

## Application Note

# Cisco Router and Security Device Manager **Role-Based Access**

## Introduction

This document gives an example of how to restrict user access to a set of operational commands and configuration capabilities.

## Role-Based CLI Access

The Role-Based CLI Access feature of Cisco IOS® Software allows the network administrator to define “views,” which are a set of operational commands and configuration capabilities that provide selective or partial access to Cisco IOS EXEC and configuration (config) mode commands. Views restrict user access to Cisco IOS command-line interface (CLI) and configuration information; that is, a view can define what commands are accepted and what configuration information is visible. Thus, network administrators can exercise better control over access to Cisco Systems® networking devices.

## Role-Based Access Supported by Cisco Router and Security Device Manager

The Cisco® Router and Security Device Manager (SDM) can create and delete four predefined views for Cisco SDM users: SDM\_Administrator(root), SDM\_Monitor, SDM\_Firewall, and SDM\_EasyVPN\_Remote.

- SDM\_Administrator(root)—A user associated to this view type has complete access to the Cisco SDM, and can perform all operations supported by the Cisco SDM.
- SDM\_Monitor—A user associated to this view type can monitor all the features supported by the Cisco SDM, but cannot deliver configurations using the Cisco SDM. The user can navigate the various areas of Cisco SDM, such as the Interfaces and Connections, Firewall, and VPN features. However, the user interface components in these areas are disabled.
- SDM\_Firewall—A user associated to this view type can use the Cisco SDM Firewall and Monitor features. The user can configure firewalls and access control lists (ACLs) using the Firewall wizard, Firewall Policy View, Inspect Rule Editor, and the ACL Editor. The user can associate or disassociate ACLs and Inspect rules from Interfaces and Connections; user interface components in other areas are disabled for this user.
- SDM\_EasyVPN\_Remote—A user associated to this view type can use the Cisco SDM Easy VPN Remote features. The user can create Easy VPN Remote connections and edit them. User interface components in other areas are disabled for this user.

A user associated to a user-defined view (or the Cisco SDM predefined view called “none”) can invoke the Cisco SDM if the user-defined view contains the minimal set of commands required by the Cisco SDM. However, the Cisco

SDM maps the view to the SDM\_Monitor view based on the commands available in the user-defined view, and the Cisco SDM is launched as read-only mode.

### **Deployment Scenario**

In this scenario, create a security operator to configure a firewall and monitor routers.

### **Sample Configuration**

#### **Prerequisites**

Before creating a view, ensure the following prerequisites are met:

- The “enable” password must exist.
- Authentication, authorization, and accounting (AAA) dependency—If the router runs a Cisco IOS Software release prior to Release 12.3(11)T, AAA must be enabled and authentication and authorization must be properly configured.
- To configure a view, the user must access the root view, which is available only to privilege-level 15 users.

#### **CLI View Configuration**

The sample configuration includes the configuration of the view (View\_Security) for security operators and new user (secOP) creation; the prerequisites configurations are not covered in this sample configuration.

The CLI View configuration requires extensive knowledge of the Cisco IOS CLIs used to configure access rules, inspection rules, and show commands to display firewall rules, firewall status, router configuration, and router status.

### **Cisco SDM Role-Based Access**

Cisco SDM facilitates role-based access by providing four predefined views; each view is named with its main operational commands and configuration capabilities, so you can easily associate a user to a view.

### **Deployment Scenarios**

This document demonstrates how to configure a user associated to a view, how to edit a user associated to a view. Two users have been configured to associated with views, sdmadmin is associated to SDM\_Administrator(root) with privilege level 1, sdmvpn is associated to SDM\_EasyVPN\_Remote with privilege level 15.

The scenarios include adding new user account sdmOP associated to SDM\_Firewall with privilege level 1, and editing sdmvpn to have privilege level 1.

### **Configuring User Accounts and Associating the Users to Views**

Launch the Cisco SDM as the privilege-level 15 user or a user associated to SDM\_Administrator(root) to perform router access configuration<sup>1</sup>. In this scenario, log on as user sdmadmin.

At *Configure Mode*, select *Additional Tasks*, expand *Router Access*, and select *User Account/View* (Figure 1).

---

<sup>1</sup> If a user is not configured with a view, the Cisco SDM places the user in the privilege level. If a user is configured with a view as well as a privilege level in the user database, the view takes precedence over the privilege level.

Figure 1. Configure User Accounts for Router Access

User Name	Password	Privilege Level	View Name
sdmadmin	*****	1	SDM_Administrator(root)
cisco	*****	15	<None>
sdmvpn	*****	15	SDM_EasyVPN_Remote

Click *Add* to launch the *Add a Username* screen.

To configure a security operator (Figure 2), enter the following:

- The username is *secOP*.
- The password is *secOP123*.
- Check *Encrypt password using MD5 hash algorithm*.
- The privilege level is *1*.
- Check *Associate a view with the user*.
- The view name is *SDM\_Firewall*.
- (Optional) Click *View Details...* to see the commands included in the view (Figure 3).
- Click *OK*.

Note: If you are associating a non-SDM\_Administrator(root) view to any user for the first time, you will be prompted to enter the view password; in this scenario, the view password is *security123* (Figure 4). For associating the SDM\_Administrator(root) to any user, the view password is requested only if the enable secret password is not configured on the router.

Figure 2. Add a Username

Enter the Username and Password

Username:

Password:

New Password:

Confirm New Password:

Encrypt password using MD5 hash algorithm

Privilege Level:

Associate a View with the user

View Name:

This View uses the SDM\_Administrator(root) view password for the firewall and Monitor feature. Click on View to see details about this view.

Figure 3. View Details

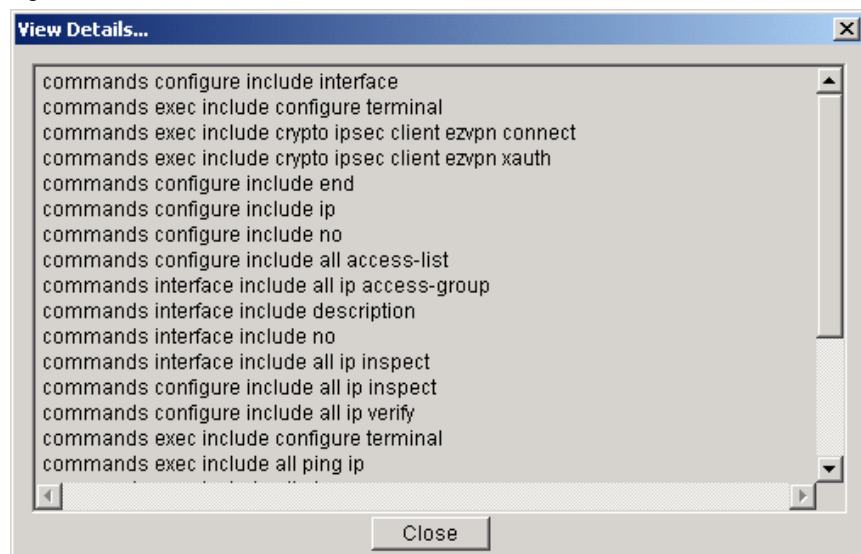

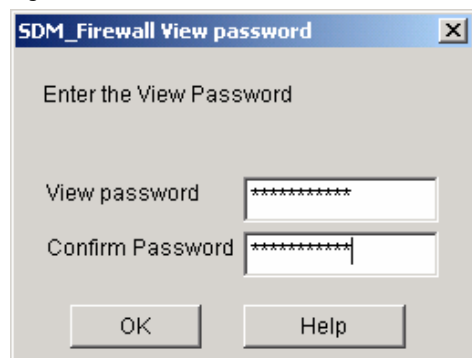

Figure 4. View Password

Click **OK** to deliver the configuration.

After finishing the task, go to *Configure Mode*, select *Additional Tasks*, expand *Router Access*, and select *User Account/View* (Figure 5).

The Cisco SDM creates a view, *SDM\_Firewall*, and associates the new user, *secOP*, to the view.

**Figure 5. User Account CLI View**

The screenshot shows the Cisco SDM interface in 'Configure Mode'. The 'Additional Tasks' pane is expanded to 'Router Access' > 'User AccountView'. The main area displays a table titled 'Configure User Accounts for Router Access' with columns for User Name, Password, Privilege Level, and View Name. The table contains four entries: sdmadmin (privilege 1, view SDM\_Administrator(root)), secOP (privilege 1, view SDM\_Firewall), cisco (privilege 15, view <None>), and sdmvpn (privilege 15, view SDM\_EasyVPN\_Remote). Buttons for 'Add...', 'Edit...', and 'Delete' are visible at the top right of the table.

User Name	Password	Privilege Level	View Name
sdmadmin	*****	1	SDM_Administrator(root)
secOP	*****	1	SDM_Firewall
cisco	*****	15	<None>
sdmvpn	*****	15	SDM_EasyVPN_Remote

## Edit User Account

In this scenario, change the password and privilege level of user *sdmvpn* (Figure 6) from 15 to 1.

At *Configure Mode*, select *Additional Tasks*, expand *Router Access*, and select *User Account/View*.

To edit user *sdmvpn*, do the following:

- Select *sdmvpn*.
- Click *Edit*; the *Edit a Username* window pops up.
- The new password is *ilikesdm*.
- Enter *ilikesdm* again to confirm password.
- The privilege level is *1*.
- Click *OK*.

Note: If you are prompted with a Cisco SDM Warning message, look at the message, and click *Yes*.

Figure 6. Edit a Username

Enter the Username and Password

Username:

Password

Password:

New Password:

Confirm New Password:

Encrypt password using MD5 hash algorithm

Privilege Level:

Associate a View with the user

View Name:

This View user is authorized to use only Easy VPN and Monitor feature in SDM.  
Click on View Details button to know more about this vi

## Verification

Log on as user *secOP*, who is allowed to configure firewall and monitor router configuration and status. On the bottom of the browser window, the status bar shows what view the user can access; in this scenario, you should see “Active View: see SDM\_Firewall”.

## Configuration, Editing, and Monitoring

At the *Configure Mode/Firewall and ACL* screen, *Create Firewall* and *Edit Firewall Policy/ACL* (Figure 7) are enabled for *secOP* to configure a firewall.

Figure 7. Create Firewall and Edit Firewall Policy and ACL

The screenshot displays the Cisco SDM interface for configuring a firewall. The top section shows the 'Create Firewall' wizard with 'Basic Firewall' selected. The bottom section shows the 'Edit Firewall Policy / ACL' screen with a traffic flow diagram and a table of services.

**Use Case Scenario Diagram:**

```
graph LR
    subgraph Inside
        direction TB
        I1[1 - n Inside]
        I2[ ]
    end
    subgraph Outside
        direction TB
        O1[One Outside]
    end
    I1 --- F[Firewall]
    F --- O1
    O1 --- Internet[Internet]
```

**IOS Firewall Configuration:**

IOS Firewall : Active (from FastEthernet0/0 to Serial0/0.1)

**Firewall Feature Availability:** Available **Access Rule:** 100 **Inspection Rule:** DEFAULT100

Action	Source	Destination	Service	Log	Option	Description
Deny	12.1.1.0/0.0.0.255	any	ftp	ip		
Deny	255.255.255.255	any	ftp	ip		
Deny	127.0.0.0/0.255.2	any	ftp	ip		
Permit	any	any	ftp	ip		

**Applications Table:**

Application Protocol	Description
cuseeme	CUseSee Protocol
ftp	File Transfer Protocol
h323	H.323 Protocol (e.g., MS NetMeeting, Intel Video Phone)
netshow	Microsoft NetShow Protocol
rcmd	R commands (f-exec, r-login, r-sh)

At the *Configure Mode/Interfaces and Connections* screen, functions on *Create Connection* are disabled (Figure 8); all functions<sup>2</sup> are disabled (Figure 9) except Edit (Figure 10) on the *Edit Interface/Connection* screen [CORRECT?].

Figure 8. Create Connection

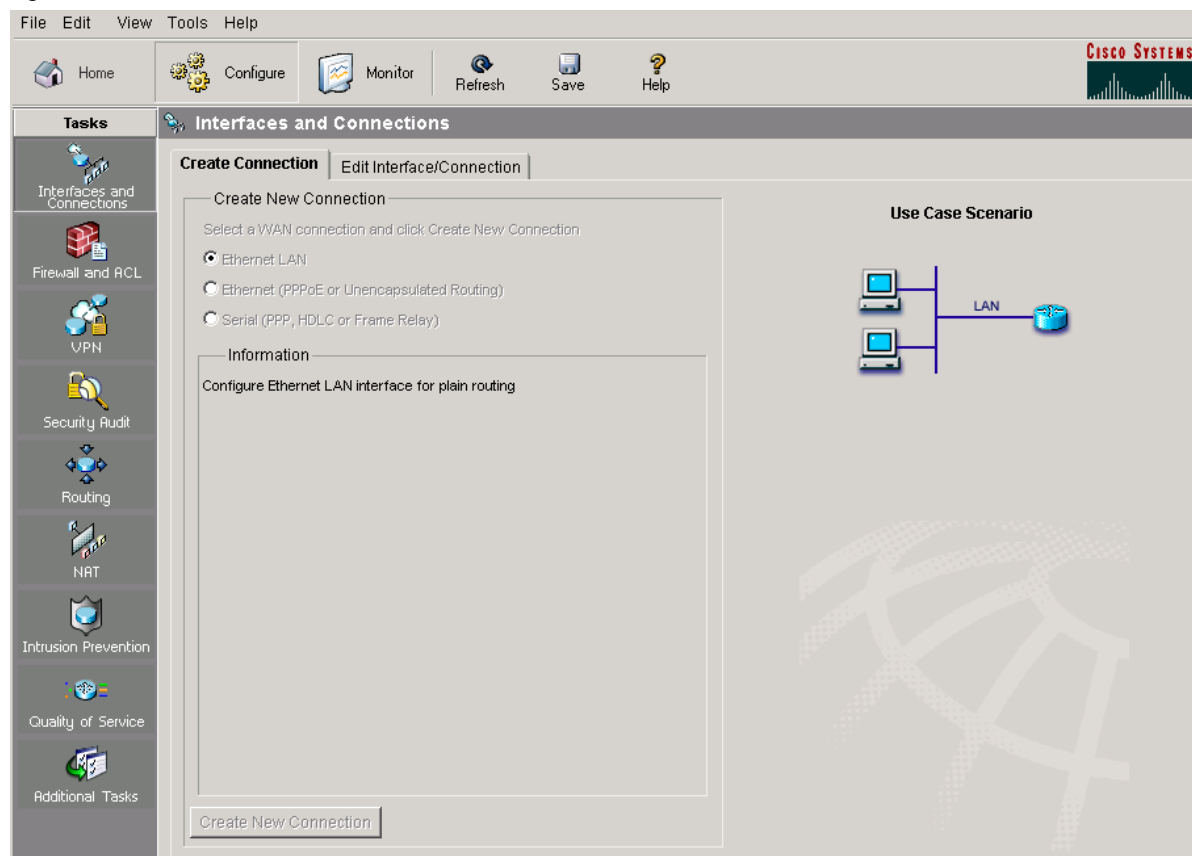

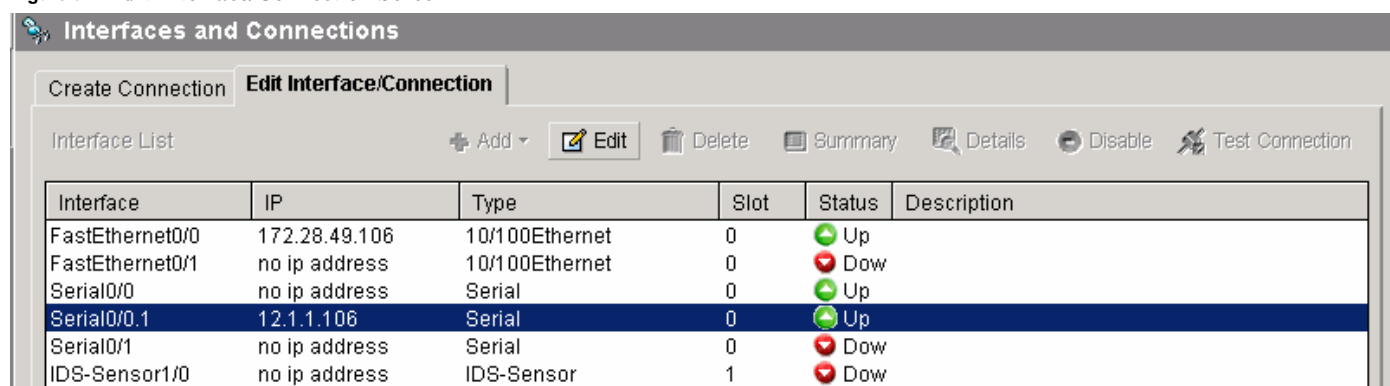

Figure 9. Edit Interface/Connection Screen

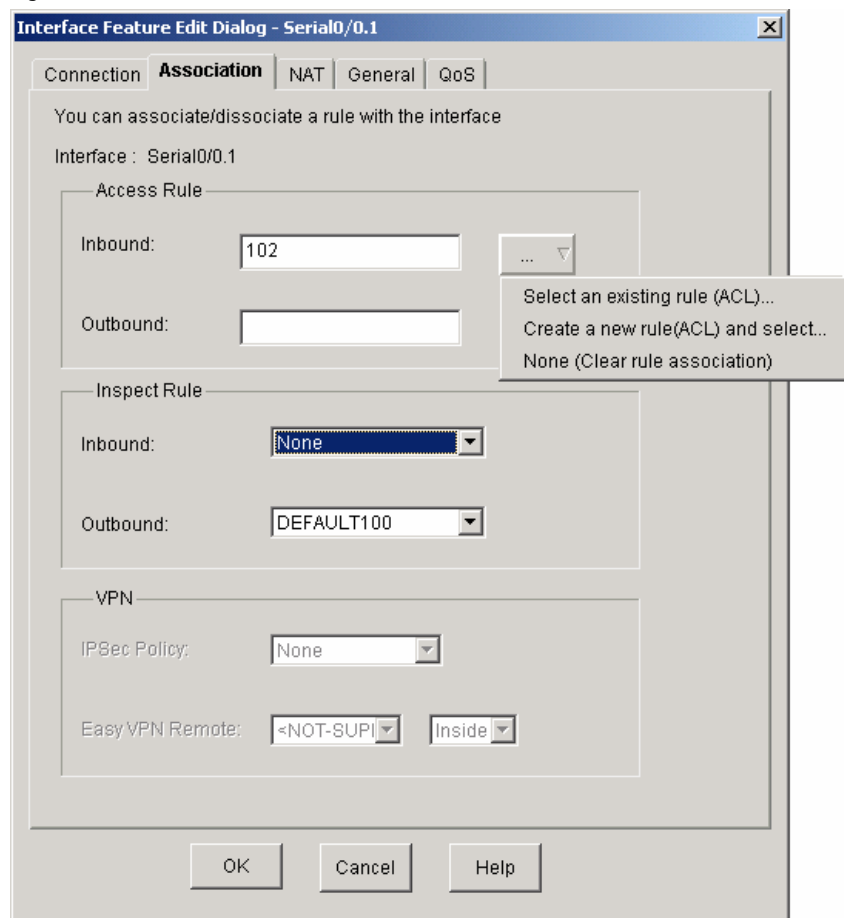

Users can associate and disassociate access rules and inspection rules to interfaces.

<sup>2</sup> The Edit button is not disabled; users can use it to display interface features; the interface editing capabilities are disabled.

Figure 10. Edit Interface/Connection -> Edit -> Association

In summary, by using the Cisco SDM, users can conduct the same Role-Based CLI Access configuration easily and quickly without a comprehensive knowledge of the Cisco IOS CLI.
