

APPENDIX **B**

Configuration Limits for Cisco NX-OS Interfaces

The features supported by NX-OS have maximum configuration limits. For some of the features, we have verified configurations that support limits less than the maximum. [Table B-1](#) lists the Cisco verified limits and maximum limits for switches running NX-OS Release 4.0.

Table B-1 Cisco NX-OS Release 4.0 Configuration Limits

Feature	Maximum Limit
VLANs per VDC	4000
Port channels per device	192
