**

DLP-G461 Create a 1+1 Protection Group for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards

Purpose	This procedure creates a 1+1 protection group for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE slots where internal patchcords were created.
Tools/Equipment	None
Prerequisite Procedures	DLP-G344 Verify Provisionable and Internal Patchcords, page 8-41
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or multishelf view (multishelf mode), click the **Provisioning > Protection** tabs.
- Step 2** In the Protection Groups area, click **Create**.
- Step 3** In the Create Protection Group dialog box, enter the following:
- Name—Type a name for the protection group. The name can have up to 32 alphanumeric (a-z, A-Z, 0-9) characters. Special characters are permitted. For TL1 compatibility, do not use question mark (?), backslash (\), or double quote (") characters.

- **Type**—Choose **L2 1+1 (port)** from the drop-down list.
- **Protect Port**—From the drop-down list, choose the port that will be the standby or protection port for the active port. The list displays the available transponder or muxponder ports. If transponder or muxponder cards are not installed, no ports appear in the drop-down list.

After you choose the protect port, a list of available working ports appear in the Available Ports list. If no cards are available, no ports appear. If this occurs, you cannot complete this task until you install the physical cards or preprovision the ONS 15454 slots using the [“DLP-G353 Preprovision a Slot” task on page 4-55](#).

- Step 4** From the Available Ports list, select the port that will be protected by the port you selected in the Protected Port drop-down list. Click the top arrow button to move the port to the Working Ports list.
- Step 5** Complete the remaining fields:
- **Revertive**—Check this check box if you want traffic to revert to the working port after failure conditions remain corrected for the amount of time entered in the Reversion Time field.
 - **Reversion time**—If Revertive is checked, select a reversion time from the drop-down list. The range is 0.5 to 12.0 minutes. The default is 5.0 minutes. Reversion time is the amount of time that will elapse before the traffic reverts to the working card. The reversion timer starts after conditions causing the switch are cleared.

The bidirectional switching option is available for SONET and SDH 1+1 protection groups.

- Step 6** Click **OK**.
- Step 7** Repeat this procedure for every 1+1 protection group indicated in the Cisco TransportPlanner Traffic Matrix.
- Step 8** Return to your originating procedure (NTP).

NTP-G98 Provision the 2.5G Multirate Transponder Card Line Settings and PM Parameter Thresholds

Purpose	This procedure changes the line and threshold settings for TXP_MR_2.5G and TXPP_MR_2.5G transponder cards.
Tools/Equipment	None
Prerequisite Procedures	NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 DLP-G63 Install an SFP or XFP, page 4-74 DLP-G277 Provision a Multirate PPM, page 6-11 (if necessary) DLP-G278 Provision the Optical Line Rate, page 6-14 (if necessary)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** Complete the [“DLP-G46 Log into CTC” task on page 3-30](#) at the node where you want to change the transponder card settings. If you are already logged in, continue with [Step 2](#).

- Step 2** As needed, complete the “[NTP-G103 Back Up the Database](#)” procedure on page 14-2 to preserve the existing transmission settings.
- Step 3** Perform any of the following tasks as needed:
- [DLP-G229 Change the 2.5G Multirate Transponder Card Settings](#), page 6-29
 - [DLP-G230 Change the 2.5G Multirate Transponder Line Settings](#), page 6-30
 - [DLP-G231 Change the 2.5G Multirate Transponder Line Section Trace Settings](#), page 6-33
 - [DLP-G232 Change the 2.5G Multirate Transponder SONET or SDH Line Threshold Settings](#), page 6-35
 - [DLP-G320 Change the 2.5G Multirate Transponder Line RMON Thresholds for 1G Ethernet or 1G FC/FICON Payloads](#), page 6-38
 - [DLP-G305 Provision the 2.5G Multirate Transponder Trunk Port Alarm and TCA Thresholds](#), page 6-39
 - [DLP-G306 Provision the 2.5G Multirate Transponder Client Port Alarm and TCA Thresholds](#), page 6-41
 - [DLP-G234 Change the 2.5G Multirate Transponder OTN Settings](#), page 6-45
 - [DLP-G367 Change the 2.5G Multirate Transponder Trunk Wavelength Settings](#), page 6-34
- Stop. You have completed this procedure.**
-

DLP-G229 Change the 2.5G Multirate Transponder Card Settings

Purpose	This task changes the card settings for TXP_MR_2.5G and TXPP_MR_2.5G transponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_2.5G or TXPP_MR_2.5G card where you want to change the card settings.
- Step 2** Click the **Provisioning > Card** tabs.
- Step 3** Modify any of the settings described in [Table 6-5](#).

Note The Card subtab Framing Type and Tunable Wavelengths fields are display-only. Framing Type shows the card framing type, either SONET or SDH, depending on whether the card is installed in an ANSI or ETSI chassis. The Tunable Wavelengths field shows the tunable wavelengths for the physical TXP_MR_2.5G or TXPP_MR_2.5G that is installed.

Table 6-5 *TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card Settings*

Parameter	Description	Options
Termination Mode	Sets the mode of operation (option only supported for SONET/SDH payloads). Refer to the “Transponder and Muxponder Cards” chapter in the <i>Cisco ONS 15454 DWDM Reference Manual</i> for more details.	- Transparent - Section (ANSI) or Regeneration Section (ETSI) - Line (ANSI) or Multiplex Section (ETSI)
Regeneration Peer Slot	Sets the slot containing another TXP_MR_2.5G or TXPP_MR_2.5G card to create a regeneration peer group. A regeneration peer group facilitates the management of two TXP_MR_2.5G or TXPP_MR_2.5G cards that are needed to perform a complete signal regeneration. The regeneration peer group synchronizes provisioning of the two cards. Payload type and ITU-T G.709 optical transport network (OTN) changes made on one TXP_MR_2.5G or TXPP_MR_2.5G card are reflected on the peer TXP_MR_2.5G or TXPP_MR_2.5G card. Note Y-cable protection groups cannot be created on TXP_MR_2.5G or TXPP_MR_2.5G cards that are in a regeneration peer group.	- None 1 2 3 4 5 6 12 13 14 15 16 17
Regeneration Group Name	Sets the regeneration peer group name.	User defined

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G230 Change the 2.5G Multirate Transponder Line Settings

Purpose	This task changes the line settings for the client port of the TXP_MR_2.5G and TXPP_MR_2.5G transponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_2.5G or TXPP_MR_2.5G card where you want to change the line settings.
- Step 2** Click the **Provisioning > Line > SONET** tabs.
- Step 3** Modify any of the settings described in [Table 6-6](#).

**Note**

The 2.5G multirate transponder trunk settings are provisioned in the “[DLP-G305 Provision the 2.5G Multirate Transponder Trunk Port Alarm and TCA Thresholds](#)” task on page 6-39.

Table 6-6 *TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card Line Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number.	1 2 (Trunk) 3 (Trunk) (TXPP_MR_2.5G card only)
Port Name	The user can assign a logical name for each of the ports shown by filling in this field.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “ DLP-G104 Assign a Name to a Port ” task on page 8-3.
Admin State	Sets the port service state unless network conditions prevent the change. For more information about administrative states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS (ANSI) or Unlocked (ETSI) - IS,AINS (ANSI) or Unlocked,automaticInService (ETSI) - OOS,DSBLD (ANSI) or Locked,disabled (ETSI) - OOS,MT (ANSI) or Locked,maintenance (ETSI)
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR (ANSI) or Unlocked-enabled (ETSI) - OOS-AU,AINS (ANSI) or Unlocked-disabled, automaticInService (ETSI) - OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI) - OOS-MA,MT (ANSI) or Locked-enabled,maintenance (ETSI)
SF BER	(OC-N and STM-N payloads only) Sets the signal fail bit error rate.	1E-3 1E-4 1E-5
SD BER	(OC-N and STM-N payloads only) Sets the signal degrade bit error rate.	1E-5 1E-6 1E-7 1E-8 1E-9

Table 6-6 *TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card Line Settings (continued)*

Parameter	Description	Options
ALS Mode	Sets the automatic laser shutdown (ALS) function.	- Disabled (default) - Auto Restart - Manual Restart - Manual Restart for Test
Reach	Displays the optical reach distance of the client port.	Options: ANSI/ETSI - Autoprovision/Autoprovision (default) - SR - SR 1/I-1—Short reach up to 2-km distance - IR 1/S1—Intermediate reach, up to 15-km distance - IR 2/S2—Intermediate reach up to 40-km distance - LR 1/L1—long reach, up to 40-km distance - LR 2/L2—long reach, up to 80-km distance - LR 3/L3—long reach, up to 80-km distance
Wavelength	Displays the wavelength of the client port.	- First Tunable Wavelength - Further wavelengths: 1310 nm through 1560.61 nm, 100-GHz ITU spacing; coarse wavelength division multiplexing (CWDM) spacing Note: supported wavelengths are marked by asterisks (**)
AINS Soak	(OC-N and STM-N payloads only) Sets the automatic in-service soak period.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments
Type	(OC-N and STM-N payloads only) The optical transport type.	- SONET - SDH

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G231 Change the 2.5G Multirate Transponder Line Section Trace Settings

Purpose	This task changes the section trace settings for TXP_MR_2.5G and TXPP_MR_2.5G transponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

This task only applies to SONET services.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_2.5G or TXPP_MR_2.5G card where you want to change the section trace settings.
- Step 2** Click the **Provisioning > Line > Section Trace** tabs.
- Step 3** Modify any of the settings described in [Table 6-7](#).

Table 6-7 *TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card Section Trace Settings*

Parameter	Description	Options
Port	(Display only) Port number.	1 2 (Trunk) 3 (Trunk) (TXPP_MR_2.5G only)
Received Trace Mode	Sets the trace mode.	- Off/None - Manual
Disable AIS/RDI on TIM-S	If an TIM on Section overhead alarm arises because of a J0 overhead string mismatch, no alarm indication signal is sent to downstream nodes if this box is checked.	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)
Transmit Section Trace String Size	Sets the trace string size.	1 byte 16 byte
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size

Table 6-7 *TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card Section Trace Settings (continued)*

Parameter	Description	Options
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this display updated automatically.	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 seconds.	Checked/unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G367 Change the 2.5G Multirate Transponder Trunk Wavelength Settings

Purpose	This task changes the trunk wavelength settings for the TXP_MR_2.5G and TXPP_MR_2.5G cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_2.5G or TXPP_MR_2.5G card where you want to change the trunk wavelength settings.
- Step 2** Click the **Provisioning > Line > Wavelength Trunk Settings** tabs.
- Step 3** Modify any of the settings as described in [Table 6-8](#).

Table 6-8 *TXP_MR_2.5G and TXPP_MR_2.5G Card Wavelength Trunk Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number.	2 (Trunk) 3 (Trunk) (TXPP_MR_2.5G only)
Wavelength	The wavelength provisioned for the trunk.	- First Tunable Wavelength - Further wavelengths in 100-GHz ITU-T, C-band spacing. If the card is installed, the wavelengths it carries are identified with two asterisks. Other wavelengths have a dark grey background. If the card is not installed, all wavelengths appear with a dark grey background.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G232 Change the 2.5G Multirate Transponder SONET or SDH Line Threshold Settings

Purpose	This task changes the line threshold settings for TXP_MR_2.5G and TXPP_MR_2.5G transponder cards carrying OC-3/STM-1, OC-12/STM-4, and OC-48/STM-16 payloads.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_2.5G or TXPP_MR_2.5G card where you want to change the line threshold settings.

Step 2 Click the **Provisioning > Line Thresholds** tabs.

Note You must modify Near End and Far End independently; 15 Min and 1 Day independently; and Line and Section independently. To do so, choose the appropriate radio button and click **Refresh**.

Step 3 Modify any of the settings in [Table 6-9](#).

**Note**

Some parameters and options in [Table 6-9](#) do not apply to all TXP_MR_2.5G or TXPP_MR_2.5G cards. If a parameter or option does not apply, that parameter or option does not appear in CTC.

Table 6-9 ***TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card Line Thresholds Settings for OC-3/STM-1, OC-12/STM-4, and OC-48/STM-16 Payloads***

Parameter	Description	Options - ANSI	Options - ETSI
Port	(Display only) Port number	1 2 (Trunk) 3 (Trunk) (TXPP_MR_2.5G only)	1 2 (Trunk) 3 (Trunk) (TXPP_MR_2.5G only)
EB	Path Errored Block indicates that one or more bits are in error within a block	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .
CV	Coding violations	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	—
ES	Errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .

Table 6-9 *TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card Line Thresholds Settings for OC-3/STM-1, OC-12/STM-4, and OC-48/STM-16 Payloads (continued)*

Parameter	Description	Options - ANSI	Options - ETSI
SES	Severely errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh.	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh.
FC	(Line or Multiplex Section only) Failure count	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh.	—
SEFS	(Near End Section or Regeneration Section only) Severely errored framing seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh.	—
UAS	Unavailable seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh.	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh.
BBE	Background block errors	—	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh.

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

DLP-G320 Change the 2.5G Multirate Transponder Line RMON Thresholds for 1G Ethernet or 1G FC/FICON Payloads

Purpose	This task changes the line remote monitoring (RMON) threshold settings for TXP_MR_2.5G and TXPP_MR_2.5G transponder cards carrying the 1G Ethernet or 1G FC/FICON payloads.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In card view, display the TXP_MR_2.5G or TXPP_MR_2.5G card where you want to change the line threshold settings.
- Step 2** Click the **Provisioning > Line Thresholds > RMON Thresholds** tabs.
- Step 3** Click **Create**. The Create Threshold dialog box appears.
- Step 4** From the Port drop-down list, choose the applicable port.
- Step 5** From the Variable drop-down list, choose an Ethernet variable. See [Table 6-10](#) for a list of available Ethernet variables.

Table 6-10 *TXP_MR_2.5G and TXPP_MR_2.5G Card 1G Ethernet and 1G FC/FICON Thresholds*

Variable	Description
ifInErrors	Number of inbound packets that contained errors preventing them from being delivered to a higher-layer protocol.
rxTotalPkts	Total number of received packets.
8b10bStatsEncodingDispErrors	Number of IETF 8b10b disparity violations on the Fibre Channel line side.
8b10bIdleOrderedSets	Number of received packets containing idle ordered sets.
8b10bNonIdleOrderedSets	Number of received packets containing non-idle ordered sets.
8b10bDataOrderedSets	Number of received packets containing data ordered sets.

- Step 6** From the Alarm Type drop-down list, indicate whether the event will be triggered by the rising threshold, the falling threshold, or both the rising and falling thresholds.

- Step 7** From the Sample Type drop-down list, choose either **Relative** or **Absolute**. Relative restricts the threshold to use the number of occurrences in the user-set sample period. Absolute sets the threshold to use the total number of occurrences, regardless of time period.
- Step 8** Enter the appropriate number of seconds for the Sample Period.
- Step 9** Enter the appropriate number of occurrences for the Rising Threshold.
- For a rising type of alarm, the measured value must move from below the falling threshold to above the rising threshold. For example, if a network is running below a rising threshold of 1000 collisions every 15 seconds and a problem causes 1001 collisions in 15 seconds, the excess occurrences trigger an alarm.
- Step 10** Enter the appropriate number of occurrences in the Falling Threshold field. In most cases a falling threshold is set lower than the rising threshold.
- A falling threshold is the counterpart to a rising threshold. When the number of occurrences is above the rising threshold and then drops below a falling threshold, it resets the rising threshold. For example, when the network problem that caused 1001 collisions in 15 seconds subsides and creates only 799 collisions in 15 seconds, occurrences fall below a falling threshold of 800 collisions. This resets the rising threshold so that if network collisions again spike over a 1000 per 15-second period, an event again triggers when the rising threshold is crossed. An event is triggered only the first time a rising threshold is exceeded (otherwise, a single network problem might cause a rising threshold to be exceeded multiple times and cause a flood of events).
- Step 11** Click **OK**.
- Step 12** Return to your originating procedure (NTP).

DLP-G305 Provision the 2.5G Multirate Transponder Trunk Port Alarm and TCA Thresholds

Purpose	This task changes the TXP_MR_2.5G and TXPP_MR_2.5G trunk port alarm and threshold crossing alert (TCA) thresholds.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

In this task, trunk port refers to Port 2 for TXP_MR_2.5G cards, and to Ports 2 and 3 for TXPP_MR_2.5G cards.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_2.5G or TXPP_MR_2.5G card where you want to change the trunk port alarm and TCA settings.
- Step 2** Click the **Pluggable Port Modules** tab. Under Pluggable Ports, record the Rate that is provisioned.
- Step 3** Look up the rate in [Table 6-11](#) and note whether it is 2R or 3R.

Table 6-11 2R and 3R Mode and ITU-T G.709 Compliance by Client Interface

Client Interface	Input Bit Rate	3R vs. 2R	ITU-T G.709
OC-48/STM-16	2.488 Gbps	3R	On or Off
DV-6000	2.38 Gbps	2R	—
2 Gigabit Fibre Channel (2G-FC)/fiber connectivity (FICON)	2.125 Gbps	3R ¹	On or Off
High-Definition Television (HDTV)	1.48 Gbps	2R	—
Gigabit Ethernet (GE)	1.25 Gbps	3R	On or Off
1 Gigabit Fibre Channel (1G-FC)/FICON	1.06 Gbps	3R	On or Off
OC-12/STM-4	622 Mbps	3R	On or Off
OC-3/STM-1	155 Mbps	3R	On or Off
Enterprise System Connection (ESCON)	200 Mbps	2R	—
SDI/D1 video	270 Mbps	2R	—
ISC-1 Compact	1.06 Gbps	3R	Off
ISC-3	1.06 or 2.125 Gbps	2R	—
ETR_CLO	16 Mbps	2R	—

1. No monitoring

Step 4 Click the **Provisioning > Optics Thresholds** tabs.

Step 5 Under **Types**, verify that the TCA radio button is checked. If not, check it and click **Refresh**.

Step 6 Referring to [Table 6-12](#), verify the trunk port TCA thresholds for RX Power High and RX Power Low depending on whether the rate is 2R or 3R. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Note Do not modify the Laser Bias parameters.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Table 6-12 TXP_MR_2.5G and TXPP_MR_2.5G Trunk Port TCA Thresholds

Signal	TCA RX Power Low	TCA RX Power High
3R	−23 dBm	−9 dBm
2R	−24 dBm	−9 dBm

Step 7 Click **Apply**.

Step 8 Under **Types**, click the **Alarm** radio button and click **Refresh**.

- Step 9** Verify the trunk port Alarm thresholds for RX Power High is -7 dBm, and for RX Power Low is -26 dBm. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.
- Step 10** Click **Apply**.
- Step 11** Return to your originating procedure (NTP).

DLP-G306 Provision the 2.5G Multirate Transponder Client Port Alarm and TCA Thresholds

Purpose	This task provisions the client port alarm and TCA thresholds for the TXP_MR_2.5G and TXPP_MR_2.5G cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G278 Provision the Optical Line Rate, page 6-14 DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_2.5G or TXPP_MR_2.5G card where you want to change the client port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs. The TCA thresholds are shown by default.
- Step 3** Referring to [Table 6-13](#), verify the Port 1 (client) TCA thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface at the other end. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Note Do not modify the Laser Bias parameters.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Note The hardware device that plugs into a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or ADM-10G card faceplate to provide a fiber interface to the card is called a Small Form-factor Pluggable (SFP or XFP). In CTC, SFPs and XFPs are called pluggable port modules (PPMs). SFPs/XFPs are hot-swappable input/output devices that plug into a port to link the port with the fiber-optic network. Multirate PPMs have provisionable port rates and payloads. For more information about SFPs and XFPs, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

Table 6-13 *TXP_MR_2.5G and TXPP_MR_2.5G Card Client Interface TCA Thresholds*

Step 7 Click **Apply**.

Step 8 Return to your originating procedure (NTP).

DLP-G234 Change the 2.5G Multirate Transponder OTN Settings

Purpose	This task changes the OTN settings for TXP_MR_2.5G and TXPP_MR_2.5G transponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_2.5G or TXPP_MR_2.5G card where you want to change the OTN settings.

Step 2 Click the **Provisioning > OTN** tabs, then choose one of the following subtabs: **OTN Lines**, **G.709 Thresholds**, **FEC Thresholds**, or **Trail Trace Identifier**.

Step 3 Modify any of the settings described in Tables [6-15](#) through [6-18](#).

Note You must modify Near End and Far End; 15 Min and 1 Day; and SM and PM settings independently. To do so, choose the appropriate radio button and click **Refresh**.

[Table 6-15](#) describes the values on the Provisioning > OTN > OTN Lines tab.

Table 6-15 *TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card OTN Line Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number.	2 (Trunk) 3 (Trunk) (TXPP_MR_2.5G)
G.709 OTN	Sets the OTN lines according to ITU-T G.709.	- Enable - Disable
FEC	Sets the OTN lines to forward error correction (FEC).	- Enable - Disable
SF BER	(Display only) The signal fail bit error rate.	1E-5
SD BER	Sets the signal degrade bit error rate.	1E-5 1E-6 1E-7 1E-8 1E-9

Table 6-16 describes the values on the Provisioning > OTN > G.709 Thresholds tab.

Table 6-16 *TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card ITU-T G.709 Threshold Settings*

Parameter	Description	Options
Port ¹	(Display only) Port number.	2 (Trunk) 3 (Trunk) (TXPP_MR_2.5G)
ES	Errored seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
SES	Severely errored seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
UAS	Unavailable seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
BBE	Background block errors	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
FC	Failure counter	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .

1. Latency for a 1G-FC payload without ITU-T G.709 is 4 microseconds, and with ITU-T G.709 is 40 microseconds. Latency for a 2G-FC payload without ITU-T G.709 is 2 microseconds, and with ITU-T G.709 is 20 microseconds. Consider these values when planning a FC network that is sensitive to latency.

Table 6-17 describes the values on the Provisioning > OTN > FEC Threshold tab.

Table 6-17 *TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card FEC Threshold Settings*

Parameter	Description	Options
Port	(Display only) Port number.	2 (Trunk) 3 (Trunk) (TXPP_MR_2.5G)
Bit Errors Corrected	Sets the value for bit errors corrected.	Numeric. Can be set for 15-minute or one-day intervals.
Uncorrectable Words	Sets the value for uncorrectable words.	Numeric. Can be set for 15-minute or one-day intervals.

Table 6-18 describes the values on the Provisioning > OTN > Trail Trace Identifier tab.

Table 6-18 *TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card Trail Trace Identifier Settings*

Parameter	Description	Options
Port	(Display only) Port number.	2 (Trunk) 3 (Trunk) (TXPP_MR_2.5G)
Level	Sets the level.	- Section - Path
Received Trace Mode	Sets the trace mode.	- Off/None - Manual
Disable FDI on TIM	If an TIM on Section overhead alarm arises because of a J0 overhead string mismatch, no alarm indication signal is sent to downstream nodes if this box is checked.	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size

Table 6-18 *TXP_MR_2.5G and TXPP_MR_2.5G Transponder Card Trail Trace Identifier Settings (continued)*

Parameter	Description	Options
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 minutes.	Checked/unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

NTP-G96 Provision the 10G Multirate Transponder Card Line Settings, PM Parameters, and Thresholds

Purpose	This procedure changes the line and threshold settings for 10G multirate transponder cards including the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C cards.
Tools/Equipment	None
Prerequisite Procedures	NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 DLP-G63 Install an SFP or XFP, page 4-74 DLP-G277 Provision a Multirate PPM, page 6-11 (if necessary) DLP-G278 Provision the Optical Line Rate, page 6-14 (if necessary)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note The TXP_MR_10G card does not support PPMs.

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to change the transponder card settings. If you are already logged in, continue with [Step 2](#).
- Step 2** As needed, complete the “[NTP-G103 Back Up the Database](#)” procedure on page 14-2 to preserve the existing transmission settings.
- Step 3** If you are provisioning a TXP_MR_10G card, complete the “[DLP-G365 Provision the TXP_MR_10G Data Rate](#)” task on page 6-49, and if you are provisioning a TXP_MR_10E or TXP_MR_10EX_C card, complete the “[DLP-G712 Provision the TXP_MR_10E or TXP_MR_10EX_C Data Rate](#)” task on page 6-50. If not, continue with [Step 4](#).

Step 4 Perform any of the following tasks as needed:

- [DLP-G216 Change the 10G Multirate Transponder Card Settings, page 6-50](#)
- [DLP-G217 Change the 10G Multirate Transponder Line Settings, page 6-52](#)
- [DLP-G218 Change the 10G Multirate Transponder Line Section Trace Settings, page 6-55](#)
- [DLP-G219 Change the 10G Multirate Transponder Line Thresholds for SONET or SDH Payloads Including 10G Ethernet WAN Phy, page 6-58](#)
- [DLP-G319 Change the 10G Multirate Transponder Line RMON Thresholds for 10G Ethernet LAN Phy Payloads, page 6-61](#)
- [DLP-G301 Provision the 10G Multirate Transponder Trunk Port Alarm and TCA Thresholds, page 6-65](#)
- [DLP-G302 Provision the 10G Multirate Transponder Client Port Alarm and TCA Thresholds, page 6-66](#)
- [DLP-G221 Change the 10G Multirate Transponder OTN Settings, page 6-68](#)
- [DLP-G368 Change the 10G Multirate Transponder Trunk Wavelength Settings, page 6-57](#)

Stop. You have completed this procedure.

DLP-G365 Provision the TXP_MR_10G Data Rate

Purpose	This task changes the TXP_MR_10G card data rate.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_10G card where you want to change the card data rate settings.
- Step 2** Click the **Provisioning > Data Rate Selection** tabs.
- Step 3** Click **Create**.
- Step 4** In the Create Port dialog box, choose one of the following data rates:
- SONET (ANSI) or SDH (ETSI) (including 10G Ethernet WAN Phy)
 - 10G Ethernet LAN Phy
- Step 5** Click **Ok**.
- Step 6** Return to your originating procedure.
-

DLP-G712 Provision the TXP_MR_10E or TXP_MR_10EX_C Data Rate

Purpose	This task changes the TXP_MR_10E or TXP_MR_10EX_C card data rate.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_10E or TXP_MR_10EX_C card where you want to change the card data rate settings.
- Step 2** Click the **Provisioning > Pluggable Port Modules** tabs.
- Step 3** In the Pluggable Port Modules area, click **Create**. The Create PPM dialog box appears.
- Step 4** In the Create PPM dialog box, complete the following:
- PPM—Choose the SFP you want to install from the drop-down list.
 - PPM Type—Choose the number of ports supported by your SFP from the drop-down list. If only one port is supported, **PPM (1 port)** is the only option.
- Step 5** Click **OK**. The newly created PPM appears in the Pluggable Port Modules area. The row in the Pluggable
- Step 6** Port Modules area turns white and the Actual Equipment Type column lists the equipment name.
- Step 7** In the Pluggable Ports area, click **Create**. The Create Ports dialog box appears.
- Step 8** In the Create Port dialog box, choose one of the following data rates:
- SONET (ANSI) or SDH (ETSI) (including 10G Ethernet WAN Phy)
 - 10G Ethernet LAN Phy
 - 10G FIBER Channel
 - (TXP-MR-10EX_C card only) IB_5G
- Step 9** Click **Ok**.
- Step 10** Return to your originating procedure.
-

DLP-G216 Change the 10G Multirate Transponder Card Settings

Purpose	This task changes the card settings for the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, or TXP_MR_10E_L card where you want to change the card settings.
- Step 2** Click the **Provisioning > Card** tabs.
- Step 3** Modify any of the settings described in [Table 6-19](#).

Table 6-19 TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card Settings

Parameter	Description	ONS 15454 Options	ONS 15454 SDH Options
Termination Mode	Sets the mode of operation. (This option is only available for SONET/SDH payloads). Refer to the “Transponder and Muxponder Cards” chapter in the <i>Cisco ONS 15454 DWDM Reference Manual</i> for more details.	- Transparent - Section (TXP_MR_10E only) - Line	- Transparent - Regeneration Section (TXP_MR_10E only) - Multiplex Section
AIS/Squelch Configuration	(TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C only) Sets the transparent termination mode configuration.	- Squelch - AIS	- Squelch - AIS
Regeneration Peer Slot	Sets the slot containing another TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C card to create a regeneration peer group. A regeneration peer group facilitates the management of two TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C cards that are needed to perform a complete signal regeneration. The regeneration peer group synchronizes provisioning of the two cards. Payload type and ITU-T G.709 optical transport network (OTN) changes made on one TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C card are reflected on the peer TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C card. Note Y-cable protection groups cannot be created on TXP cards that are in a regeneration peer group.	- None 1 2 3 4 5 6 12 13 14 15 16 17	- None 1 2 3 4 5 6 12 13 14 15 16 17

Table 6-19 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card Settings*

Parameter	Description	ONS 15454 Options	ONS 15454 SDH Options
Regeneration Group Name	(Display only) The regeneration peer group name.	—	—
Tunable Wavelengths	(Display only) Shows the supported wavelengths of the trunk port after the card is installed. For the TXP_MR_10E_C, or TXP_MR_10E_L cards, the first and last supported wavelength, frequency spacing, and number of supported wavelengths are shown in the format: <i>first wavelength-last wavelength-frequency spacing-number of supported wavelengths</i> . For example, the TXP_MR_10E_C card would show: 1529.55nm-1561.83nm-50GHz-82. The TXP_MR_10E show the four wavelengths supported by the card that is installed. The TXP_MR_10G show the two wavelengths supported by the card that is installed.	—	—

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G217 Change the 10G Multirate Transponder Line Settings

Purpose	This task changes the line settings for TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C card where you want to change the line settings.
- Step 2** Click the **Provisioning > Line > SONET/SDH/Ethernet** tabs. SONET is the option for ANSI shelves when 10G Ethernet WAN phy is the Pluggable Port Rate, SDH is the option for ETSI shelves when 10G Ethernet WAN phy is the Pluggable Port Rate, and Ethernet is the option for ANSI or ETSI shelves when 10GE LAN Phy is the Pluggable Port Rate.
- Step 3** Modify any of the settings described in [Table 6-20](#).

**Note**

In [Table 6-20](#), some parameter tabs do not always apply to all 10G multirate transponder cards. If a tab does not apply, it will not appear in CTC.

Table 6-20 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Line Settings*

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Displays the port number.	1 (OC192) (10G Ethernet WAN Phy) (if TXP_MR_10G) 1 (TEN_GE) (if Ethernet LAN is provisioned on the TXP_MR_10G card) 1-1 (OC192) (10G Ethernet WAN Phy on the TXP_MR_10E card) 1-1 (TEN_GE) (if Ethernet LAN is provisioned on the TXP_MR_10E card) 1-1 (FC10G) (if 10G fiber channel is provisioned on the TXP_MR_10E card) 2 (Trunk) (TXP_MR_10EX_C only) IB_5G	1 (STM-64) (10G Ethernet WAN Phy) (if TXP_MR_10G) 1 (TEN_GE) (if Ethernet LAN is provisioned on the TXP_MR_10G card) 1-1 (STM-64) (10G Ethernet WAN Phy on the TXP_MR_10E card) 1-1 (TEN_GE) (if Ethernet LAN is provisioned on the TXP_MR_10E card) 1-1 (FC10G) (if 10G fiber channel is provisioned on the TXP_MR_10E card) 2 (Trunk) (TXP_MR_10EX_C only) IB_5G
Port Name	Provides the ability to assign the specified port a name.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3 .	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3 .
Admin State	Sets the port service state. For more information about administrative states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS - IS,AINS - OOS,DSBLD - OOS,MT	- Unlocked - Unlocked,automaticInService - Locked,disabled - Locked,maintenance
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR - OOS-AU,AINS - OOS-MA,DSBLD - OOS-MA,MT	- Unlocked-enabled - Unlocked-disabled,automaticInService - Locked-enabled,disabled - Locked-enabled,maintenance

Table 6-20 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Line Settings*

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
SF BER	(SONET [ANSI] or SDH [ETSI] including 10G Ethernet WAN Phy only) Sets the signal fail bit error rate.	1E-3 1E-4 1E-5	1E-3 1E-4 1E-5
SD BER	(SONET [ANSI] or SDH [ETSI] including 10G Ethernet WAN Phy only) Sets the signal degrade bit error rate.	1E-5 1E-6 1E-7 1E-8 1E-9	1E-5 1E-6 1E-7 1E-8 1E-9
Type	(SONET [ANSI] or SDH [ETSI] including 10G Ethernet WAN Phy only) The optical transport type.	- SONET - SDH	- SONET - SDH
ALS Mode	Sets the ALS function mode. The DWDM transmitter supports ALS according to ITU-T G.644 (06/99). ALS can be disabled, or it can be set for one of three mode options.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.
AINS Soak	(SONET [ANSI] or SDH [ETSI] including 10G Ethernet WAN Phy only) Sets the automatic in-service soak period. Double-click the time and use the up and down arrows to change settings.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments

Table 6-20 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Line Settings*

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
ProvidesSync	(TXP_MR_10E, OC192 only) Sets the ProvidesSync card parameter. If checked, the card is provisioned as a network element (NE) timing reference.	Checked or unchecked	Checked or unchecked
SyncMsgIn	(TXP_MR_10E, OC192 only) Sets the EnableSync card parameter. Enables synchronization status messages (S1 byte), which allow the node to choose the best timing source.	Checked or unchecked	Checked or unchecked
Max Size	(TXP_MR_10E, TXP_MR_10G LAN Phy only) Sets the maximum Ethernet packet size.	1548 bytes - Jumbo (64 to 9,216 bytes)	1548 bytes - Jumbo (64 to 9,216 bytes)
Incoming MAC Address	(TXP_MR_10E, TXP_MR_10G LAN Phy only) Sets the incoming MAC address.	Value of MAC address. Six bytes in hexadecimal format.	Value of MAC address. Six bytes in hexadecimal format.
Wavelength	Displays the wavelength of the client port.	- First Tunable Wavelength - Further wavelengths: 1310 nm through 1560.61 nm, 100-GHz ITU spacing; coarse wavelength division multiplexing (CWDM) spacing Note: supported wavelengths are marked by asterisks (**)	- First Tunable Wavelength - Further wavelengths: 1310 nm through 1560.61 nm, 100-GHz ITU spacing; coarse wavelength division multiplexing (CWDM) spacing Note: supported wavelengths are marked by asterisks (**)
Reach	Displays the optical reach distance of the client port.	The Reach options depend on the traffic type that has been selected.	The Reach options depend on the traffic type that has been selected.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G218 Change the 10G Multirate Transponder Line Section Trace Settings

Purpose	This task changes the line section trace settings for the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C transponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed

Onsite/Remote Onsite or remote
Security Level Provisioning or higher

**Note**

The Section Trace tab is available for the 10G Multirate Transponder cards only if no PPMs are provisioned, or the OC192 PPM is provisioned. The tab is not available if a 10G Ethernet LAN Phy or 10G Fibre Channel PPM is provisioned.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C card where you want to change the section trace settings.
- Step 2** Click the **Provisioning > Line > Section Trace** tabs.
- Step 3** Modify any of the settings described in [Table 6-21](#).

Table 6-21 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Section Trace Settings*

Parameter	Description	ONS 15454 Options	Options — ONS 15454 SDH
Port	Sets the port number.	1-1 (OC192) 2—Trunk	1-1 (STM64) 2—Trunk
Received Trace Mode	Sets the trace mode.	- Off/None - Manual	- Off/None - Manual
Transmit Section Trace String Size	Sets the trace string size.	1 byte 16 byte	1 byte 16 byte
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size	String of trace string size
Disable AIS/RDI on TIM-S	If an TIM on Section overhead alarm arises because of a J0 overhead string mismatch, no alarm indication signal is sent to downstream nodes if this box is checked.	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size	String of trace string size

Table 6-21 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Section Trace Settings*

Parameter	Description	ONS 15454 Options	Options — ONS 15454 SDH
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 seconds.	Checked/unchecked (default)	Checked/unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G368 Change the 10G Multirate Transponder Trunk Wavelength Settings

Purpose	This task changes the trunk wavelength settings for the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note Before modifying the wavelength settings, change the port state to OOS,DSBLD (for ANSI) or Locked,disabled (for ETSI) and delete the circuit and patchcord provisioning present on the port. Payload or communication channel provisioning can be retained.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C card where you want to change the trunk wavelength settings.
- Step 2** Click the **Provisioning > Line > Wavelength Trunk Settings** tabs.
- Step 3** Modify any of the settings as described in [Table 6-22](#).

Table 6-22 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C Card Wavelength Trunk Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number.	Port 2 (Trunk)
Band	Indicates the wavelength band that can be provisioned. If the physical TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C is installed, this field is display-only.	- C—The C-band wavelengths are available in the Wavelength field. - L—The L-band wavelengths are available in the Wavelength field.
Even/Odd	Sets the wavelengths available for provisioning for TXP_MR_10E_C, and TXP_MR_10E_L cards. (This field does not apply to TXP_MR_10G or TXP_MR_10E cards.)	- Even—Displays even C-band or L-band wavelengths in the Wavelength field. - Odd—Displays odd C-band or L-band wavelengths in the Wavelength field.
Wavelength	The wavelength provisioned for the trunk.	- First Tunable Wavelength - Further wavelengths in 100-GHz ITU-T C-band or L-band spacing, depending on the card that is installed. For TXP_MR_10G and TXP_MR_10E cards, the wavelengths carried by the card are identified with two asterisks. If the card is not installed, all wavelengths appear with a dark grey background.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G219 Change the 10G Multirate Transponder Line Thresholds for SONET or SDH Payloads Including 10G Ethernet WAN Phy

Purpose	This task changes the line threshold settings for TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C transponder cards carrying SONET or SDH payloads, including the physical 10G Ethernet WAN Phy payload.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C card where you want to change the line threshold settings.
- Step 2** Click the **Provisioning > Line Thresholds > SONET Thresholds (ANSI)** or **SDH Thresholds (ETSI)** tabs.
- Step 3** Modify any of the settings described in [Table 6-23](#).

**Note**

Parameters shown in [Table 6-23](#) do not apply to all 10G multirate transponder cards. If the parameter or option does not apply, it is not shown in CTC.

Table 6-23 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card Line Threshold Settings*

Parameter	Description	Options - ANSI	Options - ETSI
Port	(Display only) Port number	1-1 (OC192) 2 (Trunk)	1-1 (STM64) 2 (Trunk)
EB	Path Errored Block indicates that one or more bits are in error within a block	—	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G319 Change the 10G Multirate Transponder Line RMON Thresholds for 10G Ethernet LAN Phy Payloads

Purpose	This task changes the line threshold settings for TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C transponder cards carrying the physical 10G Ethernet LAN payload.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 Display the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C card where you want to change the line threshold settings in card view.

Step 2 Click the **Provisioning > Line Thresholds > RMON Thresholds** tabs.

Step 3 Click **Create**. The Create Threshold dialog box appears.

- Step 4** From the Port drop-down list, choose the applicable port.
- Step 5** From the Variable drop-down list, choose an Ethernet variable. See [Table 6-24](#) for a list of available Ethernet variables.

Table 6-24 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card GE LAN Phy Variables*

Variable	Description
ifInOctets	Total number of octets received on the interface, including framing characters.
rxTotalPkts	Total number of received packets.
ifInMulticastPkts	Number of multicast frames received error free.
ifInBroadcastPkts	Number of packets, delivered by a sublayer to an higher sublayer, that were addressed to a broadcast address at this sublayer.
ifInErrors	Number of inbound packets that contained errors preventing them from being delivered to a higher-layer protocol.
ifInErrorBytePkts (TXP_MR_10G only)	Number of receive error bytes.
ifInFramingErrorPkts (TXP_MR_10G only)	Number of receive framing error counters.
ifInJunkInterPkts (TXP_MR_10G only)	Number of receive interpacket junk counters.
ifOutOctets (TXP_MR_10G only)	Total number of octets transmitted out of the interface, including framing characters.
txTotalPkts (TXP_MR_10G only)	Total number of transmit packets.
ifOutMulticastPkts (TXP_MR_10G only)	Number of multicast frames transmitted error free.
ifOutBroadcastPkts (TXP_MR_10G only)	Total number of packets that higher-level protocols requested be transmitted, and that were addressed to a broadcast address at this sublayer, including those that were discarded or not sent.
dot3StatsFCSErrors	Number of frames with frame check errors, that is, there is an integral number of octets, but an incorrect Frame Check Sequence (FCS).
dot3StatsFrameTooLong (TXP_MR_10G only)	Number of received frames that were larger than the maximum size permitted.
etherStatsUndersizePkts	Total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 6-24 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card GE LAN Phy Variables (continued)*

etherStatsFragments	Total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error). Note that it is entirely normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
etherStatsPkts64Octets	Total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts65to127Octets	Total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts128to255Octets	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts256to511Octets	Total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts512to1023Octets	Total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts1024to1518Octets	Total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsBroadcastPkts	Total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets.
etherStatsMulticastPkts	Total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
etherStatsOversizePkts	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
etherStatsJabbers	Total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).
etherStatsOctets	Total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets).

Table 6-24 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card GE LAN Phy Variables (continued)*

etherStatsCRCAlignErrors (TXP_MR_10G only)	Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).
rxPauseFrames (TXP_MR_10G only)	Number of received IETF 802.x pause frames.
rxControlFrames	Number of MAC control frames passed by the MAC sublayer to the MAC control sublayer.
rxUnknownOpcodeFrames (TXP_MR_10G only)	Number of MAC control frames received that contain an opcode that is not supported by the device.

Step 6 From the Alarm Type drop-down list, indicate whether the event will be triggered by the rising threshold, the falling threshold, or both the rising and falling thresholds.

Step 7 From the Sample Type drop-down list, choose either **Relative** or **Absolute**. Relative restricts the threshold to use the number of occurrences in the user-set sample period. Absolute sets the threshold to use the total number of occurrences, regardless of time period.

Step 8 Type in an appropriate number of seconds for the Sample Period.

Step 9 Type in the appropriate number of occurrences for the Rising Threshold.

For a rising type of alarm, the measured value must move from below the falling threshold to above the rising threshold. For example, if a network is running below a rising threshold of 1000 collisions every 15 seconds and a problem causes 1001 collisions in 15 seconds, the excess occurrences trigger an alarm.

Step 10 Enter the appropriate number of occurrences in the Falling Threshold field. In most cases a falling threshold is set lower than the rising threshold.

A falling threshold is the counterpart to a rising threshold. When the number of occurrences is above the rising threshold and then drops below a falling threshold, it resets the rising threshold. For example, when the network problem that caused 1001 collisions in 15 seconds subsides and creates only 799 collisions in 15 seconds, occurrences fall below a falling threshold of 800 collisions. This resets the rising threshold so that if network collisions again spike over a 1000 per 15-second period, an event again triggers when the rising threshold is crossed. An event is triggered only the first time a rising threshold is exceeded (otherwise, a single network problem might cause a rising threshold to be exceeded multiple times and cause a flood of events).

Step 11 Click **OK**.

Note To view all RMON thresholds, click **Show All RMON thresholds**.

Step 12 Return to your originating procedure (NTP).

DLP-G301 Provision the 10G Multirate Transponder Trunk Port Alarm and TCA Thresholds

Purpose	This task provisions the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C trunk port alarm and threshold cross alert (TCA) thresholds.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C card where you want to change the trunk port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs.
- Step 3** Under Types, verify that the TCA radio button is checked. If not, check it, then click **Refresh**.
- Step 4** Referring to [Table 6-25](#), verify the trunk port (Port 2) TCA thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting the existing value, and entering the new value. Hit **Enter**, then click **Apply**.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

Table 6-25 10G Multirate Transponder Trunk Port TCA Thresholds

Card	TCA RX Power High	TCA RX Power Low	TCA TX Power High	TCA TX Power Low
TXP_MR_10G	-8 dBm	-18 dBm	7 dBm	-1 dBm
TXP_MR_10E	-9 dBm	-18 dBm	9 dBm	0 dBm
TXP_MR_10E_C				
TXP_MR_10E_L				
TXP_MR_10EX_C				

- Step 5** Click **Apply**.
- Step 6** Under Types, click the **Alarm** radio button and click **Refresh**.

- Step 7** Referring to [Table 6-26](#), verify the trunk port (Port 2) Alarm thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting the existing value, and entering the new value. Hit **Enter**, then click **Apply**.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Table 6-26 10G Multirate Transponder Trunk Port Alarm Thresholds

Card	Alarm RX Power High	Alarm RX Power Low	Alarm TX Power High	Alarm TX Power Low
TXP_MR_10G	-8 dBm	-20 dBm	4 dBm	2 dBm
TXP_MR_10E	-8 dBm	-20 dBm	7 dBm	3 dBm
TXP_MR_10E_C				
TXP_MR_10E_L				
TXP_MR_10EX_C				

- Step 8** Click **Apply**.
- Step 9** Return to your originating procedure (NTP).

DLP-G302 Provision the 10G Multirate Transponder Client Port Alarm and TCA Thresholds

Purpose	This task provisions the client port alarm and TCA thresholds for the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G278 Provision the Optical Line Rate , page 6-14 DLP-G46 Log into CTC , page 3-30
Required/As Needed	Required
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C card where you want to change the client port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs. The TCA thresholds are shown by default.
- Step 3** Under Types, verify that the TCA radio button is checked. If not, check it, then click **Refresh**.

- Step 4** Referring to [Table 6-27](#), verify the Port 1 (Client) TCA thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface at the other end. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting the existing value, and entering the new value. Hit Enter, then click **Apply**.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

Note The hardware device that plugs into a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or ADM-10G card faceplate to provide a fiber interface to the card is called a Small Form-factor Pluggable (SFP or XFP). In CTC, SFPs and XFPs are called pluggable port modules (PPMs). SFPs/XFPs are hot-swappable input/output devices that plug into a port to link the port with the fiber-optic network. Multirate PPMs have provisionable port rates and payloads. For more information about SFPs and XFPs, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

Table 6-27 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card Client Interface TCA Thresholds*

Pluggable Port Rate	Pluggable Port Module (XFP)	TCA RX Power High	TCA RX Power Low	TCA TX Power High	TCA TX Power Low
SONET (or SDH)	TXP_MR_10E uses ONS-XC-10G-S1 TXP_MR_10G (XFP not present)	-1	-11	-1	-6
10G Ethernet LAN Phy	TXP_MR_10E uses ONS-XC-10G-S1 TXP_MR_10G (XFP not present)	0.5	-14.4	-1	-6
10G Fibre Channel	TXP_MR_10E uses ONS-XC-10G-S1	0.5	-14.4	-1	-6
IB_5G ¹	TXP_MR_10EX_C uses ONS-XC-10G-S1 Version 3	1.0	-14.0	5.0	12.0

1. Only the TXP_MR_10EX_C card supports IB_5G.

- Step 5** Click **Apply**.
- Step 6** Under Types, click the **Alarm** radio button and click **Refresh**.
- Step 7** Referring to [Table 6-28](#), provision the Port 1 (Client) Alarm thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface that is provisioned.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Table 6-28 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card Client Interface Alarm Thresholds*

Pluggable Port Rate	Pluggable Port Module (XFP)	Alarm RX Power High	Alarm RX Power Low	Alarm TX Power High	Alarm TX Power Low
SONET (or SDH)	TXP_MR_10E uses ONS-XC-10G-S1 TXP_MR_10G (XFP not present)	3	-16	1	-8
10G Ethernet LAN Phy	TXP_MR_10E uses ONS-XC-10G-S1 TXP_MR_10G (XFP not present)	3	-16	1	-8
10G Fibre Channel	TXP_MR_10E uses ONS-XC-10G-S1	3	-16	1	-8
IB_5G ¹	TXP_MR_10EX_C uses ONS-XC-10G-S1 Version 3	1.0	-14.0	5.0	12.0

1. Only the TXP_MR_10EX_C card supports IB_5G.

Step 8 Click **Apply**.

Step 9 Return to your originating procedure (NTP).

DLP-G221 Change the 10G Multirate Transponder OTN Settings

Purpose	This task changes the line OTN settings for the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, and TXP_MR_10EX_C transponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C card where you want to change the OTN settings.

- Step 2** Click the **Provisioning > OTN** tabs, then click one of the following subtabs: **OTN Lines**, **G.709 Thresholds**, **FEC Thresholds**, or **Trail Trace Identifier**.
- Step 3** Modify any of the settings described in Tables 6-29 through 6-32.

Note You must modify Near End and Far End independently, 15 Min and 1 Day independently, and SM and PM independently. To do so, choose the appropriate radio button and click **Refresh**.

Table 6-29 describes the values on the Provisioning > OTN > OTN Lines tab.

Table 6-29 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card OTN Lines Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	2
G.709 OTN	Sets the OTN lines according to ITU-T G.709. Check the box to enable. For TXP-MR-10EX_C cards, the G.709 OTN should be enabled.	• Enable • Disable
FEC	Sets the OTN lines FEC mode. FEC mode can be Disabled, Enabled, or, for the TXP_MR_10E, Enhanced FEC mode can be enabled to provide greater range and lower bit error rate. For TXP_MR_10E cards, Standard is the same as enabling FEC. For TXP-MR-10EX_C cards, the FEC should be enabled.	• Enable—(TXP_MR_10G only) FEC is on. • Disable—FEC is off. • Standard—(TXP_MR_10E only) Standard FEC is on. • Enhanced—(TXP_MR_10E only) Enhanced FEC is on.
SD BER	Sets the signal degrade bit error rate.	• 1E-5 • 1E-6 • 1E-7 • 1E-8 • 1E-9
SF BER	(Display only) Indicates the signal fail bit error rate.	• 1E-5
Asynch/Synch Mapping	(TXP_MR_10E only) Sets how the ODUk (client payload) is mapped to the optical channel (OTUk).	• Asynch mapping • Synch mapping

Table 6-30 describes the values on the Provisioning > OTN > G.709 Thresholds tab.

Table 6-30 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card ITU-T G.709 Threshold Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	2
ES	Severely errored seconds. Two types of thresholds can be asserted. Selecting the SM (OTUk) radio button selects FEC, overhead management, and PM using OTUk. Selecting the PM radio button selects path PM using ODUk.	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh. Note SM (OTUk) is the ITU-T G.709 optical channel transport unit order of k overhead frame used for management and performance monitoring. PM (ODUk) is the ITU-T G.709 optical channel data unit order of k overhead frame unit used for path performance monitoring.
SES	Severely errored seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh.
UAS	Unavailable seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh.

Table 6-30 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card ITU-T G.709 Threshold Settings (continued)*

Parameter	Description	Options
BBE	Background block errors	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh .
FC	Failure counter	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh .

Table 6-31 describes the values on the Provisioning > OTN > FEC Thresholds tab.

Table 6-31 *TXP_MR_10G, TXP_MR_10E, TXP_MR_10E_C, TXP_MR_10E_L, or TXP_MR_10EX_C Card FEC Threshold Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	2
Bit Errors Corrected	Displays the number of bit errors corrected during the selected time period.	Numeric display. Can be set for 15-minute or one-day intervals.
Uncorrectable Words	Displays the number of uncorrectable words in the selected time period.	Numeric display. Can be set for 15-minute or one-day intervals.

Table 6-32 describes the values on the Provisioning > OTN > Trail Trace Identifier tab.

Table 6-32 *10G Multirate Transponder Trail Trace Identifier Settings*

Parameter	Description	Options
Port	Sets the port number.	1 2
Level	Sets the level.	- Section - Path
Received Trace Mode	Sets the trace mode.	- Off/None - Manual

Table 6-32 10G Multirate Transponder Trail Trace Identifier Settings (continued)

Parameter	Description	Options
Disable FDI on TTIM	If a Trace Identifier Mismatch on Section overhead alarm arises because of a J0 overhead string mismatch, no Forward Defect Indication (FDI) signal is sent to the downstream nodes if this box is checked.	• Checked (FDI on TTIM is disabled) • Unchecked (FDI on TTIM is not disabled)
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size; trail trace identifier is 64 bytes in length.
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 minutes.	Checked/unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

NTP-G292 Provision the 40G Multirate Transponder Card Line Settings, PM Parameters, and Thresholds

Purpose	This procedure changes the line settings, PM parameters, and threshold settings for 40G multirate transponder cards (40E-TXP-C, 40ME-TXP-C).
Tools/Equipment	None
Prerequisite Procedures	• NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 • DLP-G63 Install an SFP or XFP, page 4-74 • DLP-G277 Provision a Multirate PPM, page 6-11 (if necessary) • DLP-G278 Provision the Optical Line Rate, page 6-14 (if necessary)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

The 40E-TXP-C and 40ME-TXP-C cards does not support PPMs.

**Note**

The maximum ambient operating temperature for 40E-TXP-C, and 40ME-TXP-C cards is 50⁰ Celsius.

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to change the transponder card settings. If you are already logged in, continue with [Step 2](#).
- Step 2** As needed, complete the “[NTP-G103 Back Up the Database](#)” procedure on page 14-2 to preserve the existing transmission settings.
- Step 3** If you are provisioning a 40E-TXP-C or 40ME-TXP-C card, complete the “[DLP-G656 Provision the 40E-TXP-C and 40ME-TXP-C Data Rate](#)” task on page 6-74. If not, continue with [Step 4](#).
- Step 4** Perform any of the following tasks as needed:
- [DLP-G657 Change the 40G Multirate Transponder Card Settings](#), page 6-74
 - [DLP-G658 Change the 40G Multirate Transponder Line Settings](#), page 6-75
 - [DLP-G659 Change the 40G Multirate Transponder SONET, SDH, or Ethernet Line Settings](#), page 6-77
 - [DLP-G660 Change the 40G Multirate Transponder Line Section Trace Settings](#), page 6-82
 - [DLP-G661 Change the 40G Multirate Transponder Line Thresholds for SONET or SDH Payloads](#), page 6-83
 - [DLP-G663 Provision the 40G Multirate Transponder Trunk Port Alarm and TCA Thresholds](#), page 6-85
 - [DLP-G664 Provision the 40G Multirate Transponder Client Port Alarm and TCA Thresholds](#), page 6-86
 - [DLP-G665 Change the 40G Multirate Transponder OTN Settings](#), page 6-88

Stop. You have completed this procedure.

DLP-G656 Provision the 40E-TXP-C and 40ME-TXP-C Data Rate

Purpose	This task changes the 40E-TXP-C and 40ME-TXP-C card data rate.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40E-TXP-C card where you want to change the card data rate settings.
- Step 2** Click the **Provisioning > Data Rate Selection** tabs.
- Step 3** Click **Create**.
- Step 4** In the Create Port dialog box, choose one of the following data rates:
- SONET (ANSI) OC-768 or SDH (ETSI) STM-256
 - 40G Ethernet LAN Phy (only when overclock mode is ON)
 - OTU3
- Step 5** Click **Ok**.
- Step 6** Return to your originating procedure.
-

DLP-G657 Change the 40G Multirate Transponder Card Settings

Purpose	This task changes the card settings of the 40E-TXP-C and 40ME-TXP-C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40E-TXP-C card where you want to change the card settings.
- Step 2** Click the **Provisioning > Card** tabs.
- Step 3** Modify any of the settings described in [Table 6-33](#).

Table 6-33 40E-TXP-C and 40ME-TXP-C Card Settings

Parameter	Description	ONS 15454(ANSI) Options	ONS 15454 SDH(ETSI) Options	
Regeneration Peer Slot	Sets the slot containing another 40E-TXP-C or 40ME-TXP-C card to create a regeneration peer group. A regeneration peer group facilitates the management of two 40E-TXP-C or 40ME-TXP-C cards that are needed to perform a complete signal regeneration. The regeneration peer group synchronizes provisioning of the two cards. Payload type and ITU-T G.709 optical transport network (OTN) changes made on one 40E-TXP-C or 40ME-TXP-C card is reflected on the peer 40E-TXP-C or 40ME-TXP-C card. Note Y-cable protection groups cannot be created on TXP cards that are in a regeneration peer group.	- None 1 2 3 4 5 12 13 14 15 16	- None 1 2 3 4 5 12 13 14 15 16	
Regeneration Group Name	The regeneration peer group name.	—	—	
Trunk Wavelengths	(Display only) Shows the supported wavelengths of the trunk port after the card is installed. The 40E-TXP-C, or 40ME-TXP-C that is installed shows the C-band wavelengths that it supports.	—	—	

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G658 Change the 40G Multirate Transponder Line Settings

Purpose	This task changes the line settings of the 40E-TXP-C and 40ME-TXP-C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40E-TXP-C card where you want to change the line settings.

Step 2 Click the **Provisioning > Line > Ports** tabs.

Step 3 Modify any of the settings for the Client tab as described in [Table 6-34](#).

Table 6-34 *Line Settings of the 40E-TXP-C, and 40ME-TXP-C Cards*

Parameter	Description	Options
Port	(Display only) Displays the port number.	1 and 2
Port Name	Assigns a logical name for each of the ports shown by filling in this field.	User-defined. The port name can be up to 32 alphanumeric or special characters, or both. The port name is blank by default. For information on assigning a port name, see the “DLP-G104 Assign a Name to a Port” task on page 8-3 .
Admin State	Sets the port service state unless network conditions prevent the change. For more information about administrative states, see the Appendix B, “Administrative and Service States” in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS (ANSI) or Unlocked (ETSI) - OOS,DSBLD (ANSI) or Locked,disabled (ETSI) - OOS,MT (ANSI) or Locked,maintenance (ETSI) - IS,AINS (ANSI) or Unlocked,automaticInService (ETSI)
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, see Appendix B, “Administrative and Service States” in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR (ANSI) or Unlocked-enabled (ETSI) - OOS-AU,AINS (ANSI) or Unlocked-disabled, automaticInService (ETSI) - OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI) - OOS-MA,MT (ANSI) or Locked-enabled,maintenance (ETSI)
ALS Mode	(Client port only) Sets the ALS function mode.	- Disabled (default)—ALS is off; the laser is not automatically shut down when traffic outage or loss of signal (LOS) occurs. - Auto Restart: (OC-768/STM-256/OTU-3 only) ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart—ALS is on; the laser automatically shuts down when traffic outage or LOS occurs. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test—Manually restarts the laser for testing.
AINS Soak	Automatic in-service soak time. The duration of time that must pass with an uninterrupted signal before the traffic/termination transitions to the IS-NR (ANSI) or unlocked-enabled (ETSI) service state.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments

Table 6-34 *Line Settings (continued) of the 40E-TXP-C, and 40ME-TXP-C Cards*

Parameter	Description	Options
Reach	(Display only) Displays the optical reach distance of the port.	- Autoprovision—(trunk port only) The system automatically provisions the reach. - VSR—(client port only) The system provisions very short reach (VSR) for the port.
Wavelength	Provisions the wavelength for the port.	- First Tunable Wavelength - Further wavelengths: Further wavelengths in 50-GHz ITU-T C-band spacing. The wavelengths carried by the card are identified with two asterisks. If the card is not installed, all wavelengths appear with a dark grey background.
Squelch	Applicable only to client port 1. When the termination mode is set to transparent, squelch or AIS (OC-768, or STM-256, or OTU3 payloads only) is enabled. For section/line termination mode, AIS (OC-768, or STM-256 only) is enabled. For trunk port, squelch (40G Ethernet LAN Phy) is disabled.	- Squelch - AIS
Overclock	Enables or disables overclock mode on trunk port.	- OFF (default) - ON
Rx Wavelength	Provisions the wavelength of the trunk port.	- First Tunable Wavelength - Further wavelengths: Further wavelengths in 50-GHz ITU-T C-band spacing. The wavelengths carried by the card are identified with two asterisks. If the card is not installed, all wavelengths appear with a dark grey background.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G659 Change the 40G Multirate Transponder SONET, SDH, or Ethernet Line Settings

Purpose	This task changes the SONET, SDH, or Ethernet line settings for 40E-TXP-C and 40ME-TXP-C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40E-TXP-C card where you want to change the SONET, SDH, or Ethernet line settings.
- Step 2** Click the **Provisioning > Line > SONET/SDH/Ethernet** tabs.
- Step 3** Modify any of the settings described in [Table 6-35](#).

**Note**

In [Table 6-35](#), some parameter tabs do not always apply to all 40G multirate transponder cards. If a tab does not apply, it will not appear in CTC.

Table 6-35 *SONET, SDH Line Settings of the 40E-TXP-C and 40ME-TXP-C Cards*

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Displays the port number.	1 (OC-768) 1 (40G Ethernet LAN Phy) 1 (OTU3)	1 (STM-256) 1 (40G Ethernet LAN Phy) 1 (OTU3)
SF BER	(SONET [ANSI] or SDH [ETSI] only) Sets the signal fail bit error rate.	1E-3 1E-4 1E-5	1E-3 1E-4 1E-5
SD BER	(SONET [ANSI] or SDH [ETSI] only) Sets the signal degrade bit error rate.	1E-5 1E-6 1E-7 1E-8 1E-9	1E-5 1E-6 1E-7 1E-8 1E-9
ProvidesSync	(OC-768/STM-256 only) Sets the ProvidesSync card parameter. If checked, the card is provisioned as a network element (NE) timing reference.	Checked or unchecked	Checked or unchecked
SyncMsgIn	(OC-768/STM-256 only) Sets the EnableSync card parameter. Enables synchronization status messages (S1 byte), which allow the node to choose the best timing source.	Checked or unchecked	Checked or unchecked

Table 6-35 *SONET, SDH Line Settings of the 40E-TXP-C and 40ME-TXP-C Cards*

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Admin SSM In	Overrides the synchronization status message (SSM) and the synchronization traceability unknown (STU) value. If the node does not receive an SSM signal, it defaults to STU.	• PRS—Primary Reference Source (Stratum 1) • STU—Sync traceability unknown • ST2—Stratum 2 • ST3—Stratum 3 • SMC—SONET minimum clock • ST4—Stratum 4 • DUS—Do not use for timing synchronization • RES—Reserved; quality level set by user	• G811—Primary reference clock • STU—Sync traceability unknown • G812T—Transit node clock traceable • G812L—Local node clock traceable • SETS—Synchronous equipment • DUS—Do not use for timing synchronization
Send DoNotUse	(OC-768/STM-256 only) Sets the Send DoNotUse card state. When checked, sends a do not use (DUS) message on the S1 byte.	Checked or unchecked	Checked or unchecked
Type	(SONET [ANSI] or SDH [ETSI] only) Indicates the optical transport type.	• SONET • SDH	• SDH
Termination Mode	(OC-768/STM-256 only) Sets the mode of operation. Note This option is only available for SONET/SDH payloads.	• Transparent • Section • Line	• Transparent • Regeneration Section (RS) • Multiplex Section (MS)

Table 6-36 Ethernet Line Settings of the 40E-TXP-C and 40ME-TXP-C Cards

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Displays the port number.		1-1 to 1-16 (STM1/STM4/STM16/GE) 17-1 (Trunk/Interlink) 18-1 (Trunk/Interlink) 19-1 (Trunk) Note Port 17 and Port 18 are trunk ports that support STM64 payload in a single-card configuration. These ports are interlink ports in a double-card configuration (ADM-10G peer group).
Port Name	Provides the ability to assign the specified port a name.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3 .	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3 .
Admin State	Sets the port service state. For more information about administrative states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS - IS,AINS - OOS,DSBLD - OOS,MT	- Unlocked - Unlocked,automaticInService - Locked,disabled - Locked,maintenance
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR - OOS-AU,AINS - OOS-MA,DSBLD - OOS-MA,MT	- Unlocked-enabled - Unlocked-disabled, automaticInService - Locked-enabled,disabled - Locked-enabled,maintenance

Table 6-36 Ethernet Line Settings of the 40E-TXP-C and 40ME-TXP-C Cards

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
ALS Mode	Sets the ALS function mode. The DWDM transmitter supports ALS according to ITU-T G.644 (06/99). ALS can be disabled, or it can be set for one of three mode options.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: (Not applicable for 40G Ethernet LAN Phy) ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: (Not applicable for Gigabit Ethernet client interfaces) ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.
AINS Soak	Sets the automatic in-service soak period. Double-click the time and use the up and down arrows to change settings.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments Note The AINS service state is not supported on interlink ports.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments Note The AINS service state is not supported on interlink ports.
Reach	Displays the optical reach distance of the client and trunk port.	- Autoprovision—(trunk port only) The system automatically provisions the reach. - VSR—(client port only) The system provisions very short reach (VSR) for the port.	- Autoprovision—(trunk port only) The system automatically provisions the reach. - VSR—(client port only) The system provisions very short reach (VSR) for the port.

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

DLP-G660 Change the 40G Multirate Transponder Line Section Trace Settings

Purpose	This task changes the line section trace settings of the 40E-TXP-C, and 40ME-TXP-C transponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40E-TXP-C card where you want to change the line section trace settings.
- Step 2** Click the **Provisioning > Line > Section Trace** tabs.
- Step 3** Modify any of the settings described in [Table 6-37](#).

Table 6-37 Section Trace Settings of the 40E-TXP-C, and 40ME-TXP-C Cards

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	Sets the port number.	1 (OC-768) 2 (OC-768)	1 (STM-256) 2 (STM-256)
Received Trace Mode	Sets the trace mode.	- Off/None - Manual	- Off/None - Manual
Disable AIS/RDI on TIM-S	If a TIM on Section overhead alarm is raised because of a J0 overhead string mismatch, no alarm indication signal is sent to downstream nodes if this box is checked.	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)
Transmit Section Trace String Size	Sets the trace string size.	1 byte 16 byte	1 byte 16 byte

Table 6-37 **Section Trace Settings of the 40E-TXP-C, and 40ME-TXP-C Cards**

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. In Transmit String Type, click Hex Mode to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex Mode). The supported range for 1 bit Hex TX trace is 20 to 7E. If TX trace is provisioned outside this range, client transmits 00.	String of trace string size	String of trace string size
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. In Expected String Type, click Hex Mode to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex Mode).	String of trace string size	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size	String of trace string size
Auto-refresh	Refreshes the display automatically every 5 seconds, if checked.	Checked or unchecked (default)	Checked or unchecked (default)

- Step 4** Click **Apply**.
- Step 5** Click **Default** to restore default values.
- Step 6** Return to your originating procedure (NTP).

DLP-G661 Change the 40G Multirate Transponder Line Thresholds for SONET or SDH Payloads

Purpose	This task changes the line threshold settings of 40E-TXP-C and 40ME-TXP-C transponder cards carrying SONET or SDH payloads.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed

Onsite/Remote Onsite or remote
Security Level Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40E-TXP-C card where you want to change the line threshold settings.
- Step 2** Click the **Provisioning > Line Thresholds > SONET Thresholds (ANSI)** or **SDH Thresholds (ETSI)** tabs.
- Step 3** Modify any of the settings described in [Table 6-38](#).

Table 6-38 *Line Threshold Settings for the 40E-TXP-C, and 40ME-TXP-C Cards*

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Port number	1 (OC-768) 2 (OC-768)	1 (STM-256) 2 (STM-256)
CV	Coding violations	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	—
ES	Errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .
SES	Severely errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh . Click Reset to Default to restore default values.	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh . Click Reset to Default to restore default values.

Table 6-38 Line Threshold Settings for the 40E-TXP-C, and 40ME-TXP-C Cards

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
FC	(Line or Multiplex Section only) Failure count	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Line or Section (near end only) Choose an option in each category and click Refresh . Click Reset to Default to restore default values.	—
UAS	(Line or Multiplex Section only) Unavailable seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Line or Section (near end only) Choose an option in each category and click Refresh . Click Reset to Default to restore default values.	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh . Click Reset to Default to restore default values.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G663 Provision the 40G Multirate Transponder Trunk Port Alarm and TCA Thresholds

Purpose	This task provisions the 40E-TXP-C, and 40ME-TXP-C trunk port alarm and threshold cross alert (TCA) thresholds.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40E-TXP-C card where you want to change the trunk port alarm and TCA settings.

Step 2 Click the **Provisioning > Optics Thresholds** tabs.

- Step 3** Under Types area, verify that the TCA radio button is selected. If not, click it, then click **Refresh**.
- Step 4** Referring to [Table 6-39](#), verify the trunk port (Port 2) TCA thresholds for Laser Bias High, RX Power High, RX Power Low, TX Power High, and TX Power Low. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting the existing value, and entering the new value. Press **Enter**, then click **Apply**.
- Step 5** Under Intervals area, select 15 Min or 1 Day, then click **Refresh**.

Note Do not modify the Laser Bias parameters.

Table 6-39 Trunk Port TCA Thresholds of the 40E-TXP-C, and 40ME-TXP-C Cards

Card	TCA Laser Bias High (dbm)	TCA RX Power High (dbm)	TCA RX Power Low (dbm)	TCA TX Power High (dbm)	TCA TX Power Low (dbm)
40E-TXP-C 40ME-TXP-C	95.0	-8.0	-20.0	5.0	-5.0

- Step 6** Click **Apply**.
- Step 7** Under Types area, click the **Alarm** radio button and click **Refresh**.
- Step 8** Referring to [Table 6-39](#), verify the trunk port (Port 2) alarm thresholds for Laser Bias High, RX Power High, RX Power Low, TX Power High, and TX Power Low. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting the existing value, and entering the new value. Press **Enter**, then click **Apply**.
- Step 9** Under Intervals area, select 15 Min or 1 Day, then click **Refresh**.

Table 6-40 Trunk Port Alarm Thresholds of the 40E-TXP-C, and 40ME-TXP-C Cards

Card	Alarm Laser Bias High (dbm)	Alarm RX Power High	Alarm RX Power Low	Alarm TX Power High	Alarm TX Power Low
40E-TXP-C 40ME-TXP-C	98.0	-6.0	-22.0	3.0	-3.0

- Step 10** Click **Apply**.
- Step 11** Click **Default** to restore default values.
- Step 12** Return to your originating procedure (NTP).

DLP-G664 Provision the 40G Multirate Transponder Client Port Alarm and TCA Thresholds

Purpose	This task provisions the client port alarm and TCA thresholds for the 40E-TXP-C, and 40ME-TXP-C cards.
Tools/Equipment	None

Prerequisite Procedures [DLP-G278 Provision the Optical Line Rate, page 6-14](#)
[DLP-G46 Log into CTC, page 3-30](#)

Required/As Needed Required
Onsite/Remote Onsite or remote
Security Level Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40E-TXP-C card where you want to change the client port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs. The TCA thresholds are shown by default.
- Step 3** Under Types area, verify that the TCA radio button is selected. If not, click it, then click **Refresh**.
- Step 4** Referring to [Table 6-41](#), verify the client port (Port 1) TCA thresholds for Laser Bias High, RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface at the other end. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting the existing value, and entering the new value. Press Enter, then click **Apply**.
- Step 5** Under Intervals area, select 15 Min or 1 Day, then click **Refresh**.

Note Do not modify the Laser Bias parameters.

Table 6-41 Client Interface TCA Thresholds of the 40E-TXP-C, and 40ME-TXP-C Cards

Pluggable Port Rate	TCA Laser Bias High	TCA RX Power High	TCA RX Power Low	TCA TX Power High	TCA TX Power Low
40G Ethernet LAN Phy	95.0	3.0	-6.0	6.0	-3.0
OC-768/STM-256	95.0	3.0	-6.0	6.0	-3.0
OTU3	95.0	3.0	-6.0	6.0	-3.0

- Step 6** Click **Apply**.
- Step 7** Under Types area, click the **Alarm** radio button and click **Refresh**.
- Step 8** Referring to [Table 6-42](#), provision the client port (Port 1) alarm thresholds for Laser Bias High, RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface that is provisioned.
- Step 9** Under Intervals area, select 15 Min or 1 Day, then click **Refresh**.

Table 6-42 Card Client Interface Alarm Thresholds of the 40E-TXP-C, and 40ME-TXP-C Cards

Pluggable Port Rate	Alarm Laser Bias High	Alarm RX Power High	Alarm RX Power Low	Alarm TX Power High	Alarm TX Power Low
40G Ethernet LAN Phy	98.0	5.0	-8.0	4.0	-1.0
OC-768/STM-256	98.0	5.0	-8.0	4.0	-1.0
OTU3	98.0	5.0	-8.0	4.0	-1.0

- Step 10** Click **Apply**.
- Step 11** Return to your originating procedure (NTP).

DLP-G665 Change the 40G Multirate Transponder OTN Settings

Purpose	This task changes the line OTN settings of the 40E-TXP-C, and 40ME-TXP-C transponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40E-TXP-C card where you want to change the OTN settings.
- Step 2** Click the **Provisioning > OTN** tabs, then click one of the following subtabs: **OTN Lines**, **ITU-T G.709 Thresholds**, **FEC Thresholds**, or **Trail Trace Identifier**.
- Step 3** Modify any of the settings described in Tables [6-43](#) through [6-46](#).

Note You must modify Near End and Far End, 15 Min and 1 Day, and SM and PM independently. To do so, select the appropriate radio button and click **Refresh**.

[Table 6-43](#) describes the values on the Provisioning > OTN > OTN Lines tab.

Table 6-43 OTN Line Settings of the 40E-TXP-C, and 40ME-TXP-C Cards

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	1 (only when data rate is set to OTU3) 2
ITU-T G.709 OTN	(Display only) Displays the OTN lines according to ITU-T G.709.	Enable
FEC	Sets the OTN line FEC mode. FEC mode can be Standard or Enhanced. Standard is the same as enabling FEC. Enhanced FEC mode can be enabled to provide greater range and lower bit error rate.	- Standard Standard FEC is on. - Enhanced Enhanced FEC is on.

Table 6-43 OTN Line Settings of the 40E-TXP-C, and 40ME-TXP-C Cards

Parameter	Description	Options
SF BER	(Display only) Sets the signal fail bit error rate.	1E-5
SD BER	Sets the signal degrade bit error rate.	1E-5 1E-6 1E-7 1E-8 1E-9

Table 6-44 describes the values on the Provisioning > OTN > G.709 Thresholds tab.

Table 6-44 ITU-T G.709 Threshold Settings of the 40E-TXP-C, and 40ME-TXP-C Cards

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	1 (Only when data rate is set to OTU3) 2
ES	Errored seconds.	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh. Click Reset to Default to restore default values. Note SM (OTUk) is the ITU-T G.709 optical channel transport unit order of k overhead frame used for management and performance monitoring. PM (ODUk) is the ITU-T G.709 optical channel data unit order of k overhead frame unit used for path performance monitoring.

Table 6-44 *ITU-T G.709 Threshold Settings of the 40E-TXP-C, and 40ME-TXP-C Cards*

Parameter	Description	Options
SES	Severely errored seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh. Click Reset to Default to restore default values.
UAS	Unavailable seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh. Click Reset to Default to restore default values.
BBE	Background block errors	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh. Click Reset to Default to restore default values.
FC	Failure counter	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh. Click Reset to Default to restore default values.

Table 6-45 describes the values on the Provisioning > OTN > FEC Thresholds tab.

Table 6-45 *FEC Threshold Settings of the 40E-TXP-C, and 40ME-TXP-C Cards*

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	2 (Only when data rate is set to OTU3)
Bit Errors Corrected	Displays the number of bit errors corrected during the selected time period.	Numeric display. Can be set for 15-minute or one-day intervals. Choose an option in each category and click Refresh . Click Reset to Default to restore default values.
Uncorrectable Words	Displays the number of uncorrectable words in the selected time period.	Numeric display. Can be set for 15-minute or one-day intervals. Choose an option in each category and click Refresh . Click Reset to Default to restore default values.

Table 6-46 describes the values on the Provisioning > OTN > Trail Trace Identifier tab.

Table 6-46 *Trail Trace Identifier Settings of the 40E-TXP-C, and 40ME-TXP-C Cards*

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	Sets the port number.	1 (OTU3) 2 (Trunk)	1 (OTU3) 2 (Trunk)
Received Trace Mode	Sets the trace mode.	- Off/None - Manual	- Off/None - Manual
Disable FDI on TTIM-S	If a TTIM on Section overhead alarm is raised because of a J0 overhead string mismatch, no alarm indication signal is sent to downstream nodes if this box is checked.	- Checked (FDI on TTIM-S is disabled) - Unchecked (FDI on TTIM-S is not disabled)	- Checked (FDI on TTIM-S is disabled) - Unchecked (FDI on TTIM-S is not disabled)
Transmit Section Trace String Size	Sets the trace string size.	1 byte 16 byte	1 byte 16 byte
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. In Transmit String Type, click Hex Mode to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex Mode).	String of trace string size	String of trace string size

Table 6-46 Trail Trace Identifier Settings of the 40E-TXP-C, and 40ME-TXP-C Cards

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. In Transmit String Type, click Hex Mode to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex Mode).	String of trace string size	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size	String of trace string size
Auto-refresh	Refreshes the display automatically every 5 seconds, if checked.	Checked or unchecked (default)	Checked or unchecked (default)

- Step 4** Click **Apply**.
- Step 5** Click **Default** to restore default settings.
- Step 6** Return to your originating procedure (NTP).

NTP-G170 Provision the ADM-10G Card Peer Group, Ethernet Settings, Line Settings, PM Parameters, and Thresholds

Purpose	This procedure creates an ADM-10G peer group and changes line settings, PM parameters, and threshold settings for ADM-10G cards.
Tools/Equipment	None
Prerequisite Procedures	NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 DLP-G63 Install an SFP or XFP, page 4-74 DLP-G411 Provision an ADM-10G PPM and Port, page 6-9 (if necessary) DLP-G278 Provision the Optical Line Rate, page 6-14 (if necessary)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** Complete the [“DLP-G46 Log into CTC” task on page 3-30](#) at the node where you want to change the ADM-10G card settings. If you are already logged in, continue with [Step 2](#).

- Step 2** As needed, complete the “[NTP-G103 Back Up the Database](#)” procedure on page 14-2 to preserve the existing transmission settings.
- Step 3** To provision a peer group, complete the “[DLP-G403 Create the ADM-10G Peer Group](#)” task on page 6-93.
- Step 4** To provision Ethernet settings, complete the “[DLP-G469 Provision the ADM-10G Card Ethernet Settings](#)” task on page 6-94.
- Step 5** To change line settings, complete the following tasks as needed:
- [DLP-G397 Change the ADM-10G Line Settings](#), page 6-95
 - [DLP-G398 Change the ADM-10G Line Section Trace Settings](#), page 6-101
 - [DLP-G399 Change the ADM-10G Line Thresholds for SONET and SDH Payloads](#), page 6-102
 - [DLP-G412 Change the ADM-10G Line RMON Thresholds for the 1G Ethernet Payload](#), page 6-106
- Step 6** To change thresholds, complete the following tasks as needed:
- [DLP-G400 Provision the ADM-10G Interlink or Trunk Port Alarm and TCA Thresholds](#), page 6-109
 - [DLP-G401 Provision the ADM-10G Client Port Alarm and TCA Thresholds](#), page 6-110
 - [DLP-G402 Change the ADM-10G OTN Settings](#), page 6-111
- Stop. You have completed this procedure.**

DLP-G403 Create the ADM-10G Peer Group

Purpose	This task creates peer group protection for two ADM-10G cards within the same node, located on the same shelf.
Tools/Equipment	None
Prerequisite Procedures	NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards , page 4-71, for two ADM-10G cards (located on the same shelf) for which a peer group is desired. DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

You cannot perform this task on a single ADM-10G card; it is only available if a second ADM-10G card can be accessed through the interlink ports (Port 17 and Port 18).

Note

Due to a hardware limitation, you cannot provision the SDCC/LDCC on Port 17.

Note

Perform this task on only one of the two peer cards.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the ADM-10G card where you want to change the card settings.
- Step 2** Click the **Provisioning > Card** tabs.
- Step 3** In the **ADM Group Peer** drop-down list, choose the slot number (for example, 14) where the companion ADM-10G card is located.
- Step 4** In the **ADM Peer Group** field, enter a group name.
- Step 5** Click **Apply**.

Note The Card Parameters Tunable Wavelengths area is read-only and does not contain any wavelengths until circuits are separately provisioned for the card.

- Step 6** Return to your originating procedure (NTP).

DLP-G469 Provision the ADM-10G Card Ethernet Settings

Purpose	This task changes the Ethernet settings for the ADM-10G card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the ADM-10G card where you want to change the Ethernet settings. The card view appears.
- Step 2** Click the **Provisioning > Line > Ethernet** tabs.
- Step 3** Modify any of the settings for the Ethernet tab as described in [Table 6-47](#). The parameters that appear depend on the card mode.

Table 6-47 ADM-10G Card Ethernet Settings

Parameter	Description	Options
Port	(Display only) The Port number (<i>n-n</i>) and rate.	—
MTU	The maximum size of the Ethernet frames accepted by the port.	Jumbo. Default: 64 to 9216 Numeric: 1548
Mode	Sets the Ethernet mode.	1000 Mbps
Framing	Sets the framing type.	- GFP-F - HDLC

Table 6-47 ADM-10G Card Ethernet Settings (continued)

Parameter	Description	Options
CRC Encap	Sets the CRC encap values for the framing type.	CRC encap value for GFP-F: - None (default) 32-Bit CRC encap value for HDLC: 16-Bit 32-Bit (default)
AINS Soak	Automatic in-service soak time. The duration of time that must pass with an uninterrupted signal before the traffic/termination transitions to the IS-NR (ANSI) or unlocked-enabled (ETSI) service state.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G397 Change the ADM-10G Line Settings

Purpose	This task changes the line settings for ADM-10G cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the ADM-10G card where you want to change the line settings.

Step 2 Click the **Provisioning > Line > Ports** tabs.

Step 3 Modify any of the settings described in [Table 6-48](#) as needed.

Note In [Table 6-48](#), some parameter tabs do not always apply to all ADM-10G cards. If a tab does not apply, it will not appear in CTC.

Table 6-48 ADM-10G Line Port Tab Settings

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Displays the port number.	1-1 to 1-16 (OC3/OC12/OC48/GE) 17-1 (Trunk/Interlink) 18-1 (Trunk/Interlink) 19-1 (Trunk) Note Port 17 and Port 18 are trunk ports that support OC192 payload in a single-card configuration. These ports are interlink ports in a double-card configuration (ADM-10G peer group).	1-1 to 1-16 (STM1/STM4/STM16/GE) 17-1 (Trunk/Interlink) 18-1 (Trunk/Interlink) 19-1 (Trunk) Note Port 17 and Port 18 are trunk ports that support STM64 payload in a single-card configuration. These ports are interlink ports in a double-card configuration (ADM-10G peer group).
Port Name	Provides the ability to assign the specified port a name.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3.
Admin State	Sets the port service state. For more information about administrative states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS - IS,AINS - OOS,DSBLD - OOS,MT	- Unlocked - Unlocked,automaticInService - Locked,disabled - Locked,maintenance

Table 6-48 **ADM-10G Line Port Tab Settings (continued)**

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	• IS-NR • OOS-AU,AINS • OOS-MA,DSBLD • OOS-MA,MT	• Unlocked-enabled • Unlocked-disabled, automaticInService • Locked-enabled,disabled • Locked-enabled,maintenance

Table 6-48 ADM-10G Line Port Tab Settings (continued)

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
ALS Mode	Sets the ALS function mode. The DWDM transmitter supports ALS according to ITU-T G.644 (06/99). ALS can be disabled, or it can be set for one of three mode options.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: (Not applicable for Gigabit Ethernet client interfaces) ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: (Not applicable for Gigabit Ethernet client interfaces) ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.
AINS Soak	Sets the automatic in-service soak period. Double-click the time and use the up and down arrows to change settings.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments Note The AINS service state is not supported on interlink ports.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments Note The AINS service state is not supported on interlink ports.

Table 6-48 ADM-10G Line Port Tab Settings (continued)

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Reach	Displays the optical reach distance of the client port.	The Reach options depend on the traffic type that has been selected.	The Reach options depend on the traffic type that has been selected.
Wavelength	Tunable wavelength.	Shows the supported wavelengths of the trunk port after the card is installed in the format: <i>first wavelength-last wavelength-frequency spacing-number of supported wavelengths</i> . For example, 1529.55nm-1561.83nm-50g Hz-8 are supported wavelengths.	Shows the supported wavelengths of the trunk port after the card is installed in the format: <i>first wavelength-last wavelength-frequency spacing-number of supported wavelengths</i> . For example, 1529.55nm-1561.83nm-50g Hz-8 are supported wavelengths.

Step 4 Click **Apply**.

Step 5 Click the **Provisioning > Line > SONET or SDH** tabs.

Step 6 Modify any of the settings described in [Table 6-49](#) as needed.

Table 6-49 ADM-10G Line SONET or SDH Tab Settings

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Displays the client and trunk port number.	1-1 to 1-16 (OC3/OC12/OC48/GE) 17-1 (OC192) 18-1 (OC192/Interlink) 19-1 (OC192) Note Port 17 and Port 18 are trunk ports that support OC192 payload in a single-card configuration. These ports are interlink ports in a double-card configuration (ADM-10G peer group).	1-1 to 1-16 (STM1/STM4/STM16/GE) 17-1 (STM64) 18-1 (STM64/Interlink) 19-1 (STM64) Note Port 17 and Port 18 are trunk ports that support STM64 payload in a single-card configuration. These ports are interlink ports in a double-card configuration (ADM-10G peer group).
ProvidesSync	When checked, the card is provisioned as an NE timing reference.	Checked or unchecked	Checked or unchecked

Table 6-49 *ADM-10G Line SONET or SDH Tab Settings (continued)*

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
SyncMsgIn	Enables synchronization status messages (S1 byte), which allow the node to choose the best timing source.	Checked or unchecked	Checked or unchecked
SF BER	Sets the signal fail bit error rate.	1E-3 1E-4 1E-5	1E-3 1E-4 1E-5
Send DoNotUse	When checked, sends a DUS message on the S1 byte.	Checked or unchecked	Checked or unchecked
SD BER	Sets the signal degrade bit error rate.	1E-5 1E-6 1E-7 1E-8 1E-9	1E-5 1E-6 1E-7 1E-8 1E-9
Type	(Display only) Type of node.	- SONET - SDH	SDH
Admin SSM In	Overrides the synchronization status message (SSM) synchronization traceability unknown (STU) value. If the node does not receive an SSM signal, it defaults to STU.	- PRS—Primary Reference Source (Stratum 1) - ST2—Stratum 2 - TNC—Transit node clock - ST3E—Stratum 3E - ST3—Stratum 3 - SMC—SONET minimum clock - ST4—Stratum 4 - DUS—Do not use for timing synchronization - RES—Reserved; quality level set by user	- G811—Primary reference clock - STU—Sync traceability unknown - G812T—Transit node clock traceable - G812L—Local node clock traceable - SETS—Synchronous equipment - DUS—Do not use for timing synchronization

Step 7 Return to your originating procedure (NTP).

DLP-G398 Change the ADM-10G Line Section Trace Settings

Purpose	This task changes the line section trace settings for the ADM-10G cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

The **Section Trace** tab is available for ports configured as OC-N (Ports 1 through 16, Ports 17 and 18 [only in a single-card configuration] and Port 19). Section trace is not available on interlink ports.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the ADM-10G card where you want to change the section trace settings. The card view appears.
- Step 2** Click the **Provisioning > Line > Section Trace** tabs.
- Step 3** Modify any of the settings described in [Table 6-50](#).

Table 6-50 ADM-10G Section Trace Settings

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	Sets the port number.	1-1 to 1-16 (OC3/OC12/OC48/GE) 17-1 (OC 192) 18-1 (OC192) 19-1 (OC192) Note Port 17 and Port 18 are trunk ports that support OC192 payload in a single-card configuration. These ports are interlink ports in a double-card configuration (ADM-10G peer group).	1-1 to 1-16 (STM1/STM4/STM16/GE) 17-1 (STM64) 18-1 (STM64) 19-1 (STM64) Note Port 17 and Port 18 are trunk ports that support STM64 payload in a single-card configuration. These ports are interlink ports in a double-card configuration (ADM-10G peer group).
Received Trace Mode	Sets the trace mode.	- Off/None - Manual	- Off/None - Manual

Table 6-50 ADM-10G Section Trace Settings (continued)

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Transmit Section Trace String Size	Sets the trace string size.	1 byte 16 byte 64 byte	1 byte 16 byte 64 byte
Current	Current Transmit String displays the current transmit string; New Transmit String sets a new transmit string. Current String Type allows you to choose between ASCII or Hexadecimal format. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size	String of trace string size
Received	(Display only) Current Received String displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 seconds.	Checked/unchecked (default)	Checked/unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G399 Change the ADM-10G Line Thresholds for SONET and SDH Payloads

Purpose	This task changes the line threshold settings for ADM-10G cards carrying SONET payloads.
Tools/Equipment	None

Prerequisite Procedures [DLP-G46 Log into CTC, page 3-30](#)

Required/As Needed As needed

Onsite/Remote Onsite or remote

Security Level Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the ADM-10G card where you want to change the line threshold settings. The card view appears.
- Step 2** Click the **Provisioning > Line Thresholds > SONET or SDH Thresholds** tabs.
- Step 3** Modify any of the settings described in [Table 6-51](#).

Table 6-51 *ADM-10G Card Line Threshold Settings*

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Port number	1-1 to 1-16 (OC3/OC12/OC48/GE) 17-1 (OC 192) 18-1 (OC192) 19-1 (OC192) Note Port 17 and Port 18 are trunk ports that support OC192 payload in a single-card configuration. These ports are interlink ports in a double-card configuration (ADM-10G peer group).	1-1 to 1-16 (STM1/STM4/STM16/GE) 17-1 (STM 64) 18-1 (STM64) 19-1 (STM64) Note Port 17 and Port 18 are trunk ports that support STM64 payload in a single-card configuration. These ports are interlink ports in a double-card configuration (ADM-10G peer group).
EB	Path Errored Block indicates that one or more bits are in error within a block	—	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh.

Table 6-51 ADM-10G Card Line Threshold Settings (continued)

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
CV	Coding violations	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	—
ES	Errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .
SES	Severely errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .
BBE	Background block errors	—	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .

Table 6-51 *ADM-10G Card Line Threshold Settings (continued)*

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options

PSC	Protection Switching Count	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day Choose an option in each category and click Refresh .	—
PSD	Protection Switching Duration	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day Choose an option in each category and click Refresh .	—
UAS	(Line Section only) Unavailable seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Line or Section (near end only) Choose an option in each category and click Refresh .	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Line or Section (near end only) Choose an option in each category and click Refresh .

Step 4 Click **Apply**.**Step 5** Return to your originating procedure (NTP).

DLP-G412 Change the ADM-10G Line RMON Thresholds for the 1G Ethernet Payload

Purpose	This task changes the line RMON threshold settings for an ADM-10G card carrying the 1G Ethernet payload.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30 DLP-G411 Provision an ADM-10G PPM and Port, page 6-9
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

This task can only be performed if the ADM-10G card has at least one PPM port provisioned for Gigabit Ethernet.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the ADM-10G card where you want to change the line RMON thresholds. The card view appears.
- Step 2** Click the **Provisioning > Line Thresholds > RMON Thresholds** tabs.
- Step 3** Click **Create**. The Create Threshold dialog box appears.
- Step 4** From the Port drop-down list, choose the applicable port.
- Step 5** From the Variable drop-down list, choose the applicable Ethernet variable. See [Table 6-52](#) for a list of available Ethernet variables.

Table 6-52 ADM-10G Gigabit Ethernet Thresholds

Variable	Description
ifInOctets	Total number of octets received on the interface, including framing characters.
ifInErrors	Number of inbound packets that contained errors preventing them from being deliverable to a higher-layer protocol.
ifOutOctets	Total number of octets transmitted out of the interface, including framing characters.
ifInMulticastPkts	Number of multicast frames received error-free.
ifInBroadcastPkts	Number of packets, delivered by a sublayer to a higher layer or sublayer, that were addressed to a broadcast address at this sublayer.
ifInErrorBytePkts	Number of receive error bytes.
dot3StatsFCSErrors	Number of frames with frame check errors; that is, there is an integral number of octets, but there is also an incorrect frame check sequence (FCS).
dot3StatsFrameTooLong	Number of received frames that were larger than the permitted maximum size.

Table 6-52 ADM-10G Gigabit Ethernet Thresholds (continued)

dot3ControlInUnknownOpCodes	A count of MAC control frames received on this interface that contain an opcode not supported by this device.
dot3InPauseFrames	A count of MAC control frames received on this interface with an opcode indicating the PAUSE operation.
dot3OutPauseFrames	A count of MAC control frames transmitted on this interface with an opcode indicating the PAUSE operation.
etherStatsUndersizePkts	Total number of packets received that were well-formed and less than 64 octets long (excluding framing bits and including FCS octets).
etherStatsFragments	Total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad FCS with an integral number of octets (FCS error) or a bad FCS with a nonintegral number of octets (alignment error). Note It is normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
etherStatsPkts64Octets	Total number of packets (including bad packets) transmitted and received by the interface that were 64 octets in length (excluding framing bits and including FCS octets).
etherStatsPkts65to127Octets	Total number of packets (including bad packets) transmitted and received by the interface that were between 65 and 127 octets in length, inclusive.
etherStatsPkts128to255Octets	The total number of packets (including bad packets) transmitted and received by the interface that were between 128 and 255 octets in length, inclusive, excluding framing bits and including FCS octets.
etherStatsPkts256to511Octets	Total number of packets (including bad packets) transmitted and received by the interface that were between 256 and 511 octets in length, inclusive.
etherStatsPkts512to1023Octets	Total number of packets (including bad packets) transmitted and received by the interface that were between 512 and 1023 octets in length, inclusive, excluding framing bits and including FCS octets.
etherStatsPkts1024to1518Octets	Total number of packets (including bad packets) transmitted and received by the interface that were between 1024 and 1518 octets in length, inclusive, excluding framing bits and including FCS octets.
etherStatsBroadcastPkts	Total number of good packets transmitted and received by the interface that were directed to the broadcast address. Note Multicast packets are not included.

Table 6-52 *ADM-10G Gigabit Ethernet Thresholds (continued)*

etherStatsMulticastPkts	Total number of good packets transmitted and received by the interface that were directed to a multicast address. Note This number does not include packets directed to the broadcast address.
etherStatsOversizePkts	Total number of packets transmitted and received by the interface that were well-formed and longer than 1518 octets, excluding framing bits and including FCS octets.
etherStatsJabbers	Total number of packets received that were longer than 1518 octets (excluding framing bits and including FCS octets), and had a bad FCS with an integral number of octets (FCS error) or a bad FCS with a nonintegral number of octets (alignment error).
rxTotalPkts	Total number of received packets.
txTotalPkts	Total number of transmit packets.

- Step 6** From the Alarm Type drop-down list, indicate whether the event will be triggered by the rising threshold, the falling threshold, or both the rising and falling thresholds.
- Step 7** From the Sample Type drop-down list, choose either **Relative** or **Absolute**. Relative restricts the threshold to use the number of occurrences in the user-set sample period. Absolute sets the threshold to use the total number of occurrences, regardless of time period.
- Step 8** Type an appropriate number of seconds for the Sample Period.
- Step 9** Type the appropriate number of occurrences for the Rising Threshold.

For a rising type of alarm, the measured value must move from below the falling threshold to above the rising threshold. For example, if a network is running below a rising threshold of 1000 collisions every 15 seconds and a problem causes 1001 collisions in 15 seconds, the excess occurrences trigger an alarm.
- Step 10** Enter the appropriate number of occurrences in the Falling Threshold field. In most cases a falling threshold is set lower than the rising threshold.

A falling threshold is the counterpart to a rising threshold. When the number of occurrences is above the rising threshold and then drops below a falling threshold, it resets the rising threshold. For example, when the network problem that caused 1001 collisions in 15 seconds subsides and creates only 799 collisions in 15 seconds, occurrences fall below a falling threshold of 800 collisions. This resets the rising threshold so that if network collisions again spike over a 1000 per 15-second period, an event again triggers when the rising threshold is crossed. An event is triggered only the first time a rising threshold is exceeded (otherwise, a single network problem might cause a rising threshold to be exceeded multiple times and cause a flood of events).
- Step 11** Click **OK**.
- Step 12** Return to your originating procedure (NTP).

DLP-G400 Provision the ADM-10G Interlink or Trunk Port Alarm and TCA Thresholds

Purpose	This task provisions the ADM-10G interlink or trunk port alarm and threshold crossing alert (TCA) thresholds.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the ADM-10G card where you want to change the interlink or trunk port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs.
- Step 3** Under Types, verify that the TCA radio button is checked. If not, check it, then click **Refresh**.
- Step 4** Referring to [Table 6-53](#), verify the interlink or trunk port TCA thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and pressing **Enter**.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

Table 6-53 ADM-10G Interlink and Trunk Port TCA Thresholds

Port	TCA RX Power High	TCA RX Power Low	TCA TX Power High	TCA TX Power Low
17-1 and 18-1 (Trunk/Interlink)	-7.0 dBm	-27.0 dBm	6.0 dBm	-4.0 dBm
Note Port 17 and Port 18 are trunk ports in single-card configuration and an interlink port in double-card configuration (ADM-10G peer group).				
19-1 (Trunk)	-7.0 dBm	-27.0 dBm	6.0 dBm	-4.0 dBm

- Step 5** Click **Apply**.
- Step 6** Under Types, click the **Alarm** radio button and click **Refresh**.
- Step 7** Referring to [Table 6-54](#), verify the interlink or trunk port alarm thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and pressing **Enter**.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Table 6-54 ADM-10G Interlink and Trunk Port Alarm Thresholds

Port	Alarm RX Power High	Alarm RX Power Low	Alarm TX Power High	Alarm TX Power Low
17-1 (Trunk/Interlink)	1.0 dBm	−13.0 dBm	1.0 dBm	−8.0 dBm
Note Port 17 is a trunk port in single-card configuration and an interlink port in double-card configuration (ADM-10G peer group).				
18-1 (Trunk/Interlink)	−5.0 dBm	−30.0 dBm	5.0 dBm	−3.0 dBm
Note Port 18 is a trunk port in single-card configuration and an interlink port in double-card configuration (ADM-10G peer group).				
19-1 (Trunk)	−5.0 dBm	−30.0 dBm	5.0 dBm	−3.0 dBm

Step 8 Click **Apply**.

Step 9 Return to your originating procedure (NTP).

DLP-G401 Provision the ADM-10G Client Port Alarm and TCA Thresholds

Purpose	This task provisions the client port alarm and TCA thresholds for the ADM-10G card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G278 Provision the Optical Line Rate, page 6-14 DLP-G46 Log into CTC, page 3-30
Required/As Needed	Required
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the ADM-10G card where you want to change the client port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs.
- Step 3** Under Types, verify that the **TCA** radio button is checked. If not, check it, then click **Refresh**.
- Step 4** Referring to [Table 6-13 on page 6-42](#) and [Table 6-14 on page 6-43](#), verify the Port 1 to 16 (Client) Alarm thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface that is provisioned. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and pressing **Enter**.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

- Step 5** Click **Apply**.
- Step 6** Under Types, click the **Alarm** radio button and click **Refresh**.
- Step 7** Referring to [Table 6-13](#) and [Table 6-14 on page 6-43](#), verify the interlink ports 17-1 and 18-1 for RX Power High, RX Power Low, TX Power High, and TX Power Low settings. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and pressing **Enter**.
- Step 8** Click **Apply**.
- Step 9** Return to your originating procedure (NTP).

DLP-G402 Change the ADM-10G OTN Settings

Purpose	This task changes the line OTN settings for the ADM-10G cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the ADM-10G card where you want to change the OTN settings.
- Step 2** Click the **Provisioning > OTN** tabs, then click one of the following subtabs: **OTN Lines**, **ITU-T G.709 Thresholds**, **FEC Thresholds**, or **Trail Trace Identifier**.
- Step 3** Modify any of the settings described in [Tables 6-55 through 6-58](#).

Note You must modify Near End and Far End independently; 15 Min and 1 Day independently; and SM and PM independently. To do so, choose the appropriate radio buttons and click **Refresh**.

[Table 6-55](#) describes the values on the Provisioning > OTN > OTN Lines tab.

Table 6-55 *ADM-10G Card OTN Lines Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	18-1 (Trunk/Interlink) 19-1 (Trunk) Note Port 18 is a trunk port in single-card configuration and an interlink port in double-card configuration (ADM-10G peer group).
ITU-TG.709 OTN	Sets the OTN lines according to ITU-T G.709.	- Enable - Disable
FEC	Sets the OTN lines FEC mode. FEC mode can be Disabled, Enabled, or, for the TXP_MR_10E, Enhanced FEC mode can be enabled to provide greater range and lower bit error rate. For TXP_MR_10E cards, Standard is the same as enabling FEC.	- Disable—FEC is off. - Standard—Standard FEC is on. - Enhanced—Enhanced FEC is on.
SD BER	Sets the signal degrade bit error rate.	1E-5 1E-6 1E-7 1E-8 1E-9
SF BER	(Display only) Indicates the signal fail bit error rate.	1E-5
Synch Mapping	Sets how the ODUk (client payload) is mapped to the optical channel (OTUk).	Synch mapping

Table 6-56 describes the values on the Provisioning > OTN > ITU-T G.709 Thresholds tab.

Table 6-56 ADM-10G Card ITU-T G.709 Threshold Settings

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	18-1 (Trunk/Interlink) 19-1 (Trunk) Note Port 18 is a trunk port in single-card configuration and an interlink port in double-card configuration (ADM-10G peer group).
ES	Errored seconds. Selecting the SM (OTUk) radio button selects FEC, overhead management, and PM using OTUk. Selecting the PM radio button selects path PM using ODUk.	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh. Note SM (OTUk) is the ITU-T G.709 optical channel transport unit order of k overhead frame used for management and performance monitoring. PM (ODUk) is the ITU-T G.709 optical channel data unit order of k overhead frame unit used for path performance monitoring.
SES	Severely errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh.
UAS	Unavailable seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh.

Table 6-56 ADM-10G Card ITU-T G.709 Threshold Settings (continued)

Parameter	Description	Options
BBE	Background block errors	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh .
FC	Failure counter	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh .

Table 6-57 describes the values on the Provisioning > OTN > FEC Thresholds tab.

Table 6-57 ADM-10G Card FEC Threshold Settings

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	• 18-1 (Trunk/Interlink) • 19-1 (Trunk) Note Port 18 is a trunk port in single-card configuration and an interlink port in double-card configuration (ADM-10G peer group).
Bit Errors Corrected	Displays the number of bit errors corrected during the selected time period.	Numeric display. Can be set for 15-minute or 1 day intervals.
Uncorrectable Words	Displays the number of uncorrectable words in the selected time period.	Numeric display. Can be set for 15-minute or 1 day intervals.

Table 6-58 describes the values on the Provisioning > OTN > Trail Trace Identifier tab.

Table 6-58 ADM-10GTrail Trace Identifier Settings

Parameter	Description	Options
Port	Sets the port number.	18-1 (Trunk/Interlink) 19-1 (Trunk) Note Port 18 is a trunk port in single-card configuration and an interlink port in double-card configuration (ADM-10G peer group).
Level	Sets the level.	- Section - Path
Received Trace Mode	Sets the trace mode.	- Off/None - Manual
Disable FDI on TTIM	If a Trace Identifier Mismatch on Section/Path overhead alarm arises because of a J0/J1 overhead string mismatch, no Forward Defect Indication (FDI) signal is sent to the downstream nodes if this box is checked.	- Checked (FDI on TTIM is disabled) - Unchecked (FDI on TTIM is not disabled)
Transmit	Current Transmit String displays the current transmit string; New sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. In Transmit String Type, click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size; trail trace identifier is 64 bytes in length.
Expected	Current Expected String displays the current expected string; New sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. In Expected String Type, click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Received	(Display only) Current Received String displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size
Auto-refresh (every 5 sec)	If checked, automatically refreshes the display every 5 seconds.	Checked/unchecked (default)

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

NTP-G333 Add an ADM-10G card to an Existing Topology

Purpose	This procedure adds an ADM-10G card to an existing topology. Perform the steps in this procedure when OCHNC and DCC are present in the network. In case of OCH trails, delete all the circuits in Step 3 that traverses the port before deleting the OCH-trail.
Tools/Equipment	None
Prerequisite Procedures	• DLP-G46 Log into CTC, page 3-30. • Complete the turn up procedures in Turn Up a Node, page 4-1 for the node to be added. • An updated Cisco Transport Planner network plan recalculated with the new node.
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** If path protected circuits exist between Node A and Node B, complete the [DLP-A197 Initiate a Path Protection Force Switch](#) task. This task applies a force switch on the path between Node A and Node B.
- Step 2** Complete the [NTP-G129 Add a DWDM Node, page 13-9](#) task to add Node C.
- Step 3** Complete the [DLP-G106 Delete Optical Channel Network Connections, page 8-26](#) task to delete OCHNC circuit between Node A and Node B.
- Step 4** Complete the [NTP-G59 Create, Delete, and Manage Optical Channel Network Connections, page 8-21](#), task to create OCHNC circuit between Node A-->Node C and Node C-->Node B for wavelength connectivity.

Note The ports on the card in Node C must be tuned to the same wavelength as Node A and Node B.

- Step 5** Create DCC terminations on Node C. See the [DLP-A377 Provision Section DCC Terminations](#) task. Alternatively, if additional bandwidth is needed for CTC management, complete the [DLP-A378 Provision Line DCC Terminations](#) task.
- Step 6** Ensure that the DCCs are functional between Node A-->Node C and Node C-->Node B. See the [DLP-G76 Provision DCC/GCC Terminations, page 8-61](#) task.
- Step 7** Complete the [NTP-G200 Create, Delete, and Manage STS or VC Circuits for the ADM-10G Card, page 8-29](#) to create pass-through STS or VC circuits in Node C.
- Step 8** Complete the [NTP-A301 Merge Circuits](#) task for each circuit created.
- Step 9** If path protected circuits exist between Node A and Node B, complete the [DLP-A198 Clear a Path Protection Force Switch](#) task. This task clears a force switch on the path between Node A and Node B.

Stop. You have completed this procedure.

NTP-G97 Modify the 4x2.5G Muxponder Card Line Settings and PM Parameter Thresholds

Purpose	This procedure changes the line and threshold settings for the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71. DLP-G63 Install an SFP or XFP, page 4-74 DLP-G277 Provision a Multirate PPM, page 6-11 (if necessary) DLP-G278 Provision the Optical Line Rate, page 6-14 (if necessary)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on [page 3-30](#) at the node where you want to change the muxponder card settings. If you are already logged in, continue with [Step 2](#).
- Step 2** As needed, complete the “[NTP-G103 Back Up the Database](#)” procedure on [page 14-2](#) to preserve the existing transmission settings.
- Step 3** Perform any of the following tasks as needed:
- [DLP-G222 Change the 4x2.5G Muxponder Card Settings, page 6-118](#)
 - [DLP-G223 Change the 4x2.5G Muxponder Line Settings, page 6-120](#)
 - [DLP-G224 Change the 4x2.5G Muxponder Section Trace Settings, page 6-122](#)
 - [DLP-G225 Change the 4x2.5G Muxponder Trunk Settings, page 6-124](#)
 - [DLP-G226 Change the 4x2.5G Muxponder SONET/SDH Line Thresholds Settings, page 6-127](#)
 - [DLP-G303 Provision the 4x2.5G Muxponder Trunk Port Alarm and TCA Thresholds, page 6-130](#)
 - [DLP-G304 Provision the 4x2.5G Muxponder Client Port Alarm and TCA Thresholds, page 6-131](#)
 - [DLP-G228 Change the 4x2.5G Muxponder Line OTN Settings, page 6-133](#)
 - [DLP-G369 Change the 4x2.5G Muxponder Trunk Wavelength Settings, page 6-126](#)
- Step 4** As needed, complete the “[NTP-G103 Back Up the Database](#)” procedure on [page 14-2](#).

Stop. You have completed this procedure.

DLP-G222 Change the 4x2.5G Muxponder Card Settings

Purpose	This task changes the card settings for the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C muxponder cards, including payload type, termination mode, and wavelength.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1

In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C card where you want to change the card settings.
- Step 2

Click the **Provisioning > Card** tabs.
- Step 3

Modify any of the settings described in [Table 6-59](#).

Note Parameters shown in [Table 6-59](#) do not apply to all 4x2.5G muxponder cards. If the parameter or option does not apply, it is not shown in CTC.

Table 6-59 ***MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Card Settings***

Parameter	Description	Options
Termination Mode	Sets the mode of operation. Options that do not apply to a card do not display. The MXP_2.5G_10G card is based on SONET/SDH multiplexing. The transparent mode terminates and rebuilds the B1 byte (as well as other bytes) of the incoming OC-48/STM-16 signal. The B2 byte is not touched. The MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C cards are fully transparent in transparent mode based on the OTN/ITU-T G.709 multiplexing scheme. It does not terminate the B1 byte or other bytes. It encapsulates OC-48/STM-16 bytes into ODU1 first, then multiplexes them into an OTU2. Refer to the “Transponder and Muxponder Cards” chapter in the <i>Cisco ONS 15454 DWDM Reference Manual</i> for more details.	For ANSI platforms: - Transparent - Section (MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C only) - Line (MXP_2.5G_10G only) For ETSI platforms: - Transparent - Multiplex Section (MXP_2.5G_10G, only) - Regeneration Section (MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C only)
AIS/Squelch	(MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C only) Sets the transparent termination mode configuration.	- Ais - Squelch
Tunable Wavelengths	(Display only) Shows the supported wavelengths of the trunk port after the card is installed. For the MXP_2.5G_10E_C, or MXP_2.5G_10E_L cards, the first and last supported wavelength, frequency spacing, and number of supported wavelengths are shown in the format: <i>first wavelength-last wavelength-frequency spacing-number of supported wavelengths</i> . For example, the MXP_2.5G_10E_C card would show: 1529.55nm-1561.83nm-50GHz-82. The MXP_2.5G_10G and MXP_2.5G_10E show the four wavelengths supported by the card that is installed.	—

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G223 Change the 4x2.5G Muxponder Line Settings

Purpose	This task changes the line settings for the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C card where you want to change the line settings.

Step 2 Click the **Provisioning > Line > SONET** (ANSI) or **SDH** (ETSI) tabs.

Note The SONET tab appears only if you have created a PPM for a given port.

Step 3 Modify any of the settings described in [Table 6-60](#).

Note You must modify Near End and Far End independently; 15 Min and 1 Day independently; and Line and Section independently. To do so, choose the appropriate radio button and click **Refresh**.

Table 6-60 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Card Line Settings*

Parameter	Description	Options
Port	(Display only) Port number. Ports 1 to 4 are client ports (OC-48/STM-16). Port 5 is the DWDM trunk (OC-192/STM-64) that provides wavelength services. Client ports will not appear if the pluggable port module is not provisioned for it.	1 2 3 4 5 (Trunk) (MXP_2.5G_10G only)
Port Name	Provides the ability to assign the specified port a logical name.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “ DLP-G104 Assign a Name to a Port ” task on page 8-3 .

Table 6-60 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Card Line Settings (continued)*

Parameter	Description	Options
Admin State	Sets the port service state unless network conditions prevent the change. For more information about administrative states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS (ANSI) or Unlocked (ETSI) - IS,AINS (ANSI) or Unlocked,automaticInService (ETSI) - OOS,DSBLD (ANSI) or Locked,disabled (ETSI) - OOS,MT (ANSI) or Locked,maintenance (ETSI)
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR (ANSI) or Unlocked-enabled (ETSI) - OOS-AU,AINS (ANSI) or Unlocked-disabled, automaticInService (ETSI) - OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI) - OOS-MA,MT (ANSI) or Locked-enabled,maintenance (ETSI)
SF BER	Sets the signal fail bit error rate.	1E-3 1E-4 1E-5
SD BER	Sets the signal degrade bit error rate.	1E-5 1E-6 1E-7 1E-8 1E-9
ALS Mode	Sets the ALS function mode. The DWDM transmitter supports ALS according to ITU-T G.644 (06/99). ALS can be disabled or can be set for one of three mode options.	- Disable (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.
AINS Soak	Sets the automatic in-service soak period. Double-click the time and use the up and down arrows to change settings.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments

Table 6-60 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Card Line Settings (continued)*

Parameter	Description	Options
Type	Sets the optical transport type.	• SONET • SDH
SyncMsgIn	Enables synchronization status messages (S1 byte), which allow the node to choose the best timing source. (This parameter does not appear for the MXP_2.5G_10E trunk port.)	Checked or unchecked
ProvidesSync	Sets the ProvidesSync card parameter. If checked, the card is provisioned as an NE timing reference. (This parameter does not appear for the MXP_2.5G_10E trunk port.)	Checked or unchecked
Reach	Displays the optical reach distance of the client port.	Options: ANSI/ETSI • Autoprovision/Autoprovision (default) • SR • SR 1/I-1—Short reach up to 2-km distance • IR 1/S1—Intermediate reach, up to 15-km distance • IR 2/S2—Intermediate reach up to 40-km distance • LR 1/L1—long reach, up to 40-km distance • LR 2/L2—long reach, up to 80-km distance • LR 3/L3—long reach, up to 80-km distance
Wavelength	Displays the wavelength of the client port.	• First Tunable Wavelength • Further wavelengths: 850 nm through 1560.61 nm 100-GHz ITU spacing CWDM spacing

Step 4 Click **Apply**.**Step 5** Return to your originating procedure (NTP).

DLP-G224 Change the 4x2.5G Muxponder Section Trace Settings

Purpose	This task changes the section trace settings for the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

The Section Trace tab appears only if you have created a PPM for the card.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C card where you want to change the section trace settings.
- Step 2** Click the **Provisioning > Line > Section Trace** tabs.
- Step 3** Modify any of the settings described in [Table 6-61](#).

Table 6-61 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Card Section Trace Settings*

Parameter	Description	Options
Port	Sets the port number.	1 2 3 4 5 (Trunk; MXP_2.5G_10G only)
Received Trace Mode	Sets the trace mode.	- Off/None - Manual
Disable AIS/RDI on TIM-S	If an TIM on Section overhead alarm arises because of a J0 overhead string mismatch, no alarm indication signal is sent to downstream nodes if this box is checked.	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)
Transmit Section Trace String Size	Sets the trace string size. Select either radio button.	1 byte 16 byte
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size

Table 6-61 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Card Section Trace Settings (continued)*

Parameter	Description	Options
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 minutes.	Checked/unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G225 Change the 4x2.5G Muxponder Trunk Settings

Purpose	This task provisions the trunk settings for the MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

This task does not apply to the MXP_2.5G_10G card.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C card where you want to change the trunk settings.
- Step 2** Click the **Provisioning > Line > Trunk** tabs.
- Step 3** Modify any of the settings described in [Table 6-62](#).

Table 6-62 *MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Card Trunk Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number. Port 5 is the DWDM trunk (OC-192/STM-64) that provides wavelength services.	5 (Trunk)
Port Name	Provides the ability to assign the specified port a logical name.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “ DLP-G104 Assign a Name to a Port ” task on page 8-3.
Admin State	Sets the port service state unless network conditions prevent the change. For more information about administrative states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS (ANSI) or Unlocked (ETSI) - IS,AINS (ANSI) or Unlocked,automaticInService (ETSI) - OOS,DSBLD (ANSI) or Locked,disabled (ETSI) - OOS,MT (ANSI) or Locked,maintenance (ETSI)
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR (ANSI) or Unlocked-enabled (ETSI) - OOS-AU,AINS (ANSI) or Unlocked-disabled, automaticInService (ETSI) - OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI) - OOS-MA,MT (ANSI) or Locked-enabled,maintenance (ETSI)
ALS Mode	Sets the ALS function mode. The DWDM transmitter supports ALS according to ITU-T G.644 (06/99). ALS can be disabled or can be set for one of three mode options.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.
AINS Soak	(OC-N and STM-N payloads only) Sets the automatic in-service soak period.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G369 Change the 4x2.5G Muxponder Trunk Wavelength Settings

Purpose	This task changes the trunk wavelength settings for the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C card where you want to change the trunk wavelength settings.
- Step 2** Click the **Provisioning > Line > Wavelength Trunk Settings** tabs.
- Step 3** Modify any of the settings described in [Table 6-63](#).

Table 6-63 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C Card Wavelength Trunk Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number.	5 (Trunk)
Band	(Display only) Indicates the wavelength band available from the card that is installed. If the card is preprovisioned, the field can be provisioned to the band of the card that will be installed.	- C—The C-band wavelengths are available in the Wavelength field. - L—The L-band wavelengths are available in the Wavelength field.

Table 6-63 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C Card Wavelength Trunk Settings (continued)*

Parameter	Description	Options
Even/Odd	Sets the wavelengths available for provisioning for MXP_2.5G_10E_C and MXP_2.5G_10E_L cards. (This field does not apply to MXP_2.5G_10G or MXP_2.5G_10E cards.)	- Even—Displays even C-band or L-band wavelengths in the Wavelength field. - Odd—Displays odd C-band or L-band wavelengths in the Wavelength field.
Wavelength	The wavelength provisioned for the trunk.	- First Tunable Wavelength - Further wavelengths in 100-GHz ITU-T C-band or L-band spacing, depending on the card that is installed. For MXP_2.5G_10G and MXP_2.5G_10E cards, the wavelengths carried by the card are identified with two asterisks. If the card is not installed, all wavelengths appear with a dark grey background.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G226 Change the 4x2.5G Muxponder SONET/SDH Line Thresholds Settings

Purpose	This task changes the SONET (ANSI) or SDH (ETSI) line threshold settings for the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C card where you want to change the line threshold settings.

Step 2 Click the **Provisioning > Line Thresholds** tabs.

Step 3 Modify any of the settings described in [Table 6-64](#).

Note In [Table 6-64](#), some parameter tabs or selections do not always apply to all 4x2.5G muxponder cards. If the tabs or selections do not apply, they do not appear in CTC.

Table 6-64 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Card Line Threshold Settings*

Parameter	Description	Options - ONS 15454	Options - ONS 15454 SDH
Port	(Display only) Port number	• 1 • 2 • 3 • 4 • 5 (MXP_2.5G_10G only)	• 1 • 2 • 3 • 4 • 5 (MXP_2.5G_10G only)
EB	Path Errored Block indicates that one or more bits are in error within a block	—	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh.
CV	Coding violations	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Line or Section (near end only) Choose an option in each category and click Refresh.	—
ES	Errored seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Line or Section (near end only) Choose an option in each category and click Refresh.	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh.
SES	Severely errored seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Line or Section (near end only) Choose an option in each category and click Refresh.	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh.

Table 6-64 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Card Line Threshold Settings (continued)*

Parameter	Description	Options - ONS 15454	Options - ONS 15454 SDH
SEFS	(Near End Section or Regeneration Section only) Severely errored framing seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Line or Section (near end only) Choose an option in each category and click Refresh .	—
BBE	Background block errors	—	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .
FC	(Line or Multiplex Section only) Failure count	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Line or Section (near end only) Choose an option in each category and click Refresh .	—
UAS	(Line or Multiplex Section only) Unavailable seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Line or Section (near end only) Choose an option in each category and click Refresh .	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G303 Provision the 4x2.5G Muxponder Trunk Port Alarm and TCA Thresholds

Purpose	This task changes the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C trunk port alarm and TCA thresholds.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C card where you want to change the trunk port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs.
- Step 3** Select **TCA** (if not already selected), a **15 Min** or **1 Day** PM interval radio button and then click **Refresh**.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

- Step 4** Referring to [Table 6-65](#), verify the trunk port (Port 5) TCA thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Note Do not modify the Laser Bias parameters.

Table 6-65 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Trunk Port TCA Thresholds*

Card	TCA RX Power High	TCA RX Power Low	TCA TX Power High	TCA TX Power Low
MXP_2.5G_10G	-8 dBm	-18 dBm	7 dBm	-1 dBm
MXP_2.5G_10E	-9 dBm	-18 dBm	9 dBm	0 dBm
MXP_2.5G_10E_C	-9 dBm	-18 dBm	9 dBm	0 dBm
MXP_2.5G_10E_L	-9 dBm	-18 dBm	9 dBm	0 dBm
MXP_2.5G_10EX_C	-9 dBm	-18 dBm	9 dBm	0 dBm

- Step 5** Click **Apply**.
- Step 6** Under Types, click the **Alarm** radio button and click **Refresh**.

- Step 7** Referring to [Table 6-66](#), verify the trunk port (Port 5) Alarm thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Note Do not modify the Laser Bias parameters.

Table 6-66 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Trunk Port Alarm Thresholds*

Card	Alarm RX Power High	Alarm RX Power Low	Alarm TX Power High	Alarm TX Power Low
MXP_2.5G_10G	-8 dBm	-20 dBm	4 dBm	2 dBm
MXP_2.5G_10E	-8 dBm	-20 dBm	7 dBm	3 dBm
MXP_2.5G_10E_C	-8 dBm	-20 dBm	7 dBm	3 dBm
MXP_2.5G_10E_L	-8 dBm	-20 dBm	7 dBm	3 dBm
MXP_2.5G_10EX_C	-8 dBm	-20 dBm	7 dBm	3 dBm

- Step 8** Click **Apply**.
- Step 9** Return to your originating procedure (NTP).

DLP-G304 Provision the 4x2.5G Muxponder Client Port Alarm and TCA Thresholds

Purpose	This task provisions the client port alarm and TCA thresholds for the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G278 Provision the Optical Line Rate, page 6-14 DLP-G46 Log into CTC, page 3-30
Required/As Needed	Required
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C card where you want to change the client port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs. The TCA thresholds are shown by default.

- Step 3** Referring to [Table 6-67](#), verify the client Port *N* (where *N* = 1 through 4) TCA thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface at the other end. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

Note The hardware device that plugs into a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or ADM-10G card faceplate to provide a fiber interface to the card is called a Small Form-factor Pluggable (SFP or XFP). In CTC, SFPs and XFPs are called pluggable port modules (PPMs). SFPs/XFPs are hot-swappable input/output devices that plug into a port to link the port with the fiber-optic network. Multirate PPMs have provisionable port rates and payloads. For more information about SFPs and XFPs, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

Table 6-67 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Card Client Interfaces TCA Thresholds*

Port Type (by CTC)	Pluggable Port Module (SFP)	TCA RX Power High	TCA RX Power Low	TCA TX Power High	TCA TX Power Low
OC-48	ONS-SE-2G-S1	-3	-18	3	-16
	15454-SFP-OC48-IR	0	-18	6	-11
STM-16	ONS-SE-2G-S1	-3	-18	3	-16
	15454E-SFP-L.16.1	0	-18	6	-11

- Step 4** Repeat [Step 3](#) to provision each additional client port.
- Step 5** Under Types, click the **Alarm** radio button and click **Refresh**.
- Step 6** Referring to [Table 6-68](#), verify the client Port *N* (where *N* = 1 through 4) Alarm thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface that is provisioned. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Note Do not modify the Laser Bias parameters.

Table 6-68 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, or MXP_2.5G_10E_L Card Client Interfaces Alarm Thresholds*

Port Type (by CTC)	Pluggable Port Module (SFP)	Alarm RX Power High	Alarm RX Power Low	Alarm TX Power High	Alarm TX Power Low
OC-48	ONS-SE-2G-S1	0	-21	0	-13
	15454-SFP-OC48-IR	3	-21	3	-8
STM-16	ONS-SE-2G-S1	0	-21	0	-13
	15454E-SFP-L.16.1	3	-21	3	-8

- Step 7** Click **Apply**.
- Step 8** Repeat Steps 6 and 7 to provision each additional client port.
- Step 9** Return to your originating procedure (NTP).

DLP-G228 Change the 4x2.5G Muxponder Line OTN Settings

Purpose	This task changes the line OTN settings for MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, and MXP_2.5G_10EX_C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C card where you want to change the line OTN settings.
- Step 2** Click the **Provisioning > OTN** tabs, then choose one of the following subtabs: **OTN Lines**, **OTN G.709 Thresholds**, **FEC Thresholds**, or **Trail Trace Identifier**.
- Step 3** Modify any of the settings described in Tables 6-69 through 6-72.

Note You must modify Near End and Far End independently, 15 Min and 1 Day independently, and SM and PM independently. To do so, choose the appropriate radio button and click **Refresh**.

Table 6-69 describes the values on the Provisioning > OTN > OTN Lines tab.

Note In Table 6-69, some parameter tabs or values do not always apply to all MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, or MXP_2.5G_10E_L cards. If the tabs or values do not apply, they do not appear in CTC.

Table 6-69 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Card Line OTN Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number.	5 (Trunk)
G.709 OTN	Sets the OTN lines according to ITU-T G.709.	• Enable • Disable
FEC	Sets the OTN line FEC mode. FEC mode can be Disabled or Enabled. With the MXP_2.5G_10E card, Enhanced FEC (E-FEC) mode can be enabled to provide greater range and lower bit error rate. E-FEC applies only to the MXP_2.5G_10E card.	• Enable—(MXP_2.5G_10G only) FEC is on. • Disable—FEC is off. • Standard—(MXP_2.5G_10E only) FEC is on. • Enhanced—(MXP_2.5G_10E only) Enhanced FEC is on.
SD BER	Sets the signal degrade bit error rate.	• 1E-5 • 1E-6 • 1E-7 • 1E-8 • 1E-9
SF BER	(Display only) Sets the signal fail bit error rate.	• 1E-5
Asynch/Synch Mapping	(MXP_2.5G_10E only) The MXP_2.5G_10E can perform standard ODU multiplexing according to ITU-T G.709. The card uses this to aggregate the four OC-48 client signals.	• ODU Multiplex

Table 6-70 describes the values on the Provisioning > OTN > OTN G.709 Thresholds tab.

Table 6-70 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C ITU-T G.709 Threshold Settings*

Parameter	Description	Options
Port	(Display only) Port number	5 (Trunk)
ES	Errored seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh. Note SM (OTUk) is the ITU-T G.709 optical channel transport unit order of k overhead frame used for management and performance monitoring. PM (ODUk) is the ITU-T G.709 optical channel data unit order of k overhead frame unit used for path performance monitoring.
SES	Severely errored seconds. Two types of thresholds can be asserted. Selecting the SM (OTUk) radio button selects FEC, overhead management, and PM using OTUk. Selecting the PM radio button selects path PM using ODUk.	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh.
UAS	Unavailable seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh.

Table 6-70 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C ITU-T G.709 Threshold Settings (continued)*

Parameter	Description	Options
BBE	Background block errors	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh .
FC	Failure counter	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh .

Table 6-71 describes the values on the Provisioning > OTN > FEC Thresholds tab.

Table 6-71 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C FEC Threshold Settings*

Parameter	Description	Options
Port	(Display only) Displays the port number.	5 (Trunk)
Bit Errors Corrected	Displays the number of bit errors corrected during the interval selected. The interval can be set for 15 minutes or one day.	Numeric
Uncorrectable Words	Displays the number of uncorrectable words during the interval selected. The interval can be set for 15 minutes or one day.	Numeric

Table 6-72 describes the values on the Provisioning > OTN > Trail Trace Identifier tab.

Table 6-72 *MXP_2.5G_10G, MXP_2.5G_10E, MXP_2.5G_10E_C, MXP_2.5G_10E_L, or MXP_2.5G_10EX_C Trail Trace Identifier Settings*

Parameter	Description	Options
Port	Sets the port number. The trail trace identifier is applicable only to the trunk interface, which handles ITU-T G.709 frames.	5 (Trunk)
Level	Sets the level.	- Section - Path
Received Trace Mode	Sets the trace mode.	- Off/None - Manual
Disable FDI on TTIM	If a Trace Identifier Mismatch on Section overhead alarm arises because of a J0 overhead string mismatch, no Forward Defect Indication (FDI) signal is sent to the downstream nodes if this box is checked.	- Checked (FDI on TTIM is disabled) - Unchecked (FDI on TTIM is not disabled)
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size; trail trace identifier is 64 bytes in length.
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec box to keep this panel updated.	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 minutes.	Checked/unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

NTP-G99 Modify the 2.5G Data Muxponder Card Line Settings and PM Parameter Thresholds

Purpose	This procedure changes the line and threshold settings for the MXP_MR_2.5G and MXPP_MR_2.5G muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 DLP-G63 Install an SFP or XFP, page 4-74 DLP-G277 Provision a Multirate PPM, page 6-11 (if necessary) DLP-G278 Provision the Optical Line Rate, page 6-14 (if necessary)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to change the muxponder card settings. If you are already logged in, proceed to [Step 2](#).
- Step 2** As needed, complete the “[NTP-G103 Back Up the Database](#)” procedure on page 14-2 to preserve the existing transmission settings.
- Step 3** Perform any of the following tasks as needed:
- [DLP-G236 Change the 2.5G Data Muxponder Client Line Settings, page 6-139](#)
 - [DLP-G237 Change the 2.5G Data Muxponder Distance Extension Settings, page 6-141](#)
 - [DLP-G238 Change the 2.5G Data Muxponder SONET \(OC-48\)/SDH \(STM-16\) Settings, page 6-143](#)
 - [DLP-G239 Change the 2.5G Data Muxponder Section Trace Settings, page 6-145](#)
 - [DLP-G240 Change the 2.5G Data Muxponder SONET or SDH Line Thresholds, page 6-148](#)
 - [DLP-G321 Change the 2.5G Data Muxponder Line Thresholds for 1G Ethernet or 1G FC/FICON Payloads, page 6-150](#)
 - [DLP-G307 Provision the 2.5G Data Muxponder Trunk Port Alarm and TCA Thresholds, page 6-152](#)
 - [DLP-G308 Provision the 2.5G Data Muxponder Client Port Alarm and TCA Thresholds, page 6-153](#)
 - [DLP-G370 Change the 2.5G Data Muxponder Trunk Wavelength Settings, page 6-147](#)

Note To use the Alarm Profiles tab, including creating alarm profiles and suppressing alarms, see [Chapter 10, “Manage Alarms.”](#)

Stop. You have completed this procedure.

DLP-G236 Change the 2.5G Data Muxponder Client Line Settings

Purpose	This task changes the client line settings for MXP_MR_2.5G and MXPP_MR_2.5G muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_2.5G or MXPP_MR_2.5G card where you want to change the line settings.
- Step 2** Click the **Provisioning > Line > Client** tabs. Tabs and parameter selections vary according to PPM provisioning.

Note

The hardware device that plugs into a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or ADM-10G card faceplate to provide a fiber interface to the card is called a Small Form-factor Pluggable (SFP or XFP). In CTC, SFPs and XFPs are called pluggable port modules (PPMs). SFPs/XFPs are hot-swappable input/output devices that plug into a port to link the port with the fiber-optic network. Multirate PPMs have provisionable port rates and payloads. For more information about SFPs and XFPs, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

- Step 3** Modify any of the settings for the Client tab as described in [Table 6-73](#).

Table 6-73 MXP_MR_2.5G or MXPP_MR_2.5G Card Client Settings

Parameter	Description	Options
Port	(Display only) Port number.	1 2
Port Name	The user can assign a logical name for each of the ports shown by filling in this field.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3. Note You can provision a string (port name) for each fiber channel/FICON interface on the MXP_MR_2.5G and MXPP_MR_2.5G cards, which allows the MDS Fabric Manager to create a link association between that SAN port and a SAN port on a Cisco MDS 9000 switch.
Admin State	Sets the port service state unless network conditions prevent the change. For more information about administrative states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS (ANSI) or Unlocked (ETSI) - OOS,DSBLD (ANSI) or Locked,disabled (ETSI) - OOS,MT (ANSI) or Locked,maintenance (ETSI)

Table 6-73 **MXP_MR_2.5G or MXPP_MR_2.5G Card Client Settings (continued)**

Parameter	Description	Options
Service State	Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR (ANSI) or Unlocked-enabled (ETSI) - OOS-AU,AINS (ANSI) or Unlocked-disabled, automaticInService (ETSI) - OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI) - OOS-MA,MT (ANSI) or Locked-enabled,maintenance (ETSI)
ALS Mode	Sets the ALS function.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: (MXP_MR_2.5G only) ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.

Table 6-73 *MXP_MR_2.5G or MXPP_MR_2.5G Card Client Settings (continued)*

Parameter	Description	Options
Reach	Displays the optical reach distance of the client port.	The reach distances that appear in the drop-down list depend on the card: • Autoprovision—The system to automatically provision the reach from the pluggable port module (PPM) reach value on the hardware. • SX—Short laser wavelength on multimode fiber optic cable for a maximum length of 550 meters. The operating wavelength range is 770-860 nm. • LX—Long wavelength for a long haul fiber optic cable for a maximum length of 10 km. The operating wavelength range is 1270-1355 nm. • CX—Two pairs of 150-ohm shielded twisted pair cable for a maximum length of 25 meters. • T—Four pairs of Category 5 Unshielded Twisted Pair cable for a maximum length of 100 meters. • DX—Single mode up to 40 km. The operating wavelength range is 1430-1580 nm. • HX—Single mode up to 40 km. The operating wavelength range is 1280-1335 nm. • ZX—Extended wavelength single-mode optical fiber for up to 100 km. The operating wavelength range is 1500-1580 nm. • VX—Single mode up to 100 km. The operating wavelength range is 1500-1580 nm.
Wavelength	Displays the wavelength of the client port.	• First Tunable Wavelength • Further wavelengths: 850 nm through 1560.61 nm; 100-GHz ITU spacing; CWDM spacing

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G237 Change the 2.5G Data Muxponder Distance Extension Settings

Purpose	This task changes the distance extension settings for MXP_MR_2.5G and MXPP_MR_2.5G muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

Distance extension settings can be changed only if the facilities are out of service (OOS,DSBLD).

**Note**

The distance extension parameters only apply to client ports (Ports 1 to 8) and not to the trunk ports (Port 9 for MXP_MR_2.5G card or Ports 9 and 10 for the MXPP_MR_2.5G card).

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_2.5G or MXPP_MR_2.5G card where you want to change the distance extension settings.
- Step 2** Click the **Provisioning > Line > Client** tabs. A client port must be provisioned for the tab to be present.

**Note**

The hardware device that plugs into a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or ADM-10G card faceplate to provide a fiber interface to the card is called a Small Form-factor Pluggable (SFP or XFP). In CTC, SFPs and XFPs are called pluggable port modules (PPMs). SFPs/XFPs are hot-swappable input/output devices that plug into a port to link the port with the fiber-optic network. Multirate PPMs have provisionable port rates and payloads. For more information about SFPs and XFPs, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

- Step 3** Locate the Client port table row and verify that the Service State column value is OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI). If yes, continue with [Step 4](#). If not, complete the following substeps:
- Click the **Admin State** table cell and choose **OOS,DSBLD (ANSI)** or **Locked,Maintenance (ETSI)**.
 - Click **Apply**, then **Yes**.
- Step 4** Click the **Provisioning > Line > Distance Extension** tabs. Tabs and parameter selections vary according to PPM provisioning.
- Step 5** Modify any of the settings for the Distance Extension tab as described in [Table 6-74](#).

Table 6-74 MXP_MR_2.5G or MXPP_MR_2.5G Card Line Distance Extension Settings

Parameter	Description	Options
Port	(Display only) Port number	1 2
Enable Distance Extension	Allows end-to-end distances of up to 1600 km for FC1G and up to 800 km for FC2G. If Distance Extension is enabled, set the connected Fibre Channel switches to Interop or Open Fabric mode, depending on the Fibre Channel switch. By default, the MXP_MR_2.5G and MXPP_MR_2.5G card will interoperate with the Cisco Multilayer Director Switch (MDS) storage products.	Checked or unchecked
Auto Detect Credits	Allows automatic detection of buffer credits for Fibre Channel flow control.	Checked or unchecked

Table 6-74 *MXP_MR_2.5G or MXPP_MR_2.5G Card Line Distance Extension Settings (continued)*

Parameter	Description	Options
Credits Available	(Display only) Displays the number of buffer credits available.	Numeric (range depends on the client equipment attached to the card)
Autoadjust GFP Buffer Threshold	Allows the threshold of the generic framing procedure (GFP) buffer between two MXP_MR_2.5G or two MXPP_MR_2.5G cards to be automatically adjusted.	Checked or unchecked
GFP Buffers Available	Displays the number of GFP buffers available between two MXP_MR_2.5G or two MXPP_MR_2.5G cards.	Numeric

- Step 6** Click **Apply**.
- Step 7** Return to your originating procedure (NTP).

DLP-G238 Change the 2.5G Data Muxponder SONET (OC-48)/SDH (STM-16) Settings

Purpose	This task changes the SONET (OC-48) or SDH (STM-16) settings for MXP_MR_2.5G and MXPP_MR_2.5G muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

SONET (OC-48)/SDH (STM-16) settings apply only to the trunk ports (Port 9 for the MXP_MR_2.5G card and Ports 9 and 10 for the MXPP_MR_2.5G card.)

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_2.5G or MXPP_MR_2.5G card where you want to change the OC-48/STM-64 settings.
- Step 2** Click the **Provisioning > Line > SONET** (ANSI) or **SDH** (ETSI). Tabs and parameter selections vary according to PPM provisioning.
- Step 3** Modify any of the settings for the SONET or SDH tab as described in [Table 6-75](#).

Table 6-75 *MXP_MR_2.5G or MXPP_MR_2.5G Card Line SONET or SDH Settings*

Parameter	Description	Options
Port	(Display only) Port number.	9 (trunk for MXP_MR_2.5G) or 9 and 10 (trunks for MXPP_MR_2.5G)
Port Name	Provides the ability to assign the specified port a name.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3 .
Admin State	Sets the port service state unless network conditions prevent the change. For more information about administrative states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS (ANSI) or Unlocked (ETSI) - IS,AINS (ANSI) or Unlocked,automaticInService (ETSI) - OOS,DSBLD (ANSI) or Locked,disabled (ETSI) - OOS,MT (ANSI) or Locked,maintenance (ETSI)
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR (ANSI) or Unlocked-enabled (ETSI) - OOS-AU,AINS (ANSI) or Unlocked-disabled, automaticInService (ETSI) - OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI) - OOS-MA,MT (ANSI) or Locked-enabled,maintenance (ETSI)
SF BER ¹	Sets the signal fail bit error rate.	1E-3 1E-4 1E-5
SD BER ¹	Sets the signal degrade bit error rate.	1E-5 1E-6 1E-7 1E-8 1E-9
ALS Mode	Sets the ALS function mode. The DWDM transmitter supports ALS according to ITU-T G.644 (06/99). ALS can be disabled or can be set for one of three mode options.	- Disable (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.

Table 6-75 *MXP_MR_2.5G or MXPP_MR_2.5G Card Line SONET or SDH Settings (continued)*

Parameter	Description	Options
AINS Soak	Sets the automatic in-service soak period. Double-click the time and use the up and down arrows to change settings.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments
Type	The optical transport type.	- SONET (ANSI) - SDH (ETSI)
SyncMsgIn	Sets the EnableSync card parameter. Enables synchronization status messages (S1 byte), which allow the node to choose the best timing source.	Checked or unchecked
Send DoNotUse	Sets the Send DoNotUse card state. When checked, sends a DUS message on the S1 byte.	Checked or unchecked
ProvidesSync	Sets the ProvidesSync card parameter. If checked, the card is provisioned as an NE timing reference.	Checked or unchecked

1. SF BER and SD BER thresholds apply only to trunk ports (Port 9 for MXP_MR_2.5G and Ports 9 and 10 for MXPP_MR_2.5G).

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G239 Change the 2.5G Data Muxponder Section Trace Settings

Purpose	This task changes the section trace settings for MXP_MR_2.5G and MXPP_MR_2.5G muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_2.5G or MXPP_MR_2.5G card where you want to change the section trace settings.
- Step 2** Click the **Provisioning > Line > Section Trace** tabs. Tabs and parameter selections vary according to PPM provisioning.

**Note**

The hardware device that plugs into a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or ADM-10G card faceplate to provide a fiber interface to the card is called a Small Form-factor Pluggable (SFP or XFP). In CTC, SFPs and XFPs are called pluggable port modules (PPMs). SFPs/XFPs are hot-swappable input/output devices that plug into a port to link the port with the fiber-optic network. Multirate PPMs have provisionable port rates and payloads. For more information about SFPs and XFPs, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

Step 3 Modify any of the settings in the Section Trace tab as described in [Table 6-76](#).

Table 6-76 MXP_MR_2.5G or MXPP_MR_2.5G Card Line Section Trace Settings

Parameter	Description	Options
Port	(Display only) Port number.	9 (trunk port for MXP_MR_2.5G) 9 and 10 (trunk ports for MXPP_MR_2.5G)
Received Trace Mode	Sets the received trace mode.	- Off/None - Manual
Disable AIS/RDI on TIM-S	If an TIM on Section overhead alarm arises because of a J0 overhead string mismatch, no alarm indication signal is sent to downstream nodes if this box is checked.	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)
Transmit Section Trace String Size	Sets the trace string size.	1 byte 16 byte
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 seconds.	Checked/unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G370 Change the 2.5G Data Muxponder Trunk Wavelength Settings

Purpose	This task changes the trunk wavelength settings for the MXP_MR_2.5G and MXPP_MR_2.5G.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_2.5G or MXPP_MR_2.5G card where you want to change the trunk wavelength settings.
- Step 2** Click the **Provisioning > Line > Wavelength Trunk Settings** tabs.
- Step 3** Modify any of the settings as described in [Table 6-77](#).

Table 6-77 MXP_MR_2.5G or MXPP_MR_2.5G Card Wavelength Trunk Settings

Parameter	Description	Options
Port	(Display only) Displays the port number.	9 (Trunk) 10 (Trunk) (MXPP_MR_2.5G only)
Band	(Display only) Indicates the wavelength band that can be provisioned.	C—Only the C band is available
Even/Odd	Sets the wavelengths available for provisioning. This field does not apply to MXP_MR_2.5G or MXPP_MR_2.5G cards	—
Wavelength	The wavelength provisioned for the trunk.	- First Tunable Wavelength - Further wavelengths in 100-GHz ITU-T, C-band spacing. If the card is installed, the wavelengths it carries are identified with two asterisks. Other wavelengths have a dark grey background. If the card is not installed, all wavelengths appear with a dark grey background.

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

DLP-G240 Change the 2.5G Data Muxponder SONET or SDH Line Thresholds

Purpose	This task changes the SONET or SDH line threshold settings for MXP_MR_2.5G and MXPP_MR_2.5G muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_2.5G or MXPP_MR_2.5G card where you want to change the line threshold settings.
- Step 2** Click the **Provisioning > Line Thresholds > SONET Thresholds (ANSI)** or **SDH Thresholds (ETSI)** tabs.
- Step 3** Modify any of the settings as shown in [Table 6-78](#).

Note You must modify Near End and Far End independently, 15 Min and 1 Day independently, and Line and Section independently. To do so, choose the appropriate radio button and click **Refresh**.

Note In [Table 6-78](#), some parameters or options do not apply to all MXP_MR_2.5G or MXPP_MR_2.5G cards. If the parameters or options do not apply, they do not appear in CTC.

Table 6-78 MXP_MR_2.5G or MXPP_MR_2.5G Card Line Threshold Settings

Field	Description	ONS 15454 Options	ONS 15454 SDH Options
Port	(Display only) Port number	9 (MXP_MR_2.5G) 9 and 10 (MXPP_MR_2.5G)	9 (MXP_MR_2.5G) 9 and 10 (MXPP_MR_2.5G)
EB	Path Errored Block indicates that one or more bits are in error within a block	—	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .
CV	Coding violations	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	—

Table 6-78 *MXP_MR_2.5G or MXPP_MR_2.5G Card Line Threshold Settings (continued)*

Field	Description	ONS 15454 Options	ONS 15454 SDH Options
ES	Errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .
SES	Severely errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .
BBE	Background block errors	—	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh .
SEFS	(Section or Regeneration Section only) Severely errored framing seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Section only Choose an option in each category and click Refresh .	—
FC	(Line or Multiplex Section only) Failure count	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Section only Choose an option in each category and click Refresh .	—
UAS	(Line or Multiplex Section only) Unavailable seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Section only Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Regeneration Section (only) Choose an option in each category and click Refresh .

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

DLP-G321 Change the 2.5G Data Muxponder Line Thresholds for 1G Ethernet or 1G FC/FICON Payloads

Purpose	This task changes the line threshold settings for MXP_MR_10G and MXPP_MR_2.5G transponder cards carrying the 1G Ethernet or 1G FC/FICON payloads.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** Display the MXP_MR_2.5G or MXPP_MR_2.5G card where you want to change the line threshold settings in card view.
- Step 2** Click the **Provisioning > Line Thresholds > RMON Thresholds** tabs.
- Step 3** Click **Create**. The Create Threshold dialog box appears.
- Step 4** From the Port drop-down list, choose the applicable port.
- Step 5** From the Variable drop-down list, choose an Ethernet variable. See [Table 6-79](#) for a list of available Ethernet variables.

Table 6-79 *MXP_MR_2.5G and MXPP_MR_2.5G Card 1G Ethernet or 1G, 2G FC/FICON Variables*

Variable	Description
ifInOctets	Number of bytes received since the last counter reset.
rxTotalPkts	Total number of receive packets.
ifInDiscards	Number of inbound packets that were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol.
ifInErrors	Total number of receive errors.
ifOutOctets	The total number of octets transmitted out of the interface, including framing characters.
txTotalPkts	Total number of transmitted packets.
ifOutDiscards	Number of outbound packets that were chosen to be discarded even though no errors had been detected to prevent their being transmitted.

Table 6-79 *MXP_MR_2.5G and MXPP_MR 2.5G Card 1G Ethernet or 1G, 2G FC/FICON Variables (continued)*

mediaIndStatsRxFramesTruncated	Total number of frames received that are less than 5 bytes. This value is a part of high-level data link control (HDLC) and GFP port statistics.
mediaIndStatsRxFramesTooLong	Number of received frames that exceed the maximum transmission unit (MTU). This value is part of HDLC and GFP port statistics.
mediaIndStatsRxFramesBadCRC	Number of receive data frames with payload cyclic redundancy check (CRC) errors when HDLC framing is used.
mediaIndStatsTxFramesBadCRC	Number of transmitted data frames with payload CRC errors when HDLC framing is used.
8b10bInvalidOrderedSets	Number of 8b10b disparity violations on the Fibre Channel line side.
8b10bStatsEncodingDispErrors	Number of 8b10b disparity violations on the Fibre Channel line side.

- Step 6** From the Alarm Type drop-down list, indicate whether the event will be triggered by the rising threshold, the falling threshold, or both the rising and falling thresholds.
- Step 7** From the Sample Type drop-down list, choose either **Relative** or **Absolute**. Relative restricts the threshold to use the number of occurrences in the user-set sample period. Absolute sets the threshold to use the total number of occurrences, regardless of time period.
- Step 8** Type in an appropriate number of seconds for the Sample Period.
- Step 9** Type in the appropriate number of occurrences for the Rising Threshold.
- For a rising type of alarm, the measured value must move from below the falling threshold to above the rising threshold. For example, if a network is running below a rising threshold of 1000 collisions every 15 seconds and a problem causes 1001 collisions in 15 seconds, the excess occurrences trigger an alarm.
- Step 10** Enter the appropriate number of occurrences in the Falling Threshold field. In most cases a falling threshold is set lower than the rising threshold.
- A falling threshold is the counterpart to a rising threshold. When the number of occurrences is above the rising threshold and then drops below a falling threshold, it resets the rising threshold. For example, when the network problem that caused 1001 collisions in 15 seconds subsides and creates only 799 collisions in 15 seconds, occurrences fall below a falling threshold of 800 collisions. This resets the rising threshold so that if network collisions again spike over a 1000 per 15-second period, an event again triggers when the rising threshold is crossed. An event is triggered only the first time a rising threshold is exceeded (otherwise, a single network problem might cause a rising threshold to be exceeded multiple times and cause a flood of events).
- Step 11** Click **OK**.
- Step 12** Return to your originating procedure (NTP).

DLP-G307 Provision the 2.5G Data Muxponder Trunk Port Alarm and TCA Thresholds

Purpose	This task changes the MXP_MR_2.5G and MXPP_MR_2.5G trunk port alarm and TCA thresholds.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note Throughout this task, trunk port refers to Port 9 (MXP_MR_2.5G and MXPP_MR_2.5G) and Port 10 (MXPP_MR_2.5G only).

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_2.5G or MXPP_MR_2.5G card where you want to change the trunk port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

- Step 3** Verify the trunk port TCA thresholds for RX Power High is -9 dBm and for RX Power Low is -23 dBm. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.
- Step 4** Under Types, click the **Alarm** radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

- Step 5** Verify the trunk port Alarm thresholds for RX Power High is -7 dBm and for RX Power Low is -26 dBm. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.
- Step 6** Click **Apply**.
- Step 7** Return to your originating procedure (NTP).

DLP-G308 Provision the 2.5G Data Muxponder Client Port Alarm and TCA Thresholds

Purpose	This task provisions the client port alarm and TCA thresholds for the MXP_MR_2.5G and MXPP_MR_2.5G cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G278 Provision the Optical Line Rate, page 6-14 DLP-G46 Log into CTC, page 3-30
Required/As Needed	Required
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_2.5G or MXPP_MR_2.5G card where you want to change the client port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs. The TCA thresholds are shown by default.
- Step 3** Referring to [Table 6-80](#), verify the client port (Ports 1 through 8) TCA thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface at the other end. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Note Do not modify the Laser Bias parameters.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Note The hardware device that plugs into a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or ADM-10G card faceplate to provide a fiber interface to the card is called a Small Form-factor Pluggable (SFP or XFP). In CTC, SFPs and XFPs are called pluggable port modules (PPMs). SFPs/XFPs are hot-swappable input/output devices that plug into a port to link the port with the fiber-optic network. Multirate PPMs have provisionable port rates and payloads. For more information about SFPs and XFPs, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

Table 6-80 *MXP_MR_2.5G and MXPP_MR_2.5G Card Client Interface TCA Thresholds*

Port Type (by CTC)	Pluggable Port Module (XFP)	TCA RX Power Low	TCA RX Power High	TCA TX Power Low	TCA TX Power High

ESCON	ONS-SE-200-MM	-21	-14	-32	-11

Step 4 Click **Apply**.

Step 5 Repeat Steps 3 and 4 to provision each additional client port.

Step 6 Under Types, click the **Alarm** radio button and click **Refresh**.

Step 7 Referring to [Table 6-81](#), verify the client port (Ports 1 through 8) Alarm thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface that is provisioned. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Table 6-81 *MXP_MR_2.5G and MXPP_MR_2.5G Card Client Interface Alarm Thresholds*

Port Type (by CTC)	Pluggable Port Module (XFP)	Alarm RX Power Low	Alarm RX Power High	Alarm TX Power Low	Alarm TX Power High

	15454-SFP-GE+-LX 15454E-SFP-GE+-LX ONS-SE-G2F-LX	-23	0	-13	0
ONE_GE	15454-SFP-GEFC-SX 15454E-SFP-GEFC-S ONS-SE-G2F-SX	-20	3	-13	-1
	15454-SFP-GE+-LX 15454E-SFP-GE+-LX ONS-SE-G2F-LX	-23	0	-13	0
ESCON	ONS-SE-200-MM	-24	-11	-35	-8

Step 8 Click **Apply**.

Step 9 Repeat Steps 7 and 8 to provision each additional client port. When you have finished provisioning client ports, continue with [Step 10](#).

Step 10 Return to your originating procedure (NTP).

NTP-G148 Modify the 10G Data Muxponder Card Line Settings and PM Parameter Thresholds

Purpose	This procedure changes the line and threshold settings for the MXP_MR_10DME_C, MXP_MR_10DME_L, and MXP_MR_10DMEX_C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 DLP-G63 Install an SFP or XFP, page 4-74 DLP-G277 Provision a Multirate PPM, page 6-11 (if necessary) DLP-G278 Provision the Optical Line Rate, page 6-14 (if necessary)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to change the muxponder card settings. If you are already logged in, proceed to [Step 2](#).
- Step 2** As needed, complete the “[NTP-G103 Back Up the Database](#)” procedure on page 14-2 to preserve the existing transmission settings.
- Step 3** Perform any of the following tasks as needed:
- [DLP-G333 Change the 10G Data Muxponder Client Line Settings, page 6-157](#)
 - [DLP-G334 Change the 10G Data Muxponder Distance Extension Settings, page 6-159](#)
 - [DLP-G340 Change the 10G Data Muxponder Trunk Wavelength Settings, page 6-161](#)
 - [DLP-G335 Change the 10G Data Muxponder SONET \(OC-192\)/SDH \(STM-64\) Settings, page 6-162](#)
 - [DLP-G336 Change the 10G Data Muxponder Section Trace Settings, page 6-164](#)
 - [DLP-G341 Change the 10G Data Muxponder SONET or SDH Line Thresholds, page 6-165](#)
 - [DLP-G337 Change the 10G Data Muxponder Line RMON Thresholds for Ethernet, 1G FC/FICON, or ISC/ISC3 Payloads, page 6-167](#)
 - [DLP-G338 Provision the 10G Data Muxponder Trunk Port Alarm and TCA Thresholds, page 6-170](#)
 - [DLP-G339 Provision the 10G Data Muxponder Client Port Alarm and TCA Thresholds, page 6-172](#)
 - [DLP-G366 Change the 10G Data Muxponder OTN Settings, page 6-175](#)

Note To use the Alarm Profiles tab, including creating alarm profiles and suppressing alarms, see [Chapter 10, “Manage Alarms.”](#)

Stop. You have completed this procedure.

DLP-G333 Change the 10G Data Muxponder Client Line Settings

Purpose	This task changes the line settings for the MXP_MR_10DME_C, MXP_MR_10DME_L, and MXP_MR_10DMEX_C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_10DME_C, MXP_MR_10DME_L, or MXP_MR_10DMEX_C card where you want to change the line settings.
- Step 2** Click the **Provisioning > Line > Client** tabs. Tabs and parameter selections vary according to PPM provisioning.
- Step 3** Modify any of the settings for the Client tab as described in [Table 6-82](#).

Table 6-82 MXP_MR_10DME_C, MXP_MR_10DME_L, or MXP_MR_10DMEX_C Card Line Client Settings

Parameter	Description	Options
Port	(Display only) Port number.	1 through 8
Port Name	The user can assign a logical name for each of the ports shown by filling in this field.	User-defined. Name can be up to 32 alphanumeric/ special characters. Blank by default. See the “ DLP-G104 Assign a Name to a Port ” task on page 8-3. Note You can provision a string (port name) for each fiber channel/FICON interface on the MXP_MR_10DME_C, MXP_MR_10DME_L, and MXP_MR_10DMEX_C cards, which allows the MDS Fabric Manager to create a link association between that SAN port and a SAN port on a Cisco MDS 9000 switch.
Admin State	Sets the port service state unless network conditions prevent the change. For more information about administrative states, refer to the Appendix B, “Administrative and Service States” in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS (ANSI) or Unlocked (ETSI) - OOS,DSBLD (ANSI) or Locked,disabled (ETSI) - OOS,MT (ANSI) or Locked,maintenance (ETSI)
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to Appendix B, “Administrative and Service States” in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR (ANSI) or Unlocked-enabled (ETSI) - OOS-AU,AINS (ANSI) or Unlocked-disabled, automaticInService (ETSI) - OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI) - OOS-MA,MT (ANSI) or Locked-enabled,maintenance (ETSI)

Table 6-82 *MXP_MR_10DME_C, MXP_MR_10DME_L, or MXP_MR_10DMEX_C Card Line Client Settings (continued)*

Parameter	Description	Options
ALS Mode	Sets the ALS function mode.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.
Reach	Sets the optical reach distance of the client port.	The reach distances that appear in the drop-down list depend on the card: - Autoprovision—The system to automatically provision the reach from the pluggable port module (PPM) reach value on the hardware. - SX—Short laser wavelength on multimode fiber optic cable for a maximum length of 550 meters. The operating wavelength range is 770-860 nm.) - LX—Long wavelength for a long haul fiber optic cable for a maximum length of 10 km. The operating wavelength range is 1270-1355 nm.) - CX—Two pairs of 150-ohm shielded twisted pair cable for a maximum length of 25 meters.) - T—Four pairs of Category 5 Unshielded Twisted Pair cable for a maximum length of 100 meters.) - DX—Single mode up to 40 km. The operating wavelength range is 1430-1580 nm.) - HX—Single mode up to 40 km. The operating wavelength range is 1280-1335 nm.) - ZX—Extended wavelength single-mode optical fiber for up to 100 km. The operating wavelength range is 1500-1580 nm.) - VX—Single mode up to 100 km. The operating wavelength range is 1500-1580 nm.)
Wavelength	Displays the wavelength of the client port.	- First Tunable Wavelength - Further wavelengths: 850 nm through 1560.61 nm 100-GHz ITU spacing CWDM spacing
Squelch	Shuts down the far-end laser in response to certain defects. (Squelch does not apply to ISC COMPACT payloads.)	- Squelch - Disable

Step 4 Click **Apply**.**Step 5** Return to your originating procedure (NTP).

DLP-G334 Change the 10G Data Muxponder Distance Extension Settings

Purpose	This task changes the distance extension settings for the MXP_MR_10DME_C, MXP_MR_10DME_L, and MXP_MR_10DMEX_C muxponder card ports provisioned for Fibre Channel or FICON payloads.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

The distance extension parameters only apply to client ports (Ports 1 to 8) and not to the trunk port (Port 9).

Note

The client port must be in the OOS,DSBLD (ANSI) or Locked,disabled (ETSI) state in order to change the distance extension settings. If a Y-cable is provisioned on the client port, both the working and protect client ports must be in OOS,DSBLD (ANSI) or Locked,disabled (ETSI) state before you change the distance extension settings.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_10DME_C, MXP_MR_10DME_L, or MXP_MR_10DMEX_C card where you want to change the distance extension settings.
- Step 2** Click the **Provisioning > Line > Distance Extension** tabs.
- Step 3** Modify any of the settings as described in [Table 6-83](#).

Table 6-83 *MXP_MR_10DME_C, MXP_MR_10DME_L, or MXP_MR_10DMEX_C Card Line Distance Extension Settings*

Parameter	Description	Options
Port	(Display only) Port number. Up to eight ports might appear based on the number of pluggable port modules that are provisioned.	—

Table 6-83 *MXP_MR_10DME_C, MXP_MR_10DME_L, or MXP_MR_10DMEX_C Card Line Distance Extension Settings (continued)*

Parameter	Description	Options
Enable Distance Extension	Allows end-to-end distances of up to 1600 km for FC1G and up to 800 km for FC2G. If Distance Extension is enabled, set the connected Fibre Channel switches to Interop or Open Fabric mode, depending on the Fibre Channel switch. By default, the MXP_MR_10DME_C and MXP_MR_10DME_L card will interoperate with the Cisco MDS storage products.	Checked or unchecked
Fast Switch	If unchecked, the end-to-end fiber channel link is reinitialized every time a Y-cable protection switch occurs. If checked, reinitialization of the link is avoided when a Y-cable protection switch occurs, thus reducing the traffic hit considerably. This feature is supported for FC1G, FC2G, FC4G, FICON1G, FICON2G, and FICON4G trunk failures as well as user-initiated Y-cable protection switch such as, Manual, Force, or Lockout. It is recommended that you do not enable the Fast Switch option as the link may not come up after a Y-cable protection switch in certain cases. Note This option can be used only if you have unchecked Enable Distance Extension option.	Checked or unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G340 Change the 10G Data Muxponder Trunk Wavelength Settings

Purpose	This task changes the trunk wavelength settings for the MXP_MR_10DME_C and MXP_MR_10DME_L.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_10DME_C or MXP_MR_10DME_L card where you want to change the trunk wavelength settings.
- Step 2** Click the **Provisioning > Line > Wavelength Trunk Settings** tabs.
- Step 3** Modify any of the settings for the Wavelength Trunk Settings tab as described in [Table 6-84](#).

Table 6-84 MXP_MR_10DME_C or MXP_MR_10DME_L Card Wavelength Trunk Settings

Parameter	Description	Options
Port	(Display only) Displays the port number.	Port 9 (Trunk)
Band	Indicates the wavelength band that can be provisioned. The field is display-only when a physical MXP_MR_10DME_C or MXP_MR_10DME_L is installed. If the card is provisioned in CTC only, you can provision the band for the card that will be installed.	- C—The C-band wavelengths are available in the Wavelength field. - L—The L-band wavelengths are available in the Wavelength field.
Even/Odd	Sets the wavelengths available for provisioning.	- Even—Displays even C-band or L-band wavelengths in the Wavelength field. - Odd—Displays odd C-band or L-band wavelengths in the Wavelength field.
Wavelength	The wavelength provisioned for the trunk.	- First Tunable Wavelength - Further wavelengths in 100-GHz ITU spacing

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

DLP-G335 Change the 10G Data Muxponder SONET (OC-192)/SDH (STM-64) Settings

Purpose	This task changes the OC-192 (ANSI)/STM-64 (ETSI) settings for the MXP_MR_10DME_C and MXP_MR_10DME_L muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_10DME_C or MXP_MR_10DME_L card where you want to change the SONET (OC-192)/SDH (STM-64) settings.
- Step 2** Click the **Provisioning > Line > SONET** (ANSI) or **SDH** (ETSI). Tabs and parameter selections vary according to PPM provisioning.
- Step 3** Modify any of the settings as described in [Table 6-85](#).

Table 6-85 *MXP_MR_10DME_C or MXP_MR_10DME_L Card Line SONET or SDH Settings*

Parameter	Description	Options
Port	(Display only) Port number.	9 (Trunk)
Port Name	Provides the ability to assign the specified port a name.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “ DLP-G104 Assign a Name to a Port ” task on page 8-3 .
Admin State	Sets the port service state unless network conditions prevent the change. For more information about administrative states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS (ANSI) or Unlocked (ETSI) - IS,AINS (ANSI) or Unlocked,automaticInService (ETSI) - OOS,DSBLD (ANSI) or Locked,disabled (ETSI) - OOS,MT (ANSI) or Locked,maintenance (ETSI)
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR (ANSI) or Unlocked-enabled (ETSI) - OOS-AU,AINS (ANSI) or Unlocked-disabled, automaticInService (ETSI) - OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI) - OOS-MA,MT (ANSI) or Locked-enabled,maintenance (ETSI)
SF BER ¹	Sets the signal fail bit error rate.	1E-3 1E-4 1E-5

Table 6-85 *MXP_MR_10DME_C or MXP_MR_10DME_L Card Line SONET or SDH Settings (continued)*

Parameter	Description	Options
SD BER ¹	Sets the signal degrade bit error rate.	• 1E-5 • 1E-6 • 1E-7 • 1E-8 • 1E-9
Type	The optical transport type.	• SONET (ANSI) • SDH (ETSI)
ALS Mode	Sets the ALS function mode. The DWDM transmitter supports ALS according to ITU-T G.644 (06/99). ALS can be disabled or can be set for one of three mode options.	• Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. • Auto Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. • Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. • Manual Restart for Test: Manually restarts the laser for testing.
AINS Soak	Sets the automatic in-service soak period. Double-click the time and use the up and down arrows to change settings.	• Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically • 0 to 48 hours, 15-minute increments
ProvidesSync	Sets the ProvidesSync card parameter. If checked, the card is provisioned as a NE timing reference.	Checked or unchecked
SyncMsgIn	Sets the EnableSync card parameter. Enables synchronization status messages (S1 byte), which allow the node to choose the best timing source.	Checked or unchecked
Send DoNotUse	Sets the Send DoNotUse card state. When checked, sends a DUS (do not use) message on the S1 byte.	Checked or unchecked

1. SF BER and SD BER thresholds apply only to trunk ports (Port 9 for MXP_MR_2.5G and Ports 9 and 10 for MXPP_MR_2.5G).

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G336 Change the 10G Data Muxponder Section Trace Settings

Purpose	This task changes the section trace settings for the MXP_MR_10DME_C and MXP_MR_10DME_L muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_10DME_C or MXP_MR_10DME_L card where you want to change the section trace settings.
- Step 2** Click the **Provisioning > Line > Section Trace** tabs. Tabs and parameter selections vary according to PPM provisioning.
- Step 3** Modify any of the settings in the Section Trace tab as described in [Table 6-86](#).

Table 6-86 *MXP_MR_10DME_C or MXP_MR_10DME_L Card Line Section Trace Settings*

Parameter	Description	Options
Port	(Display only) Port number.	9 (trunk only)
Received Trace Mode	Sets the received trace mode.	- Off/None - Manual
Disable AIS/RDI on TIM-S	If a TIM on section overhead alarm arises because of a J0 overhead string mismatch, no alarm indication signal is sent to downstream nodes if this box is checked.	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)
Transmit Section Trace String Size	Sets the trace string size.	1 byte 16 byte
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or select the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 seconds.	Checked/unchecked (default)

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

DLP-G341 Change the 10G Data Muxponder SONET or SDH Line Thresholds

Purpose	This task changes the SONET or SDH line threshold settings for the MXP_MR_10DME_C and MXP_MR_10DME_L muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_10DME_C or MXP_MR_10DME_L card where you want to change the line threshold settings.
- Step 2** Click the **Provisioning > Line Thresholds > SONET Thresholds (ANSI)** or **SDH Thresholds (ETSI)** tabs.
- Step 3** Modify any of the settings as shown in [Table 6-87](#).

Note You must modify Near End and Far End independently; 15 Min and 1 Day independently; and Line and Section independently. To do so, choose the appropriate radio button and click **Refresh**.

Note In [Table 6-87](#), some parameters and options do not apply to all MXP_MR_10DME cards. If the parameter or options do not apply, they do not appear in CTC.

Table 6-87 MXP_MR_10DME_C or MXP_MR_10DME_L Card Line Threshold Settings

Parameter	Description	Options - ONS 15454	Options - ONS 15454 SDH
Port	(Display only) Port number	9 (Trunk)	9 (Trunk)
EB	Path Errored Block indicates that one or more bits are in error within a block	—	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh.

Table 6-87 MXP_MR_10DME_C or MXP_MR_10DME_LCard Line Threshold Settings (continued)

Parameter	Description	Options - ONS 15454	Options - ONS 15454 SDH
CV	Coding violations	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh.	—
ES	Errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh.	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh.
SES	Severely errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh.	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh.
SEFS	(Near End Section or Regeneration Section only) Severely errored framing seconds	—	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh.
BBE	Background block errors	—	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh.

Table 6-87 ***MXP_MR_10DME_C or MXP_MR_10DME_L Card Line Threshold Settings (continued)***

Parameter	Description	Options - ONS 15454	Options - ONS 15454 SDH
FC	(Line or Multiplex Section only) Failure count	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .
UAS	(Line or Multiplex Section only) Unavailable seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option in each category and click Refresh .

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G337 Change the 10G Data Muxponder Line RMON Thresholds for Ethernet, 1G FC/FICON, or ISC/ISC3 Payloads

Purpose	This task changes the line threshold settings for MXP_MR_10DME_C and MXP_MR_10DME_L cards carrying Ethernet, FC/FICON, or ISC/ISC3 payloads.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), display the MXP_MR_10DME_C or MXP_MR_10DME_L card where you want to change the line threshold settings in card view.
- Step 2** Click the **Provisioning > Line Thresholds > RMON Thresholds** tabs.
- Step 3** Click **Create**. The Create Threshold dialog box appears.
- Step 4** From the Port drop-down list, choose the applicable port, either the payload port, for example “1-1 (ONE_GE)”, or the equivalent ITU-T G.7041 GFP (Generic Frame Procedure) port.

- Step 5** From the Variable drop-down list, choose an Ethernet, FC, FICON, or ISC variable. See [Table 6-88](#) for a list of available Ethernet variables, [Table 6-89](#) for a list of FC and FICON variables, [Table 6-90](#) for a list of ISC and ISC3 variables, and [Table 6-91](#) for a list of GFP variables.

Table 6-88 *MXP_MR_10DME_C or MXP_MR_10DME_L Ethernet Variables*

Variable	Description
ifInOctets	Number of bytes received since the last counter reset.
rxTotalPkts	Total number of receive packets.
ifInErrors	Total number of receive errors.
ifOutOctets	The total number of octets transmitted out of the interface, including framing characters.
txTotalPkts	Total number of transmitted packets.
mediaIndStatsRxFramesTruncated	Total number of frames received that are less than 5 bytes. This value is a part of HDLC and GFP port statistics.
mediaIndStatsRxFramesTooLong	Number of received frames that exceed the MTU ¹ . This value is part of HDLC and GFP port statistics.
mediaIndStatsRxFramesBadCRC	Number of receive data frames with payload CRC errors when HDLC framing is used.
mediaIndStatsTxFramesBadCRC	Number of transmitted data frames with payload CRC errors when HDLC framing is used.
8b10bInvalidOrderedSetsDispErrorsSum	Number of code violations/running disparity errors in the 8b/10b encoded characters received.

1. Frames larger than the MTU, including Jumbo frames, pass through. The MTU, however, is not specified by the user.

Table 6-89 *MXP_MR_10DME_C or MXP_MR_10DME_L FC/FICON Variables*

Variable	Description
ifInOctets	Number of bytes received since the last counter reset.
rxTotalPkts	Total number of receive packets.
ifInErrors	Total number of receive errors.
ifOutOctets	The total number of octets transmitted out of the interface, including framing characters.
txTotalPkts	Total number of transmitted packets.
ifOutOversizePkts	Total number of oversized packets output from the interface.
mediaIndStatsRxFramesTruncated	Total number of frames received that are less than 5 bytes. This value is a part of HDLC and GFP port statistics.
mediaIndStatsRxFramesTooLong	Number of received frames that exceed the MTU. This value is part of HDLC and GFP port statistics.

Table 6-89 *MXP_MR_10DME_C or MXP_MR_10DME_L FC/FICON Variables (continued)*

Variable	Description
mediaIndStatsRxFramesBadCRC	Number of receive data frames with payload CRC errors when HDLC framing is used.
mediaIndStatsTxFramesBadCRC	Number of transmitted data frames with payload CRC errors when HDLC framing is used.
fcStatsZeroTxCredits	This is a count that increments when the FC/FICON Tx credits go from a non-zero value to zero.
fcStatsRxRecvrReady	Number of received RDY (Receive Ready) order set.
fcStatsTxRecvrReady	Number of transmitted RDY (Receive Ready) order set.
8b10bInvalidOrderedSetsDispErrorsSum	Number of Code Violations/Running Disparity errors in the 8b/10b encoded characters received.

Table 6-90 *MXP_MR_10DME_C or MXP_MR_10DME_L ISC and ISC3 Variables*

Variable	Description
ifInOctets	Number of bytes received since the last counter reset.
rxTotalPkts	Total number of receive packets.
ifOutOctets	The total number of octets transmitted out of the interface, including framing characters.
txTotalPkts	Total number of transmitted packets.
8b10bInvalidOrderedSetsDispErrorsSum	Number of Code Violations/Running Disparity errors in the 8b/10b encoded characters received.

Table 6-91 *MXP_MR_10DME_C or MXP_MR_10DME_L GFP RMON Variables*

Variable	Description
gfpStatsRxSBitErrors	Received generic framing protocol (GFP) frames with single bit errors in the core header (these errors are correctable).
gfpStatsRxTypeInvalid	Received GFP frames with invalid type (these are discarded). For example, receiving GFP frames that contain Ethernet data when we expect Fibre Channel data.
gfpStatsRxSblkCRCErrors	Total number of superblock CRC errors with the receive transparent GFP frame. A transparent GFP frame has multiple superblocks which each contain Fibre Channel data.
gfpStatsCSFRaised	Number of Rx client management frames with Client Signal Fail indication.

Table 6-91 *MXP_MR_10DME_C or MXP_MR_10DME_L GFP RMON Variables (continued)*

gfpStatsLFDRaised	The number of Core HEC CRC Multiple Bit Errors.
	Note This count is only for cHEC multiple bit error when in frame. It is a count of when the state machine goes out of frame.

Step 6 From the Alarm Type drop-down list, indicate whether the event will be triggered by the rising threshold, the falling threshold, or both the rising and falling thresholds.

Step 7 From the Sample Type drop-down list, choose either **Relative** or **Absolute**. Relative restricts the threshold to use the number of occurrences in the user-set sample period. Absolute sets the threshold to use the total number of occurrences, regardless of time period.

Step 8 Type in an appropriate number of seconds for the Sample Period.

Step 9 Type in the appropriate number of occurrences for the Rising Threshold.

For a rising type of alarm, the measured value must move from below the falling threshold to above the rising threshold. For example, if a network is running below a rising threshold of 1000 collisions every 15 seconds and a problem causes 1001 collisions in 15 seconds, the excess occurrences trigger an alarm.

Step 10 Enter the appropriate number of occurrences in the Falling Threshold field. In most cases a falling threshold is set lower than the rising threshold.

A falling threshold is the counterpart to a rising threshold. When the number of occurrences is above the rising threshold and then drops below a falling threshold, it resets the rising threshold. For example, when the network problem that caused 1001 collisions in 15 seconds subsides and creates only 799 collisions in 15 seconds, occurrences fall below a falling threshold of 800 collisions. This resets the rising threshold so that if network collisions again spike over a 1000 per 15-second period, an event again triggers when the rising threshold is crossed. An event is triggered only the first time a rising threshold is exceeded (otherwise, a single network problem might cause a rising threshold to be exceeded multiple times and cause a flood of events).

Step 11 Click **OK**.

Note To view all RMON thresholds, click **Show All RMON thresholds**.

Step 12 Return to your originating procedure (NTP).

DLP-G338 Provision the 10G Data Muxponder Trunk Port Alarm and TCA Thresholds

Purpose	This task changes the MXP_MR_10DME_C and MXP_MR_10DME_L trunk port alarm and TCA thresholds.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed

Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_10DME_C or MXP_MR_10DME_L card where you want to change the trunk port alarm and TCA settings.

Step 2 Click the **Provisioning > Optics Thresholds** tabs.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

Step 3 If TCA is not selected, click **TCA** and then click Refresh. If it is selected, continue with [Step 4](#).

Step 4 Verify the trunk port (Port 9) TCA thresholds are set at the values shown as follows. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and press **Enter**.

- RX Power High: -9 dBm
- RX Power Low: -18 dBm
- TX Power High: 9 dBm
- TX Power Low: 0 dBm

Step 5 Under Types, click the **Alarm** radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

Step 6 Verify the trunk port (Port 9) Alarm thresholds are set at the values shown as follows. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and press **Enter**.

- RX Power High: -8 dBm
- RX Power Low: -20 dBm
- TX Power High: 7 dBm
- TX Power Low: 3 dBm

Step 7 Click **Apply**.

Step 8 Return to your originating procedure (NTP).

DLP-G339 Provision the 10G Data Muxponder Client Port Alarm and TCA Thresholds

Purpose	This task provisions the client port alarm and TCA thresholds for the MXP_MR_10DME_C and MXP_MR_10DME_L cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G278 Provision the Optical Line Rate, page 6-14 DLP-G46 Log into CTC, page 3-30
Required/As Needed	Required
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_10DME_C and MXP_MR_10DME_L card where you want to change the client port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs. The TCA thresholds are shown by default.
- Step 3** Referring to [Table 6-92](#), verify the client ports (Ports 1 through 8) TCA thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface at the other end. Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Note Do not modify the Laser Bias parameters.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Note The hardware device that plugs into a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or ADM-10G card faceplate to provide a fiber interface to the card is called a Small Form-factor Pluggable (SFP or XFP). In CTC, SFPs and XFPs are called pluggable port modules (PPMs). SFPs/XFPs are hot-swappable input/output devices that plug into a port to link the port with the fiber-optic network. Multirate PPMs have provisionable port rates and payloads. For more information about SFPs and XFPs, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

Table 6-92 *MXP_MR_10DME_C and MXP_MR_10DME_L Card Client Interfaces TCA Thresholds*

PPM Port Rate	Pluggable Port Module (XFP)	TCA RX Power High	TCA RX Power Low	TCA TX Power High	TCA TX Power Low
FC1G	15454-SFP-GEFC-SX 15454E-SFP-GEFC-S ONS-SE-G2F-SX	0	-17	3	-16
	15454-SFP-GE+-LX 15454E-SFP-GE+-LX ONS-SE-G2F-LX	-3	-20	3	-16

DLP-G366 Change the 10G Data Muxponder OTN Settings

Purpose	This task changes the OTN settings for the MXP_MR_10DME_C and MXP_MR_10DME_L cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the MXP_MR_10DME_C and MXP_MR_10DME_L card where you want to change the OTN settings.
- Step 2** Click the **Provisioning > OTN** tabs, then choose one of the following subtabs: **OTN Lines**, **G.709 Thresholds**, **FEC Thresholds**, or **Trail Trace Identifier**.
- Step 3** Modify any of the settings described in Tables [6-94](#) through [6-97](#).

Note You must modify Near End and Far End; 15 Min and 1 Day; and SM and PM independently. To do so, choose the appropriate radio button and click **Refresh**.

[Table 6-94](#) describes the values on the Provisioning > OTN > OTN Lines tab.

Table 6-94 MXP_MR_10DME_C and MXP_MR_10DME_L Card OTN Line Settings

Parameter	Description	Options
Port	(Display only) Displays the port number.	9 (Trunk)
G.709 OTN	Sets the OTN lines according to ITU-T G.709.	• Enable • Disable
FEC	Sets the OTN lines to forward error correction (FEC).	• Standard • Enhanced
SF BER	(Display only) Sets the signal fail bit error rate.	• 1E-5
SD BER	Sets the signal degrade bit error rate.	• 1E-5 • 1E-6 • 1E-7 • 1E-8 • 1E-9
Asynch/Synch Mapping	Sets how the ODUk (client payload) is mapped to the optical channel (OTUk).	• Asynch mapping • Synch mapping

[Table 6-95](#) describes the values on the Provisioning > OTN > G.709 Thresholds tab.

Table 6-95 *MXP_MR_10DME_C and MXP_MR_10DME_L Card ITU-T G.709 Threshold Settings*

Parameter	Description	Options
Port ¹	(Display only) Port number.	9 (Trunk)
ES	Errored seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
SES	Severely errored seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
UAS	Unavailable seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
BBE	Background block errors	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
FC	Failure counter	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .

1. Latency for a 1G-FC payload without ITU-T G.709 is 4 microseconds, and with ITU-T G.709 is 40 microseconds. Latency for a 2G-FC payload without ITU-T G.709 is 2 microseconds, and with ITU-T G.709 is 20 microseconds. Consider these values when planning a FC network that is sensitive to latency.

Table 6-96 describes the values on the Provisioning > OTN > FEC Threshold tab.

Table 6-96 *MXP_MR_10DME_C and MXP_MR_10DME_L Card FEC Threshold Settings*

Parameter	Description	Options
Port	(Display only) Port number.	2
Bit Errors Corrected	Sets the value for bit errors corrected.	Numeric. Can be set for 15-minute or one-day intervals.
Uncorrectable Words	Sets the value for uncorrectable words.	Numeric. Can be set for 15-minute or one-day intervals.

Table 6-97 describes the values on the Provisioning > OTN > Trail Trace Identifier tab.

Table 6-97 *MXP_MR_10DME_C and MXP_MR_10DME_L Card Trail Trace Identifier Settings*

Parameter	Description	Options
Port	(Display only) Port number.	2
Level	Sets the level.	- Section - Path
Received Trace Mode	Sets the trace mode.	- Off/None - Manual

Table 6-97 *MXP_MR_10DME_C and MXP_MR_10DME_L Card Trail Trace Identifier Settings (continued)*

Parameter	Description	Options
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Disable FDI on TTIM	If a Trace Identifier Mismatch on Section overhead alarm arises because of a J0 overhead string mismatch, no Forward Defect Indication (FDI) signal is sent to the downstream nodes if this box is checked.	• Checked (FDI on TTIM is disabled) • Unchecked (FDI on TTIM is not disabled)
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

NTP-G293 Modify the 40G Muxponder Card Line Settings and PM Parameter Thresholds

Purpose	This procedure changes the line and parameter threshold settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	• NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 • DLP-G63 Install an SFP or XFP, page 4-74 • DLP-G277 Provision a Multirate PPM, page 6-11 (Optional) • DLP-G278 Provision the Optical Line Rate, page 6-14 (Optional)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to change the muxponder card settings. If you are already logged in, proceed to [Step 2](#).
- Step 2** Complete the “[NTP-G103 Back Up the Database](#)” procedure on page 14-2 to save the existing settings before modifying.
- Step 3** Perform any of the following tasks as needed:
- [DLP-G662 Change the 40G Multirate Muxponder Card Settings](#), page 6-179
 - [DLP-G666 Change the 40G Muxponder Line Settings](#), page 6-180
 - [DLP-G667 Change the 40G Muxponder Line SONET \(OC-192\) or SDH \(STM-64\), or Ethernet Line Settings](#), page 6-182
 - [DLP-G668 Change the 40G Muxponder Section Trace Settings](#), page 6-186
 - [DLP-G669 Change the 40G Muxponder SONET or SDH Line Thresholds](#), page 6-187
 - [DLP-G670 Change the 40G Muxponder Line RMON Thresholds for Ethernet, or 10G FC Payloads](#), page 6-189
 - [DLP-G671 Provision the 40G Muxponder Trunk Port Alarm and TCA Thresholds](#), page 6-194
 - [DLP-G672 Provision the 40G Muxponder Client Port Alarm and TCA Thresholds](#), page 6-195
 - [DLP-G673 Change the 40G Muxponder OTN Settings](#), page 6-198

Note To use the Alarm Profiles tab, including creating alarm profiles and suppressing alarms, see [Chapter 10, “Manage Alarms.”](#)

Stop. You have completed this procedure.

DLP-G662 Change the 40G Multirate Muxponder Card Settings

Purpose	This task changes the card settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40G-MXP-C, or 40E-MXP-C card where you want to change the card settings.
- Step 2** Click the **Provisioning > Card** tabs.
- Step 3** Modify either of the settings described in [Table 6-98](#).

Table 6-98 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Card Settings

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Card Mode	Sets the card mode.	- Muxponder - Unidirectional Regen Set the mode to Unidirectional Regen under the following conditions: - Trunk port is in OOS,DSBLD state. - Pluggable port modules of the card must not be configured for payload. - Regeneration peer slot must be set to None.	- Muxponder - Unidirectional Regen Set the mode to Unidirectional Regen under the following conditions: - Trunk port is in locked,disabled state. - Pluggable port modules of the card must not be configured for payload. - Regeneration peer slot must be set to None.
Trunk Wavelengths	(Display only) Shows supported wavelengths of the trunk port after the card is installed. The 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C card that is installed shows the C-band wavelengths that it supports.	—	—

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

DLP-G666 Change the 40G Muxponder Line Settings

Purpose	This task changes the line settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40G-MXP-C or 40E-MXP-C card where you want to change the line settings.
- Step 2** Click the **Provisioning > Line > Ports** tabs. Tabs and parameters vary according to the PPM provisioning.
- Step 3** Modify any of the settings as described in [Table 6-99](#).

Table 6-99 Line Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Parameter	Description	Options
Port	(Display only) Displays the port number.	1 through 4 (client) 5 (trunk)
Port Name	Assigns a logical name for each of the port.	User-defined. This can be up to 32 alphanumeric or special characters, or both. The port name is blank by default. For information on assigning a port name, see the “DLP-G104 Assign a Name to a Port” task on page 8-3. Note You can assign a port name for each fiber channel/FICON interface on the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C card, enabling the MDS Fabric Manager to associate the SAN port and a SAN port on the Cisco MDS 9000 switch.
Admin State	Sets the port service state unless network conditions prevent the change. For more information, see Appendix B, “Administrative and Service States” in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS (ANSI) or Unlocked (ETSI) - OOS,DSBLD (ANSI) or Locked,disabled (ETSI) - OOS,MT (ANSI) or Locked,maintenance (ETSI) - IS,AINS (ANSI) or Unlocked,automaticInService (ETSI)
Service State	(Display only) Shows the general condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, see Appendix B, “Administrative and Service States” in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR (ANSI) or Unlocked-enabled (ETSI) - OOS-AU,AINS (ANSI) or Unlocked-disabled, automaticInService (ETSI) - OOS-MA,DSBLD (ANSI) or Locked-enabled,disabled (ETSI) - OOS-MA,MT (ANSI) or Locked-enabled,maintenance (ETSI)

Table 6-99 *Line Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards*

Parameter	Description	Options
ALS Mode	(Client ports only) Activates the ALS mode.	- Disabled (default)—ALS is off; the laser is not automatically shut down when traffic outage or loss of signal (LOS) occurs. - Auto Restart—(OC-192/STM-64/OTU2/OTU2e only) ALS is on; the laser automatically shuts down during LOS. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart—ALS is on; the laser automatically shuts down when traffic outage or LOS occurs. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test—Manually restarts the laser for testing.
AINS Soak	Sets the automatic in-service soak period. Double-click the time and use the up and down arrows to change settings.	- Duration of valid input signal, in hh.mm format, after which the card status changes to in service (IS) automatically 0 to 48 hours, 15-minute increments
Reach	Sets the optical reach distance of the client port.	- Autoprovision—The system automatically provisions the reach from the pluggable port module (PPM) reach value on the hardware. - EW - LW - SW - LRM - ER - LR - SR - ZR - IR 2 - LR 2 - DWDM - CWDM40km
Wavelength	Provisions the port wavelength.	- First Tunable Wavelength - Further wavelengths: Further wavelengths in the 50-GHz ITU-T C-band spacing. The card wavelengths are marked by asterisks. If the card is not installed, all wavelengths appear with a dark grey background.
Squelch	Shuts down the far-end laser in response to certain defects.	- Squelch - AIS—OC-192/STM-64/OTU2/OTU2e only

Table 6-99 Line Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Parameter	Description	Options
Overclock	(Trunk port only) Enables or disables overclock mode on the trunk port.	• OFF (default) • ON
Rx Wavelength	(Trunk port only) Provisions the trunk port wavelength.	• First Tunable Wavelength • Further wavelengths: Further wavelengths in the 50-GHz ITU-T C-band spacing. The card wavelengths are marked by asterisks. If the card is not installed, all wavelengths appear with a dark grey background.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G667 Change the 40G Muxponder Line SONET (OC-192) or SDH (STM-64), or Ethernet Line Settings

Purpose	This task changes the line SONET OC-192 or SDH STM-64, or ethernet line settings for the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40G-MXP-C, or 40E-MXP-C card where you want to change the SONET (OC-192) or SDH (STM-64) line, or ethernet line settings.
- Step 2** Click the **Provisioning > Line > SONET** (ANSI) or **SDH** (ETSI) or **Ethernet**. Tabs and parameters vary according to the PPM provisioning.
- Step 3** To modify the line SONET or SDH settings, see [Table 6-100](#). To modify the ethernet line settings see [Table 6-101](#).

Table 6-100 *Line SONET or SDH Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards*

Parameter	Description	Options
Port	(Display only) Displays the port number.	1 through 4 (client)
Port Name	Assigns a logical name assigned to a port. This field is blank by default.	User-defined. This can be up to 32 alphanumeric or special characters, or both. The port name is blank by default. For information on assigning a port name, see the “DLP-G104 Assign a Name to a Port” task on page 8-3 .
SF BER	Sets the signal fail bit error rate.	• 1E-3 • 1E-4 • 1E-5
SD BER	Sets the signal degrade bit error rate.	• 1E-5 • 1E-6 • 1E-7 • 1E-8 • 1E-9
ProvidesSync	(Display only) Displays the ProvidesSync card parameter state.	Checked or unchecked
SyncMsgIn	Sets the EnableSync card parameter. Enables synchronization status messages (S1 byte), which allow the node to choose the best timing source.	Checked or unchecked
Send DoNotUse	Sets the Send DoNotUse card state. When checked, sends a DUS (do not use) message on the S1 byte.	Checked or unchecked
Type	Indicates the optical transport type.	• SONET (ANSI) • SDH (ETSI)
Termination Mode	Sets the mode of operation.	• Transparent • Section (ANSI) or Regeneration Section (RS) (ETSI) • Line (ANSI) or Multiplex Section (MS) (ETSI)

Table 6-101 Ethernet Line Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Displays the port number.	1 through 4 (client)	1 through 4 (client)
Port Name	Provides the ability to assign the specified port a name.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3 .	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3 .
Admin State	Sets the port service state. For more information about administrative states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS - IS,AINS - OOS,DSBLD - OOS,MT	- Unlocked - Unlocked,automaticInService - Locked,disabled - Locked,maintenance
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR - OOS-AU,AINS - OOS-MA,DSBLD - OOS-MA,MT	- Unlocked-enabled - Unlocked-disabled,automaticInService - Locked-enabled,disabled - Locked-enabled,maintenance
ALS Mode	Sets the ALS function mode. The DWDM transmitter supports ALS according to ITU-T G.644 (06/99). ALS can be disabled, or it can be set for one of three mode options.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.

Table 6-101 Ethernet Line Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
AINS Soak	Sets the automatic in-service soak period. Double-click the time and use the up and down arrows to change settings.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments Note The AINS service state is not supported on interlink ports.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments Note The AINS service state is not supported on interlink ports.
Reach	Displays the optical reach distance of the client port.	- Autoprovision—The system automatically provisions the reach. - LR - LR2 - SR - SR1 - IR 1 - ER - ZR - DWDM - CWDM40km - IR2 - MM	- Autoprovision—The system automatically provisions the reach. - LR - I1 - I2 - S2 - ER - L1 - L2 - DWDM - MM - ZR - IR 1 - CWDM40km
MTU	Displays the maximum size of the Ethernet frames accepted by the port.	Jumbo (16384 bytes)	Jumbo (16384 bytes)
Mapping Mode	Displays the mapping mechanism. Choose GFP framing (the default) or WIS framing. The framing type needs to match the framing type at the far end.	- GFP - WIS	- GFP - WIS
Enable Flow Control (Only when the framing type is WIS)	Enables/disables flow control messaging with its peer port. When enabled, the port can send and receive PAUSE frames when buffer congestion occurs. When disabled, no PAUSE frames are transmitted and the PAUSE frames received are discarded.	- ON —Flow control is enabled. - OFF(default)—Flow control is disabled.	- ON —Flow control is enabled. - OFF(default)—Flow control is disabled.

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

DLP-G668 Change the 40G Muxponder Section Trace Settings

Purpose	This task changes the section trace settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40G-MXP-C, or 40E-MXP-C card where you want to change the section trace settings.
- Step 2** Click the **Provisioning > Line > Section Trace** tabs. Tabs and parameter selections vary according to the PPM provisioning.
- Step 3** Modify any of the settings described in [Table 6-102](#).

Table 6-102 Line Section Trace Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Parameter	Description	Options
Port	(Display only) Displays the port number that is applicable only for OC-192/STM-64 payloads.	1-1 2-1 3-1 4-1
Received Trace Mode	Sets the trace mode.	- Off/None - Manual
Disable AIS/RDI on TIM-S	Disables the alarm indication signal.	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)
Transmit Section Trace String Size	Sets the trace string size.	1 byte 16 byte

Table 6-102 Line Section Trace Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Parameter	Description	Options
Transmit	Displays and sets the current transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. In Transmit String Type, click Hex Mode to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex Mode). The supported range for 1 bit Hex TX trace is 20 to 7E. If TX trace is provisioned outside this range, client transmits 00.	Transmit string size
Expected	Displays and sets the current expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. In Expected String Type, click Hex Mode to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex Mode).	Expected string size
Received	(Display only) Displays the current received string. Click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	Received string size
Auto-refresh	Automatically refreshes the display every 5 seconds.	• Checked • Unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G669 Change the 40G Muxponder SONET or SDH Line Thresholds

Purpose	This task changes the SONET or SDH line threshold settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C muxponder cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40G-MXP-C, or 40E-MXP-C card where you want to change the line threshold settings.
- Step 2** Click the **Provisioning > Line Thresholds > SONET Thresholds (ANSI)** or **SDH Thresholds (ETSI)** tabs.
- Step 3** Modify any of the settings shown in [Table 6-103](#).

**Note**

In [Table 6-103](#), some parameters and options do not apply to all 40-G-MXP-C cards. If the parameter or options do not apply, they do not appear in CTC.

Table 6-103 *Line Threshold Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards*

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Port number. Applicable for only OC-192/STM-64 payloads.	1-1 2-1 3-1 4-1	1-1 2-1 3-1 4-1
CV	Coding violations	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option individually in each category and click Refresh .	—
ES	Errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option individually in each category and click Refresh .	Numeric. Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
FC	(Line or Multiplex Section only) Failure count	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option individually in each category and click Refresh. Click Reset to Default to restore default values.	—
UAS	(Line or Multiplex Section only) Unavailable seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Line or Section (near end only) Choose an option individually in each category and click Refresh. Click Reset to Default to restore default values.	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—Multiplex Section or Regeneration Section (near end only) Choose an option individually in each category and click Refresh. Click Reset to Default to restore default values.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G670 Change the 40G Muxponder Line RMON Thresholds for Ethernet, or 10G FC Payloads

Purpose	This task changes the line threshold settings of 40G-MXP-C, or 40E-MXP-C card carrying Ethernet, or 10G FC payloads.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), display the 40G-MXP-C, or 40E-MXP-C card where you want to change the line threshold settings in the card view.

Step 2 Click the **Provisioning > Line Thresholds > RMON Thresholds** tabs.

- Step 3** Click **Create**. The Create Threshold dialog box appears.
- Step 4** From the Port drop-down list, choose the payload port— for example “1-1 (TEN_GE)”, or the equivalent ITU-T G.7041 GFP (Generic Frame Procedure) port.
- Step 5** From the Variable drop-down list, choose an Ethernet or FC variable. See [Table 6-104](#) for a list of available Ethernet variables, [Table 6-105](#) for a list of FC, and [Table 6-105](#) for a list of GFP variables.

Table 6-104 Ethernet Variables of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Variable	Description
ifInOctets	Number of bytes received since the last counter reset.
rxTotalPkts	Total number of received packets.
ifInUcastPkts	Number of packets, delivered by this sub-layer to a higher sub-layer, which were not addressed to a multicast or broadcast address at this sub-layer.
inInMulticastPkts	Number of packets, delivered by this sub-layer to a higher sub-layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses.
ifInBroadcastPkts	Number of packets, delivered by this sub-layer to a higher sub-layer, which were addressed to a broadcast address at this sub-layer.
ifInErrors	Total number of received errors.
ifOutOctets	Total number of octets transmitted out of the interface, including framing characters.
txTotalPkts	Total number of transmitted packets.
dot3StatsFCSErrors	Count of frames received on a particular interface that are an integral number of octets in length but do not pass the Frame Check Sequence (FCS) check.
dot3StatsFrameTooLong	Count of frames received on a particular interface that exceed the maximum permitted frame size.
dot3StatsInPauseFrames	Count of frames received on this interface with an opcode indicating the PAUSE operation.
dot3StatsOutPauseFrames	Count of MAC control frames transmitted on this interface with an opcode indicating the PAUSE operation.
etherStatsUndersizePkts	Total number of packets transmitted and received by the interface that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.
etherStatsFragments	Total number of packets transmitted and received by the interface that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets.

Table 6-104 Ethernet Variables of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Variable	Description
etherStatsPkts	Total number of packets (including bad packets, broadcast packets, and multicast packets) transmitted and received by the interface.
etherStatsPkts64Octets	Total number of packets (including bad packets) transmitted and received by the interface that were 64 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts65to127Octets	Total number of packets (including error packets) transmitted and received by the interface that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts128to255Octets	Total number of packets (including error packets) transmitted and received by the interface that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts256to511Octets	Total number of packets (including error packets) transmitted and received by the interface that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts512to1023Octets	Total number of packets (including error packets) transmitted and received by the interface that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts1024to1518Octets	Total number of packets (including error packets) transmitted and received by the interface that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsBroadcastPkts	Total number of good packets transmitted and received by the interface that were directed to the broadcast address.
etherStatsMulticastPkts	Total number of good packets transmitted and received by the interface that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
etherStatsOversizePkts	Total number of packets transmitted and received by the interface that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
etherStatsOctets	Total number of octets of data (including those in bad packets) transmitted and received by the interface on the network (excluding framing bits but including FCS octets).
pcs49RXErrBer	Count of 125 microsecond periods that PCS BER was detected.
pcs49RxErrDec	Total number of invalid PCS blocks received by the interface.

Table 6-105 *FC Variables of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards*

Variable	Description
ifInOctets	Number of bytes received since the last counter reset.
rxTotalPkts	Total number of received packets.
ifInErrors	Total number of received errors. IfInErrors = CRC_ERR + FRAMES_TOO_LONG counters
ifOutOctets	Total number of octets transmitted out of the interface, including framing characters.
txTotalPkts	Total number of transmitted packets.
ifOutErrors	Number of outbound packets or transmission units that could not be transmitted because of errors. IfOutErrors = CRC_ERR + FRAMES_TOO_LONG counters
mediaIndStatsRxFramesTruncated	Total number of frames received that are less than 5 bytes. This value is a part of HDLC and GFP port statistics.
mediaIndStatsRxFramesTooLong	Number of received frames that exceed the MTU. This value is part of HDLC and GFP port statistics.
mediaIndStatsRxFramesBadCRC	Number of receive data frames with payload CRC errors when HDLC framing is used.
mediaIndStatsTxFramesBadCRC	Number of transmitted data frames with payload CRC errors when HDLC framing is used.
mediaIndStatsTxFramesTooLong	Total number of transmitted data frames that are less than 5 bytes. This value is a part of HDLC and GFP port statistics.
mediaIndStatsTxFramesTruncated	Number of transmitted data frames that exceed the MTU. This value is part of HDLC and GFP port statistics.
pcs49RXErrBer	Count of 125 microsecond periods that PCS BER was detected.
pcs49RxErrDec	Total number of invalid PCS blocks received by the interface.

Table 6-106 *GFP RMON Variables of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards*

Variable	Description
gfpStatsRxFrame	Total number of received data frames.
gfpStatsTxFrame	Total number of transmitted data frames.
gfpStatsRxSblkCRCErrors	Total number of superblock CRC errors with the receive transparent GFP frame. A transparent GFP frame has multiple superblocks where each contains Fibre Channel data.

Table 6-106 GFP RMON Variables of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Variable	Description
gfpStatsRxOctets	Total number of GFP data octets received.
gfpStatsTxOctets	Total number of GFP data octets transmitted.
gfpStatsRxSBitErrors	Received GFP frames with single bit errors in the core header (these errors can be corrected).
gfpStatsRxMBitErrors	Received GFP frames with multiple bit errors in the core header (these errors cannot be corrected).
gfpStatsRxTypeInvalid	Received GFP frames with invalid type (these are discarded). For example, receiving GFP frames that contain Ethernet data when we expect Fibre Channel data.
gfpStatsLFDRaised	Count of core HEC CRC multiple bit errors. Note This count is only of eHec multiple bit errors when in frame. This can be looked at as a count of when the state machine goes out of frame.
gfpRxCmfFrame	—
gfpTxCmfFrame	—

- Step 6** From the Alarm Type drop-down list, choose an alarm type. The alarm type indicates whether or not an event is triggered by the type of threshold.
- Step 7** From the Sample Type drop-down list, choose either **Relative** or **Absolute**. Relative restricts the threshold to use the number of occurrences in the user-set sample period. Absolute sets the threshold to use the total number of occurrences, regardless of time period.
- Step 8** Enter the number of Sample Period occurrences.
- Step 9** Enter the number of Rising Threshold occurrences.
- To trigger the alarm, the measured value of a threshold must always move from below the falling threshold to above the rising threshold. For example, if a network moves from below a rising threshold of 1000 collisions every 15 seconds to 1001 collisions.
- Step 10** Enter the appropriate number of occurrences for the Falling Threshold field. In most cases a falling threshold is set lower than the rising threshold.
- A falling threshold is the exact opposite of a rising threshold. When the number of occurrences is above the rising threshold and then drops below a falling threshold, it resets the rising threshold. For example, when the network problem that caused 1001 collisions in 15 seconds subsides and creates only 799 collisions in 15 seconds, occurrences fall below a falling threshold of 800 collisions. This resets the rising threshold so that if network collisions again spike over a 1000 per 15-second period, an event again triggers when the rising threshold is crossed. An event is triggered only the first time a rising threshold is exceeded.
- Step 11** Click **OK**.
- Step 12** Return to your originating procedure (NTP).

DLP-G671 Provision the 40G Muxponder Trunk Port Alarm and TCA Thresholds

Purpose	This task changes the trunk port alarm and TCA thresholds of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40G-MXP-C, or 40E-MXP-C card where you want to change the trunk port alarm and TCA settings.

Step 2 Click the **Provisioning > Optics Thresholds** tabs.

Note You must modify 15 Min and 1 Day independently. To do so, select the appropriate radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

Step 3 If TCA is not selected, click **TCA** and then click Refresh. If it is selected, continue with [Step 4](#).

Step 4 Verify the trunk port (Port 5) TCA thresholds are set at the values shown as follows:

- Laser Bias High (%): 95.0
- RX Power High (dBm): -9.0
- RX Power Low (dBm): -22.0
- TX Power High (dBm): 9.0
- TX Power Low (dBm): 0.0

Provision new thresholds as needed by replacing the old values with new ones.

Step 5 Under Types area, click the **Alarm** radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

Step 6 Verify the trunk port (Port 5) alarm thresholds are set at the values shown as follows:

- Laser Bias High (%): 98.0
- RX Power High (dBm): -8.0
- RX Power Low (dBm): -24.0
- TX Power High (dBm): 7.0
- TX Power Low (dBm): 3.0

Provision new thresholds as needed replacing the old values with new ones.

Step 7 Click **Apply**.

Step 8 Return to your originating procedure (NTP).

DLP-G672 Provision the 40G Muxponder Client Port Alarm and TCA Thresholds

Purpose	This task provisions the client port alarm and TCA thresholds of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C cards.
Tools/Equipment	None
Prerequisite Procedures	• DLP-G46 Log into CTC, page 3-30 • DLP-G278 Provision the Optical Line Rate, page 6-14
Required/As Needed	Required
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40G-MXP-C, or 40E-MXP-C card where you want to change the client port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs.
- Step 3** If TCA is not selected, click **TCA** and then click Refresh. If it is selected, continue with [Step 4](#).
- Step 4** Referring to [Table 6-107](#), verify the client ports (Ports 1 through 4) TCA thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low based on the client interface at the other end. Provision new thresholds as needed by replacing the old values with new ones.

Note Do not modify the Laser Bias parameters.

Note You must modify 15 Min and 1 Day independently. To do so, select the appropriate radio button and click **Refresh**.

1. In CTC, SFPs and XFPs are called pluggable port modules (PPMs). For more information about SFPs and XFPs, see the “Transponder and Muxponder Cards” chapter in the Cisco ONS 15454 DWDM Reference Manual.

- Step 9** Click **Apply**.
- Step 10** Repeat Steps 7 and 8 to provision additional client ports.
- Step 11** Return to your originating procedure (NTP).

DLP-G673 Change the 40G Muxponder OTN Settings

Purpose	This task changes the OTN settings for the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the 40G-MXP-C, or 40E-MXP-C card where you want to change the OTN settings.
- Step 2** Click the **Provisioning > OTN** tabs, then choose one of the following subtabs: **OTN Lines**, **ITU-T G.709 Thresholds**, **FEC Thresholds**, or **Trail Trace Identifier**.
- Step 3** Modify any of the settings described in Tables [6-109](#) through [6-112](#).

Note You must modify Near End and Far End, 15 Min and 1 Day, and SM and PM independently. To do so, select the appropriate radio button and click **Refresh**.

[Table 6-109](#) describes the values on the Provisioning > OTN > OTN Lines tab.

Table 6-109 OTN Line Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Parameter	Description	Options
Port	(Display only) Displays the port number. Applicable for trunk ports and ports with OTU2 payload.	1-1 2-1 3-1 4-1 5 (Trunk)
ITU-T G.709 Thresholds	Sets the OTN lines according to ITU-T G.709.	- Enable - Disable
FEC	Sets the OTN lines to forward error correction (FEC).	- Standard - Enhanced

Table 6-109 OTN Line Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Parameter	Description	Options
SF BER	(Display only) Sets the signal fail bit error rate.	1E-5
SD BER	Sets the signal degrade bit error rate.	1E-5 1E-6 1E-7 1E-8 1E-9

Table 6-110 describes the values on the Provisioning > OTN > G.709 Thresholds tab.

Table 6-110 ITU-T G.709 Threshold Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Parameter	Description	Options
Port	(Display only) Displays the port number. Applicable for trunk ports and ports with OTU2 payload.	1-1 2-1 3-1 4-1 5 (Trunk)
ES	Errored seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select the radio button individually and click Refresh . Click Reset to Default to restore default values.
SES	Severely errored seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select the radio button individually and click Refresh .
UAS	Unavailable seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select the radio button individually and click Refresh .
BBE	Background block errors	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select the radio button individually and click Refresh .
FC	Failure counter	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select radio button individually and click Refresh .

Table 6-111 describes the values on the Provisioning > OTN > FEC Threshold tab.

Table 6-111 *FEC Threshold Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards*

Parameter	Description	Options
Port	(Display only) Displays the port number. Applicable for trunk ports and ports with OTU2 payload.	1-1 2-1 3-1 4-1 5 (Trunk)
Bit Errors Corrected	Sets the value for bit errors corrected.	Numeric. Can be set for 15-minute or one-day intervals.
Uncorrectable Words	Sets the value for uncorrectable words.	Numeric. Can be set for 15-minute or one-day intervals.

Table 6-112 describes the values on the Provisioning > OTN > Trail Trace Identifier tab.

Table 6-112 *Trail Trace Identifier Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards*

Parameter	Description	Options
Port	(Display only) Displays the port number. Applicable for trunk ports and ports with OTU2 payload.	1-1 2-1 3-1 4-1 5 (Trunk)
Received Trace Mode	Sets the trace mode.	- Off/None - Manual
Disable AIS/RDI on TIM-S	Disables alarm indication signal.	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)
Transmit Section Trace String Size	Sets the trace string size.	1 byte 16 byte
Transmit	Displays and sets the current transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. In Transmit String Type, click Hex Mode to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex Mode).	Transmit string size

Table 6-112 Trail Trace Identifier Settings of the 40G-MXP-C, 40E-MXP-C, and 40ME-MXP-C Cards

Parameter	Description	Options
Expected	Displays and sets the current expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. In Expected String Type, click Hex Mode to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex Mode).	Expected string size
Received	(Display only) Displays the current received string. Click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	Received string size
Auto-refresh	Refreshes the display automatically every 5 seconds.	• Checked • Unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

NTP-G281 Manage the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Channel Group Settings

Purpose	This procedure changes the channel group settings for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	• NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 • “DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8 • DLP-G277 Provision a Multirate PPM, page 6-11 (if necessary)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 Complete the [“DLP-G46 Log into CTC” task](#) on page 3-30 at the node where you want to change the channel group settings. If you are already logged in, continue with [Step 2](#).

Step 2 Perform any of the following tasks as needed:

- [DLP-G611 Create a Channel Group Using CTC](#), page 6-202
- [DLP-G612 Modify the Parameters of the Channel Group Using CTC](#), page 6-203
- [DLP-G613 Add or Remove Ports to or from an Existing Channel Group Using CTC](#), page 6-207
- [DLP-G614 Delete a Channel Group Using CTC](#), page 6-208
- [DLP-G615 Retrieve Information on Channel Group, REP, CFM, and EFM Using CTC](#), page 6-209
- [DLP-G616 View Channel Group PM Parameters for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Cards Using CTC](#), page 6-210
- [DLP-G617 View Channel Group Utilization PM Parameters for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Cards Using CTC](#), page 6-211
- [DLP-G618 View Channel Group History PM Parameters for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Cards Using CTC](#), page 6-211
- [DLP-G619 Create a Channel Group on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#), page B-24
- [DLP-G620 Add Ports to a Channel Group on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#), page B-25

Step 3 **Stop. You have completed this procedure.**

DLP-G611 Create a Channel Group Using CTC

Purpose	This task creates a channel group on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

You can create up to 11 channel groups on the GE_XP and GE_XPE cards and up to 2 channel groups on the 10GE_XP and 10GE_XPE cards. You can create a channel group with ports only when the ports do not have any UNI QinQ settings or NNI SVLAN settings. Otherwise, the channel group will be created with empty ports.

For information on interaction of LACP with other protocols, see the *Protocol Compatibility list* in the *Transponder and Muxponder Cards* chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to create a channel group. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed according to the requirements specified in [Table 4-7 on page 4-111](#).

- Step 3** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 4** In card view, click the **Provisioning > Channel Groups** tabs.
- Step 5** Click **Create**. The Channel Group Creation dialog box appears.
- Step 6** Enter the name of the channel group in the Name field.
- Step 7** From the Stand Alone list, choose the ports that will belong to this channel group and click the right arrow button to move the selected ports to the Bundled list.
- Step 8** From the LACP Mode drop-down list, choose the LACP mode as needed:
- On—Default mode. In this mode, the ports will not exchange LACP packets with the partner ports.
 - Active—In this mode, the ports will send LACP packets at regular intervals to the partner ports.
 - Passive—In this mode, the ports will not send LACP packets until the partner ports send LACP packets. After receiving the LACP packets from the partner ports, the ports will send LACP packets.
- Step 9** From the LACP Hashing drop-down list, select the LACP hashing algorithm that the protocol uses to perform the load balancing task between the bundled ports.
- The following hashing algorithms are supported:
- Ucast SA VLAN Incoming Port
 - Ucast DA VLAN Incoming Port
 - Ucast SA DA VLAN Incoming port
 - Ucast Src IP TCP UDP
 - Ucast Dst IP TCP UDP
 - Ucast Src Dst IP TCP UDP
- Step 10** Click **Create**.
- A new row is added in the LACP table and all the other parameters in the channel group are set to default values. The default values of these parameters are taken from the first port that is attached to the channel group.
- Step 11** Return to your originating procedure (NTP).

DLP-G612 Modify the Parameters of the Channel Group Using CTC

Purpose	This task modifies the parameters of the channel group.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

Ports cannot be added or removed using this procedure. For adding or removing the ports, see [“DLP-G613 Add or Remove Ports to or from an Existing Channel Group Using CTC” task on page 6-207](#).

- Step 1** Complete the [“DLP-G46 Log into CTC” task on page 3-30](#) at the node where you want to modify the parameters of the channel group. If you are already logged in, continue with Step 2.
- Step 2** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to modify the parameters of the channel group.
- Step 3** In card view, click the **Provisioning > Channel Groups** tabs.
- Step 4** Choose a channel group from the existing channel groups.
- Step 5** Modify the channel group settings as described in [Table 6-113](#).

Table 6-113 Channel Group Settings

Parameter	Description	Options
Channel Group	(Display only) ID and name of the channel group.	N.A.
Name	Sets the name of the channel group.	—
Ports	(Display only) Port number (<i>n-n</i>) and rate (GE or TEN_GE of the channel group).	N.A.
LACP Mode	Sets the LACP mode. The channel group must be in OOS-DSBLD admin state.	- On - Active - Passive
Hashing	Sets the LACP hashing algorithm. The channel group must be in OOS-DSBLD admin state.	- Ucast SA VLAN Incoming Port - Ucast DA VLAN Incoming Port - Ucast SA DA VLAN Incoming port - Ucast Src IP TCP UDP - Ucast Dst IP TCP UDP - Ucast Src Dst IP TCP UDP
Admin State	Sets the administrative state on the channel group.	- IS - OOS, DSBLD
Service State	(Display only) Sets the service state that indicates the operational state of the channel group.	- IS-NR - OOS-MA, DSBLD

Table 6-113 Channel Group Settings

Parameter	Description	Options
MTU	Sets the maximum transfer unit (MTU), which sets the maximum number of bytes per frame accepted on the port. The member ports must be in OOS-DSBLD admin state. The default MTU value in the channel group is taken from the default settings in the node.	Numeric. Default: 9700 Range: 64 to 9700
Mode	Sets the provisional port mode. If the port mode is Auto, the Expected Speed field determines which ports can belong to the bundle. The member ports must be in OOS-DSBLD admin state.	• Auto • 1000 Mbps
Expected Speed	Sets the expected speed of ports of the channel group. The channel group must be in OOS-DSBLD admin state.	• 10 Mbps • 100 Mbps • 1000 Mbps
Duplex	(Display only) Expected duplex capability of ports of the channel group.	• Full
Committed Info Rate	Sets the guaranteed information rate as per the service provider service-level agreement. The channel group must be in OOS-DSBLD admin state.	Numeric. Default: 100 Range: 0 to 100%
Committed Burst Size	Sets the maximum number of bits transferred per second. The channel group must be in OOS-DSBLD admin state.	• 4k (default) • 8k • 16k • 32k • 64k • 128k • 256k • 512k • 1M • 2M • 4M • 8M • 16M

Table 6-113 Channel Group Settings

Parameter	Description	Options
Excess Burst Size	Sets the maximum number of bits credited for later transfer if the committed burst rate cannot be transmitted. The channel group must be in OOS-DSBLD admin state.	• 4k (default) • 8k • 16k • 32k • 64k • 128k • 256k • 512k • 1M • 2M • 4M • 8M • 16M
NIM	Sets the network interface mode (NIM) for the channel group. The member ports must be in OOS-DSBLD admin state. The channel group NIM is set to UNI or NNI based on the mode of the first port that is added to the channel group.	• UNI Mode (Default)—provisions the port as a User-Network Interface (UNI). This is the interface that faces the subscriber. • NNI Mode—provisions the port as a Network-to-Network Interface (NNI). This is the interface that faces the service provider network.
Ingress CoS	Provisions the IEEE 802.1p ingress class of service (CoS). Ingress CoS is used to set the priority of the Ethernet frame in the service provider network. The member ports must be in OOS-DSBLD admin state.	• 0 • 1 • 2 • 3 • 4 • 5 • 6 • 7 • Trust • CVLAN • DSCP

Table 6-113 Channel Group Settings

Parameter	Description	Options
Inner Ethertype (Hex)	Defines the inner Ethertype field. The Ethertype field indicates which protocol is being transported in an Ethernet frame. The member ports must be in OOS-DSBLD admin state to modify the Inner Ethertype value to a non-default value.	Numeric. Default: 8100 (IEEE Std 802.1Q customer VLAN tag type) Range: 0x600 to 0xffff.
Outer Ethertype (Hex)	Defines the outer Ethertype field. The Ethertype field identifies which protocol is being transported in an Ethernet frame. The member ports must be in OOS-DSBLD admin state.	Numeric. Default: 8100 (IEEE standard 802.1Q service provider VLAN tag type) Range: 0x600 to 0xffff
MAC Learning	Enables or disables MAC learning for the port on GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards. MAC learning is used by Layer 2 switches to learn the MAC addresses of network nodes so that the Layer 2 switches send traffic to the right location. In GE_XPE or 10GE_XPE cards, enable MAC address learning per SVLAN.	• Checked—MAC learning is enabled for this port. • Unchecked—(Default) MAC learning is disabled for this port.

**Note**

When you set the Committed Info Rate above 40% on 10GE_XP and 10GE_XPE cards, the Committed Burst Size and Excess Burst Size must be set to at least 32K. The Committed Burst Size and Excess Burst Size can be increased based on the packet size and Committed Info Rate value.

Step 6 Click **Apply**.

Step 7 Return to your originating procedure (NTP).

DLP-G613 Add or Remove Ports to or from an Existing Channel Group Using CTC

Purpose	This task adds or removes ports to or from an existing channel group.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Before You Begin

- You can assign up to eight ports to a channel group on GE_XP and GE_XPE cards and up to three ports on the 10GE_XP and 10GE_XPE cards.
- You can assign the ports to a channel group only if the ports are in OOS-DSBLD admin state. The ports must not have any UNI QinQ rule or NNI SVLAN configuration.
- If the channel group is configured in UNI mode, only the UNI ports can be added to the channel group. If the channel group is configured in NNI mode, only the NNI ports can be added to the channel group.

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want add ports to an existing channel group. If you are already logged in, continue with Step 2.
- Step 2** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to add ports to an existing channel group.
- Step 3** In card view, click the **Provisioning > Channel Groups** tabs.
- Step 4** Choose a channel group from the existing channel groups.
- Step 5** Click **Add/Remove Ports**. The Add/Remove Ports dialog box appears.
- Step 6** To add ports to an existing channel group, complete the following:
From the Stand Alone list, choose the required ports and click the right arrow button to move the selected ports to the Bundled list.
- Step 7** To remove ports from an existing channel group, complete the following:
From the Bundled list, choose the required ports and click the left arrow button to move the selected ports to the Stand Alone list.
- Step 8** Click **Apply**.
- Step 9** Return to your originating procedure (NTP).
-

DLP-G614 Delete a Channel Group Using CTC

Purpose	This task deletes a channel group.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to delete the channel group. If you are already logged in, continue with Step 2.
- Step 2** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XP card where you want to delete the channel group.

- Step 3** In card view, click the **Provisioning > Channel Groups** tabs.
- Step 4** Choose a channel group that you want to delete.
- Step 5** Click **Delete**.
- Step 6** Return to your originating procedure (NTP).

DLP-G615 Retrieve Information on Channel Group, REP, CFM, and EFM Using CTC

Purpose	This task enables you to view and retrieve information on the channel group, Resilient Ethernet Protocol (REP), Connectivity Fault Management (CFM), and Ethernet in the First Mile (EFM) on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on [page 3-30](#) at the node where you want to view and retrieve information on the channel group, REP, CFM, and EFM. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on [page 6-8](#).
- Step 3** In card view, click the **Maintenance > Show Commands** tabs.
- Step 4** From the Command drop-down list, choose a command.
- The following commands are supported:
- **ETH LACP**—Displays detailed LACP information from the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards.
 - **REP TOPO**—Displays the topology information for a specific REP segment.
 - **REP TOPO ARCHIVE**—Displays the previous topology information for a specific REP segment.
 - **REP INTERFACE**—Displays information on the REP interface status and configuration. You can retrieve detailed information for each segment by selecting Detailed from the Level drop-down list and providing the segment ID.
 - **OAM DISCOVERY**—Displays discovery information for all the EFM interfaces or for a specific EFM interface.
 - **OAM SUMMARY**—Displays the active EFM sessions on a device.
 - **OAM STATISTICS**—Displays detailed information about the EFM packets.

- **OAM STATUS**—Displays information about the EFM configurations for all the EFM interfaces or for a specific interface.

For more information, see the *Pseudo Command Line Interface Reference* chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

- Step 5** From the Level drop-down list, choose **Normal** or **Detailed**.
- Step 6** Click **Show**. Depending on the command, the appropriate output appears in the text area.
- Step 7** Return to your originating procedure (NTP).

DLP-G616 View Channel Group PM Parameters for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Cards Using CTC

Purpose	This task enables you to view current statistical performance monitoring (PM) counts on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards and channel groups to detect possible performance problems.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to view the channel group PM counts on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
- Step 2** In node view (single-shelf mode) or shelf view (multishelf mode), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to view the channel group statistics. The card view appears.
- Step 3** Click the **Performance > Channel Groups > Statistics** tabs.
- Step 4** Click **Refresh**. Performance monitoring statistics for each channel group on the card appear in the Statistics tab.

View the PM parameter names in the Param column. The current PM parameter values appear in the Port # (CHGRP) column. For PM parameter definitions, refer to the “Performance Monitoring” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

Note To refresh, reset, or clear PM counts, see the “[NTP-G73 Change the PM Display](#)” procedure on page 9-2.

- Step 5** Return to your originating procedure (NTP).

DLP-G617 View Channel Group Utilization PM Parameters for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Cards Using CTC

Purpose	This task enables you to view line utilization PM counts on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards and channel groups to detect possible performance problems.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

-
- Step 1** Complete the [“DLP-G46 Log into CTC” task on page 3-30](#) at the node where you want to view the channel group utilization PM parameters on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
- Step 2** In node view, double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to view the channel group utilization. The card view appears.
- Step 3** Click the **Performance > Channel Groups > Utilization** tabs.
- Step 4** Click **Refresh**. The utilization percentages for each channel group on the card appear in the Utilization tab.

View the Port # column to find the channel group you want to monitor.

The transmit (Tx) and receive (Rx) bandwidth utilization values, for the previous time intervals, appear in the Prev-*n* columns. For PM parameter definitions, refer to the “Performance Monitoring” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

Note To refresh, reset, or clear PM counts, see the [“NTP-G73 Change the PM Display” procedure on page 9-2](#).

- Step 5** Return to your originating procedure (NTP).
-

DLP-G618 View Channel Group History PM Parameters for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Cards Using CTC

Purpose	This task enables you to view historical PM counts at selected time intervals on GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards and channel groups to detect possible performance problems.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

-
- Step 1** Complete the [“DLP-G46 Log into CTC” task on page 3-30](#) at the node where you want to view the channel group history PM parameters on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
- Step 2** In node view (single-shelf mode) or shelf view (multishelf mode), double-click the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE card where you want to view the channel group history PM data. The card view appears.
- Step 3** Click the **Performance > Channel Groups > History** tabs.
- Step 4** From the **Port** field, choose a channel group.
- Step 5** Click **Refresh**. Performance monitoring statistics for each channel group on the card appear in the History tab.

View the PM parameter names that appear in the Param column. The PM parameter values appear in the Prev-*n* columns. For PM parameter definitions, refer to the “Performance Monitoring” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

Note To refresh, reset, or clear PM counts, see the [“NTP-G73 Change the PM Display” procedure on page 9-2](#).

- Step 6** Return to your originating procedure (NTP).
-

NTP-G283 Manage the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card CFM Settings

Purpose	This procedure changes the CFM settings for GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 “DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8 DLP-G277 Provision a Multirate PPM, page 6-11 (if necessary)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** Complete the [“DLP-G46 Log into CTC” task on page 3-30](#) at the node where you want to change the CFM settings. If you are already logged in, continue with [Step 2](#).
- Step 2** Perform any of the following tasks as needed:
- [DLP-G621 Enable or Disable CFM on the Card Using CTC, page 6-213](#)
 - [DLP-G622 Enable or Disable CFM for Each Port Using CTC, page 6-214](#)
 - [DLP-G623 Create a Maintenance Domain Profile Using CTC, page 6-215](#)

- [DLP-G624 Delete a Maintenance Domain Profile Using CTC, page 6-216](#)
- [DLP-G625 Create a Maintenance Association Profile Using CTC, page 6-217](#)
- [DLP-G626 Modify a Maintenance Association Profile Using CTC, page 6-218](#)
- [DLP-G627 Delete a Maintenance Association Profile Using CTC, page 6-218](#)
- [DLP-G628 Map a Maintenance Association Profile to a Maintenance Domain Profile Using CTC, page 6-219](#)
- [DLP-G629 Create a MEP Using CTC, page 6-220](#)
- [DLP-G630 Delete a MEP Using CTC, page 6-221](#)
- [DLP-G631 Create a MIP Using CTC, page 6-221](#)
- [DLP-G632 Delete a MIP Using CTC, page 6-222](#)
- [DLP-G633 Ping MEP Using CTC, page 6-223](#)
- [DLP-G634 Traceroute MEP Using CTC, page 6-224](#)
- [DLP-G615 Retrieve Information on Channel Group, REP, CFM, and EFM Using CTC, page 6-209](#)
- [DLP-G635 Enable CFM on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI, page B-29](#)
- [DLP-G636 Create a Maintenance Domain on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI, page B-29](#)
- [DLP-G637 Create a Maintenance Intermediate Point on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI, page B-30](#)
- [DLP-G638 Create a Maintenance End Point on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI, page B-31](#)

Step 3 **Stop. You have completed this procedure.**

DLP-G621 Enable or Disable CFM on the Card Using CTC

Purpose	This task allows you to enable or disable CFM on GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Note

CFM is disabled on the card by default. CFM must be enabled at both card and port levels for the CFM service to work.

For information on interaction of CFM with other protocols, see the *Protocol Compatibility list* in the *Transponder and Muxponder Cards* chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to enable or disable CFM on the card. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > Security** tab.
- Step 4** Uncheck the **MAC security** check box to disable MAC security.
- Step 5** In card view, click the **Provisioning > CFM > Configuration > Global Settings** tabs.
- Step 6** Check the **Enable CFM** check box that is present at the bottom of the screen.
- Step 7** Choose the value for CC Timer field. The value can be 1 second, 10 seconds, or 1 minute.
-  **Note** Continuity Check (CC) messages are periodically exchanged between maintenance end points (MEPs). The CC Timer field is used to set the time frequency for transmission of CC messages.
-
- Step 8** Click **Apply** to enable CFM on the card.
-  **Note** Uncheck the **Enable CFM** check box to disable CFM on the card.
-
- Step 9** Return to your originating procedure (NTP).
-

DLP-G622 Enable or Disable CFM for Each Port Using CTC

Purpose	This task allows you to enable or disable CFM for each port on GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Note CFM must be enabled at both card and port levels for the CFM service to work. However, CFM is enabled on all the ports by default.

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to enable or disable CFM for each port. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > CFM > Configuration > Global Settings** tabs.

Step 4 If you want to enable CFM on a specific port, check the **Enable CFM** check box against that port.

Step 5 Choose the value for CC Timer field. The value can be 1 second, 10 seconds, or 1 minute.

Note Continuity Check (CC) messages are periodically exchanged between MEPs. The CC Timer field is used to set the time frequency for transmission of CC messages.

Step 6 Click **Apply** to enable CFM on the port.

Note Uncheck the **Enable CFM** check box against the port to disable CFM on the port.

Step 7 Return to your originating procedure (NTP).

DLP-G623 Create a Maintenance Domain Profile Using CTC

Purpose	This task allows you to create a maintenance domain profile on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Before You Begin

- You can create up to eight maintenance domain profiles on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards.
- The maximum number of characters for the maintenance domain profile and the maintenance association profile must not exceed 43 characters.

Step 1 Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to create a maintenance domain profile. If you are already logged in, continue with Step 2.

Step 2 Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.

Step 3 In card view, click the **Provisioning > CFM > Configuration > Domain Profiles** tabs or in node/network view, click the **Provisioning > CFM Profiles > Domain Profiles** tabs.

Note Use the network view to store the domain profile on multiple nodes.

Step 4 Click **Add row(s)**.

- Step 5** Enter the name of the domain in the Domain Name field.
 - Step 6** Enter the level of the domain profile in the Level field. The range of the domain profile level is from 0 to 7.
 - Step 7** Click **Store**.
 - Step 8** Choose the card slot where you want to store this domain profile and click **OK**.
 - Step 9** Return to your originating procedure (NTP).
-

DLP-G624 Delete a Maintenance Domain Profile Using CTC

Purpose	This task allows you to delete a maintenance domain profile on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to delete a maintenance domain profile. If you are already logged in, continue with Step 2.
 - Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
 - Step 3** In card view, click the **Provisioning > CFM > Configuration > Domain Profiles** tabs or in node/network view, click the **Provisioning > CFM Profiles > Domain Profiles** tabs.
 - Step 4** Select the domain profiles that you want to delete.
 - Step 5** Check the **on Node** check box.
 - Step 6** Click **Delete Sel. row(s)**. The **CFM Profile Deleting** dialog box appears.
 - Step 7** Choose the card slot where you want to delete this profile and click **OK**. The **Deleting Profile** dialog box appears.
 - Step 8** In the **Deleting Profile** dialog box, click **Yes**.
 - Step 9** Return to your originating procedure (NTP).
-

DLP-G625 Create a Maintenance Association Profile Using CTC

Purpose	This task allows you to create a maintenance association profile on GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Note You can create up to 1500 maintenance association profiles on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards.

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to create a maintenance association profile. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > CFM > Configuration > MA Profiles** tabs or in node/network view, click the **Provisioning > CFM Profiles > MA Profiles** tabs.

Note Use the network view to store the maintenance association profile on multiple nodes.

-
- Step 4** Click **Add row(s)**.
- Step 5** Enter the name of the maintenance association in the Maintenance Profile Name field.
- Step 6** Enter the VLAN ID in the VLAN ID field. The range of the VLAN ID is from 1 to 4093.
- Step 7** Check the **CC Enable** check box to receive Continuity Check messages.
- Step 8** Click **Store**.
- Step 9** Choose the card slot where you want to store this maintenance association profile and click **OK**.
- Step 10** Return to your originating procedure (NTP).
-

DLP-G626 Modify a Maintenance Association Profile Using CTC

Purpose	This task allows you to modify a maintenance association profile on GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Note

Ensure that the maintenance association profile you want to modify is not associated with a maintenance domain profile.

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on [page 3-30](#) at the node where you want to modify a maintenance association profile. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on [page 6-8](#).
- Step 3** In card view, click the **Provisioning > CFM > Configuration > MA Profiles** tabs or in node/network view, click the **Provisioning > CFM Profiles > MA Profiles** tabs.
- Step 4** Select the maintenance association profiles that you want to modify.
- Step 5** Click **Modify Selected Profile(s)**. The **Modify MA Profile** dialog box appears.
- Step 6** Modify the values as required and click **OK**.
- Step 7** Return to your originating procedure (NTP).
-

DLP-G627 Delete a Maintenance Association Profile Using CTC

Purpose	This task allows you to delete a maintenance association profile on GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Note

Ensure that the maintenance association profile you want to delete is not associated with a maintenance domain profile.

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to delete a maintenance association profile. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > CFM > Configuration > MA Profiles** tabs or in node/network view, click the **Provisioning > CFM Profiles > MA Profiles** tabs.
- Step 4** Select the maintenance association profiles that you want to delete.
- Step 5** Check the **on Node** check box.
- Step 6** Click **Delete Sel. row(s)**. The **CFM Profile Deleting** dialog box appears.
- Step 7** Choose the card slot where you want to delete this profile and click **OK**. The **Deleting Profile** dialog box appears.
- Step 8** In the **Deleting Profile** dialog box, click **Yes**.
- Step 9** Return to your originating procedure (NTP).
-

DLP-G628 Map a Maintenance Association Profile to a Maintenance Domain Profile Using CTC

Purpose	This task allows you to map a maintenance association profile to a maintenance domain profile on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Note Ensure that you have already created maintenance domain profiles and maintenance association profiles.

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to map a maintenance association profile to a maintenance domain profile. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > CFM > Configuration > MA-Domain Mapping** tabs.
- Step 4** From the main drop-down list, choose a maintenance domain profile.
- Step 5** Click **Link MA Profiles**. The **Link MA Profiles** dialog box appears.

- Step 6** From the Available Profiles list, choose the required MA profiles and click the right arrow button to move the MA profiles to the Linked Profiles list and click **OK**.

Note The maintenance association profiles that are mapped with a specific maintenance domain profile must have a unique SVLAN ID.

- Step 7** Return to your originating procedure (NTP).

DLP-G629 Create a MEP Using CTC

Purpose	This task allows you to create a Maintenance End Point (MEP) for a given VLAN range on a specific maintenance domain.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Note You can create up to 255 MEPs and MIPs on the GE_XP and 10GE_XP cards. You can create up to 500 MEPs and MIPs on the GE_XPE and 10GE_XPE cards.

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to create a MEP. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > CFM > Configuration > MEP** tabs.
- Step 4** Click **Create**. The **Create MEP** dialog box appears.
- Step 5** From the Port drop-down list, choose a port where you want to create the MEP.

Note CFM must be enabled on the port to create a MEP. The port must not belong to a channel group.

- Step 6** From the Domain drop-down list, choose a maintenance domain.

- Step 7** Enter the SVLAN ID in the Vlan Id field.

Note The specified VLAN must be configured on the selected port. The specified VLAN must also appear in the MA-Domain Mapping table.

- Step 8** Enter the MP ID (identifier of the maintenance end point) in the MPID field and click **OK**. The range of the MP ID is from 1 to 8191.

The MP ID must not be the same between the maintenance end points.

Step 9 Return to your originating procedure (NTP).

DLP-G630 Delete a MEP Using CTC

Purpose	This task allows you to delete a MEP on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on [page 3-30](#) at the node where you want to delete a MEP. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on [page 6-8](#).
- Step 3** In card view, click the **Provisioning > CFM > Configuration > MEP** tabs.
- Step 4** Select the MEPs that you want to delete.
- Step 5** Click **Delete**.
- Step 6** Return to your originating procedure (NTP).
-

DLP-G631 Create a MIP Using CTC

Purpose	This task allows you to create a Maintenance Intermediate Point (MIP) for a given VLAN range with a specific maintenance level.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Note

You can create up to 255 MEPs and MIPs on the GE_XP and 10GE_XP cards. You can create up to 500 MEPs and MIPs on the GE_XPE and 10GE_XPE cards.

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to create a MIP. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > CFM > Configuration > MIP** tabs.
- Step 4** Click **Create**. The **Create MIP** dialog box appears.
- Step 5** From the Port drop-down list, choose a port where you want to create the MIP.

Note The port must not belong to a channel group.

- Step 6** From the Level drop-down list, choose a maintenance level. The range of the maintenance level is from 0 to 7.
- Step 7** Enter the SVLAN range in the Vlan range field. The range of the SVLAN is from 1 to 4093.

Note The specified SVLAN must be configured on the selected port.

- Step 8** Click **OK**.
- Step 9** Return to your originating procedure (NTP).

DLP-G632 Delete a MIP Using CTC

Purpose	This task allows you to delete a MIP on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to delete a MIP. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > CFM > Configuration > MIP** tabs.
- Step 4** Select the MIPs that you want to delete.
- Step 5** Click **Delete**.

Step 6 Return to your originating procedure (NTP).

DLP-G633 Ping MEP Using CTC

Purpose	This task allows you to display the output of the ping command on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Step 1 Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to ping MEP. If you are already logged in, continue with Step 2.

Step 2 Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.

Step 3 In card view, click the **Provisioning > CFM > Ping** tabs.

Step 4 Enter the MP ID value in the MPID field. The range of the MP ID is from 1 to 8191.

Note Remote MP ID user cannot ping local MP ID.

Step 5 (Optional) Enter the MAC address of the remote maintenance point in the Mac Addr field. The format of MAC address is abcd.abcd.abcd.

Step 6 Enter the SVLAN ID in the VLAN ID field. The range of the SVLAN ID is from 1 to 4093.

Step 7 Enter the domain name in the Domain Name field.

Step 8 Enter the size of the ping packet in the DataGram Size field. The default value is 100.

Step 9 Enter the number of ping packets in the No of Requests field. The default value is 5.

Step 10 Click **Ping**. The output of the ping command appears in the Ping Response area.

Step 11 Return to your originating procedure (NTP).

DLP-G634 Traceroute MEP Using CTC

Purpose	This task allows you to display the output of the traceroute command on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to view the output of the **traceroute** command. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > CFM > Traceroute** tabs.
- Step 4** Enter the remote MP ID value in the MPID field. The range of the MP ID is from 1 to 8191.
- Step 5** (Optional) Enter the MAC address of the remote maintenance point in the Mac Addr field. The format of MAC address is abcd.abcd.abcd.
- Step 6** Enter the SVLAN ID in the VLAN ID field. The range of the SVLAN ID is from 1 to 4093.
- Step 7** Enter the domain name in the Domain Name field.
- Step 8** Click **TraceRoute Response**.
- The output of the **traceroute** command appears in the TraceRoute Response area.
- Verify the RlyHit message is shown in the traceroute display and LTM reaches a maintenance point whose MAC address matches the target MAC address.
 - Verify the RlyFDB message is shown in the traceroute display when the next hop address is found in the forwarding database.
 - Verify the RlyMPDB message is shown in the traceroute display when the next hop address is found in the CCDN.
- Step 9** Return to your originating procedure (NTP).
-

NTP-G285 Manage the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card EFM Settings

Purpose	This procedure changes the EFM settings of the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	• NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 • “DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8 • DLP-G277 Provision a Multirate PPM, page 6-11 (if necessary)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to change the EFM settings. If you are already logged in, continue with [Step 2](#).

Step 2 Perform any of the following tasks as needed:

- [DLP-G639 Enable or Disable EFM for Each Port Using CTC](#), page 6-225
- [DLP-G640 Configure EFM Parameters Using CTC](#), page 6-226
- [DLP-G641 Configure EFM Link Monitoring Parameters Using CTC](#), page 6-228
- [DLP-G642 Enable Remote Loopback for Each Port Using CTC](#), page 6-229
- [DLP-G615 Retrieve Information on Channel Group, REP, CFM, and EFM Using CTC](#), page 6-209
- [DLP-G643 Enable EFM on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#), page B-26
- [DLP-G644 Configure the EFM Mode on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#), page B-27

Stop. You have completed this procedure.

DLP-G639 Enable or Disable EFM for Each Port Using CTC

Purpose	This task allows you to enable or disable EFM for each port on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Before You Begin

- You can enable EFM on both UNI and NNI ports.
- You cannot enable or disable EFM for ports that belong to a channel group.
- For information on interaction of EFM with other protocols, see the *Protocol Compatibility list* in the *Transponder and Muxponder Cards* chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to enable or disable EFM for each port. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > EFM > Configuration** tabs. The EFM details appear for each port.
- Step 4** From the EFM State drop-down list, choose **Enabled**.
- Step 5** Click **Apply** to enable EFM for that port.

Note From the EFM State drop-down list, choose **Disabled** to disable EFM for that port.

- Step 6** Return to your originating procedure (NTP).

DLP-G640 Configure EFM Parameters Using CTC

Purpose	This task allows you to configure EFM parameters on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to configure EFM parameters. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > EFM > Configuration** tabs.

Step 4 Modify the EFM parameter settings as described in [Table 6-114](#).

Table 6-114 EFM Parameter Settings

Parameter	Description	Options
Port	(Display only) Port number (<i>n-n</i>) and rate (GE or TEN_GE).	—
EFM State	Sets the state of the EFM protocol for each port.	- Enabled - Disabled
Mode	Sets the operating mode of the port. If the mode is Active, the port sends OAM Protocol Data Units (OAMPDUs) at regular intervals to the partner ports. If the mode is Passive, the port will not send OAMPDUs until the partner ports send OAMPDUs.	- Active - Passive
Link Fault	Sets the Remote Failure Indication (RFI) action. If the link is down on a port, the link fault RFI is sent to the partner port through OAMPDU. An alarm indicating the remote failure indication link fault (RFI-LF) is raised. The alarm is cleared after you clear the link fault condition. You can specify the following actions for link fault RFI: - Error Block—The interface is placed in the error-block state and the RFI-LF alarm is raised. - None—Only the RFI-LF alarm is raised. Note Dying Gasp and critical events are not supported.	- Error Block - None
Session Timer	Sets the duration up to when the EFM session is retained with the partner port without receiving OAMPDUs.	Default: 5 seconds Range: 2 to 30 seconds

Step 5 Click **Apply** to save the changes.

Step 6 Return to your originating procedure (NTP).

DLP-G641 Configure EFM Link Monitoring Parameters Using CTC

Purpose	This task allows you to configure EFM link monitoring parameters for each port on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to configure EFM link monitoring parameters. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > EFM > Link Monitoring** tabs.
- Step 4** Modify the EFM link monitoring parameter settings as described in [Table 6-115](#).

Table 6-115 EFM Link Monitoring Parameter Settings

Parameter	Description	Options
Port	(Display only) Port number (<i>n-n</i>) and rate (GE or TEN_GE).	—
EF Max	Sets the threshold value for the maximum number of errored frames to detect during a specific period.	Range: 1 to 65535
EF Min	Sets the threshold value for the minimum number of errored frames to detect during a specific period.	Range: 0 to 65535
EF Action	Specifies that when the parameter value exceeds the maximum threshold value, the applicable action is None. When the parameter value falls below the minimum threshold value, a threshold crossing alert (transient condition) is generated.	- None - Squelch
EF Window	Period in which the errored frame parameters are monitored.	Range: 10 to 600
EFP Max	Sets the threshold value for the maximum number of errored frames within the last <i>n</i> frames.	Range: 1 to 65535
EFP Min	Sets the threshold value for the minimum number of errored frames within the last <i>n</i> frames.	Range: 0 to 65535

Table 6-115 EFM Link Monitoring Parameter Settings

Parameter	Description	Options
EFP Action	Specifies that when the parameter value exceeds the maximum threshold value, the applicable action is None. When the parameter value falls below the minimum threshold value, a threshold crossing alert (transient condition) is generated.	- None - Squelch
EFP Window	Period in which the EFP parameters are monitored.	Range: 1 to 65535
EFSS Max	Sets the threshold value for the maximum number of errored seconds within the last <i>m</i> seconds.	Range: 1 to 900
EFSS Min	Sets the threshold value for the minimum number of errored seconds within the last <i>m</i> seconds.	Range: 0 to 900
EFSS Action	Specifies that when the parameter value exceeds the maximum threshold value, the applicable action is None. When the parameter value falls below the minimum threshold value, a threshold crossing alert (transient condition) is generated.	- None - Squelch
EFSS Window	Specifies the period when the EFSS parameters are monitored.	Range: 100 to 9000

Step 5 Click **Apply** to save the changes.

Step 6 Return to your originating procedure (NTP).

DLP-G642 Enable Remote Loopback for Each Port Using CTC

Purpose	This task allows you to enable remote loopback for each port on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Step 1 Complete the “[DLP-G46 Log into CTC](#)” task on [page 3-30](#) at the node where you want to enable the remote loopback for each port. If you are already logged in, continue with Step 2.

Step 2 Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on [page 6-8](#).

- Step 3** In card view, click the **Provisioning > EFM > Loopback** tabs.
The remote loopback type details appear for each port.
- Step 4** From the Remote Loopback Type drop-down list, choose **Remote Loopback**.
- Step 5** Click **Apply** to save the changes.
- Step 6** Return to your originating procedure (NTP).
-

NTP-G287 Manage the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card REP Settings

Purpose	This procedure changes the REP settings for the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	• NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 • “DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8 • DLP-G277 Provision a Multirate PPM, page 6-11 (if necessary)
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** Complete the [“DLP-G46 Log into CTC” task](#) on page 3-30 at the node where you want to change the REP settings. If you are already logged in, continue with [Step 2](#).
- Step 2** Perform any of the following tasks as needed:
- [DLP-G713 Provision Administrative VLAN for Ports in a REP Segment Using CTC](#), page 6-231
 - [DLP-G645 Create a Segment Using CTC](#), page 6-232
 - [DLP-G646 Edit a Segment Using CTC](#), page 6-234
 - [DLP-G647 Activate VLAN Load Balancing Using CTC](#), page 6-235
 - [DLP-G648 Deactivate VLAN Load Balancing Using CTC](#), page 6-235
 - [DLP-G615 Retrieve Information on Channel Group, REP, CFM, and EFM Using CTC](#), page 6-209
 - [DLP-G649 Create a Segment on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#), page B-33
 - [DLP-G650 Configure STCN on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#), page B-34
 - [DLP-G651 Configure Preemption Delay on the Primary Edge Port Using PCLI](#), page B-35
 - [DLP-G652 Configure VLAN Load Balancing on the Primary Edge Port Using PCLI](#), page B-36

Stop. You have completed this procedure.

DLP-G713 Provision Administrative VLAN for Ports in a REP Segment Using CTC

Purpose	This task allows you to provision administrative VLAN for NNI and UNI ports in a REP segment on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Note

One administrative CVLAN and one administrative SVLAN can be provisioned for each card. The REP segments using NNI ports send Hardware Flood Layer (HFL) messages using the administrative SVLAN. The REP segments using UNI ports send HFL messages using the administrative CVLAN. The two VLANs need not be the same.

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to provision administrative VLAN. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > REP > Admin VLAN Configuration** tabs.
- Step 4** To provision administrative VLAN for NNI ports in a REP segment, perform the following steps:
- From the SVLAN drop-down list, choose a SVLAN. The following table describes the REP convergence time for SVLANs.

Table 6-116 REP Convergence Time for SVLANs

SVLAN	Administrative VLAN	REP Convergence Time
0 (default)	Not configured	4 to 5 seconds
1 to 4093	Configured	Less than 200 milliseconds

- Click **Apply**.
 - To associate the chosen SVLAN with the NNI ports, see “[DLP-G382 Add and Remove SVLANs to/from GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE NNI Ports](#)” task on page 6-252.
- Step 5** To provision administrative VLAN for UNI ports in a REP segment, perform the following steps:
- Enter the CVLAN in the CVLAN field.
 - Click **Apply**.
 - To associate the CVLAN with the UNI ports, see “[DLP-G384 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE QinQ Settings](#)” task on page 6-255.
- Step 6** Return to your originating procedure (NTP).

DLP-G645 Create a Segment Using CTC

Purpose	This task allows you to create a segment on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Before You Begin

- You can create up to three segments on a card. Each segment can have up to two ports on the same switch.
- You must configure the REP administrative VLAN to activate the HFL.
- Before creating REP segments, you must configure the administrative VLAN or use the default VLAN 1 and add the ports to the segment. Only one SVLAN can be configured per card for all the three segments. REP uses the administrative VLAN to flood its own control traffic.
- The administrative CVLAN is required if a REP port is configured as a UNI port. However, the REP ports are configured as NNI ports in many configurations, and hence the administrative CVLAN is not required in these configurations. The option to configure the administrative CVLAN is present in CTC.
- You must configure two edge ports in the segment. A segment has only one primary edge port. If you configure two ports in a segment as the primary edge port, for example, ports on different switches, REP selects one of the ports to serve as the primary edge port based on port priority.
- If REP is enabled on two ports on a switch, both the ports must be either regular ports or edge ports. However, if the No-neighbor port is configured, one port can be an edge port and another port can be a regular port.
- You can also optionally configure where to send segment topology change notifications (STCNs) and VLAN load balancing (VLB). STCNs are enabled only for primary edge ports. VLB configurations are enabled on any edge ports.
- For information on interaction of REP with other protocols, see the *Protocol Compatibility list* in the *Transponder and Muxponder Cards* chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to create a segment. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > REP > Segment** tabs.
- Step 4** Click **Create**. The **Create Segment** wizard appears.
- Step 5** Enter the segment ID in the Segment field. The range of the segment ID is from 1 to 1024.

Step 6 From the Port drop-down list, choose a REP port that must belong to this segment.

Note A REP port can belong to only one segment.

Step 7 From the Port Role area, choose whether you want to configure the port as an edge port or a regular port. The options are:

- a. Edge—The port is configured as an edge port.
 - Check the **Primary** check box to configure the edge port as a primary edge port. A segment can have only one primary edge port.

Note If an edge port is configured as primary edge port, the other edge port in the ring automatically becomes secondary edge port. If neither edge port is configured as primary edge port, one edge port is automatically selected as primary edge port, and the other edge port is secondary edge port. Configuring an edge port as a primary edge port is not mandatory. However, it is recommended since VLAN load balancing must be configured on the node with the primary edge port.

- Uncheck the **Primary** check box to configure the edge port as a secondary edge port.
- (Optional) Check the **Preferred** check box to configure the regular or edge port as a preferred alternate port (alternate to primary edge port). This port blocks a range of SVLANs for VLAN load balancing. There is no limit on the number of preferred ports in a REP ring. The preferred port, if configured, is relevant even without VLAN load balancing, as it takes priority over non-preferred ports for alternate port election.

Note Configuring a port as **preferred** does not ensure that it becomes the alternate port; it only gets preference over the other ports that are not configured as preferred when an alternate port is elected.

- Check the **NoNeighbor** check box if the edge port must not have a neighbor port. REP does not check for neighbor adjacency.

Note When the **NoNeighbor** check box is checked, ensure that only one segment is created.

- b. None—The port is configured as a regular port. If you choose this option, Segment Topology Change Notifications (STCN) and VLAN Load Balancing (VLB) configurations are disabled.

Check the **Preferred** check box to configure the regular port as a preferred alternate port.

Step 8 From the STCN area, configure the destination of STCN messages:

- a. Check the **Enable** check box to enable sending STCN messages.
- b. From the Port drop-down list, choose the STCN port to send STCN messages or enter the segment ID in the Segment field to send STCN messages. The STCN port and REP port must be unique.

Step 9 From the VLAN Load Balancing area, configure VLAN Load Balancing on the primary edge port:

- a. Check the **Enable** check box to enable VLB.
- b. Enter a single SVLAN or range of SVLANs in the SVLAN field. These SVLANs are blocked at the alternate ports. The primary edge port blocks the remaining VLANs.

- c. Enter the Rep PortId in the Rep PortId field to identify the VLAN blocking alternate port. This unique port ID is automatically generated when REP is enabled.
 - d. Check the **Preferred** check box to select the segment port previously identified as the preferred alternate port for VLAN load balancing.
- When you check **Preferred** under VLAN Load Balancing area, you configure VLAN load balancing to use one of the previously configured preferred ports (under the Port Role area) to be the load balancing port. This restricts the load balancing port to be one among the preferred ports, but you cannot select a specific preferred port.

- Step 10** From the VLB Preempt Delay area, enter the trigger delay for automatic VLB activation. The range is 15 to 300 seconds.
- Step 11** Click **Next**.
- Step 12** Enter the details of the second port to add it to the segment.
- Repeat [Step 6 to 10](#) when the first port is configured as a regular port and the second port is configured as a primary edge port. Repeat [Step 6 to 7](#) when the first port is configured as a primary edge port and the second port is configured as a regular port.
- Step 13** Click **Finish**.
- Step 14** Return to your originating procedure (NTP).

DLP-G646 Edit a Segment Using CTC

Purpose	This task allows you to edit a segment on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Note You can edit only the STCN and VLB entries for a segment.

- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on [page 3-30](#) at the node where you want to edit a segment. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on [page 6-8](#).
- Step 3** In card view, click the **Provisioning > REP > Segment** tabs. The list of segments appear.
- Step 4** Choose a segment from the list of segments.
- Step 5** Click **Edit**.
- Step 6** Modify the values as required and click **Finish**.

Step 7 Return to your originating procedure (NTP).

DLP-G647 Activate VLAN Load Balancing Using CTC

Purpose	This task allows you to activate VLAN load balancing on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

Note When VLAN load balancing is activated, the default configuration is manual preemption with the delay timer disabled.

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to activate VLAN load balancing. If you are already logged in, continue with Step 2.
- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.
- Step 3** In card view, click the **Provisioning > REP > Segment** tabs. The list of segments appear.
- Step 4** Choose a segment from the list of segments.
- Step 5** Click **Activate VLB**.
- Step 6** Return to your originating procedure (NTP).
-

DLP-G648 Deactivate VLAN Load Balancing Using CTC

Purpose	This task allows you to deactivate VLAN load balancing on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Retrieve or higher

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to deactivate VLAN load balancing. If you are already logged in, continue with Step 2.

- Step 2** Verify that the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card is installed in L2-over-DWDM mode. See [“DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8](#).
- Step 3** In card view, click the **Provisioning > REP > Segment** tabs. The list of segments appear.
- Step 4** Choose a segment from the list of segments.
- Step 5** Click **Deactivate VLB**.
- Step 6** Return to your originating procedure (NTP).

NTP-G165 Modify the GE_XP, 10GE_XP, GE_XPE, 10GE_XPE Cards Ethernet Parameters, Line Settings, and PM Thresholds

Purpose	This procedure changes Ethernet, line, and PM threshold settings for the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71 DLP-G63 Install an SFP or XFP, page 4-74
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** Complete the [“DLP-G46 Log into CTC” task on page 3-30](#) at the node where you want to change the card settings. If you are already logged in, continue with Step 2.
- Step 2** As needed, complete the [“NTP-G103 Back Up the Database” procedure on page 14-2](#) to preserve the existing transmission settings.
- Step 3** Verify the card mode:
- Display the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE card in card view.
 - Click the **Provisioning > Card** tabs.
 - Verify that the card mode is set to the mode designated by your site plan:
 - L2-over-DWDM (GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE)
 - 10GE TXP (10GE_XP or 10 GE_XPE)
 - 10GE MXP (GE_XP or GE_XPE)
 - 20GE MXP (GE_XP or GE_XPE)
- If the card mode is set correctly, continue with [Step 4](#). If not, complete the [“DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8](#).
- Step 4** Complete the [“DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings” task on page 6-238](#).
- Step 5** If the ONS-SC-E1-T1-PW or ONS-SC-E3-T3-PW SFP is inserted in the GE_XPE card, complete the following tasks, as needed.

- [DLP-G684 Provision the GE_XPE Card PDH Ethernet Settings, page 6-245](#)
- [DLP-G685 Provision the GE_XPE Card Electrical Lines Settings, page 6-247](#)

Step 6 If the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card mode is L2-over-DWDM, complete the following tasks, as needed. If the card mode is not L2-over-DWDM, continue with [Step 7](#).

- [DLP-G381 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Layer 2 Protection Settings, page 6-249](#)
- [DLP-G421 Create and Store an SVLAN Database, page 8-58](#)
- [DLP-G382 Add and Remove SVLANs to/from GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE NNI Ports, page 6-252](#)
- [DLP-G383 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Quality of Service Settings, page 6-253](#)
- [DLP-G384 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE QinQ Settings, page 6-255](#)
- [NTP-G205 Enable Link Integrity on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards, page 6-262.](#)
- [DLP-G385 Provision the MAC Filter Settings for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card, page 6-258](#)
- [NTP-G204 Enable IGMP Snooping on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards, page 6-267](#) or [NTP-G220 Enable IGMP Snooping on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI, page B-14.](#)
- [NTP-G206 Enable MVR on a GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card, page 6-269](#) or [NTP-G224 Enable MVR on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI, page B-18.](#)
- [DLP-G460 Enable MAC Address Learning on SVLANs for GE_XPE or 10GE_XPE Cards Using CTC, page 6-257](#) or [NTP-G226 Enable MAC Address Learning on SVLANs for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI, page B-11.](#)

Step 7 Complete the following tasks, as needed:

- [DLP-G386 Provision the Gigabit Ethernet Trunk Port Alarm and TCA Thresholds, page 6-270](#)
- [DLP-G387 Provision the Gigabit Ethernet Client Port Alarm and TCA Thresholds, page 6-272](#)
- [DLP-G388 Change the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card RMON Thresholds, page 6-273](#)
- [DLP-G389 Change the Gigabit Ethernet Optical Transport Network Settings, page 6-277](#)

Note To use the Alarm Profiles tab, including creating alarm profiles and suppressing alarms, see [Chapter 10, “Manage Alarms.”](#)

Stop. You have completed this procedure.

DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings

Purpose	This task changes the Ethernet settings for the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the Ethernet settings. The card view appears.
- Step 2** Click the **Provisioning > Ether Ports > Ethernet** tabs.
- Step 3** Modify any of the settings for the Ethernet tab as described in [Table 6-117](#). The parameters that appear depend on the card mode.

Table 6-117 GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Ethernet Settings

Parameter	Description	Card Mode	Options
Port	(Display only) The Port number (<i>n-n</i>) and rate (GE or TEN_GE).	- L2-over-DWDM 10GE TXP 10GE MXP 20GE MXP	—
MTU	The maximum size of the Ethernet frames accepted by the port. The port must be in OOS/locked state.	- L2-over-DWDM 10GE TXP 10GE MXP 20GE MXP	Numeric. Default: 9700 Range 64 to 9700 (for R9.1 and later) (jumbo frame)
Mode	Sets the Ethernet mode. The port must be in OOS/locked state before setting the card mode. Note For GE_XP and GE_XPE cards that are in Y-cable protection groups, Mode must be set to 1000 Mbps for those client ports that are configured in Y-cable. For 10GE_XP and 10GE_XPE cards that are in Y-cable protection groups, Mode must be set to 10000 Mbps.	- L2-over-DWDM 10GE TXP 10GE MXP 20GE MXP	- Auto (default) - Display Only 1000 Mbps 10000 Mbps Note If Mode is set to Auto on the GE_XP or GE_XPE port, autonegotiation gets enabled on the peer port.  Note On GE_XP card, the copper Pluggable Port Module (PPM) interface can auto-negotiate and carry traffic even when the peer interface operates at rates other than 1000 Mbps.

Table 6-117 *GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Ethernet Settings (continued)*

Parameter	Description	Card Mode	Options
Flow Control	Enables/disables flow control messaging with its peer port. When enabled, the port can send and receive PAUSE frames when buffer congestion occurs. When disabled, no PAUSE frames are transmitted and the PAUSE frames received are discarded. Note Flow control messaging is symmetric and not negotiated. When flow control is enabled on one port, the other end of the link (peer port) is not considered. That is, even if flow control is disabled on the peer port, the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card will send PAUSE frames.	• L2-over-DWDM • 10GE MXP • 10GE TXP • 20GE MXP	• ON—Flow control is enabled. • OFF (default)—Flow control is disabled. • Display Only.
Media Type	(GE_XPE card only) Sets the Media Type. Note PROV-MISMATCH alarm is raised if the Media Type is not set to Ethernet Over DS1 (ANSI) or Ethernet Over E1 (ETSI) for ONS-SC-EOP1, Ethernet Over DS3 (ANSI) or Ethernet Over E3 (ETSI) for ONS-SC-EOP3, or DS1 Over Ethernet (ANSI) or E1 Over Ethernet (ETSI) for ONS-SC-E1-T1-PW or DS3 Over Ethernet (ANSI) or E3 Over Ethernet (ETSI) for ONS-SC-E3-T3-PW. Set the correct Media Type to clear the PROV-MISMATCH alarm.	• L2-over-DWDM • 10GE MXP • 20GE MXP	• Ethernet Over DS1 (ANSI) (for ONS-SC-EOP1) • Ethernet Over E1 (ETSI) (for ONS-SC-EOP1) • Ethernet Over DS3 (ANSI) (for ONS-SC-EOP3) • Ethernet Over E3 (ETSI) (for ONS-SC-EOP3) • DS1 over Ethernet (ANSI) (for ONS-SC-E1-T1-PW) • DS3 over Ethernet (ANSI) (for ONS-SC-E3-T3-PW) • E1 Over Ethernet (ETSI) (for ONS-SC-E1-T1-PW) • E3 Over Ethernet (ETSI) (for ONS-SC-E3-T3-PW)
Committed Info Rate	Sets the guaranteed information rate as provided by the service provider service-level agreement. The port must be in OOS/locked state.	• L2-over-DWDM • 10GE MXP • 20GE MXP	Numeric. Default: 100 Range: 0 to 100%

Table 6-117 *GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Ethernet Settings (continued)*

Parameter	Description	Card Mode	Options
Committed Burst Size	Sets the maximum number of bits that will be transferred per second. The port must be in OOS/locked state before the Committed Burst Size is provisioned.	- L2-over-DWDM 10GE MXP 20GE MXP	4k (default) 8k 16k 32k 64k 128k 256k 512k 1MB 2MB 8MB 16MB
Excess Burst Size	The maximum number of bits that are credited for later transfer in the event the committed burst rate cannot be transmitted. The port must be in OOS/locked state before the Excess Burst Size is provisioned.	- L2-over-DWDM 10GE MXP 20GE MXP	- None 4k (default) 8k 16k 32k 64k 128k 256k 512k 1MB 2MB 8MB 16MB
NIM	Sets the port network interface mode (NIM). This parameter classifies port types designed for the Metro Ethernet market to simplify deployment, management, and troubleshooting. The port must be in OOS/locked state before the NIM is provisioned.	L2-over-DWDM	- UNI Mode—provisions the port as a user-to-network interface (UNI). This is the interface that faces the subscriber. - NNI Mode—provisions the port as a network-to-network interface. This is the interface that faces the service provider network.
Egress QoS	Enables Quality of Service (QoS) on the port's egress or output queues. The port must be in OOS/locked state before the Egress QoS is provisioned.	L2-over-DWDM	- Checked—QoS is enabled on the port's egress queues. - Unchecked—(Default) QoS is disabled on the port's egress queues.

Table 6-117 *GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Ethernet Settings (continued)*

Parameter	Description	Card Mode	Options
MAC Learning	Enables or disables MAC learning for the port on GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards. MAC learning is used by Layer 2 switches to learn the MAC addresses of network nodes so the Layer 2 switches send traffic to the right location. Layer 2 switches, including the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards in L2-over-DWDM mode with MAC Learning configured, maintain a MAC learning table that associates the MAC addresses and VLANs with a given port. Note MAC addresses on SVLANs attached to the port must also be enabled to provision MAC address learning on GE_XPE and 10GE_XPE cards. Note MAC address table aging is 300 seconds. It cannot be changed.	L2-over-DWDM	• Checked—MAC learning is enabled for this port. • Unchecked—(Default) MAC learning is disabled.

Table 6-117 *GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Ethernet Settings (continued)*

Parameter	Description	Card Mode	Options
Ingress CoS	Provisions the IEEE 802.1p ingress Class of Service (CoS). The CoS .1p bits set the Ethernet frame priority. The port must be in OOS/locked state before the Ingress CoS is provisioned. Ingress CoS is used to set the priority of the Ethernet frame in the service provider network. This parameter is used to set the CoS .1p bits in the SVLAN tag. Ingress CoS applies only to ports provisioned as UNI mode. It does not apply to ports provisioned as NNI mode.	L2-over-DWDM	0—(default) All incoming frames on the port will have the CoS .1p bits in the SVLAN tag set to 0. 1—All incoming frames on the port will have the CoS .1p bits in the SVLAN tag set to 1. 2—All incoming frames on the port will have the CoS .1p bits in the SVLAN tag set to 2. 3—All incoming frames on the port will have the CoS .1p bits in the SVLAN tag set to 3. 4—All incoming frames on the port will have the CoS .1p bits in the SVLAN tag set to 4. 5—All incoming frames on the port will have the CoS .1p bits in the SVLAN tag set to 5. 6—All incoming frames on the port will have the CoS .1p bits in the SVLAN tag set to 6. 7—All incoming frames on the port will have the CoS .1p bits in the SVLAN tag set to 7. - Trust—Automatically copies customer VLAN tag into the service provider VLAN tag. - CVLAN—CoS can be provisioned based on CVLAN. For information on how CoS can be provisioned on the IEEE 802.1QinQ CVLAN tags, refer to the “DLP-G384 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE QinQ Settings” task on page 6-255. If CVLAN CoS is configured on a GE_XP or a 10GE_XP card, a PROV-MISMATCH alarm is raised. Until this alarm is cleared, provisioning on the card is not possible. The CVLAN CoS configuration takes effect only after QinQ is configured.

Table 6-117 *GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Ethernet Settings (continued)*

Parameter	Description	Card Mode	Options
Inner Ethertype (Hex)	Defines the inner Ethertype field. The Ethertype field indicates which protocol is being transported in an Ethernet frame. The inner Ethertype applies to ports provisioned in UNI mode only. It does not apply to ports provisioned as NNI mode. The ports must be OOS/locked before the inner Ethertype is provisioned.	L2-over-DWDM	Numeric. Default: 8100 (IEEE Std 802.1Q customer VLAN tag type) Range: 0x0600 to 0xFFFF
Outer Ethertype (Hex)	Defines the outer Ethertype field. The Ethertype field identifies which protocol is being transported in an Ethernet frame. The ports must be OOS/locked before the Outer Ethertype is provisioned. Note The PROV-MISMATCH alarm is raised on GE_XPE and 10GE_XPE cards if more than four different Outer Ethertype options are configured per card.	L2-over-DWDM	Numeric. Default: 8100 (IEEE 802.1Q customer VLAN tag type) Range: 0x0600 to 0xFFFF
IGMP Static Router Port	Adds multicast-capable ports to the forwarding table for every IP multicast.	L2-over-DWDM	• Checked—IGMP static router port is enabled. • Unchecked—(Default) IGMP static router port is disabled.
AIS Action	Defines the AIS action type provisioned on the port.	L2-over-DWDM	• None—No action. • Squelch—When an AIS packet is received on a SVLAN terminating on the UNI-port, the UNI port is squelched.
Protection Action	Configures the standby port behavior. Set Protection Action to None if Media Type is set to Ethernet Over DS1 (ANSI) or Ethernet Over E1 (ETSI) for ONS-SC-EOP1, Ethernet Over DS3 (ANSI) or Ethernet Over E3 (ETSI) for ONS-SC-EOP3, or DS1 Over Ethernet (ANSI) or E1 Over Ethernet (ETSI) for ONS-SC-E1-T1-PW or DS3 Over Ethernet (ANSI) or E3 Over Ethernet (ETSI) for ONS-SC-E3-T3-PW.	L2-over-DWDM	• None—No action. • Squelch—The laser on the standby port in a 1+1 protection group is squelched. This setting has no effect if the port is not part of the 1+1 protection group.

Table 6-118 shows the inner and outer Ethertype behavior based on the NIM setting (either NNI mode or UNI mode). When the NIM is set to UNI, and the QinQ mode is set to Selective, the Ethertype behavior depends on the SVLAN/CVLAN operation that is provisioned, either Add or Translate. (QinQ parameters are provisioned in the “DLP-G384 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE QinQ Settings” task on page 6-255.)

**Note**

A packet can exit out of any UNI/NNI port if the outermost tag in the packet matches with the SVLAN provisioned on that port. In other words, in the egress path, the inner tags (even if present) of the packet are not matched with the inner SVLAN or CVLAN provisioned on the port.

**Note**

The Committed Burst Size and Excess Burst Size must be configured based on the expected packet size to ensure that no packets are dropped when Flow Control is enabled. For example, if the CIR is 40% and packet size is 1 KB, the Committed Burst Size and Excess Burst Size should be set to 1 MB.

**Note**

When you set the Committed Info Rate above 40% on 10GE_XP and 10GE_XPE cards, the Committed Burst Size and Excess Burst Size must be set to at least 32K. The Committed Burst Size and Excess Burst Size can be increased based on the packet size and Committed Info Rate value.

Table 6-118 **Ethertype Behavior**

Port Type/ Ethertype	NNI Mode	UNI Mode		
		Transparent	Selective Operation: Add	Selective Operation: Translate
Inner Ethertype	Not applicable: the outer Ethertype value is used.	Not applicable: all packets are mapped over the SVLAN.	Working (card-based)	Working (card-based)
Outer Ethertype	Working (per port)	Not applicable: the outer Ethertype is contained in the inner VLAN (same as UNI Selective mode).	Not applicable: the outer Ethertype is the one contained in the inner VLAN.	This cannot be set by port, only by card. The outer Ethertype is automatically set to the inner Ethertype.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G684 Provision the GE_XPE Card PDH Ethernet Settings

Purpose	This task changes the PDH Ethernet settings for the GE_XPE card.
Tools/Equipment	None
Prerequisite Procedures	• DLP-G46 Log into CTC, page 3-30 • Set the Media Type as DS1 Over Ethernet in Provisioning > Ether Ports > Ethernet tab in DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings, page 6-238
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note The Provisioning > Ether Ports > PDH Ethernet Parameters tab is available in GE_XPE card view only, provided the PPM for GE_XPE port is created in FE mode.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XPE card where you want to change the PDH Ethernet settings. The card view appears.
- Step 2** Click the **Provisioning > Ether Ports > PDH Ethernet Parameters** tabs. The PDH Ethernet Parameters tab appear only when the ONS-SC-E1-T1-PW or ONS-SC-E3-T3-PW SFP is inserted.
- Step 3** Modify any of the settings for the PDH Ethernet Parameters tab as described in [Table 6-119](#).

Table 6-119 GE_XPE Card PDH Ethernet Settings

Parameter	Description	Card Mode	Options
Port	(Display only) The Port number (<i>n-n</i>) and rate.	• L2-over-DWDM • 10GE MXP • 20GE MXP	—
Port Name	(Display only) The port name.	• L2-over-DWDM • 10GE MXP • 20GE MXP	—
MPLS Inner Label	Sets the MPLS Inner Label value.	• L2-over-DWDM • 10GE MXP • 20GE MXP	Default: 16 Range: 16-65535.
MPLS Outer Label	Sets the MPLS Outer Label value.	• L2-over-DWDM • 10GE MXP • 20GE MXP	Default: 16 Range: 16-65535.

Table 6-119 GE_XPE Card PDH Ethernet Settings (continued)

Parameter	Description	Card Mode	Options
Jitter Buffer	Sets the jitter buffer value.	- L2-over-DWDM 10GE MXP 20GE MXP	Default: 1500 Range: 400-200000. Table 6-120 provides jitter buffer values for different payloads. Note The traffic is down if the jitter buffer is set to ≥ 192000 when Media Type is set to DS1 over Ethernet (ANSI) (for ONS-SC-E1-T1-PW) and E1 Over Ethernet (ETSI) (for ONS-SC-E1-T1-PW).
RX Sensitivity	(ONS-SC-E1-T1-PW only) Sets the RX sensitivity value.	- L2-over-DWDM 10GE MXP 20GE MXP	Default: -36 (ANSI), -12 (ETSI) Range: -36 to -15 (ANSI), -12 to -43 (ETSI)
Source IP Address	Enter the source IP address. Only Unicast IP addresses are accepted.	- L2-over-DWDM 10GE MXP 20GE MXP	—
Peer IP Address	Enter the peer IP address. Only Unicast IP addresses are accepted.	- L2-over-DWDM 10GE MXP 20GE MXP	—

Table 6-120 Jitter Buffer Values for Various Payload Types

Payload Type	Jitter Buffer Value	
	Lower Limit	Upper Limit
T1 (DS1)	1500	20000
T3 (DS3)	400	4500
E1	1500	200000
E3	400	60000

Step 4 Click **Apply**.**Step 5** Return to your originating procedure (NTP).

DLP-G685 Provision the GE_XPE Card Electrical Lines Settings

Purpose	This task changes the Electrical Lines settings for the GE_XPE card.
Tools/Equipment	None
Prerequisite Procedures	• DLP-G46 Log into CTC, page 3-30 • Set the Media Type as DS1 Over Ethernet in Provisioning > Ether Ports > Ethernet tab in DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings, page 6-238
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note The Provisioning > Ether Ports > Electrical Lines tab is available in GE_XPE card view only, provided the PPM for GE_XPE port is created in FE mode.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XPE card where you want to change the Electrical Lines settings. The card view appears.
- Step 2** Click the **Provisioning > Ether Ports > Electrical Lines** tabs. The Electrical Lines tab appear only when the ONS-SC-E1-T1-PW or ONS-SC-E3-T3-PW SFP is inserted.
- Step 3** Modify any of the settings for the Electrical Lines > DS1 or Electrical Lines > DS3 tab as described in [Table 6-121](#).

Table 6-121 GE_XPE Card Electrical Lines Settings

Parameter	Description	Card Mode	Options
Port	(Display only) The Port number (<i>n-n</i>) and rate.	• L2-over-DWDM • 10GE MXP • 20GE MXP	—
Port Name	(Display only) The port name.	• L2-over-DWDM • 10GE MXP • 20GE MXP	—
Clock Source	Sets the Clock Source	• L2-over-DWDM • 10GE MXP • 20GE MXP	Default: • Internal (for ONS-SC-E3-T3-PW) • Adaptive (for ONS-SC-E1-T1-PW) Options: • Loopback Timing • Internal • Adaptive

Table 6-121 *GE_XPE Card Electrical Lines Settings (continued)*

Parameter	Description	Card Mode	Options
Line Type	Sets the Line Type	- L2-over-DWDM 10GE MXP 20GE MXP	Default: - C-BIT (for ONS-SC-E3-T3-PW ANSI) - Unframed (for ONS-SC-E3-T3-PW ETSI) - ESF (for ONS-SC-E1-T1-PW ANSI) - Framed (for ONS-SC-E1-T1-PW ETSI) Options: - G.751 (ETSI) - G.832 (ETSI) - C-BIT (ANSI) - ESF (ANSI) - M23 (ANSI) - Framed (ETSI) - Unframed (ETSI)
Line Coding	Sets the Line Coding	- L2-over-DWDM 10GE MXP 20GE MXP	Default: - B3ZS (for ONS-SC-E3-T3-PW ANSI) - HDB3 (for ONS-SC-E3-T3-PW ETSI) - B8ZS (for ONS-SC-E1-T1-PW ANSI) - HDB3 (for ONS-SC-E1-T1-PW ETSI) Options: - AMI (ETSI) - B3ZS (ANSI) - B8ZS (ANSI) - HDB3 (ETSI)
Line Length	(ANSI only) Sets the Line Length	- L2-over-DWDM 10GE MXP 20GE MXP	Defaults: 0-225 ft (for ONS-SC-E3-T3-PW ANSI) 266-399 ft (for ONS-SC-E1-T1-PW ANSI) Options (ANSI only): 0-133 ft 0-225 ft 133-266 ft 225-450 ft 266-399 ft 399-533 ft 533-655 ft

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

DLP-G381 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Layer 2 Protection Settings

Purpose	This task provisions the Layer 2 protection settings for the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards when the cards are provisioned in L2-over-DWDM mode.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

To perform this task, the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card must be in L2-over-DWDM mode. To change the card mode, complete the “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.

Note

GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Layer 2 protection settings must be planned for the entire VLAN ring. One card in the ring is provisioned as the master card and one of its port is set to Blocking. The master card coordinates the protection switching for the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE in a VLAN ring.

Note

You can choose to enable another card in the ring to be the master card. However, only one card in the ring can be provisioned as master card. Make sure that the provisioning settings on the card that was previously configured as the master are disabled as soon as another card is enabled as the master card. To perform this task complete the “[DLP-G507 Enable a Different GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card as the Master Card](#)” procedure on page 6-251

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the protection settings. The card view appears.
- Step 2** Click the **Provisioning > Protection** tabs.
- Step 3** In the Status column, modify the port protection status by clicking the appropriate table cell and choosing one of the following from the drop-down list:
- Forwarding—Forwards the Ethernet packets that are received by the port.
 - Blocking—Blocks the Ethernet packets that are received by the port.

Note One port of the master card within a VLAN ring must be set to Blocking. All other ports must be set to Forwarding.

- Step 4** Check the **Master** check box if you want the card to serve as the protection coordinator for the VLAN ring. If not, continue with [Step 5](#).
- Step 5** From the Protection drop-down list, choose one of the following:
- Enabled—Enables protection.
 - Disabled—Disables protection.
 - Forced—Converts all the SVLANs to protected SVLANs irrespective of the SVLAN protection configuration in the SVLAN database. This is applicable to a point-to-point linear topology. The SVLAN protection must be forced to move all SVLANs, including protected and unprotected SVLANs, to the protect path irrespective of provisioned SVLAN attributes.
- Step 6** From the Hold Off Time drop-down list, choose one of the following:
- Disabled (default)—A FAPS switchover occurs immediately.
 - 50 msec, 100 msec, 200 msec, 500 msec, 1 sec, 2 sec, or 5 sec—Holds off FAPS protection for the selected duration.

Note To get consistent results ensure Hold Off Time values are the same throughout the ring.

Note FAPS is an Layer 2 protection enabled on a VLAN. When a fiber fault occurs, Layer 1 protection is triggered immediately to restore the traffic. Setting the Hold Off Time option prevents Layer 2 FAPS protection from triggering at the same time as Layer 1 protection thereby avoiding traffic hits.

- Step 7** Set the following parameters for FAPS switching with CRC errors:
- Switch with CRC Alarm—Check this check box to enable FAPS switching with CRC errors.
 - CRC Threshold—Threshold for CRC error count. The default CRC threshold value is 10(-e)2. The available options are 10(-e)2, 10(-e)3, and 10(-e)4.
 - CRC Soak Count—Number of times the CRC error rate exceeds the CRC threshold value before raising the DATA-CRC alarm. The default CRC Soak Count is 10. The valid range is from 3 to 10.
 - CRC Poll Interval—Time interval (in seconds) between the successive polls. The default CRC Poll Interval is 60 seconds.

For example, if the CRC Threshold value = 10(-e)2, CRC Soak Count = 10, and CRC Poll Interval = 60 seconds, then FAPS occurs when the incoming CRC error rate is more than 10(-e)2 continuously across 10 poll intervals (10*60 = 600 seconds).
 - Clear/Supress CRC Alarm—Uncheck the **Clear/Supress CRC Alarm** check box for FAPS to occur. If you check this check box, the DATA-CRC alarm gets cleared and FAPS does not occur.

Note As long as the **Clear/Supress CRC Alarm** checkbox is checked, the DATA-CRC alarm is not raised on that port and FAPS does not occur.

Note For consistent result, ensure that all the values that are set in Step 7 are same throughout the ring.

Step 8 Click **Apply**.

Step 9 Return to your originating procedure (NTP).

DLP-G507 Enable a Different GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card as the Master Card

Purpose	This task provisions another GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card on a stable VLAN ring, to be the master card when the cards are provisioned in L2-over-DWDM mode.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30 DLP-G381 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Layer 2 Protection Settings, page 6-249
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note To perform this task, the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card must be in L2-over-DWDM mode. To change the card mode, complete the [“DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8](#).

Note Do not attempt to change the master card when there is a failure in the FAPS ring.

Note GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Layer 2 protection must be enabled for the entire VLAN ring. One card in the ring is provisioned as the master card and one of its port is set to Blocking. The master card coordinates the protection switching for the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards in a VLAN ring.

Note You can choose to enable another card in the ring to be the master card. However, only one card in the ring can be provisioned as master card. Make sure that the provisioning settings on the card that was previously configured as the master are disabled as soon as another card is enabled as the master card.

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card in a VLAN ring where you want to enable master card provisioning. The card view appears. Perform the following steps:

- a. Click the **Provisioning > Protection** tabs.

- b. From the Status drop-down list, choose **Blocking** for a trunk port.

Note One port of the master card within a VLAN ring must be set to Blocking. All other ports must be set to Forwarding.

- c. Check the **Master** check box for the card that serves as the protection coordinator for the VLAN ring.
- d. From the Protection drop-down list, choose **Enabled**.
- e. Click **Apply**.

Step 2 The master card provisioning on the other card must be disabled. Perform the following steps:

- a. Click the **Provisioning > Protection** tabs.
- b. Uncheck the **Master** check box for the card where Master node provisioning must be disabled.
- c. Click **Apply**.
- d. From the Protection drop-down list, choose **Disabled**.
- e. Click **Apply**.

Step 3 The protection on the card that was disabled in [Step 2](#) must be enabled again. Perform the following steps:

- a. Click the **Provisioning > Protection** tabs.
- b. From the Protection drop-down list, choose **Enabled**.
- c. Click **Apply**.
- d. From the Status drop-down list, choose **Forwarding** on both ports.
- e. Click **Apply**.

Step 4 Return to your originating procedure (NTP).

DLP-G382 Add and Remove SVLANS to/from GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE NNI Ports

Purpose	This task adds or removes service provider VLAN (SVLAN) provisioning to/from GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE ports. This task only applies to GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards in L2-over- DWDM mode.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30 DLP-G421 Create and Store an SVLAN Database, page 8-58
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

To perform this task, the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card must be in L2-over-DWDM mode. To change the card mode, complete the [“DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8](#).

**Note**

This task can only be performed on ports provisioned as NNI. See the [“DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings” task on page 6-238](#).

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the SVLAN port settings. The card view appears.
- Step 2** Click the **Provisioning > SVLAN** tabs.
- Step 3** For each SVLAN shown in the table, click the check box under the Port [*port name*] table cell to include the SVLAN in that port. If you do not want the SVLAN included, uncheck the check box.

**Note**

If no SVLANs appear in the SVLAN tab, complete the [“DLP-G421 Create and Store an SVLAN Database” task on page 8-58](#).

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

DLP-G383 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Quality of Service Settings

Purpose	This task provisions the Weighted Round Robin (WRR) value and bandwidth for QoS Class of Service (CoS) egress queues on a GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE card port.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

To perform this task, the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card must be in L2-over-DWDM mode and the port must have QoS enabled. Refer to the [“DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8](#) and the [“DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings” task on page 6-238](#), if needed.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the QoS settings.

- Step 2

Click the **Provisioning > QoS** tabs.
- Step 3

In the Port field at the bottom of the window, choose the port where you want to provision the QoS settings.
- Step 4

For each CoS egress queue, 0 through 7, define the following:

Note

The GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE define a set of eight queues, one queue for each CoS. Only one of the queues can be assigned the 0 WRR weight (Strict Priority).

Note

The GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE define a set of eight queues, one queue for each CoS. Only one of the queues can be assigned the 0 WRR weight (Strict Priority).

Note

The GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE define a set of eight queues, one queue for each CoS. Only one of the queues can be assigned the 0 WRR weight (Strict Priority).

- WRR weight—sets the Weighted Round Robin (WRR) level for the CoS egress queue. The default is 1. The range is 0 to 15, where 0 is Strict Priority.)

Note

The GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE define a set of eight queues, one queue for each CoS. Only one of the queues can be assigned the 0 WRR weight (Strict Priority).

Note

The GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE define a set of eight queues, one queue for each CoS. Only one of the queues can be assigned the 0 WRR weight (Strict Priority).

- Bandwidth—sets the bandwidth allocated for the CoS egress queue, 100 is the default. This bandwidth value is the percentage (%) of bandwidth with respect to the SFP, XFP, or port speed (100 Mbps for FE, 1 Gbps for GE, and 10 Gbps for 10GE) of the interface.

Step 5

Click **Apply**. Click **Yes** in the confirmation dialog box.

Step 6

Return to your originating procedure (NTP).

DLP-G470 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Class of Service (CoS) Settings

Purpose	This task provisions Class of Service (CoS) settings on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

To perform this task, the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE card must be in L2-over-DWDM mode and the port must be in OOS state.

- Step 1

In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the CoS settings.
- Step 2

Complete the following task:

- Refer to the Ingress CoS section in the [“DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings” task on page 6-238.](#)
- Step 3

Return to your originating procedure (NTP).

DLP-G384 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE QinQ Settings

Purpose	This task provisions the IEEE 802.1QinQ VLAN tags on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card UNI ports. QinQ tags expand the VLAN capability by tagging the tagged packets to produce a “double-tagged” Ethernet frame. For service providers the expanded VLAN allows specific services to be provided on specific VLANs for specific customers, while other types of services can be provided to other customers on other VLANs.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30 DLP-G421 Create and Store an SVLAN Database, page 8-58
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

To perform this task, the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE must be in L2-over-DWDM mode. To change the card mode, complete the “[DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#)” task on page 6-8.

Note

This task can only be performed on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards UNI ports. (To provision the port Ethernet parameters, see the “[DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings](#)” task on page 6-238.)

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the QinQ settings.
- Step 2** Click the **Provisioning > QinQ** tabs.
- Step 3** Click the **Port** field and choose the port where you want to provision QinQ.
Channel groups configured in UNI mode appear in the Port field along with the physical ports.
- Step 4** Click the **Mode** field and choose one of the following modes from the drop-down list:
- **Selective**—The incoming Ethernet packet is checked against the CVLAN and SVLAN table. If the CVLAN is not found, the packet is dropped. If you choose Selective, add an entry in the QinQ tab to map the administrative CVLAN to the SVLAN (if it is not same as the one used for data).
 - **Transparent**—All incoming packets are transported with the additional VLAN chosen in the SVLAN field. If you choose transparent, the traffic on administrative CVLAN will pass through.
- Step 5** Click the **BPDU** field and choose one of the following bridge protocol data unit (BPDU) modes from the drop-down list:
- **Drop (default)**—If checked, drops incoming packets with any of the following destination MAC addresses. The BPDU default can be applied for any UNI port.
 - 01-80-c2-00-00-00—IEEE 802.1D
 - 01-80-c2-00-00-02—Link Aggregation Control Protocol (LACP)

- 01-80-0c-cc-cc-cc—VLAN Spanning Tree Plus (PVST+)
- 01-00-c-cc-cc-cc—Cisco Discovery Protocol (CDP) type 0x2000, VLAN Trunk Protocol (VTP) type 0x2003, Port Aggregation Protocol (PAgP), type 0x0104, Uni-Directional Link Detection (UDLD) type 0x111, Dynamic Trunking Protocol (DTP) type 0x2004
- Tunnel—If checked, transparently sends any of the destination MAC addresses listed above.

Step 6 If the Mode was set to Selective, complete the following steps. If not, continue with [Step 7](#).

- a. To add a row, click **Add**.
- b. Click the **CVLAN** table and type in the CVLAN range. You can enter a single value or a range using “-” between the two ends of the range.

Note If you are using Software Release 8.5 or earlier, it is recommended that you do not specify a CVLAN range due to certain limitations in the feature.

- c. Click the **SVLAN** table cell and choose an SVLAN from the drop-down list.
- d. Click the **Operation** table cell and choose an operation:
 - Add (default)—Adds the SVLAN on top of the CVLAN. The operation default can be applied for any UNI port.
 - Translate—CVLAN is translated with the SVLAN value.
 - Double Add—(GE_XPE and 10GE_XPE cards only) Adds an inner and an outer SVLAN to double tagged packets only. CVLAN settings are not required. If this double tagged selective operation is present on a port, no other selective operation can be present.
 - Translate Add—(GE_XPE and 10GE_XPE cards only) CVLAN gets translated to inner SVLAN and the SVLAN is added.

Note If Double Add and Translate Add are configured on a GE_XP or a 10GE_XP card, a PROV-MISMATCH alarm is raised. Until this alarm is cleared, provisioning on the card is not possible.

Note A CVLAN with a value of 0 means “untagged packet”.

Note Two or more CVLANs cannot be translated over the same SVLAN.

- e. (GE_XPE and 10GE_XPE cards only) Click the **COS** table cell and choose a value from the drop down list.
- f. Click **Apply**.
- g. Continue with [Step 10](#).

Step 7 If the Mode was set to Transparent, in the SVLAN field, choose the SVLAN to be added to incoming packets.

Step 8 Click DSCP-Cos mapping Table to provision CoS based on DSCP for each port.

Step 9 For each DSCP, choose a CoS value from 0 to 7 and click **OK**.

Step 10 Return to your originating procedure (NTP).

DLP-G221 Enable MAC Address Learning on SVLANs for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards

Purpose	This task enables MAC address learning on SVLANs for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	VLANs must already be created on the selected card.
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 Complete the “[DLP-G46 Log into CTC](#)” task on [page 3-30](#) at the node where you want to enable MAC Address Learning. If you are already logged in, continue with [Step 2](#).

Step 2 Complete the following tasks, as needed:

- [DLP-G460 Enable MAC Address Learning on SVLANs for GE_XPE or 10GE_XPE Cards Using CTC](#), [page 6-257](#)
- [NTP-G226 Enable MAC Address Learning on SVLANs for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#), [page B-11](#)

Stop. You have completed this procedure.

DLP-G460 Enable MAC Address Learning on SVLANs for GE_XPE or 10GE_XPE Cards Using CTC

Purpose	This task enables MAC address learning on SVLANs attached to the port of a GE_XPE or 10GE_XPE card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30 DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode , page 6-8
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

MAC address learning is applicable only for GE_XPE and 10GE_XPE cards. If MAC address learning is configured on a GE_XP or a 10GE_XP card, a PROV-MISMATCH alarm is raised. Until this alarm is cleared, provisioning on the card is not possible.

**Note**

To perform this task, the GE_XPE or 10GE_XPE card must be in L2-over-DWDM mode. Refer to the [“DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8](#) if needed.

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XPE or 10GE_XPE card where you want to enable MAC address learning.

Step 2 Enable MAC address learning on the port. Perform the following steps:

- a. Click **Provisioning > Ethernet**.
- b. Check the **MAC Learning** check box.

**Note**

If the per port MAC address learning is configured on a GE_XP or 10 GE_XP cards, before upgrading to a GE_XPE or 10 GE_XPE card, enable MAC address learning per SVLAN. Not doing so disables MAC address learning.

Step 3 Enable MAC address learning on the SVLAN attached to the port. Perform the following steps:

- a. Click **SVLAN > SVLAN DB** tabs.
- b. Click **Load**. This loads an SVLAN database from a network node or local file and replaces any SVLANs that are in the network view VLAN DB table.
- c. Check the **MAC Learning** check box related to the SVLAN (one or more than one SVLAN) to be configured with MAC address learning.
- d. Click **Store**. This records and enables the new configuration.

Step 4 Return to your originating procedure (NTP).

DLP-G385 Provision the MAC Filter Settings for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card

Purpose	This task provisions the MAC address filter for the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards when the cards are provisioned in L2-over-DWDM mode. The MAC address filter is a list of MAC addresses whose packets should be accepted or dropped.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

To perform this task, the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card must be in L2-over-DWDM mode. To change the card mode, complete the [“DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8](#).

-
- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the MAC filter settings.
- Step 2** Click the **Provisioning > Security > MAC Filter** tabs.
- Step 3** Click the port for which you want to create a MAC filter.
- Step 4** Click **Edit**.
- Step 5** In the Edit MAC Address dialog box, click **Add**. A new table entry appears with the MAC address 00-00-00-00-00-00.
- Step 6** In the MAC Address Port field, type in the MAC address you want to filter over the default 00-00-00-00-00-00 address.
- Step 7** If you want to add more MAC addresses, repeat Steps 5 and 6. (Up to eight MAC addresses can be added for each port.) If not, click **OK**.
- Step 8** On the MAC Filter table, provision the Allowed check box:
- Checked—All MAC addresses different from the address(es) entered in the table will be dropped.
 - Unchecked—All MAC addresses matching the address(es) entered in the table will be dropped.
- Step 9** Click **Apply**.
- Step 10** Repeat Steps 3 through 9 for each port of the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card that you want to set up.
- Step 11** Return to your originating procedure (NTP).
-

NTP-G237 Retrieve and Clear MAC Addresses on SVLANs for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards

Purpose	This procedure retrieves and clears MAC addresses learned on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	• DLP-G46 Log into CTC, page 3-30 • DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode, page 6-8 • DLP-G221 Enable MAC Address Learning on SVLANs for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards, page 6-257
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Caution

Retrieving and clearing learned MAC addresses are CPU intensive and traffic affecting. You must clear the MAC addresses only during a scheduled maintenance window.

Note It is not possible to simultaneously retrieve learned MAC addresses from both CTC and TL1 interfaces.

Step 1 In the node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to retrieve the MAC addresses.

Step 2 To retrieve the MAC addresses learned, perform the following steps:

- a. Click **Maintenance > MAC Addresses > Learned**.
- b. In the SVLAN field, type a valid SVLAN range. The SVLAN range is from 1 to 4093.
- c. Click **Refresh**.

The table displays the following fields:

- MAC Address—Displays the MAC address for the port.
- VLAN—Displays the VLAN identifier for the port.
- Port—Displays the port number.

Right-click the column heading to display the following options:

- Row Count—Displays the number of learned MAC addresses retrieved.
- Sort Column—Sorts the table by the column’s values.
- Hide Column—Hides the column from view.
- Reorder Columns Visibility—Displays all hidden columns.

Step 3 Click **Refresh** to refresh the list of MAC addresses learned.

Step 4 Click **Clear** to clear the MAC addresses learned on all the SVLANS of the card.

Note It is not possible to delete the MAC addresses learned on a per SVLAN basis.

Step 5 To view card MAC addresses, complete the “[DLP-G546 View Card MAC Addresses on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards](#)” task on page 6-260.

Stop. You have completed this procedure.

DLP-G546 View Card MAC Addresses on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards

Purpose	This task allows you to view the MAC addresses for each client and trunk port and the CPU port of the card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 To view the card MAC addresses, click **Maintenance > MAC Addresses > Card**. The MAC addresses for each client and trunk port and the CPU port are displayed.

The table displays the following fields:

- Port—Displays the port number.
- MAC Address—Displays the MAC address for the port.

Step 2 Return to your originating procedure.

NTP-G311 Provision the Storm Control Settings for GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards

Purpose	This task provisions the storm control settings for the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards when the cards are provisioned in L2-over-DWDM mode.
Tools/Equipment	None
Prerequisite Procedures	None
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

To perform this task, the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card must be in L2-over-DWDM mode. To change the card mode, complete the [“DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode” task on page 6-8](#).

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the storm control settings.

Step 2 Click the **Provisioning > Security > Storm Control** tabs.

Step 3 Modify any of the settings as described in [Table 6-122](#).

Table 6-122 Storm Control Settings

Parameter	Description	Options
Port	(Display only) The Port number (<i>n-n</i>) and rate (GE or TEN_GE).	
DLF Storm Control	Enables or disables DLF storm control on the card.	• Checked—DLF storm control is enabled. • Unchecked—DLF storm control is disabled.
DLF Storm Control Threshold (pps)	Threshold value to set the number of unknown unicast packets per second.	Range: 0 to 16777215 packets per second

Table 6-122 Storm Control Settings

Parameter	Description	Options
Mcast Storm Control	Enables or disables Multicast storm control on the card.	• Checked—Multicast storm control is enabled. • Unchecked—Multicast storm control is disabled.
Mcast Storm Control Threshold (pps)	Threshold value to set the number of multicast packets per second.	Range: 0 to 16777215 packets per second
Bcast Storm Control	Enables or disables Broadcast storm control on the card.	• Checked—Broadcast storm control is enabled. • Unchecked—Broadcast storm control is disabled.
Bcast Storm Control Threshold (pps)	Threshold value to set the number of broadcast packets per second.	Range: 0 to 16777215 packets per second

Step 4 Click **Apply**.

Stop. You have completed this procedure.

NTP-G205 Enable Link Integrity on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards

Purpose	This task enables link integrity on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	None
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 Complete the “[DLP-G46 Log into CTC](#)” task on [page 3-30](#) at the node where you want to enable link integrity. If you are already logged in, continue with [Step 2](#).

Step 2 Complete the following tasks, as needed:

- [DLP-G509 Enable Link Integrity on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using CTC](#), [page 6-263](#)
- [NTP-G216 Enable Link Integrity on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#), [page B-12](#)

Stop. You have completed this procedure.

DLP-G509 Enable Link Integrity on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using CTC

Purpose	This task enables link integrity on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 From the View menu, choose **Go to Network View**.

Step 2 Create or load an SVLAN profile. To create a SVLAN profile see [DLP-G471 Create a SVLAN or CVLAN Profile, page 6-266](#).

Note Make sure the **Link Integrity** check box is selected to enable link integrity for a profile and save it to the node.

Step 3 Associate the SVLAN profile (with Link Integrity enabled) to a SVLAN on a port. To do this perform the following steps:

- a. In node view (single-shelf mode), or shelf view (multishelf mode), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card. The card view appears.
- b. Click the **Provisioning > Profiles Mapping > SVLAN** tabs.
- c. Enter the SVLANs or SVLAN range in the **SVLAN to View** text box.

A table appears that displays SVLANs and available ports. The SVLAN profiles that was created must be applied to a SVLAN and a port. However, make sure the SVLAN has already been associated with the port via the QinQ tab (For information on how to associate a SVLAN to a port, see the [“DLP-G384 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE QinQ Settings” task on page 6-255](#)).

- d. Select the SVLAN for a port and choose the available SVLAN profile from the drop-box.
- e. Click **Apply**.

Step 4 AIS action must be set on a per-UNI port basis. Select **None** or **Squelch** from the AIS action drop-down list. For detailed instructions, see the [“DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings” task on page 6-238](#).

Step 5 Return to your originating procedure (NTP).

NTP-G289 Provision CVLAN Rate Limiting on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card

Purpose	This task provisions CVLAN rate limiting on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note You cannot provision CVLAN rate limiting on channel groups.

- Step 1** Complete the [“DLP-G46 Log into CTC” task on page 3-30](#) at the node where you want to provision CVLAN rate limiting. If you are already logged in, continue with [Step 2](#).
- Step 2** From the View menu, choose **Go to Network View**.
- Step 3** Create or load a CVLAN profile by setting Committed Info Rate, Committed Burst, Excess Info, Excess Burst. To create a CVLAN Profile see [“DLP-G471 Create a SVLAN or CVLAN Profile” task on page 6-266](#).
- Step 4** Associate the CVLAN profile to a CVLAN on a UNI port. To do this perform the following steps:

a. In node view (single-shelf mode), or shelf view (multishelf mode), double-click the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE card. The card view appears.

b. Click the **Provisioning > Profiles Mapping > CVLAN** tabs.

c. Enter the CVLANs or CVLAN range in the **CVLANs to View** text box.

A table appears that displays CVLANs and available ports. The CVLAN profiles that were created must be applied to a CVLAN and port. However, make sure the CVLAN has already been associated with the port via the QinQ tab (For information on how to associate a CVLAN profile to a UNI port, see [“DLP-G384 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE QinQ Settings” task on page 6-255](#)).

d. Select the CVLAN for a given port and choose the available CVLAN profile from the drop-down list.

e. Click **Apply**.

Stop. You have completed this procedure.
- Cisco ONS 15454 DWDM Procedure Guide, Releases 9.2.1 and 9.2.2
- 6-264
- 78-19694-02

NTP-G208 Provision SVLAN Rate Limiting on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card

Purpose	This task provisions SVLAN rate limiting on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to enable SVLAN rate limiting. If you are already logged in, continue with [Step 2](#).
- Step 2** Complete the following tasks, as needed:
- [DLP-G515 Provision SVLAN Rate Limiting on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card Using CTC, page 6-265](#)
 - [NTP-G225 Provision SVLAN Rate Limiting on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card Using PCLI, page B-13](#)
- Stop. You have completed this procedure.**
-

DLP-G515 Provision SVLAN Rate Limiting on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card Using CTC

Purpose	This task provisions SVLAN rate limiting on the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** From the View menu, choose **Go to Network View**.
- Step 2** Create or load a SVLAN profile by setting Committed Info Rate, Committed Burst, Excess Info, Excess Burst. To create a SVLAN Profile see “[DLP-G471 Create a SVLAN or CVLAN Profile](#)” task on page 6-266.
- Step 3** Associate the SVLAN profile to a SVLAN on a port. To do this, perform the following steps:
- In node view (single-shelf mode), or shelf view (multishelf mode), double-click the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE card. The card view appears.

- b. Click the **Provisioning > Profiles Mapping > SVLAN** tabs.
- c. Enter the SVLANs or SVLAN range in the **SVLAN to View** text box.

A table appears that displays SVLANs and available ports. The SVLAN profiles that were created must be applied to a SVLAN and port. However, make sure the SVLAN has already been associated with the port via the QinQ tab (For information on how to associate a SVLAN profile to a UNI port, see [“DLP-G384 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE QinQ Settings” task on page 6-255](#) and to a NNI port see [“DLP-G382 Add and Remove SVLANs to/from GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE NNI Ports” task on page 6-252](#)).

- d. Select the SVLAN for a given port and choose the available SVLAN profile from the drop-down list.
- e. Click **Apply**.

Stop. You have completed this procedure.

DLP-G471 Create a SVLAN or CVLAN Profile

Purpose	This task creates an SVLAN profile.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

You cannot associate SVLAN or CVLAN profiles to channel groups. You can associate a CVLAN profile only to a UNI port.

- Step 1** From the View menu, choose **Go to Network View**.
- Step 2** Click the **Provisioning > SVLAN > Profiles** tabs.
- Step 3** Click **Add** and a profile is added to the Profiles tab. Modify any of the settings as follows:
 - Name—The profile name can be up to 32 alphanumeric/special characters.
 - Committed Info Rate—Sets the guaranteed information rate as provided by the service provider service-level agreement. The default value is 100 and the range is 0 to 100 percent.
 - Committed Burst—Sets the maximum number of bits that will be transferred per second.
 - Peak Info Rate—Sets the maximum information rate as provided by the service provider service-level agreement. The default value is 100 and the range is 0 to 100 percent. However, the value must be greater or equal to than the Committed Info Rate.
 - Peak Burst Size—The maximum number of bits that are credited for later transfer in the event the committed burst rate cannot be transmitted.
 - Link Integrity—Enables link integrity for the SVLAN profile. Do not check this check box if you are creating a CVLAN profile.

**Note**

When you set the Committed Info Rate above 40% on 10GE_XP and 10GE_XPE cards, the Committed Burst Size and Excess Burst Size must be set to at least 32K. The Committed Burst Size and Excess Burst Size can be increased based on the packet size and Committed Info Rate value.

Step 4 Click **Store**.

Step 5 In the Store Profile(s) dialog box, choose one of the following:

- To Node(s)—Stores the SVLAN profile at one or more network nodes. Choose the network nodes where you want to store the SVLAN profile. To choose more than one node, press the Shift key, or click Select All.
- To File—Stores the SVLAN profile in a file. Enter a file name, then click Browse to navigate to a local or network drive where you want to store the file.

Step 6 Click **OK**.

Step 7 Return to your originating procedure (NTP).

NTP-G204 Enable IGMP Snooping on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards

Purpose	This procedure enables Internet Group Management Protocol (IGMP) snooping on a per-SVLAN basis on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	None
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to enable IGMP snooping. If you are already logged in, continue with [Step 2](#).

Step 2 Complete the following tasks, as needed:

- “[DLP-G511 Enable IGMP Snooping, IGMP Fast Leave and IGMP Report Suppression on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using CTC](#)” task on page 6-268.
- “[NTP-G220 Enable IGMP Snooping on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#)” task on page B-14.
- “[NTP-G217 Enable IGMP Fast-Leave Processing on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#)” procedure on page B-15.
- “[NTP-G219 Enable IGMP Report Suppression on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#)” procedure on page B-17.

Stop. You have completed this procedure.

DLP-G511 Enable IGMP Snooping, IGMP Fast Leave and IGMP Report Suppression on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using CTC

Purpose	This procedure explains how to enable IGMP snooping, IGMP fast leave and IGMP report suppression on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards using CTC.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** From the View menu, choose **Go to Network View**.
- Step 2** Click the **Provisioning > SVLAN > SVLAN DB** tabs. Click **Load** to load the SVLANs on the card where IGMP must be enabled.
- Step 3** For each SVLAN shown in the table, select the following:
- IGMP—Check the IGMP check box to enable IGMP for the selected SVLAN.
 - IGMP Fast Leave—Checking the IGMP Fast Leave causes the switch to immediately remove a port from the IP multicast group when it detects an IGMP, version 2 (IGMPv2) leave message on that port.
 - IGMP Suppression—Check the IGMP Suppression check box to enable a single IGMP report to be sent to each multicast group in response to a single query.
- Step 4** Click **Store SVLAN DB**.
- Step 5** In the Store SVLAN DB dialog box, choose one of the following:
- To Node/Shelf/Card—Select the node and shelf. All the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards in L2 over DWDM mode are displayed. Select the card where you want to store the SVLAN DB.
 - Stores the SVLAN database at one or more network nodes. Choose the network nodes where you want to store the SVLAN database. To choose more than one node, press the Shift key, or click **Select All**.
 - To File—Stores the SVLAN database in a file. Enter a file name, then click **Browse** to navigate to a local or network drive where you want to store the file.
 - Select the card on which you want to save the changes made in step 3.
- Step 6** Click **OK**.

Note

If you want to add the multicast-capable ports to the forwarding table for every IP multicast, select the IGMP Static Router Port check box as described in the “[DLP-G380 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Ethernet Settings](#)” task on page 6-238.

Stop. You have completed this procedure.

NTP-G206 Enable MVR on a GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card

Purpose	This procedure enables Multicast VLAN Registration (MVR) on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	None
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to enable IGMP snooping. If you are already logged in, continue with [Step 2](#).
- Step 2** Complete the following tasks, as needed:
- “[DLP-G513 Enable MVR on a GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card Using CTC](#)” task on page 6-269.
 - “[NTP-G224 Enable MVR on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Cards Using PCLI](#)” task on page B-18.
- Stop.** You have completed this procedure.
-

DLP-G513 Enable MVR on a GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card Using CTC

Purpose	This procedure enables Multicast VLAN Registration (MVR) on GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE cards using CTC.
Tools/Equipment	None
Prerequisite Procedures	DLP-G382 Add and Remove SVLANS to/from GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE NNI Ports , page 6-252
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** In node view (single-shelf mode), or shelf view (multishelf mode), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to enable MVR. The card view appears.

Note At least one SVLAN must be configured on the card.

- Step 2** Click the **Provisioning > MVR** tabs. The MVR Settings tab appears.
- Step 3** Check the **Enabled** check box and enter the following information:

- **IGMP CVLAN**—Check box to enable IGMP snooping on CVLAN. This check box is enabled only when MVR is enabled through the Enabled check box.
- **Multicast SVLAN**—Select the MVR SVLAN ID. The default value is the SVLAN with the lowest ID configured on the card. The drop box lists all the SVLANs on the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card.

Note SVLAN selected here can not be used for UNI port, make sure that the corresponding SVLAN on the NNI port is checked.

- **Multicast Address**—Sets the specified multicast group address as the MVR multicast group. The default address is 239.255.255.255 and the range is 224.0.0.0 to 239.255.255.255. Except the subrange [224-239].[0/128].0.x.
- **Count**—Sets the range of any additional multicast group addresses. The default is 1, and range is 1 to 256.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G386 Provision the Gigabit Ethernet Trunk Port Alarm and TCA Thresholds

Purpose	This task changes the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card trunk port alarm and TCA thresholds.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note The GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards have two trunk ports. The GE_XP and GE_XPE trunk ports are 21-1 and 22-1 on the card graphic and 21 (Trunk) and 22 (Trunk) on the Optics Thresholds table. The 10GE_XP and 10GE_XPE card trunk ports are 3-1 and 4-1 on the card graphic and 3 (Trunk) and 4 (Trunk) on the Optics Thresholds table.

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the trunk port alarm and TCA settings.

Step 2 Click the **Provisioning > Optics Thresholds** tabs.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

**Note**

The hardware device that plugs into a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE or ADM-10G card faceplate to provide a fiber interface to the card is called a Small Form-factor Pluggable (SFP or XFP). In CTC, SFPs and XFPs are called pluggable port modules (PPMs). SFPs/XFPs are hot-swappable input/output devices that plug into a port to link the port with the fiber-optic network. Multirate PPMs have provisionable port rates and payloads. For more information about SFPs and XFPs, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

- Step 3** If TCA is not selected, click **TCA** and then click **Refresh**. When TCA is selected, continue with [Step 4](#).
- Step 4** Verify the trunk port TCA thresholds are provisioned as shown in [Table 6-123](#). Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Table 6-123 GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card Trunk Interface TCA Thresholds

Pluggable Port Module (XFP)	TCA RX Power High	TCA RX Power Low	TCA TX Power High	TCA TX Power Low
XFP WDM no FEC	–7	–23	6	–4
XFP WDM standard FEC	–7	–27	6	–4
XFP WDM Enhanced FEC	–7	–27	6	–4

- Step 5** Under Types, click the **Alarm** radio button and click **Refresh**.

**Note**

Do not modify the Laser Bias parameters.

- Step 6** Verify the trunk port alarm thresholds are provisioned as shown in [Table 6-124](#). Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Table 6-124 GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card Trunk Interface Alarm Thresholds

Pluggable Port Module (XFP)	Alarm RX Power High	Alarm RX Power Low	Alarm TX Power High	Alarm TX Power Low
XFP WDM no FEC	–5	–26	5	–3
XFP WDM standard FEC	–5	–30	5	–3
XFP WDM Enhanced FEC	–5	–30	5	–3

- Step 7** Click **Apply**.
- Step 8** Repeat Steps [3](#) through [7](#) to provision the second trunk port.
- Step 9** Return to your originating procedure (NTP).

DLP-G387 Provision the Gigabit Ethernet Client Port Alarm and TCA Thresholds

Purpose	This task provisions the client port alarm and TCA thresholds for the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G277 Provision a Multirate PPM, page 6-11 DLP-G46 Log into CTC, page 3-30
Required/As Needed	Required
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

The GE_XP card has 20 client ports. The ports are 1-1 through 20-1 on the card graphic and 1 (Client) through 20 (Client) on the Optics Thresholds table. The 10GE_XP card has 2 client ports. The ports are 1-1 and 2-1 on the card graphic and 1 (Client) and 2 (Client) on the Optics Thresholds table.

Note

The hardware device that plugs into a TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or ADM-10G card faceplate to provide a fiber interface to the card is called a Small Form-factor Pluggable (SFP or XFP). In CTC, SFPs and XFPs are called pluggable port modules (PPMs). SFPs/XFPs are hot-swappable input/output devices that plug into a port to link the port with the fiber-optic network. Multirate PPMs have provisionable port rates and payloads. For more information about SFPs and XFPs, refer to the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the client port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs. The TCA thresholds are shown by default.
- Step 3** If TCA is not selected, click **TCA** and then click **Refresh**. When TCA is selected, continue with [Step 4](#).
- Step 4** Verify the client port TCA thresholds are provisioned as shown in [Table 6-125](#). Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Table 6-125 GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card Client Interface TCA Thresholds

Pluggable Port Module (XFP)	TCA RX Power High	TCA RX Power Low	TCA TX Power High	TCA TX Power Low
10GE LAN PHY 10GBASE-LR	1	-14	5	-12
1000Base-SX (1Gbps) ¹	0	-17	3	-16
1000Base-LX ¹	-3	-20	3	-16

1. Gigabit Ethernet client

Note

You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Step 5 Under Types, click the **Alarm** radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

Step 6 Verify the client port Alarm thresholds are provisioned as shown in [Table 6-126](#). Provision new thresholds as needed by double-clicking the threshold value you want to change, deleting it, entering a new value, and hitting **Enter**.

Table 6-126 *GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card Client Interface Alarm Thresholds*

Pluggable Port Module (XFP)	Alarm RX Power High	Alarm RX Power Low	Alarm TX Power High	Alarm TX Power Low
10GE LAN PHY 10GBASE-LR	3	-16	1	-8
1000Base-SX (1Gbps) ¹	3	-20	-2	-12
1000Base-SX (2Gbps) ¹	3	-18	-2	-12
1000Base-LX ¹	0	-23	-1	-12

1. Gigabit Ethernet client

Step 7 Click **Apply**.

Step 8 Repeat Steps 3 through 7 to provision each additional client port.

Step 9 Return to your originating procedure (NTP).

DLP-G388 Change the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card RMON Thresholds

Purpose	This task changes the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card RMON threshold settings.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), display the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the RMON thresholds.
- Step 2** Click the **Provisioning > RMON Thresholds** tabs.
- Step 3** Click **Create**. The Create Threshold dialog box appears.
- Step 4** From the Port drop-down list, choose an individual port, or choose **All** to provision RMON thresholds for all ports.
- Step 5** From the Variable drop-down list, choose an Ethernet variable. See [Table 6-127](#) for a list of available Ethernet RMON variables.

**Note**

Variable descriptions were obtained from the following Internet Engineering Task Force (IETF) Requests for Comment (RFCs): RFC 3635, RFC 2233, and RFC 1757. Refer to the RFCs for additional information.

Table 6-127 **Gigabit Ethernet RMON Variables**

Variable	Description
rxTotalPkts	Total number of receive packets.
ifInUcastPkts	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were not addressed to a multicast or broadcast address at this sub-layer.
ifInMulticastPkts	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a multicast address at this sub-layer. For a MAC layer protocol, this includes both Group and Functional addresses.
ifInBroadcastPkts	The number of packets, delivered by this sub-layer to a higher (sub-)layer, which were addressed to a broadcast address at this sub-layer.
ifInDiscards	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being deliverable to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space.
ifInOctets	Total number of octets received on the interface, including framing characters.
ifOutOctets	Total number of octets transmitted out of the interface, including framing characters.
txTotalPkts	Total number of transmitted packets.
ifOutMulticastPkts	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both group and functional addresses.
ifOutBroadcastPkts	The total number of packets that higher-level protocols requested be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent.
ifOutDiscards	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space.
IfOutErrors	Number of outbound packets or transmission units that could not be transmitted because of errors.
dot3StatsFCSErrors	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check.
dot3StatsFrameTooLong	A count of frames received on a particular interface that exceed the maximum permitted frame size.
dot3ControlInUnknownOpCode	A count of MAC control frames received on this interface that contain an opcode that is not supported by this device.
dot3InPauseFrames	A count of MAC control frames received on this interface with an opcode indicating the PAUSE operation.
dot3StatsFCSErrors	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the FCS check.

Table 6-127 **Gigabit Ethernet RMON Variables (continued)**

Variable	Description
dot3StatsFrameTooLong	A count of frames received on a particular interface that exceed the maximum permitted frame size.
dot3ControlInUnknownOpCode	A count of MAC control frames received on this interface that contain an opcode that is not supported by this device.
dot3InPauseFrames	A count of MAC control frames received on this interface with an opcode indicating the PAUSE operation.
dot3OutPauseFrames	A count of MAC Control frames transmitted on this interface with an opcode indicating the PAUSE operation.
etherStatsCRCAlignErrors	Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).
etherStatsUndersizePkts	The total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.
etherStatsFragments	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral.
etherStatsPkts	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.
etherStatsPkts64Octets	The total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts65to127Octets	The total number of packets (including error packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts128to255Octets	The total number of packets (including error packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts256to511Octets	The total number of packets (including error packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts512to1023Octets	The total number of packets (including error packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts1024to1518Octets	The total number of packets (including error packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts1519to1522Octets	The total number of packets (including error packets) received that were between 1519 and 1522 octets in length inclusive (excluding framing bits but including FCS octets). Note This variable is supported only on client ports.
etherStatsBroadcastPkts	The total number of good packets received that were directed to the broadcast address
etherStatsMulticastPkts	The total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
etherStatsOversizePkts	The total number of packets received that were longer than 1518 octets (for untagged packets) or 1522 octets (for tagged packets) (excluding framing bits, but including FCS octets) and were otherwise well formed.

Table 6-127 Gigabit Ethernet RMON Variables (continued)

Variable	Description
etherStatsJabbers	The total number of packets received that were longer than 1518 octets (for untagged packets) or 1522 octets (for tagged packets) (excluding framing bits, but including FCS octets), and were not an integral number of octets in length or had a bad FCS.
etherStatsOctets	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets).
pcsErrCount	(10 GE payload only) Total count for long and short preamble.

- Step 6** From the Alarm Type drop-down list, indicate whether the event will be triggered by the rising threshold, the falling threshold, or both the rising and falling thresholds.
- Step 7** From the Sample Type drop-down list, choose either **Relative** or **Absolute**. Relative restricts the threshold to use the number of occurrences in the user-set sample period. Absolute sets the threshold to use the total number of occurrences, regardless of time period.
- Step 8** Type in an appropriate number of seconds for the Sample Period.
- Step 9** Type in the appropriate number of occurrences for the Rising Threshold.
- For a rising type of alarm, the measured value must move from below the falling threshold to above the rising threshold. For example, if a network is running below a rising threshold of 1000 collisions every 15 seconds and a problem causes 1001 collisions in 15 seconds, the excess occurrences trigger an alarm.
- Step 10** Enter the appropriate number of occurrences in the Falling Threshold field. In most cases a falling threshold is set lower than the rising threshold.
- A falling threshold is the counterpart to a rising threshold. When the number of occurrences is above the rising threshold and then drops below a falling threshold, it resets the rising threshold. For example, when the network problem that caused 1001 collisions in 15 seconds subsides and creates only 799 collisions in 15 seconds, occurrences fall below a falling threshold of 800 collisions. This resets the rising threshold so that if network collisions again spike over a 1000 per 15-second period, an event again triggers when the rising threshold is crossed. An event is triggered only the first time a rising threshold is exceeded (otherwise, a single network problem might cause a rising threshold to be exceeded multiple times and cause a flood of events).
- Step 11** Click **OK**.
- Step 12** To view all RMON thresholds, click **Show All RMON thresholds**. If not, continue with [Step 12](#)
- Step 13** Return to your originating procedure (NTP).

DLP-G389 Change the Gigabit Ethernet Optical Transport Network Settings

Purpose	This task changes the optical transport network (OTN) settings for the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE card where you want to change the OTN settings.
- Step 2** Click the **Provisioning > OTN** tabs, then choose one of the following subtabs: **OTN Lines**, **G.709 Thresholds**, **FEC Thresholds**, or **Trail Trace Identifier**.
- Step 3** Modify any of the settings described in Tables [6-128](#) through [6-131](#).

Note You must modify Near End and Far End; 15 Min and 1 Day; and SM and PM independently. To do so, choose the appropriate radio button and click **Refresh**.

[Table 6-128](#) describes the values on the Provisioning > OTN > OTN Lines tab.

Table 6-128 *GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card OTN Line Settings*

Parameter	Description	Options
Port	(Display only) Port number and description:	3 (Trunk) and 4 (Trunk). 10GE_XP and 10GE_XPE cards 21 (Trunk) and 22 (Trunk). GE_XP and GE_XPE cards
ITU-T G.709 OTN	Sets the OTN lines according to ITU-T G.709.	• Enable • Disable
FEC	Sets the OTN lines to forward error correction (FEC).	• Standard • Enhanced
SF BER	(Display only) Sets the signal fail bit error rate.	• 1E-5
SD BER	Sets the signal degrade bit error rate.	• 1E-5 • 1E-6 • 1E-7 • 1E-8 • 1E-9

[Table 6-129](#) describes the values on the Provisioning > OTN > ITU-T G.709 Thresholds tab.

Table 6-129 *GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card ITU-T G.709 Threshold Settings*

Parameter	Description	Options
Port	(Display only) Port number and description:	3 (Trunk) and 4 (Trunk). 10GE_XP and 10GE_XPE cards 21 (Trunk) and 22 (Trunk). GE_XP and GE_XPE cards
ES	Errored seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
SES	Severely errored seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
UAS	Unavailable seconds	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
BBE	Background block errors	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .
FC	Failure counter	Numeric. Can be set for Near End or Far End, for 15-minute or one-day intervals, or for SM (OTUk) or PM (ODUk). Select a bullet and click Refresh .

Table 6-130 describes the values on the Provisioning > OTN > FEC Threshold tab.

Table 6-130 *GE_XP, 10GE_XP, GE_XPE, or 10GE_XPE Card FEC Threshold Settings*

Parameter	Description	Options
Port	(Display only) Port number and description:	3 (Trunk) and 4 (Trunk). 10GE_XP and 10GE_XPE cards 21 (Trunk) and 22 (Trunk). GE_XP and GE_XPE cards
Bit Errors Corrected	Sets the value for bit errors corrected.	Numeric. Can be set for 15-minute or one-day intervals.
Uncorrectable Words	Sets the value for uncorrectable words.	Numeric. Can be set for 15-minute or one-day intervals.

Table 6-131 describes the values on the Provisioning > OTN > Trail Trace Identifier tab.

Table 6-131 *GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Trail Trace Identifier Settings*

Parameter	Description	Options
Port	(Display only) Port number.	2
Level	Sets the level.	- Section - Path

Table 6-131 *GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Trail Trace Identifier Settings*

Parameter	Description	Options
Received Trace Mode	Sets the trace mode.	- Off/None - Manual
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Disable FDI on TTIM	If a Trace Identifier Mismatch on Section overhead alarm arises because of a J0 overhead string mismatch, no Forward Defect Indication (FDI) signal is sent to the downstream nodes if this box is checked.	- Checked (FDI on TTIM is disabled) - Unchecked (FDI on TTIM is not disabled)
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

NTP-G314 Add a GE_XP or 10GE_XP Card on a FAPS Ring

Purpose	This procedure adds a GE_XP or 10GE_XP card on a FAPS ring.
Tools/Equipment	Installed GE_XP or 10GE_XP cards.

Prerequisite Procedures [DLP-G46 Log into CTC, page 3-30](#)

“NTP-G15 Install the Common Control Cards” in the *Cisco ONS 15454 Hardware Installation Guide*

NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards, page 4-71

DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode, page 6-8

Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** Complete the [DLP-G46 Log into CTC, page 3-30](#) at the node where you want to add a GE_XP or 10GE_XP card on a FAPS ring. If you are already logged in, continue with [Step 2](#).
- Step 2** Perform any of the following tasks as needed:
- [DLP-G687 Add a GE_XP or 10GE_XP Card Facing Master Card on a FAPS Ring, page 6-280](#)
 - [DLP-G688 Add a GE_XP or 10GE_XP Card Between the Slave Cards on a FAPS Ring, page 6-281](#)
- Stop. You have completed this procedure.**

DLP-G687 Add a GE_XP or 10GE_XP Card Facing Master Card on a FAPS Ring

Purpose	This procedure adds a GE_XP or 10GE_XP card that faces the master card on a FAPS ring.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** Complete the [DLP-G46 Log into CTC, page 3-30](#) at the node where you want to add a GE_XP or 10GE_XP card on a FAPS ring.
- Step 2** Verify that the GE_XP or 10GE_XP card is installed according to the requirements specified in [Table 4-7 on page 4-111](#).
- Step 3** Insert the new GE-XP card with XFP on the slot.
- Step 4** Change the GE_XP card mode to L2-over-DWDM. See [DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode, page 6-8](#).
- Step 5** Create and store an SVLAN database on the new GE_XP card. See [DLP-G421 Create and Store an SVLAN Database, page 8-58](#).
- Step 6** Enable FAPS protection on the new card.
- Step 7** Attach SVLAN to the trunk ports of the new card.

- Step 8** Choose OOS,DSBLD from the Admin State column for port 22 on the master card that is facing toward the new card. This action places port 22 in the blocking state and port 21 in the forwarding state.
- FAPS configuration mismatch alarm is raised on the master card.
- Step 9** Switch the traffic to the protect path.
- Step 10** Choose OOS,DSBLD from the Admin State column for port 21 on the slave card that is facing toward the new card.
- Step 11** Connect the fiber from the slave card (that is facing toward the new card) to the new card in segment B.
- Step 12** Connect the fiber from the master card to the new card in segment A.
- Step 13** Choose IS from the Admin State column for port 21 on the slave card that is facing toward the new card.
- Step 14** Choose IS from the Admin State column for port 22 on the new card to bring up segment B.
- Step 15** Choose IS from the Admin State column for port 21 on the new card.

Note The FAPS state of the new card will be in the forwarding state for both the ports and port 21 of the slave card will be in the blocking state.

- Step 16** Choose IS from the Admin State column for port 22 on the master card to bring up segment A.

Note The FAPS state of port 21 on the master card will be in the blocking state and port 22 will be in the forwarding state. The trunk ports of the remaining GE_XP cards will be in the forwarding state. The port 21 of the slave card (that is facing toward the new card) will change to the forwarding state.

- Step 17** Return to your originating procedure (NTP).

DLP-G688 Add a GE_XP or 10GE_XP Card Between the Slave Cards on a FAPS Ring

Purpose	This procedure adds a GE_XP or 10GE_XP card between the two slave cards on a FAPS ring.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** Complete the [DLP-G46 Log into CTC, page 3-30](#) at the node where you want to add a GE_XP or 10GE_XP card on a FAPS ring.
- Step 2** Verify that the GE_XP or 10GE_XP card is installed according to the requirements specified in [Table 4-7 on page 4-111](#).
- Step 3** Insert the new GE-XP card with XFP on the slot.

- Step 4** Change the GE_XP card mode to L2-over-DWDM. See [DLP-G379 Change the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Card Mode](#), page 6-8.
- Step 5** Create and store an SVLAN database on the new GE_XP card. See [DLP-G421 Create and Store an SVLAN Database](#), page 8-58.
- Step 6** Attach SVLAN to the trunk ports of the new card.
- Step 7** Choose OOS,DSBLD from the Admin State column for port 22 on both the slave cards that are facing toward the new card.
- Step 8** Connect the fiber from the slave card to the new card in segment B.
- Step 9** Connect the fiber from the master card to the new card in segment A.
- Step 10** Choose IS from the Admin State column for port 22 on the slave card.
- Step 11** Choose IS from the Admin State column for port 22 on the new card to bring up segment B.
- Step 12** Choose IS from the Admin State column for port 21 on the new card.
- Step 13** Choose IS from the Admin State column for port 21 on the slave card to bring up segment A.
- Step 14** Return to your originating procedure (NTP).

NTP-G197 Provision the OTU2_XP Card Line Settings, PM Parameters, and Thresholds

Purpose	This procedure changes line settings, PM parameters, and threshold setting for the OTU2_XP card.
Tools/Equipment	None
Prerequisite Procedures	NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards , page 4-71 DLP-G63 Install an SFP or XFP , page 4-74 DLP-G452 Change the OTU2_XP Card Mode , page 6-10
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** Complete the “[DLP-G46 Log into CTC](#)” task on page 3-30 at the node where you want to change the card settings. If you are already logged in, continue with Step 2.
 - Step 2** As needed, complete the “[NTP-G103 Back Up the Database](#)” procedure on page 14-2 to preserve the existing transmission settings.
 - Step 3** In node view (single-shelf mode) or shelf view (multishelf view), double-click the OTU2_XP card.
 - Step 4** Verify the card mode:
 - a. Display the OTU2_XP card in card view.
 - b. Click the **Provisioning > Card** tabs.
 - c. Verify that the card mode is set to the mode designated by your site plan:
 - Transponder

- Standard Regen
- Enhanced FEC
- Mixed
- 10G Ethernet LAN Phy to WAN Phy

If the card mode is set correctly, continue with [Step 6](#). If not, complete the “[DLP-G452 Change the OTU2_XP Card Mode](#)” task on page 6-10.

Step 5 Refer to the “OTU2_XP Card Configuration Rules” section in chapter “Transponder and Muxponder Cards” in the *Cisco ONS 15454 DWDM Reference Manual* before performing any task listed in [Step 6](#).

Step 6 Perform any of the following tasks as needed.

Note

For information about the OTU2_XP card configuration rules, refer to the “OTU2_XP Card Configuration Rules” section of the “Transponder and Muxponder Cards” chapter in the *Cisco ONS 15454 DWDM Reference Manual*.

- [DLP-G453 Change the OTU2_XP Card Settings](#), page 6-283
- [DLP-G454 Change the OTU2_XP Line Settings](#), page 6-285
- [DLP-G455 Change the OTU2_XP Line Section Trace Settings](#), page 6-288
- [DLP-G456 Change the OTU2_XP Line Thresholds for SONET or SDH Payloads](#), page 6-289
- [DLP-G457 Provision the OTU2_XP Port Alarm and TCA Thresholds](#), page 6-291
- [DLP-G462 Change the OTU2_XP Line RMON Thresholds for the 10G Ethernet and 10G FC Payloads](#), page 6-293
- [DLP-G458 Change the OTU2_XP OTN Settings](#), page 6-296
- [DLP-G523 Change the OTU2_XP Path Trace Settings](#), page 6-302
- [DLP-G524 Provision the OTU2_XP Path Settings for 10G Ethernet LAN Phy to WAN Phy Configuration](#), page 6-303

Stop. You have completed this procedure.

DLP-G453 Change the OTU2_XP Card Settings

Purpose	This task changes the card settings for the OTU2_XP card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC , page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the OTU2_XP card where you want to change the card settings.

Step 2 Click the **Provisioning > Card** tab.

Step 3 Modify any of the settings described in [Table 6-132](#).

Table 6-132 OTU2_XP Card Settings

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Card Configuration	Sets the card configuration.	- Transponder - Standard Regen - Enhanced FEC - Mixed 10G Ethernet LAN Phy to WAN Phy	- Transponder - Standard Regen - Enhanced FEC - Mixed 10G Ethernet LAN Phy to WAN Phy
Port Mode	Sets the port configuration when the card configuration is set as Mixed. For card configurations other than Mixed, this is a display-only parameter. You can configure Ports 2 and 4 as port mode, when the card is in 10G Ethernet LAN Phy to WAN Phy mode.	- Transponder - Standard Regen	- Transponder - Standard Regen
Termination Mode	Sets the mode of operation. (This option is only available for SONET/SDH payloads). For Standard Regen and Enhanced FEC card configurations, this is a display-only parameter.	- Transparent - Section - Line	- Transparent - Regeneration Section (RS) - Multiplex Section (MS)
Framing Type	(Display only) The card framing type, either SONET or SDH.	—	—
AIS/Squelch	Sets the transparent termination mode configuration.	- AIS - Squelch	- AIS - Squelch
Regen Line Name	Sets the regeneration line name.	—	—
ODU Transparency	Sets the ODU overhead byte configuration. For Transponder card configuration, this is a display-only parameter.	- Transparent Standard Use - Cisco Extended Use	- Transparent Standard Use - Cisco Extended Use
Proactive Protection Regen	Enables or disables the proactive protection regen mode.	- Enable - Disable	- Enable - Disable

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G454 Change the OTU2_XP Line Settings

Purpose	This task changes the line settings for OTU2_XP card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the OTU2_XP card where you want to change the line settings.
- Step 2** Click the **Provisioning > Line > Ports/SONET/Ethernet** tabs.
- Step 3** Modify any of the settings described in [Table 6-133](#).

Table 6-133 OTU2_XP Line Settings

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Displays the port number.	1-1 (OC192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC) 2-1 (OC192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC) 3-1 (OC192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC) 4-1 (OC192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC) - IB_5G	1-1 (STM-64/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC) 2-1 (STM-64/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC) 3-1 (STM-64/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC) 4-1 (STM-64/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC) - IB_5G
Port Name	Provides the ability to assign the specified port a name.	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3 .	User-defined. Name can be up to 32 alphanumeric/special characters. Blank by default. See the “DLP-G104 Assign a Name to a Port” task on page 8-3 .
Admin State	Sets the port service state. For more information about administrative states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS - IS,AINS - OOS,DSBLD - OOS,MT	- Unlocked - Unlocked,automaticInService - Locked,disabled - Locked,maintenance

Table 6-133 OTU2_XP Line Settings (continued)

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Service State	(Display only) Identifies the autonomously generated state that gives the overall condition of the port. Service states appear in the format: Primary State-Primary State Qualifier, Secondary State. For more information about service states, refer to the “Administrative and Service States” appendix in the <i>Cisco ONS 15454 DWDM Reference Manual</i> .	- IS-NR - OOS-AU,AINS - OOS-MA,DSBLD - OOS-MA,MT	- Unlocked-enabled - Unlocked-disabled, automaticInService - Locked-enabled,disabled - Locked-enabled,maintenance
ALS Mode	Sets the ALS function mode. The DWDM transmitter supports ALS according to ITU-T G.644 (06/99). ALS can be disabled, or it can be set for one of three mode options.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.	- Disabled (default): ALS is off; the laser is not automatically shut down when traffic outages (LOS) occur. - Auto Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. It automatically restarts when the conditions that caused the outage are resolved. - Manual Restart: ALS is on; the laser automatically shuts down when traffic outages (LOS) occur. However, the laser must be manually restarted when conditions that caused the outage are resolved. - Manual Restart for Test: Manually restarts the laser for testing.
Reach	Displays the optical reach distance of the client/trunk ports.	The Reach options depend on the traffic type that has been selected.	The Reach options depend on the traffic type that has been selected.
Wavelength	Displays the wavelength of the client/trunk ports.	- First Tunable Wavelength - Further wavelengths: 850 nm through 1610 nm, 100-GHz ITU spacing; coarse wavelength division multiplexing (CWDM) spacing Note Supported wavelengths are marked by asterisks (**).	- First Tunable Wavelength - Further wavelengths: 850 nm through 1610 nm, 100-GHz ITU spacing; CWDM spacing Note Supported wavelengths are marked by asterisks (**).

Table 6-133 OTU2_XP Line Settings (continued)

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
AINS Soak	Sets the automatic in-service soak period. Double-click the time and use the up and down arrows to change settings.	- Duration of valid input signal, in hh.mm format, after which the card becomes in service (IS) automatically 0 to 48 hours, 15-minute increments	- Duration of valid input signal, in hh.mm format, after which the card becomes IS automatically 0 to 48 hours, 15-minute increments
SF BER	(SONET [ANSI] or SDH [ETSI] only) Sets the signal fail bit error rate.	1E-3 1E-4 1E-5	1E-3 1E-4 1E-5
SD BER	(SONET [ANSI] or SDH [ETSI] only) Sets the signal degrade bit error rate.	1E-5 1E-6 1E-7 1E-8 1E-9	1E-5 1E-6 1E-7 1E-8 1E-9
Type	(SONET [ANSI] or SDH [ETSI] only) The optical transport type.	- SONET - SDH Note When Type is set to SDH in a SONET (ANSI) provisioning, SDCC or LDCC on OTU2_XP cards cannot be provisioned.	- SONET - SDH
MTU	The maximum size of the Ethernet frames accepted by the port. The port must be in OOS/locked state.	1548 bytes - Jumbo (64 to 9,216 bytes)	1548 bytes - Jumbo (64 to 9,216 bytes)
Incoming MAC Address	Sets the incoming MAC address.	Value of MAC address. Six bytes in hexadecimal format.	Value of MAC address. Six bytes in hexadecimal format.
Flow Control (Only when the card is in 10G Ethernet LAN Phy to WAN Phy mode)	Enables/disables flow control messaging with its peer port. When enabled, the port can send and receive PAUSE frames when buffer congestion occurs. When disabled, no PAUSE frames are transmitted and the PAUSE frames received are discarded.	- ON (default)—Flow control is enabled. - OFF—Flow control is disabled.	- ON (default)—Flow control is enabled. - OFF—Flow control is disabled.
Client Distance (Only when the card is in 10G Ethernet LAN Phy to WAN Phy mode)	Sets the fiber distance between the client of OTU2_XP card and the LAN port that is connected to the OTU2_XP client port.	10 km (default) 30 km	10 km (default) 30 km

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

DLP-G455 Change the OTU2_XP Line Section Trace Settings

Purpose	This task changes the line section trace settings for the OTU2_XP card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the OTU2_XP card where you want to change the section trace settings.
- Step 2** Click the **Provisioning > Line > Section Trace** tabs.
- Step 3** Modify any of the settings described in [Table 6-134](#).

Table 6-134 OTU2_XP Section Trace Settings

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	Sets the port number.	1-1 (OC192) 2-1 (OC192) 3-1 (OC192) 4-1 (OC192)	1-1 (STM-64) 2-1 (STM-64) 3-1 (STM-64) 4-1 (STM-64)
Received Trace Mode	Sets the trace mode.	- Off/None - Manual	- Off/None - Manual
Disable AIS/RDI on TIM-S	If a TIM on Section overhead alarm arises because of a J0 overhead string mismatch, no alarm indication signal is sent to downstream nodes if this box is checked. This is a display-only parameter under the following conditions: - Received Trace Mode is Off/None - Termination Mode is set to Transparent or Section (see DLP-G453 Change the OTU2_XP Card Settings, page 6-283)	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)	- Checked (AIS/RDI on TIM-S is disabled) - Unchecked (AIS/RDI on TIM-S is not disabled)
Transmit Section Trace String Size	Sets the trace string size.	1 byte 16 byte	1 byte 16 byte

Table 6-134 OTU2_XP Section Trace Settings (continued)

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size	String of trace string size
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh check box to automatically refresh the display every 5 seconds.	String of trace string size	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 seconds.	Checked/unchecked (default)	Checked/unchecked (default)

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G456 Change the OTU2_XP Line Thresholds for SONET or SDH Payloads

Purpose	This task changes the line threshold settings for the OTU2_XP card carrying SONET or SDH payload.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Step 1 In node view (single-shelf mode) or shelf view (multishelf view), double-click the OTU2_XP card where you want to change the line threshold settings.

- Step 2** Click the **Provisioning > Line Thresholds > SONET Thresholds (ANSI)** or **SDH Thresholds (ETSI)** tabs.

**Note**

If you have enabled 10G Ethernet LAN Phy to WAN Phy on the OTU2_XP card, the STS option is automatically enabled.

Only near end STS thresholds are supported. No STS thresholds are support for Far End.

- Step 3** Modify any of the OTU2_XP card path threshold settings on a LAN Phy to WAN Phy mode, as seen in [Table 6-135](#).

Table 6-135 OTU2_XP Card Path Threshold Settings on a 10G Ethernet LAN Phy to WAN Phy Mode

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Port number.	- Ports 3-1 (Trunk), STS-1 - Ports 4-1 (Trunk), STS-1	- Port 3-1 (Trunk), VC4-1 - Port 4-1 (Trunk), VC4-1

- Step 4** Modify any of the OTU2_XP Card Line Threshold settings described in [Table 6-136](#)

Table 6-136 OTU2_XP Card Line Threshold Settings

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	(Display only) Port number	1-1 (OC192) 2-1 (OC192) 3-1 (OC192) 4-1 (OC192)	1-1 (STM-64) 2-1 (STM-64) 3-1 (STM-64) 4-1 (STM-64)
CV	Coding violations	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—(Near end only) Line or Section Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—(Near end only) Multiplex Section or Regeneration Section Choose an option in each category and click Refresh .
ES	Errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—(Near end only) Line or Section Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—(Near end only) Multiplex Section or Regeneration Section Choose an option in each category and click Refresh .

Table 6-136 OTU2_XP Card Line Threshold Settings (continued)

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
SES	Severely errored seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—(Near end only) Line or Section Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—(Near end only) Multiplex Section or Regeneration Section Choose an option in each category and click Refresh .
FC	(Line or Multiplex Section only) Failure count	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—(Near end only) Line or Section Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—(Near end only) Multiplex Section or Regeneration Section Choose an option in each category and click Refresh .
UAS	(Line or Multiplex Section only) Unavailable seconds	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—(Near end only) Line or Section Choose an option in each category and click Refresh .	Numeric. Threshold display options include: - Direction—Near End or Far End - Interval—15 Min (minutes) or 1 day - Types—(Near end only) Multiplex Section or Regeneration Section Choose an option in each category and click Refresh .

Step 5 Click **Apply**.

Step 6 Return to your originating procedure (NTP).

DLP-G457 Provision the OTU2_XP Port Alarm and TCA Thresholds

Purpose	This task provisions the OTU2_XP port alarm and threshold crossing alert (TCA) thresholds.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the OTU2_XP card where you want to change the trunk port alarm and TCA settings.
- Step 2** Click the **Provisioning > Optics Thresholds** tabs.
- Step 3** Under Types, verify that the TCA radio button is checked. If not, select it, then click **Refresh**.
- Step 4** Refer to [Table 6-137](#) to provision the port TCA thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Note Do not modify the Laser Bias parameters.

Table 6-137 OTU2_XP Port TCA Thresholds

Port	TCA RX Power High	TCA RX Power Low	TCA TX Power High	TCA TX Power Low
1-1 (OC-192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC/IB_5G)	1.0 dBm	-14.0 dBm	5.0 dBm	-12.0 dBm
2-1 (OC-192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC/IB_5G)	1.0 dBm	-14.0 dBm	5.0 dBm	-12.0 dBm
3-1 (OC-192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC/IB_5G)	1.0 dBm	-14.0 dBm	5.0 dBm	-12.0 dBm
4-1 (OC-192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC/IB_5G)	1.0 dBm	-14.0 dBm	5.0 dBm	-12.0 dBm

- Step 5** Click **Apply**.
- Step 6** Under Types, click the **Alarm** radio button and click **Refresh**.
- Step 7** Refer to [Table 6-138](#) to provision the port alarm thresholds for RX Power High, RX Power Low, TX Power High, and TX Power Low.

Note You must modify 15 Min and 1 Day independently. To do so, choose the appropriate radio button and click **Refresh**.

Table 6-138 OTU2_XP Port Alarm Thresholds

Port	Alarm RX Power High	Alarm RX Power Low	Alarm TX Power High	Alarm TX Power Low
1-1 (OC-192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC/IB_5G)	3.0 dBm	-16.0 dBm	1.0 dBm	-8.0 dBm
2-1 (OC-192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC/IB_5G)	3.0 dBm	-16.0 dBm	1.0 dBm	-8.0 dBm
3-1 (OC-192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC/IB_5G)	3.0 dBm	-16.0 dBm	1.0 dBm	-8.0 dBm
4-1 (OC-192/10G Ethernet WAN Phy/10G Ethernet LAN Phy/10G FC/IB_5G)	3.0 dBm	-16.0 dBm	1.0 dBm	-8.0 dBm

- Step 8** Click **Apply**.
- Step 9** Return to your originating procedure (NTP).

DLP-G462 Change the OTU2_XP Line RMON Thresholds for the 10G Ethernet and 10G FC Payloads

Purpose	This task changes the line threshold settings for OTU2_XP card carrying the 10G Ethernet or 10G FC payloads.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the OTU2_XP card where you want to change the line threshold in the card view.
- Step 2** Click the **Provisioning > Line Thresholds > RMON Thresholds** tabs.
- Step 3** Click **Create**. The Create Threshold dialog box appears.
- Step 4** From the Port drop-down list, choose the applicable port.
- Step 5** From the Variable drop-down list, choose an Ethernet variable. See [Table 6-139](#) and [Table 6-140](#) for a list of available Ethernet variables.

Table 6-139 OTU2_XP Card 10G Ethernet Variables

Variable	Description
----------	-------------

Table 6-139 OTU2_XP Card 10G Ethernet Variables (continued)

ifInOctets	Total number of octets received on the interface, including framing characters.
rxTotalPkts	Total number of received packets. rxTotalPkts increments for 10G FC payload packets with FCS errors. However, 10G Ethernet LAN Phy payload packets with CRC errors are not counted.
ifInMulticastPkts	Number of multicast frames received error free.
ifInBroadcastPkts	Number of packets, delivered by a sublayer to an higher sublayer, that were addressed to a broadcast address at this sublayer.
ifInErrors	Number of inbound packets that contained errors preventing them from being delivered to a higher-layer protocol.
dot3StatsFCSErrors	Number of frames with frame check errors, that is, there is an integral number of octets, but an incorrect Frame Check Sequence (FCS).
etherStatsUndersizePkts	Total number of packets received that were less than 64 octets long (excluding framing bits, but including FCS octets) and were otherwise well formed.
etherStatsFragments	Total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error). Note that it is entirely normal for etherStatsFragments to increment. This is because it counts both runts (which are normal occurrences due to collisions) and noise hits.
etherStatsPkts64Octets	Total number of packets (including bad packets) received that were 64 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts65to127Octets	Total number of packets (including bad packets) received that were between 65 and 127 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts128to255Octets	The total number of packets (including bad packets) received that were between 128 and 255 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts256to511Octets	Total number of packets (including bad packets) received that were between 256 and 511 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts512to1023Octets	Total number of packets (including bad packets) received that were between 512 and 1023 octets in length inclusive (excluding framing bits but including FCS octets).
etherStatsPkts1024to1518Octets	Total number of packets (including bad packets) received that were between 1024 and 1518 octets in length inclusive (excluding framing bits but including FCS octets).

Table 6-139 OTU2_XP Card 10G Ethernet Variables (continued)

etherStatsBroadcastPkts	Total number of good packets received that were directed to the broadcast address. Note that this does not include multicast packets.
etherStatsMulticastPkts	Total number of good packets received that were directed to a multicast address. Note that this number does not include packets directed to the broadcast address.
etherStatsOversizePkts	Total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets) and were otherwise well formed.
etherStatsJabbers	Total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).
etherStatsOctets	Total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets).
rxControlFrames	Number of MAC control frames passed by the MAC sublayer to the MAC control sublayer.

Table 6-140 OTU2_XP Card 10G FC Variables

Variable	Description
ifInOctets	Total number of octets received on the interface, including framing characters.
mediaIndStatsRxFramesTruncated	Total number of fiber channel frames received that are less than the minimum 36-byte frame. This is inclusive of header, SOF, EOF, and CRC with no data bytes.
mediaIndStatsRxFramesTooLong	Total number of fiber channel frames received that exceed the maximum 2148-byte frame. This is inclusive of header, SOF, EOF, CRC, and data bytes.
mediaIndStatsRxFramesBadCRC	Total number of fiber channel frames received with CRC errors.
ifInDiscards	The number of inbound packets, which were chosen to be discarded even though no errors had been detected to prevent their being delivered to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space. ¹
ifOutOctets	Total number of octets transmitted out of the interface, including framing characters. ¹
mediaIndStatsTxFramesBadCRC	Number of transmitted data frames with payload CRC errors when HDLC framing is used. ¹
transmitPauseFrames	Number of transmitted pause frames. ¹
txTotalPkts	Total number of transmit packets. ¹

1. This variable is supported when the 10G Ethernet LAN Phy to WAN Phy mode is enabled on the OTU2_XP card.

- Step 6** From the Alarm Type drop-down list, choose the event triggers. The available options are rising threshold, falling threshold, or rising and falling thresholds.
- Step 7** From the Sample Type drop-down list, choose either **Relative** or **Absolute**. Relative restricts the threshold to use the number of occurrences in the user-set sample period. Absolute sets the threshold to use the total number of occurrences, regardless of time period.
- Step 8** Enter an appropriate number of seconds for the Sample Period.
- Step 9** Enter in the appropriate number of occurrences for the Rising Threshold.
- For a rising type of alarm, the measured value must move from below the falling threshold to above the rising threshold. For example, if a network is running below a rising threshold of 1000 collisions every 15 seconds and a problem causes 1001 collisions in 15 seconds, the excess occurrences trigger an alarm.
- Step 10** Enter the appropriate number of occurrences in the Falling Threshold field. In most cases a falling threshold is set lower than the rising threshold.
- A falling threshold is the counterpart to a rising threshold. When the number of occurrences is above the rising threshold and then drops below a falling threshold, it resets the rising threshold. For example, when the network problem that caused 1001 collisions in 15 seconds subsides and creates only 799 collisions in 15 seconds, occurrences fall below a falling threshold of 800 collisions. This resets the rising threshold so that if network collisions again spike over a 1000 per 15-second period, an event again triggers when the rising threshold is crossed. An event is triggered only the first time a rising threshold is exceeded (otherwise, a single network problem might cause a rising threshold to be exceeded multiple times and cause a flood of events).
- Step 11** Click **OK**.

Note To view all RMON thresholds, click **Show All RMON thresholds**.

- Step 12** Return to your originating procedure (NTP).

DLP-G458 Change the OTU2_XP OTN Settings

Purpose	This task changes the OTN line settings for the OTU2_XP card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the OTU2_XP card where you want to change the OTN settings.
- Step 2** Click the **Provisioning > OTN** tabs. Then click one of the following subtabs: **OTN Lines**, **ITU-T G.709 Thresholds**, **FEC Thresholds**, **Trail Trace Identifier**, or **Proactive Protection Regen**.
- Step 3** Modify any of the settings described in Tables [6-29](#) through [6-32](#).

**Note**

You must modify Near End and Far End independently, 15 Min and 1 Day independently, and SM and PM independently. To do so, select the appropriate radio button and click **Refresh**.

Table 6-141 describes the values on the **Provisioning > OTN > OTN Lines** tabs.

Table 6-141 OTU2_XP Card OTN Lines Settings

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	—
ITU-T G.709 OTN	Sets the OTN lines according to ITU-T G.709. Check the box to enable.	• Enable • Disable
FEC	Sets the OTN lines FEC mode. Enhanced FEC mode can be enabled to provide greater range and lower bit error rate.	• Disable—FEC is off. • Standard—Standard FEC is on. • Enhanced—Enhanced FEC is on.
SD BER	Sets the signal degrade bit error rate.	• 1E-5 • 1E-6 • 1E-7 • 1E-8 • 1E-9
SF BER	(Display only) Indicates the signal fail bit error rate.	• 1E-5
No Fixed Stuff	Sets the insertion of stuffing bytes. This parameter only applies to 10G Ethernet LAN Phy signals in transponder card configuration. This is a display-only parameter for all other card configurations. When the “No Fixed Stuff” parameter is disabled, the bit rate is 11.09 Gbps. When the “No Fixed Stuff” parameter is enabled, the bit rate is 11.05 Gbps.	• Disable • Enable

Table 6-142 describes the values on the **Provisioning > OTN > ITU-T G.709 Thresholds** tab.

Table 6-142 OTU2_XP Card ITU-T G.709 Threshold Settings

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	—
ES	Severely errored seconds. Two types of thresholds can be asserted. Selecting the SM (OTUk) radio button selects FEC, overhead management, and PM using OTUk. Selecting the PM radio button selects path PM using ODUk.	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh. Note SM (OTUk) is the ITU-T G.709 optical channel transport unit order of k overhead frame used for management and performance monitoring. PM (ODUk) is the ITU-T G.709 optical channel data unit order of k overhead frame unit used for path performance monitoring.
SES	Severely errored seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh.
UAS	Unavailable seconds	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh.

Table 6-142 OTU2_XP Card ITU-T G.709 Threshold Settings (continued)

Parameter	Description	Options
BBE	Background block errors	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh .
FC	Failure counter	Numeric. Threshold display options include: • Direction—Near End or Far End • Interval—15 Min (minutes) or 1 day • Types—SM (OTUk) or PM (ODUk) Choose an option in each category and click Refresh .

Table 6-143 describes the values on the **Provisioning > OTN > FEC Thresholds** tab.

Table 6-143 OTU2_XP Card FEC Threshold Settings

Parameter	Description	Options
Port	(Display only) Displays the port number and optional name.	—
Bit Errors Corrected	Displays the number of bit errors corrected during the selected time period.	Numeric display. Can be set for 15-minute or one-day intervals.
Uncorrectable Words	Displays the number of uncorrectable words in the selected time period.	Numeric display. Can be set for 15-minute or one-day intervals.

Table 6-144 describes the values on the **Provisioning > OTN > Trail Trace Identifier** tab.

**Note**

You cannot change the Path Trail Trace Identifier settings when the OTU2_XP card is in the Standard Regen mode, and if the ODU transparency is set to “Transparent Standard Use”. You can change the Path Trail Trace Identifier settings when the OTU2_XP card is in the Standard Regen mode, and if the ODU transparency is set to “Cisco Extended Use”.

Table 6-144 OTU2_XP Card Trail Trace Identifier Settings

Parameter	Description	Options
Port	Sets the port number.	—
Level	Sets the level.	• Section • Path

Table 6-144 OTU2_XP Card Trail Trace Identifier Settings (continued)

Parameter	Description	Options
Received Trace Mode	Sets the trace mode.	- Off/None - Manual
Disable FDI on TTIM	If a Trace Identifier Mismatch on Section overhead alarm arises because of a J0 overhead string mismatch, no Forward Defect Indication (FDI) signal is sent to the downstream nodes if this box is checked.	- Checked (FDI on TTIM is disabled) - Unchecked (FDI on TTIM is not enabled)
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size; trail trace identifier is 64 bytes in length.
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh every 5 sec check box to keep this panel updated.	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 minutes.	Checked/unchecked (default)

Table 6-145 describes the values on the **Provisioning > OTN > Proactive Protection Regen** tabs.

**Note**

Proactive protection regen is supported on ports of OTU2_XP only in Standard Regen and Enhanced FEC mode.

Table 6-145 OTU2_XP Card Proactive Protection Regen Settings

Parameter	Description	Options
Port	(Display only) Displays the port number and name (optional).	—
Trigger threshold	Sets the maximum BER threshold to trigger proactive protection.	• 1E-3 • 9E-4 to 1E-4 • 9E-5 to 1E-5 • 9E-6 to 1E-6 • 9E-7 to 1E-7
Trigger window (ms)	Sets the duration for which BER is monitored before triggering the proactive protection. The trigger window value must be a multiple of: • 10 ms for trigger thresholds between 1E-3 and 6E-6 • 100 ms for trigger threshold between 5E-6 to 1E-7 Trigger window must be less than or equal to 10000 ms.	Time in milliseconds.
Revert Threshold	Sets the revert threshold value of BER. Note Revert Threshold settings must be less than the Trigger Threshold values.	• 1E-4 • 9E-5 to 1E-5 • 9E-6 to 1E-6 • 9E-7 to 1E-7 • 9E-8 to 5E-8
Revert window (ms)	Sets the duration for which BER is monitored for settings that are less than the revert threshold value before which proactive protection provided to the router is removed. Revert Window value must be at least 2000ms and a multiple of: • 10ms for a Revert Threshold of 1E-4 to 6E-7 • 100ms for a Revert Threshold of 5E-7 to 5E-8. The revert window must be less than or equal to 10000ms.	Time in milliseconds.

Step 4 Click **Apply**.

Step 5 Return to your originating procedure (NTP).

DLP-G523 Change the OTU2_XP Path Trace Settings

Purpose	This task changes the path trace settings for the OTU2_XP card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the OTU2_XP card where you want to change the path trace settings.
- Step 2** Click the **Provisioning > Path > J1 Path Trace** tabs.
- Step 3** Modify any of the settings described in [Table 6-146](#).

Table 6-146 OTU2_XP Path Trace Settings

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	Sets the port number.	3-1 (OC192) 4-1 (OC192)	3-1 (STM-64) 4-1 (STM-64)
Received Trace Mode	Sets the trace mode.	- Off/None - Manual	- Off/None - Manual
Transmit	Displays the current transmit string; sets a new transmit string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size	String of trace string size

Table 6-146 OTU2_XP Path Trace Settings (continued)

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Expected	Displays the current expected string; sets a new expected string. You can click the button on the right to change the display. Its title changes, based on the current display mode. Click Hex to change the display to hexadecimal (button changes to ASCII); click ASCII to change the display to ASCII (button changes to Hex).	String of trace string size	String of trace string size
Received	(Display only) Displays the current received string. You can click Refresh to manually refresh this display, or check the Auto-refresh check box to automatically refresh the display every 5 seconds.	String of trace string size	String of trace string size
Auto-refresh	If checked, automatically refreshes the display every 5 seconds.	Checked/unchecked (default)	Checked/unchecked (default)

- Step 4** Click **Apply**.
Return to your originating procedure (NTP).

DLP-G524 Provision the OTU2_XP Path Settings for 10G Ethernet LAN Phy to WAN Phy Configuration

Purpose	This task changes the path settings of the OTU2_XP card for 10G Ethernet LAN Phy to WAN Phy configuration.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the OTU2_XP card where you want to change the path settings.

- Step 2** Click the **Provisioning > Path > SONET/SDH** tab. You can now provision the SF BER and SD BER values.
- Step 3** Modify any of the OTU2_XP path settings described in [Table 6-147](#).

Table 6-147 OTU2_XP Path Settings

Parameter	Description	ONS 15454 (ANSI) Options	ONS 15454 SDH (ETSI) Options
Port	Sets the port number.	- Port 3-1 (trunk) - Port 4-1 trunk	- Port 3-1 (trunk) - Port 4-1 trunk
SF BER	Sets the signal fail bit error rate (SONET [ANSI] or SDH [ETSI]).	1E-3 1E-4 1E-5	1E-3 1E-4 1E-5
SD BER	Sets the signal degrade bit error rate (SONET [ANSI] or SDH [ETSI]).	1E-5 1E-6 1E-7 1E-8 1E-9	1E-5 1E-6 1E-7 1E-8 1E-9

- Step 4** Click **Apply**.
- Step 5** Return to your originating procedure (NTP).

NTP-G162 Change the ALS Maintenance Settings

Purpose	This procedure changes the ALS maintenance settings for the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, and OTU2_XP cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

The automatic laser shutdown (ALS) function is normally disabled for TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, and OTU2_XP cards. Enable ALS only when the cards are directly connected to each other.

- Step 1** In node view (single-shelf mode) or shelf view (multishelf mode), double-click the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or OTU2_XP card where you want to change the ALS maintenance settings.
- Step 2** Click the **Maintenance > ALS** tabs.

- Step 3** Modify any of the settings described in [Table 6-148](#). The provisionable parameters are listed in the Options column in the table.

Table 6-148 ALS Settings

Parameter	Description	Options
ALS Mode	Automatic laser shutdown. ALS provides the ability to shut down the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, and OTU2_XP TX laser when the card detects an LOS.	From the drop-down list, choose one of the following: - Disable—Deactivates ALS. - Auto Restart—(Default) ALS is active. The power is automatically shut down when needed and automatically tries to restart using a probe pulse until the cause of the failure is repaired. - Manual Restart - Manual Restart for Test
Recovery Pulse Duration	(Display only) Displays the duration of the optical power pulse that begins when an amplifier restarts.	—
Recovery Pulse Interval	(Display only) Displays the interval between optical power pulses.	—
Currently Shutdown	(Display only) Displays the current status of the laser.	—
Request Laser Restart	If checked, allows you to restart the laser for maintenance.	Checked or unchecked

- Step 4** Click **Apply**. If the change affects traffic, a warning message displays. Click **Yes** to complete the change. **Stop. You have completed this procedure.**

NTP-G192 Force FPGA Update

Purpose	This procedure forces an upgrade of the FPGA image on the MXP_MR_10DME_C and MXP_MR_10DME_L cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

**Note**

Perform [Step 1](#) through [Step 4](#) if you are updating the node software. Otherwise continue with [Step 5](#) to force FPGA image upgrade on MXP_MR_10DME_C or MXP_MR_10DME_L card.

-
- Step 1** Close the CTC window, if open.
- Step 2** Delete the CTC Cache from the CTC Launcher browser window.
- Step 3** Close the CTC Launcher browser window.
- Step 4** Relaunch the CTC Launcher browser window.
- Step 5** In node view (single-shelf mode) or shelf view (multishelf mode), double-click the MXP_MR_10DME_C or MXP_MR_10DME_L card to be upgraded.
- Step 6** For all ports being provisioned on the card, click the **Provisioning > Line** tabs.
- Click the **Admin State** table cell and choose **OOS,DSBLD** (ANSI) or **Locked,Disabled** (ETSI).
 - Click **Apply**, then **Yes**.
- Step 7** Click the **Provisioning > Card** tabs.
- Step 8** Change the Card Mode as needed:
- FC-GE_ISC—Choose this option if you will provision any of the following PPM port rates: FC1G (Ports 1-1 through 4-1), FC2G (Ports 1-1 and 3-1 only), FICON1G (Ports 1-1 through 4-1), FICON2G (Ports 1-1 and 3-1 only), ONE_GE (Ports 1-1 through 4-1), ISC3 COMPAT (Ports 1-1 through 4-1), ISC3 PEER 1G (Ports 1-1 through 4-1), and ISC3 PEER 2G (Ports 1-1 and 3-1 only).
 - FC4G—Choose this option if you will provision an FC4G or FICON4G PPM (Port 1-1 only).
- Step 9** Click the **Force FPGA Update** button. This upgrades the FPGA image in the MXP_MR_10DME_C or MXP_MR_10DME_L card, as appropriate. The MXP_MR_10DME_C or MXP_MR_10DME_L card reboots and the FPGA now contains the updated image.
- Step 10** For all ports being provisioned on the card, click the **Provisioning > Line** tabs.
- Click the **Admin State** table cell and choose **IS** (ANSI) or **Unlocked** (ETSI).
 - Click **Apply**, then **Yes**.

Stop. You have completed this procedure.

NTP-G196 Force FPGA Update When the Card is Part of a Protection Group

Purpose	This procedure forces an upgrade of the FPGA image on the MXP_MR_10DME_C and MXP_MR_10DME_L cards when the card is part of a protection group.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note

This procedure applies to a near-end node that has two MXP_MR_10DME_C or MXP_MR_10DME_L cards, one card acting as the working card and the other as the protect card. The far-end node has a similar configuration. The near-end working card trunk port is connected to the far-end working card trunk port. The near-end protect card trunk port is connected to the far-end protect card trunk port.

Note

Perform [Step 1](#) through [Step 4](#) if you are updating the node software. Otherwise, continue with [Step 5](#) to force FPGA image upgrade on MXP_MR_10DME_C or MXP_MR_10DME_L card.

-
- Step 1** Close the CTC window, if open.
 - Step 2** Delete the CTC Cache from the CTC Launcher browser window.
 - Step 3** Close the CTC Launcher browser window.
 - Step 4** Relaunch the CTC Launcher browser window.
 - Step 5** Ensure traffic is running on the near-end and far-end working cards for each protection group on the MXP_MR_10DME_C or MXP_MR_10DME_L card.
 - Step 6** In node view (single-node mode) or multishelf view (multishelf mode), click the **Provisioning > Protection** tab.
 - Step 7** For each protection group, verify that the working card client port is reported as working/active and the protect card client port is reported as protect/standby.
 - Step 8** Repeat Steps [6](#) and [7](#) for the far-end node.
 - Step 9** For each protection group on the near-end and far-end nodes, complete the “[DLP-G182 Apply a Lockout](#)” task on [page 11-46](#) to prevent traffic from switching to the protect card.
 - Step 10** At the near-end and far-end nodes, complete the “[NTP-G192 Force FPGA Update](#)” procedure on [page 6-305](#) to force an upgrade of the FPGA image on the protect card.
 - Step 11** For each protection group on the near-end and far-end nodes, complete the “[DLP-G183 Clear a Lock-On or Lockout](#)” task on [page 11-46](#) to remove a lockout and return a protection group to its usual switching method.
 - Step 12** For each protection group on the near-end and far-end nodes, complete the “[DLP-G179 Apply a Force Y-Cable or Splitter Protection Switch](#)” task on [page 11-44](#) to move traffic from the working to the protect card.

- Step 13** At the near-end and far-end nodes, complete the “[NTP-G192 Force FPGA Update](#)” procedure on [page 6-305](#) to force an upgrade of the FPGA image on the working card.
- Step 14** For each protection group on the near-end and far-end nodes, complete the “[DLP-G180 Clear a Manual or Force Y-Cable or Splitter Protection Switch](#)” task on [page 11-44](#) to clear a Force protection switch on the working card. If the protection group is revertive, this operation causes the traffic to revert to the working card. If the protection group is non-revertive, this operation causes the traffic to remain on the protect card.
- Stop.** You have completed this procedure.

NTP-G232 Enabling Error Decorrelator

Purpose	This task enables error decorrelator on a TXP_MR_10EX_C, MXP_2.5G_10EX_C, or MXP_MR_10DMEX_C card.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

- Step 1** In node view (single-shelf mode) or shelf view (multishelf view), double-click the TXP_MR_10EX_C, MXP_2.5G_10EX_C, or MXP_MR_10DMEX_C card where you want to enable error decorrelator.
- Step 2** Click the **Provisioning > Line > Error Decorrelator Settings** tabs.
- Step 3** In the Error Decorrelator Settings area, Select **Enable**.

Note

To inter-operate with other cards, disable the error decorrelator. Click the **Provisioning > Line > Error Decorrelator Settings** tabs and then select **Disable**.

NTP-G315 Enable or Disable the Wavelength Drifted Channel Automatic Shutdown Feature

Purpose	This procedure allows you to enable or disable the wavelength drifted channel automatic shutdown feature for 40-SMR1-C, 40-SMR2-C, 80-WXC-C, 40-WXC-C, and 40-WSS-C cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

-
- Step 1** In the node view (single-shelf mode) or multishelf view (multishelf mode), click the **Provisioning > Defaults** tabs. The Node Defaults page opens.
- Step 2** Select the card from the Defaults Selector pane where you want to enable or disable the wavelength drifted channel automatic shutdown feature.
- Step 3** Select the <card name>.config.card.WavelengthDrift from the Default Name column. Choose Disable or Enable from the Default Value drop-down list for the selected card.
- For example, if you select 40-SMR2-C card from the Defaults Selector folder, the Default Name column reads “40-SMR2-C.config.card.WavelengthDrift”.
- Step 4** Click **Apply** to save changes.
- Stop. You have completed this procedure.**
-

NTP-G316 Enable REP and FAPS on the same port

Purpose	This task allows you enable REP and FAPS on the same port for the GE_XP and 10GE_XP cards.
Tools/Equipment	None
Prerequisite Procedures	DLP-G46 Log into CTC, page 3-30
Required/As Needed	As needed
Onsite/Remote	Onsite or remote
Security Level	Provisioning or higher

Note The FAPS master node on the edge ring should never be the node that has a common FAPS and REP port.

You can configure REP and FAPS on port 22 and 21 for GE_XP cards, and port 4 and 3 for 10GE_XP cards.

-
- Step 1** To enable REP, complete the following procedures:
- a. [DLP-G645 Create a Segment Using CTC, page 6-232](#)
 - b. [DLP-G647 Activate VLAN Load Balancing Using CTC, page 6-235](#)
- Step 2** To enable FAPS, complete the [DLP-G381 Provision the GE_XP, 10GE_XP, GE_XPE, and 10GE_XPE Layer 2 Protection Settings, page 6-249](#).
- Stop. You have completed this procedure.**
-
