

## V Commands

---

This chapter describes the Cisco NX-OS system management commands that begin with the letter V.

**verify**

**Send document comments to [nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com).**

## verify

To verify the commands in the configuration session, use the **verify** command.

**verify [verbose]**

<b>Syntax Description</b>	<b>verbose</b>	(Optional) Verifies the current configuration session and displays more details on the results.
---------------------------	----------------	---

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	Session configuration
----------------------	-----------------------

<b>SupportedUserRoles</b>	network-admin vdc-admin
---------------------------	----------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(1)	This command was introduced.

<b>Usage Guidelines</b>	This command does not require a license.
-------------------------	--

<b>Examples</b>	This example shows how to verify a configuration session:
	<pre>switch# configure session myACLs switch(config-s)# verify switch(config-s)# </pre>

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>commit</b>	Commits the commands in the configuration session.
	<b>abort</b>	Deletes the session and exists session configuration mode.

## version 5

To configure version 5 for the NetFlow exporter, use the **version 5** command. To remove the version 5 configuration, use the **no** form of this command.

**version 5**

**no version 5**

---

**Syntax Description** This command has no arguments or keywords.

---

**Defaults** None

---

**Command Modes** NetFlow exporter configuration (config-flow-exporter)

---

**SupportedUserRoles** network-admin  
vdc-admin

---

Command History	Release	Modification
	4.0(1)	This command was introduced.

---

---

**Usage Guidelines** The default NetFlow exporter version is 5.

If you remove the version 5 configuration, the NetFlow exporter defaults to version 9.

This command does not require a license.

---

**Examples** This example shows how to configure the NetFlow exporter version to version 5:

```
switch(config)# flow exporter Netflow-Exporter-1
switch(config-flow-exporter)# version 5
switch(config-flow-exporter-version-5)#
```

This example shows how to remove the version 5 configuration, which causes the NetFlow exporter to default to version 9:

```
switch(config-flow-exporter-version-5)# no version 5
switch(config-flow-exporter)#
```

---

**Related Commands**

---

Command	Description
<b>show flow exporter</b>	Displays information about NetFlow exporters.
<b>version 9</b>	Configures the NetFlow exporter to version 9.

---

**version 9**

**Send document comments to [nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com).**

## version 9

To specify the export version 9 and enter the export version configuration mode, use the **version 9** command.

**version 9**

**no version 9**

**Syntax Description** This command has no arguments or keywords.

**Defaults** Flow exporters are not present in the configuration until you create them.

**Command Modes** Flow export configuration

**SupportedUserRoles** network-admin  
vdc-admin

Command History	Release	Modification
	4.0(1)	This command was introduced.

**Usage Guidelines** Flow exporters export the data in the flow monitor cache to a remote system, such as a server running NetFlow collector, for analysis and storage. Flow exporters are created as separate entities in the configuration. Flow exporters are assigned to flow monitors to provide data export capability for the flow monitors. You can create several flow exporters and assign them to one or more flow monitors to provide several export destinations. You can create one flow exporter and apply it to several flow monitors.

Once you enter the flow exporter configuration mode, the prompt changes to the following:

```
switch(config-flow-exporter) #
```

Within the flow exporter configuration mode, you can enter the version 9 keywords. Once you enter the **version 9** keywords, the prompt changes to the following:

```
switch(config-flow-exporter-version-9) #
```

When entering the **no** form of this command, the *seconds* argument is optional.

This command does not require a license.

**Examples** This example shows how to specify the name of the flow exporter that is created or modified.

```
switch(config)# flow exporter flow-export-test
switch(config-flow-exporter)# version 9
switch(config-flow-exporter-version-9) #
```

**Send document comments to [nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com).**

This example shows how to specify the version 9 exporter statistics option templates and data:

```
switch(config)# flow exporter flow-export-test
switch(config-flow-exporter)# version 9
switch(config-flow-exporter-version-9)# exporter-stats
```

This example shows how to specify the version 9 interface table option templates and data:

```
switch(config)# flow exporter flow-export-test
switch(config-flow-exporter)# version 9
switch(config-flow-exporter-version-9)# interface-table
```

This example shows how to specify the version 9 interface table option templates and data:

```
switch(config)# flow exporter flow-export-test
switch(config-flow-exporter)# version 9
switch(config-flow-exporter-version-9)# sampler-table
```

This example shows how to specify the option resend time in seconds:

```
switch(config)# flow exporter flow-export-test
switch(config-flow-exporter)# version 9
switch(config-flow-exporter-version-9)# timeout 32
```

This example shows how to specify the data template:

```
switch(config)# flow exporter flow-export-test
switch(config-flow-exporter)# version 9
switch(config-flow-exporter-version-9)# template data
```

#### Related Commands

Command	Description
<b>flow exporter</b>	Creates a flow exporter.
<b>flow monitor</b>	Creates a flow monitor.
<b>flow record</b>	Creates a flow record.
<b>sampler</b>	Creates a flow sampler.

## vrf

To configure a virtual routing and forwarding (VRF) instance for Encapsulated Remote Switched Port Analyzer (ERSPAN) traffic forwarding in both the source and destination, use the **vrf** command.

**vrf {vrf\_name} | {[default | foo]}**

Syntax Description	<b>vrf_name</b> Name of the VRF. The VRF name can be any case-sensitive, alphanumeric string up to 32 characters. <b>default</b> (Optional) Specifies the VRF name as the default. <b>foo</b> (Optional) Specifies the VRF name as foo.
--------------------	---

Defaults	None
----------	------

Command Modes	config-erspan-src config-erspan-dst
---------------	--

SupportedUserRoles	network-admin network-operator
--------------------	-----------------------------------

Command History	Release	Modification
	5.1(1)	This command was introduced.

Usage Guidelines	This command does not require a license.
------------------	--

Examples	This example shows how to configure a VRF instance for the ESRSPAN source:
----------	--

```
switch# configure terminal
switch(config)# monitor session 5 type erspan-source
switch(config-erspan-src)# vrf default
switch(config-erspan-src)#

```

This example shows how to configure a VRF instance for the ESRSPAN destination:

```
switch# configure terminal
switch(config)# monitor session 2 type erspan-destination
switch(config-erspan-dst)# vrf default
switch(config-erspan-dst)#

```

**Send document comments to [nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com).**

Related Commands	Command	Description
	<b>ip ttl</b>	Applies an access control group to an ERSPAN source session.
	<b>monitor-session</b>	Enters the monitor configuration mode for configuring an ERSPAN or SPAN session for analyzing traffic between ports.

■ vrf
