

CHAPTER 1

Introduction to Routing Messages

This chapter includes the following sections:

- [Overview, page 1-1](#)
- [Routing Messages, page 1-1](#)

Overview

This reference includes routing messages and recovery procedures for the Cisco Nexus platforms. The messages are listed in alphabetical order by the system facility that produces them. Within each system facility section, messages are listed alphabetically by mnemonics. Each system message is followed by an explanation and a recommended action.

Routing Messages

The following example shows a typical routing message:

Error Message AM-2-API_INIT Format: Failed to initialize %s API

Explanation An unrecoverable software error has occurred during the AM initialization.

Recommended Action Use 'reload' command to reload the system. Be aware that this problem affects all VDCs on the system.

This section includes the following topics:

- [Error Message, page 1-2](#)
- [Explanation, page 1-2](#)
- [Recommended Action, page 1-2](#)

Send document comments to nexus7k-docfeedback@cisco.co

Error Message

States the message.

Explanation

Provides an explanation of the message.

Recommended Action

Provides an action to take.
