

# **AsyncOS for Web 7.5.0**

Build 7.5.0-810

Revised: July 25, 2012

## ***Known Limitations Fixed in Hot Patch 2***

**Fixed: Access logs may have erroneously omitted a hyphen (-) for the MIME type in some cases**

Previously, the access logs may have erroneously omitted a hyphen (-) for the MIME type when the server returned either no Content-Type header, or a Content-Type header with an empty value. This no longer occurs. Now, the access logs include a hyphen (-) when the server omits MIME type information. [Defect ID: 86521]
