

Cisco AS5300 Gateway-PBX Interoperability: Siemens Hicom 330E with E1 QSIG Signaling

This document describes the interoperability and configuration of a Cisco AS5300 voice gateway with an Siemens Hicom 330E PBX using E1 QSIG signaling. It includes the following sections:

- System Components
- Configuration Tasks
- Caveats

System Components

PBX Model	Siemens Hicom 330E
PBX Release	Version 3.1
Telephony Signaling	E1 QSIG
Voice Gateway	Cisco AS5300
Gateway Release	Cisco IOS™ 12.2(3)
VoX Protocol	H.323

Configuration Tasks

See the following sections for configuration tasks for this feature:

- Set Up
- Siemens Hicom 330E PBX Configuration
- Cisco AS5300 Gateway Configuration

Set Up

This section includes the following information:

- Connectivity Diagrams
- Set Up Notes

Connectivity Diagrams

Figure 1: Test Configuration

Figure 1 represents the configuration used for testing: a Siemens Hicom 330E PBX connected to a Cisco AS5300 voice gateway via an E1 QSIG connection.

Set Up Notes

- The layer 1 configuration in the Siemens Hicom 330E PBX is assigned to the device type S2CONN via parameter “LWPAR” (Loadware Parameters). For Master side operation, the Hicom 330E was configured so that the LWPAR field under the <cha-tdesu> command is:

LWPAR = 4

The applicable fields under LWPAR = 4 <cha-lwpar> are as follows:

MASTER = Y

SMD = Y

For slave side operation:

LWPAR = 1

The applicable fields under LWPAR = 1 <cha-lwpar> are as follows:

MASTER = N

SMD = N

- Configuring the Siemens operation to be Master (or Network) side sets the Layers 2 and 3 protocol side setting to master as well. Therefore, the Cisco AS5300 gateway should be set to Slave protocol side by issuing the command: “isdn protocol-emulate user”.
- Similarly, if the Siemens operation is set for Slave (or user) side, Layers 2 and 3 protocol side are set for slave side. The Cisco AS5300 gateway is set to Master protocol side by issuing the command: “isdn protocol-emulate network”.
- The Cisco AS5300 gateway with ISDN switch type setting of **primary-qsig** supports both protocol sides by using the “isdn protocol-emulate network/user” command.
- The ECMA1 protocol setting was used on the Siemens Hicom 330E PBX.

Siemens Hicom 330E PBX Configuration

Version Information

Software Version 3.1.

Siemens Hicom 330E PBX Sample Configuration

See the following sections for sample configuration information:

- Trunk Configuration
- Route Configuration
- Board Configuration
- Station (Phone) Configuration
