

## Supported MIBs

---

This appendix lists the supported management information base (MIBs) for this release on the Catalyst 2960 switch. It contains these sections:

- [MIB List, page A-1](#)
- [Using FTP to Access the MIB Files, page A-4](#)

## MIB List

- BRIDGE-MIB

---

**Note** The BRIDGE-MIB supports the context of a single VLAN. By default, SNMP messages using the configured community string always provide information for VLAN 1. To obtain the BRIDGE-MIB information for other VLANs, for example VLAN x, use this community string in the SNMP message: configured community string @x.

## Using FTP to Access the MIB Files

You can get each MIB file by using this procedure:

---

**Step 1** Make sure that your FTP client is in passive mode.

---

**Note** Some FTP clients do not support passive mode.

---

**Step 2** Use FTP to access the server **ftp.cisco.com**.

**Step 3** Log in with the username **anonymous**.

**Step 4** Enter your e-mail username when prompted for the password.

**Step 5** At the `ftp>` prompt, change directories to **/pub/mibs/v1** and **/pub/mibs/v2**.

**Step 6** Use the **get *MIB\_filename*** command to obtain a copy of the MIB file.
