

# Installing ONS 15454 SDH OC48 IR/STM16 SH AS 1310 Cards

---

Product Name: 15454E-S16.1-1=

This document contains a description of OC48 IR/STM16 SH AS 1310 card features, installation procedures, removal instructions, and technical specifications. Use this document in conjunction with the *Cisco ONS 15454 SDH Installation and Operations Guide* and the *Cisco ONS 15454 SDH Troubleshooting and Reference Guide* when working with OC48 IR/STM16 SH AS 1310 cards.

This document contains the following sections:

- [“Installation Procedures” section on page 5](#)
- [“OC48 IR/STM16 SH AS 1310 Card Specifications” section on page 4](#)
- [“Installation Procedures” section on page 5](#)
- [“Removal Procedures” section on page 7](#)
- [“Related Documentation” section on page 8](#)
- [“Obtaining Documentation” section on page 9](#)
- [“Obtaining Technical Assistance” section on page 10](#)

This document contains the following procedures:

[“Installation Procedures” procedure on page 5](#)

[“Card Turn Up” procedure on page 6](#)

[“Verify Successful Turn Up of the OC48 IR/STM16 SH AS 1310 Card” procedure on page 6](#)

[“Removal Procedures” procedure on page 7](#)

[“Reset an STM-N Card” procedure on page 7](#)

**Note**

---

For information about circuits and card capacities, see the *Cisco ONS 15454 SDH Installation and Operations Guide*.

---

# OC48 IR/STM16 SH AS 1310 Card

The OC48 IR/STM16 SH AS 1310 card provides one intermediate-range, ITU-T G.707, ITU-T G.957-compliant, SDH STM-16 port per card. The interface operates at 2.488 GBits/s (Gbps) over a single-mode fiber span. The card supports concatenated or non-concatenated payloads at STM-1, STM-4, or STM-16 signal levels on a per VC-4 basis. [Figure 1](#) shows the OC48 IR/STM16 SH AS 1310 faceplate and [Figure 2](#) shows a block diagram of the card.

**Warning**

**Class 1 laser product.**

**Figure 1** OC48 IR/STM16 SH AS 1310 Faceplate

You can install the OC48 IR/STM16 SH AS 1310 card in any multispeed or high speed card slot on the ONS 15454 SDH. You can provision the card as part of a MSSPRing or SNCP. In an ADM/TM configuration, you can provision the card as either an access tributary or a transport span interface.

The STM-16 port features a 1310 nm laser and contains a transmit and receive connector (labeled) on the card faceplate. The OC48 IR/STM16 SH AS 1310 uses SC connectors. The card supports 1+1 unidirectional protection and provisionable bidirectional switching.

The OC48 IR/STM16 SH AS 1310 detects LOS, LOF, LOP, MS-AIS, and MS-FERF conditions. Refer to the *Cisco ONS 15454 SDH Installation and Operations Guide, R3.3* for a description of these conditions. The card also counts section and line BIT errors.

## OC48 IR/STM16 SH AS 1310 Card-Level Indicators

The OC48 IR/STM16 SH AS 1310 card has three card-level LED indicators.

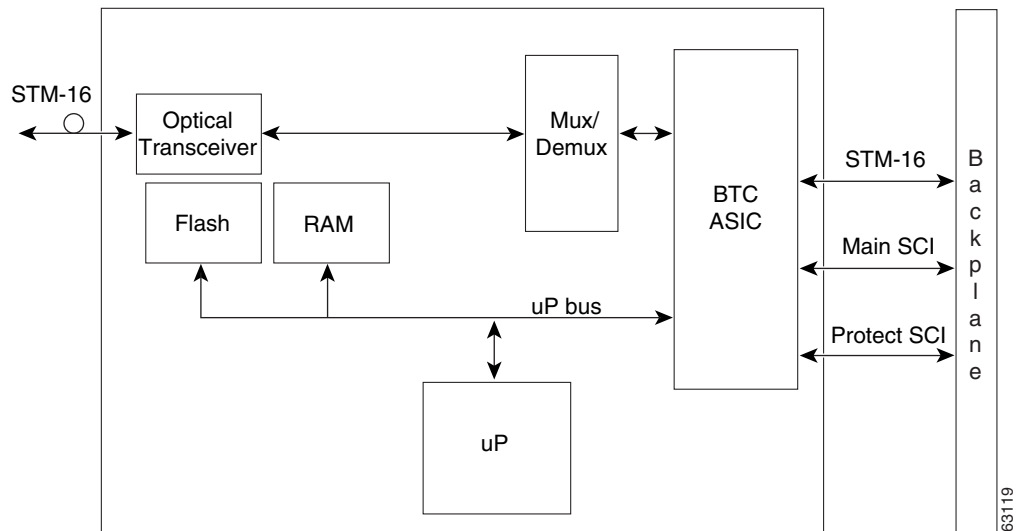

**Table 1** OC48 IR/STM16 SH AS 1310 Card-Level Indicators

Card-Level LEDs	Description
Red FAIL LED	The red FAIL LED indicates the card's processor is not ready. This LED is lit during Reset. The FAIL LED flashes during the boot process. Replace the card if the red FAIL LED persists.
Green ACT LED	The green ACT LED indicates that the OC48 IR/STM16 SH AS 1310 card is carrying traffic or is traffic-ready.
Yellow SF LED	The yellow SF LED indicates a signal failure or condition such as LOS, LOF, MS-AIS or high BERs on one or more of the card's ports. The Yellow SF LED also illuminates when the transmit and receive fibers are incorrectly connected. When the fibers are properly connected and the link is working, the light turns off.

## OC48 IR/STM16 SH AS 1310 Port-Level Indicators

You can find the status of the OC48 IR/STM16 SH AS 1310 card ports using the LCD screen on the ONS 15454 SDH fan tray assembly. Use the LCD to view the status of any port or card slot; the screen displays the number and severity of alarms for a given port or slot. Refer to the *Cisco ONS 15454 SDH Installation and Operations Guide, R3.3* for a complete description of the alarm messages.

Figure 2 OC48 IR/STM16 SH AS 1310 Block Diagram

**Warning**

Invisible laser radiation may be emitted from disconnected fibers or connectors. Do not stare into beams or view directly with optical instruments.

## OC48 IR/STM16 SH AS 1310 Card Specifications

- Line
  - Bit Rate: 2488.320 Mbits/s (Mbps)
  - Code: Scrambled NRZ
  - Fiber: 1310 nm Single Mode
  - Loopback Modes: Terminal and Facility
  - Connectors: SC
  - Compliance: ITU-T G.707, ITU-T G.957
- Transmitter
  - Max. Transmitter Output Power: 0 dBm
  - Min. Transmitter Output Power: -5 dBm
  - Center Wavelength: 1280 nm – 1350 nm
  - Nominal Wavelength: 1310nm
  - Transmitter: Distributed Feedback (DFB) Laser
- Receiver
  - Max. Receiver Level: 0 dBm at BER  $1 * 10^{-10}$
  - Min. Receiver Level: -18 dBm at BER  $1 * 10^{-10}$
  - Receiver: InGaAs InP photo detector
  - Link Loss Budget: 13 dB min.

- Environmental
  - Operating Temperature: -5 to +45 degrees Celsius
  - Operating Humidity: 5 to 95%, non-condensing
  - Power Consumption: 37.20 W, 0.78 A (AMPS) at -48V, 127.0 BTU/hr
- Dimensions
  - Height: 321.3 mm (12.650 in.)
  - Width: 18.2 mm (0.716 in.)
  - Depth: 228.6 mm (9.000 in.)
  - Depth with backplane connector: 235 mm (9.250 in.)
  - Weight not including clam shell: 0.9 kg (2.2 lb)
- Compliance
 

ONS15454 SDH optical cards, when installed in a system, comply with these standards:

  - Safety: IEC 60950, EN 60950, UL 60950, CSA C22.2 No. 60950, TS 001, AS/NZS 3260, IEC 60825-1, IEC 60825-2, 21 CFR 1040-10 and 21 CFR 1040.11.
  - Class I laser product

## Installation Procedures

Use this section if you are installing or removing the OC48 IR/STM16 SH AS 1310 card for the first time. After you become familiar with ONS 15454 SDH card installation and boot up, use this section as a reference.

### Caution

Always use the supplied electrostatic discharge (ESD) wristband when working with an ONS 15454 SDH. Plug the wristband cable into the ESD jack located on the lower right outside edge of the shelf assembly and ensure the shelf assembly is properly grounded.

### Caution

Hazardous voltage or energy may be present on the backplane when the system is operating. Use caution when servicing.

- Step 1** Open the card ejectors.
- Step 2** Carefully insert the card into the guide rails of the desired slot ([Figure 3 on page 6](#)).
- Step 3** Push the card into the connector on the back plane by closing the ejectors.

**Figure 3** Installing cards in an ONS 15454 SDH

## Card Turn Up

Follow the steps in this section to verify card turn up. If one or more of the Cisco Transport Controller (CTC) software screen conditions according to [“Verify Successful Turn Up of the OC48 IR/STM16 SH AS 1310 Card”](#) section on page 6 are not met, re-install the card. Replace the unit if the faulty state persists.

### Verify Successful Turn Up of the OC48 IR/STM16 SH AS 1310 Card

- 
- Step 1** Verify that power is applied to the shelf assembly.
  - Step 2** Verify that the OC48 IR/STM16 SH AS 1310 card has been installed in the correct slot.
  - Step 3** Verify that the card appears in the correct slot on the CTC software screen.
  - Step 4** Verify that the card is white on the CTC software screen.
  - Step 5** Verify that the card is shown in Inventory on the CTC software screen.
-

# Removal Procedures

Use this section if you are installing or removing the OC48 IR/STM16 SH AS 1310 card for the first time. After you become familiar with ONS 15454 SDH card installation and boot up, use this section as a reference.

## Caution

Always use the supplied electrostatic discharge (ESD) wristband when working with an ONS 15454 SDH. Plug the wristband cable into the ESD jack located on the lower right outside edge of the shelf assembly and ensure the shelf assembly is properly grounded.

## Caution

Hazardous voltage or energy may be present on the backplane when the system is operating. Use caution when servicing.

## Note

Traffic can be interrupted if you pull an active card from the ONS 15454 SDH. Use caution when replacing cards and verify that only inactive or standby cards are being replaced. If an active card needs to be replaced, follow the procedure to switch the electrical card to standby mode before you pull the card from the node.

## Reset an STM-N Card

## Note

An STM-N reset can cause a linear 1+1 STM-N protection switch or an MSSPRing protection switch.

## Note

Traffic can be interrupted if you pull an active card from the ONS 15454 SDH. Use caution when replacing cards and verify that only inactive or standby cards are being replaced. If an active card needs to be replaced, follow the procedure to switch the STM-N card to standby mode before you pull the card from the node.

## Warning

**Class I (21 CFR 1040.10 and 1040.11) and Class 1M (IEC 60825-1 2001-01) laser products.**

## Warning

**Invisible laser radiation may be emitted from the end of the unterminated fiber cable or connector. Do not stare into the beam or view directly with optical instruments. Viewing the laser output with certain optical instruments (for example, eye loupes, magnifiers, and microscopes) within a distance of 100 mm may pose an eye hazard. Use of controls or adjustments or performance of procedures other than those specified may result in hazardous radiation exposure.**

The STM-N card should be replaced if a red FAIL LED appears.

Take these precautions before initiating an STM-N card reset to avoid causing a linear 1+1 or MSSPRing protection switch:

### Step 1

Ensure that the working (active) span is active on the local and remote nodes.

- Step 2** Ensure that the working (active) span is carrying error-free traffic without FAIL alarms or SF alarms.
- Step 3** Perform a lockout on the protection span in the CTC software before initiating an STM-N card reset. In an MSSPRing, place a lockout on the East and West node cards adjacent to the XC10-G switch node. For example, if you are switching the XC10-G on Node B, place a lockout on the Node A West card and on the Node C East card. You do not need to place lockouts on Node B. Before setting the lockout, verify that the MSSPRing is not switched. Traffic can be lost if the MSSPRing is switched when the lockout is set.

<-----East [Node A] West-----East [Node B] West-----East [Node C] West----->

In a 1+1 protection scheme, place a lockout on the protect card and verify that traffic is traveling over the working span before setting the lockout.

## Replace an In-Service STM-N Card

**Caution**

Hazardous voltage or energy may be present on the backplane when the system is operating. Use caution when servicing.

- Step 1** In the CTC software, determine which STM-N card is active.

**Note**

You can determine whether the card is in active mode or standby mode by viewing it in the CTC software and positioning the cursor over the card graphic to display the status.

- Step 2** Switch the active STM-N card to standby:
  - a. In the node view, select the **Maintenance > STM Cards** tabs.
  - b. From the Cross Connect Cards menu, choose **Switch**.
  - c. Click **Yes** on the Confirm Switch dialog box.

**Note**

After the working STM-N card goes into protection, the protection slot becomes working. This causes the former working card ACT LED to switch off.

- Step 3** Pull the protection STM-N card from the ONS 15454 SDH.
- Step 4** Insert the replacement STM-N card into the empty slot. The replacement card boots up and becomes ready for service after approximately one minute. After this procedure the card is ready for protection function.

- DOC-7813037= *Cisco ONS 15454 SDH Troubleshooting and Reference Guide*

# Obtaining Documentation

The following sections explain how to obtain documentation from Cisco Systems.

## World Wide Web

You can access the most current Cisco documentation on the World Wide Web at the following URL:

<http://www.cisco.com>

Translated documentation is available at the following URL:

[http://www.cisco.com/public/countries\\_languages.shtml](http://www.cisco.com/public/countries_languages.shtml)

## Documentation CD-ROM

Cisco documentation and additional literature are available in a Cisco Documentation CD-ROM package, which is shipped with your product. The Documentation CD-ROM is updated monthly and may be more current than printed documentation. The CD-ROM package is available as a single unit or through an annual subscription.

## Ordering Documentation

Cisco documentation is available in the following ways:

- Registered Cisco Direct Customers can order Cisco product documentation from the Networking Products MarketPlace:  
[http://www.cisco.com/cgi-bin/order/order\\_root.pl](http://www.cisco.com/cgi-bin/order/order_root.pl)
- Registered Cisco.com users can order the Documentation CD-ROM through the online Subscription Store:  
<http://www.cisco.com/go/subscription>
- Nonregistered Cisco.com users can order documentation through a local account representative by calling Cisco corporate headquarters (California, USA) at 408 526-7208 or, elsewhere in North America, by calling 800 553-NETS (6387).

## Documentation Feedback

If you are reading Cisco product documentation on Cisco.com, you can submit technical comments electronically. Click **Leave Feedback** at the bottom of the Cisco Documentation home page. After you complete the form, print it out and fax it to Cisco at 408 527-0730.

You can e-mail your comments to [bug-doc@cisco.com](mailto:bug-doc@cisco.com).

To submit your comments by mail, use the response card behind the front cover of your document, or write to the following address:

Cisco Systems  
Attn: Document Resource Connection  
170 West Tasman Drive  
San Jose, CA 95134-9883

We appreciate your comments.

## Obtaining Technical Assistance

Cisco provides Cisco.com as a starting point for all technical assistance. Customers and partners can obtain documentation, troubleshooting tips, and sample configurations from online tools by using the Cisco Technical Assistance Center (TAC) Web Site. Cisco.com registered users have complete access to the technical support resources on the Cisco TAC Web Site.

### Cisco.com

Cisco.com is the foundation of a suite of interactive, networked services that provides immediate, open access to Cisco information, networking solutions, services, programs, and resources at any time, from anywhere in the world.

Cisco.com is a highly integrated Internet application and a powerful, easy-to-use tool that provides a broad range of features and services to help you to

- Streamline business processes and improve productivity
- Resolve technical issues with online support
- Download and test software packages
- Order Cisco learning materials and merchandise
- Register for online skill assessment, training, and certification programs

You can self-register on Cisco.com to obtain customized information and service. To access Cisco.com, go to the following URL:

<http://www.cisco.com>

### Technical Assistance Center

The Cisco TAC is available to all customers who need technical assistance with a Cisco product, technology, or solution. Two types of support are available through the Cisco TAC: the Cisco TAC Web Site and the Cisco TAC Escalation Center.

Inquiries to Cisco TAC are categorized according to the urgency of the issue:

- Priority level 4 (P4)—You need information or assistance concerning Cisco product capabilities, product installation, or basic product configuration.
- Priority level 3 (P3)—Your network performance is degraded. Network functionality is noticeably impaired, but most business operations continue.
- Priority level 2 (P2)—Your production network is severely degraded, affecting significant aspects of business operations. No workaround is available.
- Priority level 1 (P1)—Your production network is down, and a critical impact to business operations will occur if service is not restored quickly. No workaround is available.

Which Cisco TAC resource you choose is based on the priority of the problem and the conditions of service contracts, when applicable.

## Cisco TAC Web Site

The Cisco TAC Web Site allows you to resolve P3 and P4 issues yourself, saving both cost and time. The site provides around-the-clock access to online tools, knowledge bases, and software. To access the Cisco TAC Web Site, go to the following URL:

<http://www.cisco.com/tac>

All customers, partners, and resellers who have a valid Cisco services contract have complete access to the technical support resources on the Cisco TAC Web Site. The Cisco TAC Web Site requires a Cisco.com login ID and password. If you have a valid service contract but do not have a login ID or password, go to the following URL to register:

<http://www.cisco.com/register/>

If you cannot resolve your technical issues by using the Cisco TAC Web Site, and you are a Cisco.com registered user, you can open a case online by using the TAC Case Open tool at the following URL:

<http://www.cisco.com/tac/caseopen>

If you have Internet access, it is recommended that you open P3 and P4 cases through the Cisco TAC Web Site.

## Cisco TAC Escalation Center

The Cisco TAC Escalation Center addresses issues that are classified as priority level 1 or priority level 2; these classifications are assigned when severe network degradation significantly impacts business operations. When you contact the TAC Escalation Center with a P1 or P2 problem, a Cisco TAC engineer will automatically open a case.

To obtain a directory of toll-free Cisco TAC telephone numbers for your country, go to the following URL:

<http://www.cisco.com/warp/public/687/Directory/DirTAC.shtml>

Before calling, please check with your network operations center to determine the level of Cisco support services to which your company is entitled; for example, SMARTnet, SMARTnet Onsite, or Network Supported Accounts (NSA). In addition, please have available your service agreement number and your product serial number.

This document is to be used in conjunction with the documents listed in the “Related Documentation” section.
