

## Boot Loader Commands

---

This appendix describes the boot loader commands on the Catalyst 3750 switches. Unless otherwise noted, the term *switch* refers to a standalone switch and to a switch stack.

During normal boot loader operation, you are not presented with the boot loader command-line prompt. You gain access to the boot loader command line if the switch is set to manually boot, if an error occurs during power-on self test (POST) DRAM testing, or if an error occurs while loading the operating system (a corrupted IOS image). You can also access the boot loader if you have lost or forgotten the switch password.

### Note

The default configuration for Catalyst 3750 switches allows an end user with physical access to the switch to recover from a lost password by interrupting the boot process while the switch is powering up and then entering a new password. The password recovery disable feature allows the system administrator to protect access to the switch password by disabling part of this functionality and allowing the user to interrupt the boot process only by agreeing to set the system back to the default configuration. With password recovery disabled, the user can still interrupt the boot process and change the password, but the configuration file (`config.text`) and the VLAN database file (`vlan.dat`) are deleted. For more information, refer to the software configuration guide for this release.

You can access the boot loader through a switch console connection at 9600 bps. Unplug the switch power cord, and press the switch **Mode** button while reconnecting the power cord. You can release the **Mode** button a second or two after the LED above port IX goes off. You should then see the boot loader *Switch:* prompt. The boot loader performs low-level CPU initialization, performs POST, and loads a default operating system image into memory.

# boot

Use the **boot** boot loader command to load and boot an executable image and to enter the command-line interface.

```
boot [-post | -n | -p | flag] filesystem:/file-url ...
```

## Syntax Description

<b>-post</b>	(Optional) Run the loaded image with an extended or comprehensive power-on self-test (POST). Using this keyword causes POST to take longer to complete.
<b>-n</b>	(Optional) Pause for the IOS debugger immediately after launching.
<b>-p</b>	(Optional) Pause for the JTAG debugger right after loading the image.
<i>filesystem:</i>	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.
<i>/file-url</i>	(Optional) Path (directory) and name of a bootable image. Separate image names with a semicolon.

## Defaults

The switch attempts to automatically boot the system by using information in the BOOT environment variable. If this variable is not set, the switch attempts to load and execute the first executable image it can by performing a recursive, depth-first search throughout the Flash file system. In a depth-first search of a directory, each encountered subdirectory is completely searched before continuing the search in the original directory.

## Command Modes

Boot loader

## Command History

Release	Modification
12.1(11)AX	This command was first introduced.

## Usage Guidelines

When you enter the **boot** command without any arguments, the switch attempts to automatically boot the system by using the information in the BOOT environment variable, if any. If you supply an image name for the *file-url* variable, the **boot** command attempts to boot the specified image.

When you set boot loader **boot** command options, they are executed immediately and apply only to the current boot loader session. These settings are not saved for the next boot operation.

Filenames and directory names are case sensitive.

## Examples

This example shows how to boot the switch using the *new-image.bin* image:

```
switch: boot flash:/new-images/new-image.bin
```

After entering this command, you are prompted to start the setup program.

Related Commands	Command	Description
	<a href="#">set</a>	Sets the BOOT environment variable to boot a specific image when the <b>BOOT</b> keyword is appended to the command.

# cat

Use the **cat** boot loader command to display the contents of one or more files.

```
cat filesystem:/file-url ...
```

Syntax Description	filesystem:	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.
	/file-url	Path (directory) and name of the files to display. Separate each filename with a space.

Command Modes	Boot loader
---------------	-------------

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

Usage Guidelines	<p>Filenames and directory names are case sensitive.</p> <p>If you specify a list of files, the contents of each file is sequentially displayed.</p>
------------------	--

Examples	This example shows how to display the contents of two files:
----------	--

```
switch: cat flash:/new-images/info flash:env_vars
version_suffix: i5q312-121-11.AX
version_directory: c3750-i5q312-mz.121-11.AX
image_name: c3750-i5q312-mz.121-11.AX.bin
ios_image_file_size: 3049472
total_image_file_size: 4551168
image_feature: LAYER_3|MIN_DRAM_MEG=64
image_family: C3750
info_end:
BAUD=57600
MANUAL_BOOT=no
```

Related Commands	Command	Description
	<a href="#">more</a>	Displays the contents of one or more files.
	<a href="#">type</a>	Displays the contents of one or more files.

# copy

Use the **copy** boot loader command to copy a file from a source to a destination.

```
copy [-b block-size] filesystem:/source-file-url filesystem:/destination-file-url
```

Syntax Description		
<b>-b</b> <i>block-size</i>	(Optional)	This option is used only for internal development and testing.
<i>filesystem:</i>	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.	
<i>/source-file-url</i>	Path (directory) and filename (source) to be copied.	
<i>/destination-file-url</i>	Path (directory) and filename of the destination.	

**Defaults** The default block size is 4 KB.

**Command Modes** Boot loader

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

**Usage Guidelines**

Filenames and directory names are case sensitive.

Directory names are limited to 45 characters between the slashes (/); the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

Filenames are limited to 45 characters; the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

If you are copying a file to a new directory, the directory must already exist.

**Examples**

This example show how to copy a file at the root:

```
switch: copy flash:test1.text flash:test4.text
.
```

File "flash:test1.text" successfully copied to "flash:test4.text"

You can verify that the file was copied by entering the **dir** *filesystem:* boot loader command.

Related Commands	Command	Description
	<a href="#">delete</a>	Deletes one or more files from the specified file system.

# delete

Use the **delete** boot loader command to delete one or more files from the specified file system.

```
delete filesystem:file-url ...
```

## Syntax Description

<i>filesystem:</i>	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.
<i>file-url</i>	Path (directory) and filename to delete. Separate each filename with a space.

## Command Modes

Boot loader

## Command History

Release	Modification
12.1(11)AX	This command was first introduced.

## Usage Guidelines

Filenames and directory names are case sensitive.  
The switch prompts you for confirmation before deleting each file.

## Examples

This example shows how to delete two files:

```
switch: delete flash:test2.text flash:test5.text
Are you sure you want to delete "flash:test2.text" (y/n)?y
File "flash:test2.text" deleted
Are you sure you want to delete "flash:test5.text" (y/n)?y
File "flash:test2.text" deleted
```

You can verify that the files were deleted by entering the **dir flash:** boot loader command.

## Related Commands

Command	Description
<a href="#">copy</a>	Copies a file from a source to a destination.

# dir

Use the **dir** boot loader command to display a list of files and directories on the specified file system.

```
dir filesystem:/file-url ...
```

Syntax Description	
<i>filesystem:</i>	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.
<i>/file-url</i>	(Optional) Path (directory) and directory name whose contents you want to display. Separate each directory name with a space.

Command Modes	
Boot loader	

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

Usage Guidelines	
Directory names are case sensitive.	

Examples	
This example shows how to display the files in Flash memory:	

```
switch: dir flash:
```

```
Directory of flash:/
```

```

  3  -rwx      1839  Mar 01 2002 00:48:15  config.text
 11  -rwx      1140  Mar 01 2002 04:18:48  vlan.dat
 21  -rwx         26  Mar 01 2002 00:01:39  env_vars
  9  drwx       768  Mar 01 2002 23:11:42  html
 16  -rwx      1037  Mar 01 2002 00:01:11  config.text
 14  -rwx      1099  Mar 01 2002 01:14:05  homepage.htm
 22  -rwx         96  Mar 01 2002 00:01:39  system_env_vars
 17  drwx       192  Mar 06 2002 23:22:03  c3750-i5q312-mz.121-11.64.AX
```

```
15998976 bytes total (6397440 bytes free)
```

Table A-1 describes the fields in the display.

**Table A-1** *dir* Field Descriptions

Field	Description
2	Index number of the file.
-rwx	File permission, which can be any or all of the following: <ul style="list-style-type: none"> <li>• d—directory</li> <li>• r—readable</li> <li>• w—writable</li> <li>• x—executable</li> </ul>
1644045	Size of the file.
<date>	Last modification date.
env_vars	Filename.

#### Related Commands

Command	Description
<a href="#">mkdir</a>	Creates one or more directories.
<a href="#">rmdir</a>	Removes one or more directories.

# flash\_init

Use the **flash\_init** boot loader command to initialize the Flash file system.

**flash\_init**

---

**Syntax Description** This command has no arguments or keywords.

---

**Defaults** The Flash file system is automatically initialized during normal system operation.

---

**Command Modes** Boot loader

---

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.1(11)AX	This command was first introduced.

---

---

**Usage Guidelines** During the normal boot process, the Flash file system is automatically initialized.

Use this command to manually initialize the Flash file system. For example, you use this command during the recovery procedure for a lost or forgotten password.

# format

Use the **format** boot loader command to format the specified file system and destroy all data in that file system.

**format** *filesystem:*

---

## Syntax Description

*filesystem:* Alias for a Flash file system. Use **flash:** for the system board Flash device.

---

---

## Command Modes

Boot loader

---

## Command History

Release	Modification
12.1(11)AX	This command was first introduced.

---

---

## Usage Guidelines

### Caution

Use this command with care; it destroys all data on the file system and renders your system unusable.

---

# fsck

Use the **fsck** boot loader command to check the file system for consistency.

**fsck** [-test | -f] *filesystem*:

Syntax Description		
<b>-test</b>	(Optional) Initialize the file system code and perform extra POST on Flash memory. An extensive, nondestructive memory test is performed on every byte that makes up the file system.	
<b>-f</b>	(Optional) Initialize the file system code and perform a fast file consistency check. Cyclic redundancy checks (CRCs) in the flashfs sectors are not checked.	
<i>filesystem</i> :	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.	

**Defaults** No file system check is performed.

**Command Modes** Boot loader

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

**Usage Guidelines** To stop an in-progress file system consistency check, disconnect the switch power and then reconnect the power.

**Examples** This example shows how to perform an extensive file system check on Flash memory:

```
switch: fsck -test flash:
```

# help

Use the **help** boot loader command to display the available commands.

**help**

---

**Syntax Description** This command has no arguments or keywords.

---

**Command Modes** Boot loader

---

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.1(11)AX	This command was first introduced.

---

---

**Usage Guidelines** You can also use the question mark (?) to display a list of available boot loader commands.

# load\_helper

Use the **load\_helper** boot loader command to load and initialize one or more helper images, which extend or patch the functionality of the boot loader.

**load\_helper** *filesystem:/file-url ...*

Syntax Description	
<i>filesystem:</i>	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.
<i>/file-url</i>	Path (directory) and a list of loadable helper files to dynamically load during loader initialization. Separate each image name with a semicolon.

**Defaults** No helper files are loaded.

**Command Modes** Boot loader

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

**Usage Guidelines** The **load\_helper** command searches for loadable files only if the HELPER environment variable is set. Filenames and directory names are case sensitive.

# memory

Use the **memory** boot loader command to display memory heap utilization information.

**memory**

**Syntax Description** This command has no arguments or keywords.

**Command Modes** Boot loader

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

**Examples** This example shows how to display memory heap utilization information:

```
switch: memory
Text: 0x00700000 - 0x0071cf24 (0x0001cf24 bytes)
Rotext: 0x00000000 - 0x00000000 (0x00000000 bytes)
Data: 0x0071cf24 - 0x00723a0c (0x00006ae8 bytes)
Bss: 0x0072529c - 0x00746f94 (0x00021cf8 bytes)
Stack: 0x00746f94 - 0x00756f94 (0x00010000 bytes)
Heap: 0x00756f98 - 0x00800000 (0x000a9068 bytes)
```

Bottom heap utilization is 22 percent.

Top heap utilization is 0 percent.

Total heap utilization is 22 percent.

Total bytes: 0xa9068 (692328)

Bytes used: 0x26888 (157832)

Bytes available: 0x827e0 (534496)

Alternate heap utilization is 0 percent.

Total alternate heap bytes: 0x6fd000 (7327744)

Alternate heap bytes used: 0x0 (0)

Alternate heap bytes available: 0x6fd000 (7327744)

[Table A-2](#) describes the fields in the display.

**Table A-2** memory Field Descriptions

Field	Description
Text	Beginning and ending address of the text storage area.
Rotext	Beginning and ending address of the read-only text storage area. This part of the data segment is grouped with the Text entry.
Data	Beginning and ending address of the data segment storage area.
Bss	Beginning and ending address of the block started by symbol (Bss) storage area. It is initialized to zero.

**Table A-2** *memory Field Descriptions (continued)*

<b>Field</b>	<b>Description</b>
Stack	Beginning and ending address of the area in memory allocated to the software to store automatic variables, return addresses, and so forth.
Heap	Beginning and ending address of the area in memory that memory is dynamically allocated to and freed from.

# mkdir

Use the **mkdir** boot loader command to create one or more new directories on the specified file system.

```
mkdir filesystem:/directory-url ...
```

Syntax Description	<i>filesystem:</i>	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.
	<i>/directory-url</i>	Name of the directories to create. Separate each directory name with a space.

Command Modes	Boot loader
---------------	-------------

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

Usage Guidelines	Directory names are case sensitive.
	Directory names are limited to 45 characters between the slashes (/); the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

**Examples** This example shows how to make a directory called Saved\_Configs:

```
switch: mkdir flash:Saved_Configs  
Directory "flash:Saved_Configs" created
```

This example shows how to make two directories:

```
switch: mkdir flash:Saved_Configs1 flash:Test  
Directory "flash:Saved_Configs1" created  
Directory "flash:Test" created
```

You can verify that the directory was created by entering the **dir** *filesystem:* boot loader command.

Related Commands	Command	Description
	<a href="#">dir</a>	Displays a list of files and directories on the specified file system.
	<a href="#">rmdir</a>	Removes one or more directories from the specified file system.

# more

Use the **more** boot loader command to display the contents of one or more files.

```
more filesystem:/file-url ...
```

Syntax Description	filesystem:	Description
	flash:	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.
	/file-url	Path (directory) and name of the files to display. Separate each filename with a space.

Command Modes	Boot loader
---------------	-------------

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

Usage Guidelines	<p>Filenames and directory names are case sensitive.</p> <p>If you specify a list of files, the contents of each file is sequentially displayed.</p>
------------------	--

Examples	This example shows how to display the contents of two files:
----------	--

```
switch: more flash:/new-images/info flash:env_vars
version_suffix: i5q312-121-11.AX
version_directory: c3750-i5q312-mz.121-11.AX
image_name: c3750-i5q312-mz.121-11.AX.bin
ios_image_file_size: 3049472
total_image_file_size: 4551168
image_feature: LAYER_3|MIN_DRAM_MEG=64
image_family: C3750
info_end:
BAUD=57600
MANUAL_BOOT=no
```

Related Commands	Command	Description
	<a href="#">cat</a>	Displays the contents of one or more files.
	<a href="#">type</a>	Displays the contents of one or more files.

# rename

Use the **rename** boot loader command to rename a file.

```
rename filesystem:/source-file-url filesystem:/destination-file-url
```

## Syntax Description

<i>filesystem:</i>	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.
<i>/source-file-url</i>	Original path (directory) and filename.
<i>/destination-file-url</i>	New path (directory) and filename.

## Command Modes

Boot loader

## Command History

Release	Modification
12.1(11)AX	This command was first introduced.

## Usage Guidelines

Filenames and directory names are case sensitive.

Directory names are limited to 45 characters between the slashes (/); the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

Filenames are limited to 45 characters; the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

## Examples

This example shows a file named *config.text* being renamed to *config1.text*:

```
switch: rename flash:config.text flash:config1.text
```

You can verify that the file was renamed by entering the **dir filesystem:** boot loader command.

## Related Commands

Command	Description
<a href="#">copy</a>	Copies a file from a source to a destination.

# reset

Use the **reset** boot loader command to perform a hard reset on the system. A hard reset is similar to power-cycling the switch, clearing the processor, registers, and memory.

**reset**

---

**Syntax Description** This command has no arguments or keywords.

---

**Command Modes** Boot loader

---

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

---

---

**Examples** This example shows how to reset the system:

```
switch: reset  
Are you sure you want to reset the system (y/n)?y  
System resetting...
```

---

Related Commands	Command	Description
	<a href="#">boot</a>	Loads and boots an executable image and enters the command-line interface.

---

# rmdir

Use the **rmdir** boot loader command to remove one or more empty directories from the specified file system.

```
rmdir filesystem:/directory-url ...
```

Syntax Description		
<i>filesystem:</i>	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.	
<i>/directory-url</i>	Path (directory) and name of the empty directories to remove. Separate each directory name with a space.	

Command Modes	Boot loader
---------------	-------------

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

**Usage Guidelines**

Directory names are case sensitive and limited to 45 characters between the slashes (/); the name cannot contain control characters, spaces, deletes, slashes, quotes, semicolons, or colons.

Before removing a directory, you must first delete all the files in the directory.

The switch prompts you for confirmation before deleting each directory.

**Examples**

This example shows how to remove a directory:

```
switch: rmdir flash:Test
```

You can verify that the directory was deleted by entering the **dir** *filesystem:* boot loader command.

Related Commands	Command	Description
	<b>dir</b>	Displays a list of files and directories on the specified file system.
	<b>mkdir</b>	Creates one or more new directories on the specified file system.

# set

Use the **set** boot loader command to set or display environment variables, which can be used to control the boot loader or any other software running on the switch.

**set** *variable value*

## Note

Under normal circumstances, it is not necessary to alter the setting of the environment variables.

## Syntax Description

*variable value* Use one of these keywords for *variable* and *value*:

**MANUAL\_BOOT**—Determines whether the switch automatically or manually boots.

Valid values are 1, yes, 0, and no. If it is set to no or 0, the boot loader attempts to automatically boot the system. If it is set to anything else, you must manually boot the switch from the boot loader mode.

**BOOT filesystem:/file-url**— A semicolon-separated list of executable files to try to load and execute when automatically booting.

If the **BOOT** environment variable is not set, the system attempts to load and execute the first executable image it can find by using a recursive, depth-first search through the flash: file system. If the **BOOT** variable is set but the specified images cannot be loaded, the system attempts to boot the first bootable file that it can find in the Flash file system.

**ENABLE\_BREAK**—Determines whether the automatic boot process can be interrupted by using the Break key on the console.

Valid values are 1, yes, on, 0, no, and off. If it is set to 1, yes, or on, you can interrupt the automatic boot process by pressing the Break key on the console after the Flash file system has initialized.

**HELPER filesystem:/file-url**— A semicolon-separated list of loadable files to dynamically load during the boot loader initialization. Helper files extend or patch the functionality of the boot loader.

**PS1 prompt**—A string that is used as the command-line prompt in boot loader mode.

**CONFIG\_FILE flash:/file-url**—The filename that IOS uses to read and write a nonvolatile copy of the system configuration.

**BAUD rate**—The rate in bits per second (bps) used for the console. The IOS software inherits the baud rate setting from the boot loader and continues to use this value unless the configuration file specifies another setting. The range is from 0 to 4294967295 bps. Valid values are 50, 75, 110, 150, 300, 600, 1200, 1800, 2000, 2400, 3600, 4800, 7200, 9600, 14400, 19200, 28800, 38400, 56000, 57600, 115200, and 128000.

The most commonly used values are 300, 1200, 2400, 9600, 19200, 57600, and 115200.

---

**BOOHLPR** *filesystem:/file-url*—The name of the IOS helper image that is first loaded into memory so that it can then load a second IOS image into memory and launch it. This variable is used only for internal development and testing.

**HELPER\_CONFIG\_FILE** *filesystem:/file-url*—The name of the configuration file to be used by the IOS helper image. If this is not set, the file specified by the CONFIG\_FILE environment variable is used by all versions of IOS that are loaded, including the helper image. This variable is used only for internal development and testing.

---

## Defaults

The environment variables have these default values:

MANUAL\_BOOT: No (0)

BOOT: Null string

ENABLE\_BREAK: No (Off or 0) (the automatic boot process cannot be interrupted by pressing the Break key on the console).

HELPER: No default value (helper files are not automatically loaded).

PS1: switch:

CONFIG\_FILE: config.text

BAUD: 9600 bps

BOOHLPR: No default value (no helper images are specified).

HELPER\_CONFIG\_FILE: No default value (no helper configuration file is specified).

SWITCH\_NUMBER: 1

SWITCH\_PRIORITY: 1

### Note

---

Environment variables that have values are stored in the Flash file system in various files. The format of these files is that each line contains an environment variable name and an equal sign followed by the value of the variable. A variable has no value if it is not listed in this file; it has a value if it is listed in the file even if the value is a null string. A variable that is set to a null string (for example, “”) is a variable with a value. Many environment variables are predefined and have default values.

---

## Command Modes

Boot loader

## Command History

Release	Modification
12.1(11)AX	This command was first introduced.

---

**Usage Guidelines**

Environment variables are case sensitive and must be entered as documented.

Environment variables that have values are stored in Flash memory outside of the Flash file system.

The MANUAL\_BOOT environment variable can also be set by using the **boot manual** global configuration command.

The BOOT environment variable can also be set by using the **boot system** *filesystem:/file-url* global configuration command.

The ENABLE\_BREAK environment variable can also be set by using the **boot enable-break** global configuration command.

The HELPER environment variable can also be set by using the **boot helper** *filesystem:/file-url* global configuration command.

The CONFIG\_FILE environment variable can also be set by using the **boot config-file** *flash:/file-url* global configuration command.

The BOOTHLP environment variable can also be set by using the **boot boothlpr** *filesystem:/file-url* global configuration command.

The HELPER\_CONFIG\_FILE environment variable can also be set by using the **boot helper-config-file** *filesystem:/file-url* global configuration command.

The HELPER\_CONFIG\_FILE environment variable can also be set by using the **boot helper-config-file** *filesystem:/file-url* global configuration command.

The SWITCH\_NUMBER environment variable can also be set by using the **switch** *current-stack-member-number* **renumber** *new-stack-member-number* global configuration command.

The SWITCH\_PRIORITY environment variable can also be set by using the **switch** *stack-member-number* **priority** *priority-number* global configuration command.

The boot loader prompt string (PS1) can be up to 120 printable characters except the equal sign (=).

**Examples**

This example shows how to change the boot loader prompt:

```
switch: set PS1 loader:
loader:
```

You can verify your setting by using the **set** boot loader command.

**Related Commands**

Command	Description
<a href="#">unset</a>	Resets one or more environment variables to its previous setting.

# type

Use the **type** boot loader command to display the contents of one or more files.

**type** *filesystem:/file-url ...*

Syntax Description		
<i>filesystem:</i>	Alias for a Flash file system. Use <b>flash:</b> for the system board Flash device.	
<i>/file-url</i>	Path (directory) and name of the files to display. Separate each filename with a space.	

Command Modes	
	Boot loader

Command History	Release	Modification
	12.1(11)AX	This command was first introduced.

Usage Guidelines	
	<p>Filenames and directory names are case sensitive.</p> <p>If you specify a list of files, the contents of each file is sequentially displayed.</p>

Examples	
	<p>This example shows how to display the contents of two files:</p>

```
switch: type flash:/new-images/info flash:env_vars
version_suffix: i5q312-121-11.AX
version_directory: c3750-i5q312-mz.121-11.AX
image_name: c3750-i5q312-mz.121-11.AX.bin
ios_image_file_size: 3049472
total_image_file_size: 4551168
image_feature: LAYER_3|MIN_DRAM_MEG=64
image_family: C3750
info_end:
BAUD=57600
MANUAL_BOOT=no
```

Related Commands	Command	Description
	<a href="#">cat</a>	Displays the contents of one or more files.
	<a href="#">more</a>	Displays the contents of one or more files.

# unset

Use the **unset** boot loader command to reset one or more environment variables.

**unset** *variable* ...

## Note

Under normal circumstances, it is not necessary to alter the setting of the environment variables.

## Syntax Description

*variable*

Use one of these keywords for *variable*:

**MANUAL\_BOOT**—Determines whether the switch automatically or manually boots.

**BOOT**—Resets the list of executable files to try to load and execute when automatically booting. If the **BOOT** environment variable is not set, the system attempts to load and execute the first executable image it can find by using a recursive, depth-first search through the Flash file system. If the **BOOT** variable is set but the specified images cannot be loaded, the system attempts to boot the first bootable file that it can find in the Flash file system.

**ENABLE\_BREAK**—Determines whether the automatic boot process can be interrupted by using the Break key on the console after the Flash file system has been initialized.

**HELPER**—A semicolon-separated list of loadable files to dynamically load during the boot loader initialization. Helper files extend or patch the functionality of the boot loader.

**PS1**—A string that is used as the command-line prompt in boot loader mode.

**CONFIG\_FILE**—Resets the filename that IOS uses to read and write a nonvolatile copy of the system configuration.

**BAUD**—Resets the rate in bits per second (bps) used for the console. The IOS software inherits the baud rate setting from the boot loader and continues to use this value unless the configuration file specifies another setting.

**BOOHLPR**—Resets the name of the IOS helper image that is first loaded into memory so that it can then load a second IOS image into memory and launch it. This variable is used only for internal development and testing.

**HELPER\_CONFIG\_FILE**—Resets the name of the configuration file to be used by the IOS helper image. If this is not set, the file specified by the **CONFIG\_FILE** environment variable is used by all versions of IOS that are loaded, including the helper image. This variable is used only for internal development and testing.

## Command Modes

Boot loader

## Command History

Release	Modification
12.1(11)AX	This command was first introduced.

**Usage Guidelines**

The MANUAL\_BOOT environment variable can also be reset by using the **no boot manual** global configuration command.

The BOOT environment variable can also be reset by using the **no boot system** global configuration command.

The ENABLE\_BREAK environment variable can also be reset by using the **no boot enable-break** global configuration command.

The HELPER environment variable can also be reset by using the **no boot helper** global configuration command.

The CONFIG\_FILE environment variable can also be reset by using the **no boot config-file** global configuration command.

The BOOTHLP environment variable can also be reset by using the **no boot boothlpr** global configuration command.

The HELPER\_CONFIG\_FILE environment variable can also be reset by using the **no boot helper-config-file** global configuration command.

**Examples**

This example shows how to reset the prompt string to its previous setting:

```
switch: unset PS1
switch:
```
