## Policy Feature Cards

- [Policy Feature Card Guidelines and Restrictions, page 42](#)
- [Policy Feature Card 3BXL, page 44](#)
- [Policy Feature Card 3B, page 44](#)
- [Policy Feature Card 3A, page 45](#)

## Policy Feature Card Guidelines and Restrictions

- A [Supervisor Engine 2](#) always has a PFC2; there are no PFC options for Supervisor Engine 2.
- The PFC2 supports a theoretical maximum of 128 K MAC addresses (32 K MAC addresses recommended maximum).
- The PFC3 supports a theoretical maximum of 64 K MAC addresses (32 K MAC addresses recommended maximum).
- The PFC3 partitions the hardware FIB table to route IPv4 unicast, IPv4 multicast, MPLS, and IPv6 unicast and multicast traffic in hardware. Traffic for routes that do not have entries in the hardware FIB table are routed by the MSFC in software.

The defaults for [XL mode](#) are:

- IPv4 unicast and MPLS—512,000 routes
- IPv4 multicast and IPv6 unicast and multicast—256,000 routes

The defaults for [Non-XL mode](#) are:

- IPv4 unicast and MPLS—192,000 routes
- IPv4 multicast and IPv6 unicast and multicast—32,000 routes

---

**Note** The size of the global internet routing table plus any local routes might exceed the non-XL mode default partition sizes.

---

These are the theoretical maximum numbers of routes for the supported protocols (the maximums are not supported simultaneously):

- [XL mode](#):
  - IPv4 and MPLS—Up to 1,007,000 routes
  - IPv4 multicast and IPv6 unicast and multicast—Up to 503,000 routes
- [Non-XL mode](#):
  - IPv4 and MPLS—Up to 239,000 routes
  - IPv4 multicast and IPv6 unicast and multicast—Up to 119,000 routes

Enter the [mls cef maximum-routes](#) command to repartition the hardware FIB table. IPv4 unicast and MPLS require one hardware FIB table entry per route. IPv4 multicast and IPv6 unicast and multicast require two hardware FIB table entries per route. Changing the partition for one protocol makes corresponding changes in the partitions of the other protocols. You must enter the **reload** command to put configuration changes made with the **mls cef maximum-routes** command into effect.

---

**Note** With a non-XL-mode system, if your requirements cannot be met by repartitioning the hardware FIB table, upgrade components as necessary to operate in XL mode.

---

- You cannot use one type of PFC3 (PFC3BXL, PFC3B, or PFC3A) on one supervisor engine and a different type on the other supervisor engine for redundancy. You must use identical policy feature cards for redundancy.
- With Release 12.2(17d)SXB and later releases, enter the **show platform hardware pfc mode** command to display the PFC3 mode.

- With Release 12.2(17b)SXA and Release 12.2(17b)SXA2, enter the **show platform earl-mode** command to display the PFC3 mode.
- PFC3A—These restrictions apply to a configuration with a PFC3A and these DFCs:
  - PFC3A and DFC3A—No restrictions (PFC3A mode).
  - PFC3A and DFC3B—The PFC3A restricts DFC3B functionality: the DFC3B functions as a DFC3A (PFC3A mode).
  - PFC3A and DFC3BXL—The PFC3A restricts DFC3BXL functionality: the DFC3BXL functions as a DFC3A (PFC3A mode).
  - PFC3A and DFC3C—The PFC3A restricts DFC3C functionality: the DFC3C functions as a DFC3A (PFC3A mode).
  - PFC3A and DFC3CXL—The PFC3A restricts DFC3CXL functionality: the DFC3CXL functions as a DFC3A (PFC3A mode).
- PFC3B—These restrictions apply to a configuration with a PFC3B and these DFCs:
  - PFC3B and DFC3A—PFC3B functionality is restricted by the DFC3A: after a reload with a DFC3A-equipped module installed, the PFC3B functions as a PFC3A (PFC3A mode).
  - PFC3B and DFC3B—No restrictions (PFC3B mode).
  - PFC3B and DFC3BXL—The PFC3B restricts DFC3BXL functionality: after a reload with a DFC3BXL-equipped module installed, the DFC3BXL functions as a DFC3B (PFC3B mode).
  - PFC3B and DFC3C—The PFC3B restricts DFC3C functionality: the DFC3C functions as a DFC3B (PFC3B mode).
  - PFC3B and DFC3CXL—The PFC3B restricts DFC3CXL functionality: the DFC3CXL functions as a DFC3B (PFC3B mode).
- PFC3BXL—These restrictions apply to a configuration with a PFC3BXL and these DFCs:
  - PFC3BXL and DFC3A—PFC3BXL functionality is restricted by the DFC3A: after a reload with a DFC3A-equipped module installed, the PFC3BXL functions as a PFC3A (PFC3A mode).
  - PFC3BXL and DFC3B—PFC3BXL functionality is restricted by the DFC3B: after a reload with a DFC3B-equipped module installed, the PFC3BXL functions as a PFC3B (PFC3B mode).
  - PFC3BXL and DFC3BXL—No restrictions (PFC3BXL mode).
  - PFC3BXL and DFC3C—Each restricts the functionality of the other: the PFC3BXL functions as a PFC3B and the DFC3C functions as a DFC3B (PFC3B mode).
  - PFC3BXL and DFC3CXL—The PFC3BXL restricts DFC3CXL functionality: the DFC3CXL functions as a DFC3BXL (PFC3BXL mode).
- Summary of the PFC modes:
  - PFC3A mode—Operating mode with a PFC3A or any DFC3As
  - PFC3B mode—Operating mode with PFC3B and any DFC3Bs or DFC3BXLs
  - PFC3BXL mode—Operating mode with PFC3BXL and any DFC3BXLs
- The features that require the PFC3BXL or PFC3B are not supported in PFC3A mode.
- With a PFC3BXL or PFC3B and no DFC3A-equipped switching modules installed at bootup, any DFC3A-equipped switching module installed after bootup remain powered down.

- To use DFC3A-equipped switching modules with a PFC3BXL or PFC3B, the DFC3A-equipped switching modules must be installed at bootup.
- To use DFC3B-equipped switching modules with a PFC3BXL, the DFC3B-equipped switching modules must be installed at bootup.

Full NEBS-compliance requires support for operating temperatures up to 55° C, which is available in all other chassis that support WS-X6708-10GE.

**Note** All E-Series [chassis](#) provide NEBS compliance.

- Support in the [WS-C6509-NEB-A](#) chassis requires two [FAN-MOD-09](#) modules.
- WS-X6708-10GE ports do not support VACL capture. (CSCsb59015)
- WS-X6708-10GE is not supported in the [WS-C6503](#) and [CISCO7603](#) chassis.
- In a [13-slot chassis](#), WS-X6708-10GE is supported only in slots 9 through 13 and does not power up in other slots.
- On WS-X6708-10GE ports, STP BPDUs are not exempt from [Traffic Storm Control](#) multicast suppression. Do not configure multicast suppression on STP-protected WS-X6708-10GE ports that interconnect network devices. (CSCsg86315)

### Note

- To use Cisco IOS Software Modularity images with 6700 series switching modules, ensure that the 6700 series switching modules have switching module ROMMON version 12.2(18r)S1 or later. To display the switching module ROMMON version, enter the **remote command module** *module\_slot\_number* **show version | include ROM** command. To upgrade the switching module ROMMON, see this document: [http://www.cisco.com/en/US/docs/switches/lan/catalyst6500/rommon/OL\\_6143.html](http://www.cisco.com/en/US/docs/switches/lan/catalyst6500/rommon/OL_6143.html)
- WS-X6748-GE-TX requires one of the following:
  - [WS-F6700-DFC3BXL](#) (3.30 A@42 V)
  - [WS-F6700-DFC3B](#) (2.70 A@42 V)
  - [WS-F6700-DFC3A](#) (3.00 A@42 V)
  - [WS-F6700-CFC](#) (0.75 A@42 V)
- WS-X6748-GE-TX ships with [WS-F6700-CFC](#) installed unless ordered with [WS-F6700-DFC3BXL](#), [WS-F6700-DFC3B](#), or [WS-F6700-DFC3A](#).
- WS-X6748-GE-TX is supported in the [WS-C6503-E](#) chassis.
- WS-X6748-GE-TX is not supported in the [WS-C6503](#) and [CISCO7603](#) chassis.
- In a [13-slot chassis](#), WS-X6748-GE-TX is supported only in slots 9 through 13 and does not power up in other slots.
- On WS-X6748-GE-TX ports, STP BPDUs are not exempt from [Traffic Storm Control](#) multicast suppression. Do not configure multicast suppression on STP-protected WS-X6748-GE-TX ports that interconnect network devices. (CSCsg86315)

### OSM Guidelines and Restrictions

- Cisco IOS Software modularity does not support OSMs.
- Supervisor Engine 32 does not support OSMs.
- With Release 12.2(18)SXD and later releases, OSMs require a minimum of 128 MB of dynamic random-access memory (SDRAM)—See this publication for memory upgrade procedures:  
[http://www.cisco.com/en/US/docs/routers/7600/Hardware/Module\\_and\\_Line\\_Card\\_Installation\\_Guide/s/7600\\_Series\\_Router\\_Module\\_Installation\\_Guide/osmodule.html](http://www.cisco.com/en/US/docs/routers/7600/Hardware/Module_and_Line_Card_Installation_Guide/s/7600_Series_Router_Module_Installation_Guide/osmodule.html)
- OSMs are CEF256 modules.
- OSM WAN port numbering starts with 1.
- On OSMs with Gigabit Ethernet GBIC Layer 2 LAN ports:
  - OSM LAN port numbering starts with 1.
  - The LAN ports are in a single port group.
- In releases earlier than Release 12.2(18)SXD1, [WS-SVC-WLAN-1-K9](#) has not been tested with OSMs.

- The [OSM-2+4GE-WAN+](#) and the OC-12 Packet-over-SONET OSMs have been tested with the service modules and [WS-SUP720](#).
- In releases earlier than Release 12.2(18)SXD1, except for the [OSM-2+4GE-WAN+](#) and the OC-12 Packet-over-SONET OSMs, the following service modules have not been tested with other OSMs:
  - [WS-X6066-SLB-APC](#) content switching module (CSM)
  - [WS-SVC-IDSM2-K9](#) intrusion detection system module
  - [WS-SVC-NAM-2](#) and [WS-SVC-NAM-1](#) network analysis modules (NAMs)
  - [WS-SVC-SSL-1](#) SSL services module

# Unsupported Hardware

The following hardware is not supported:

- DWDM-SFP-5817—1000BASE-DWDM 1558.17 nm SFP (100-GHz ITU grid) SFP module
- DWDM-SFP-4692—1000BASE-DWDM 1546.92 nm SFP (100-GHz ITU grid) SFP module
- See the “[Supervisor Engine 32 \(CAT6000-SUP32/MSFC2A, 7600-SUP32/MSFC2A\)](#)” section on [page 38](#) for information about hardware that is not supported with the Supervisor Engine 32.
- With a Supervisor Engine 720, [WS-X6516-GBIC](#) hardware revisions 5.0 through 5.4 with a DFC3 installed.

Supervisor Engine 720 supports a DFC3 on these [WS-X6516-GBIC](#) hardware revisions:

- Lower than 5.0
- 5.5 and higher

With a Supervisor Engine 720 and a DFC3 installed, [WS-X6516-GBIC](#) hardware revisions 5.0 through 5.3 do not power up. Without a DFC3, [WS-X6516-GBIC](#) hardware revisions 5.0 through 5.4 operate in bus mode.
