

# Release Notes for Cisco Unified MeetingPlace Release 7.0

---

**Revised: November 8, 2011 2:08 pm**

These release notes contain information about new and changed functionality, limitations and restrictions, and open and resolved caveats for all releases of Cisco Unified MeetingPlace Release 7.0 including Release 7.0.1, 7.0.2 (MR1), and 7.0.3 (MR2).

## Contents

- [Introduction, page 1](#)
- [Software Download, page 2](#)

## Introduction

Cisco Unified MeetingPlace Release 7.0 offers significant solution enhancements, including a new architecture that combines voice and video capabilities in a single solution. The architecture offers improved scalability, improved reliability, and simpler installation and administration.

---

**Americas Headquarters:**  
**Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA**

## Software Download

You can access the software from the Cisco Software Download site at:

<http://tools.cisco.com/support/downloads/go/Model.x?mdfid=282340975&mdfLevel=Software%20Version/Option&treeName=Voice%20and%20Unified%20Communications&modelName=Cisco%20Unified%20MeetingPlace%207.0&treeMdfId=278875240>

If you cannot access the Cisco Software Download site by clicking the link, go to <http://www.cisco.com/cisco/web/download/index.html> and navigate to **Voice and Unified Communications > Unified Communications Applications > Conferencing > Cisco Unified MeetingPlace > Cisco Unified MeetingPlace 7.0**.

## Release 7.0.3 Prerequisite Package

Release 7.0.3 (MR2) requires that you download and install a number of hotfixes and dependencies prior to upgrading or migrating to this release.

### Note

Upgrading to Release 7.0.3 from Release 7.0.2 requires that you have hotfix HF17 or later installed on the Application Server and hotfix HF5D or later installed on the Web Server.

These hotfixes and dependencies are available in the *Cisco Unified MeetingPlace Release 7.0.3 Prerequisite Package*, which is available on the Cisco Software Download site at:

<http://tools.cisco.com/support/downloads/go/Model.x?mdfid=282340975&mdfLevel=Software%20Version/Option&treeName=Voice%20and%20Unified%20Communications&modelName=Cisco%20Unified%20MeetingPlace%207.0&treeMdfId=278875240>. Select **Unified MeetingPlace Application Server > 7.0(3)**.

If you cannot access the Cisco Software Download site by clicking the link, go to <http://www.cisco.com/cisco/web/download/index.html> and navigate to **Voice and Unified Communications > Unified Communications Applications > Conferencing > Cisco Unified MeetingPlace > Cisco Unified MeetingPlace 7.0 > Unified MeetingPlace Application Server > 7.0(3)**.

## Installation, Upgrade, and Migration Requirements

For information about installation, upgrades, or migration see the *Installation and Upgrade Guide for Cisco Unified MeetingPlace Release 7.0* at:

[http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod\\_installation\\_guides\\_list.html](http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod_installation_guides_list.html)

This guide provides detailed instructions for the following:

- Completing a new installation of Cisco Unified MeetingPlace Release 7.0.
- Upgrading to the latest release of Cisco Unified MeetingPlace Release 7.0 from the previous release.
- Migrating to the latest release of Cisco Unified MeetingPlace Release 7.0 from Release 6.0.

### Note

If you are upgrading from Release 7.0.2 (MR1) to Release 7.0.3 (MR2) or migrating from Release 6.0 MR5 to Release 7.0.3 (MR2), make sure that you download the Cisco Unified MeetingPlace Release 7.0.3 Prerequisite Package to access all required hotfixes and dependencies. You can find the

prerequisite package on the Cisco Software Download site at:

<http://tools.cisco.com/support/downloads/go/Model.x?mdfid=282340975&mdfLevel=Software%20Version/Option&treeName=Voice%20and%20Unified%20Communications&modelName=Cisco%20Unified%20MeetingPlace%207.0&treeMdfid=278875240>. Select **Unified MeetingPlace Application Server > 7.0(3)**.

## Related Documentation

You can access the latest documentation on the Cisco docwiki page at:

[http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0)

For a description of all available Cisco Unified MeetingPlace documentation, see the *Documentation Guide for Cisco Unified MeetingPlace Release 7.0* at:

[http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products\\_documentation\\_roadmaps\\_list.html](http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_documentation_roadmaps_list.html)

## System Requirements

See the *System Requirements for Cisco Unified MeetingPlace Release 7.0* at:

[http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products\\_device\\_support\\_tables\\_list.html](http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_device_support_tables_list.html)

## Compatibility Matrix

See the *Compatibility Matrix for Cisco Unified MeetingPlace Release 7.0* at:

[http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products\\_device\\_support\\_tables\\_list.html](http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_device_support_tables_list.html)

## URL for Cisco Unified MeetingPlace Documentation

For a list of all Cisco Unified MeetingPlace documentation, see:

[http://www.cisco.com/en/US/products/sw/ps5664/ps5669/tsd\\_products\\_support\\_series\\_home.html](http://www.cisco.com/en/US/products/sw/ps5664/ps5669/tsd_products_support_series_home.html)

## Recommended Practices

The following recommended practices are provided to help prevent system failure and data loss.

- Do not run above the documented system capacity requirements. For details, see [http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_-\\_System\\_Capacity\\_Quick\\_Reference\\_Tables#System\\_Capacity\\_Quick\\_Reference\\_Tables](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_-_System_Capacity_Quick_Reference_Tables#System_Capacity_Quick_Reference_Tables).
- If upgrading or migrating to Release 7.0.3 (MR2), make sure that you install the Cisco Unified MeetingPlace Release 7.0.3 Prerequisite Package in advance of your upgrade or migration.
- If upgrading from Release 7.0.2 (MR1) to Release 7.0.3 (MR2), make sure that you install the restore script included with the Cisco Unified MeetingPlace Release 7.0.3 Prerequisite Package in advance of your upgrade. This script, along with backing up your Release 7.0.2 system, allows you to restore your system to the previous release in the event of an upgrading failure.

- Scheduling and rescheduling of recurring meetings with more than 10 instances should be performed during off-peak times to minimize delays perceived by users joining meetings.
- Administrative reports should be run during off-peak times to minimize delays perceived by users joining meetings

## New and Changed Information

- [New Features in Release 7.0.3 \(MR2\), page 4](#)
- [Features that Have Changed from Release 7.0.2 \(MR1\) to Release 7.0.3 \(MR2\), page 6](#)
- [New Features in Release 7.0.2 \(MR1\), page 9](#)
- [Features That Have Changed from Release 7.0.1 to Release 7.0.2 \(MR1\), page 10](#)
- [New Features in Release 7.0.1, page 14](#)
- [Features No Longer Supported in Release 7.0, page 15](#)
- [Features that Have Changed from Release 6.0 to Release 7.0, page 16](#)
- [Limitations and Restrictions, page 18](#)

## New Features in Release 7.0.3 (MR2)

- [Hardware and Software Support, page 4](#)
- [Support for 2048-bit CSR, page 5](#)
- [Restore Script, page 5](#)
- [Reservationless Single Number Access in a Distributed Deployment, page 5](#)
- [New Checkcores Utility, page 5](#)
- [Second Alternate Number, page 5](#)
- [Dial-Out Calls from the Cisco WebEx Web Meeting Room, page 5](#)
- [New Meeting Settings Field, page 6](#)

## Hardware and Software Support

Release 7.0.3 supports the following new hardware and software:

- Cisco MCS 7845-I3-RC1 and Cisco MCS 7835-I3-RC1
  - The Cisco MCS 7845-I3-RC1 and equivalent DL380-G6 Server both support a maximum of 400 web sessions with SSL and 600 without SSL.
- Cisco Security Agent Release 6.0.x for both the Application Server and the Web Server
- Microsoft Windows 7 operating system

For further information, see the *System Requirements for Cisco Unified MeetingPlace Release 7.0* in the following location:

[http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products\\_device\\_support\\_tables\\_list.html](http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_device_support_tables_list.html)

## Support for 2048-bit CSR

This release supports 2048-bit length when generating Certificate Signing Requests (CSRs) for SSL.

## Restore Script

This release provides customers with a script called `ext_archive.files` that allows you to restore your Cisco Unified MeetingPlace system to Release 7.0.2 (MR1) for any reason. This script is part of an MR2 prerequisite package and must be installed prior to backing up the Release 7.0.2 system if you plan to upgrade to Release 7.0.3. For details, see the following links:

- [http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_--\\_How\\_to\\_Upgrade\\_to\\_Cisco\\_Unified\\_MeetingPlace\\_Release\\_7.0.3](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_--_How_to_Upgrade_to_Cisco_Unified_MeetingPlace_Release_7.0.3)
- [http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_--\\_How\\_to\\_Back\\_Up\\_%2C\\_Archive%2C\\_and\\_Restore\\_Data#How\\_to\\_Back\\_Up.2C\\_Archive.2C\\_and\\_Restore\\_Data](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_--_How_to_Back_Up_%2C_Archive%2C_and_Restore_Data#How_to_Back_Up.2C_Archive.2C_and_Restore_Data)

## Reservationless Single Number Access in a Distributed Deployment

Release 7.0.3 supports a reservationless solution that supports meetings across two geographical distributed sites with site-level redundancy, and single number access for both sites. This deployment supports both audio and video. For details, see [http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_--\\_How\\_to\\_Configure\\_RSNA\\_in\\_a\\_Distributed\\_Deployment](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_--_How_to_Configure_RSNA_in_a_Distributed_Deployment).

## New Checkcores Utility

A new utility called `checkcores` reports new cores found, raises an alarm (`EX_CORESPACE`), and compresses/archives the cores to `/mpx-record/cores`. For details, see the *Alarm and Exception Code Reference* at: [http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod\\_technical\\_reference\\_list.html](http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod_technical_reference_list.html)

## Second Alternate Number

This release supports a second alternate number that the system can use to reach you. If your method of attending a meeting is set to Find Me, the system uses this number when it receives no answer from your main phone number and first alternate phone number. The Alternate phone number 2 field is found under **Account Basics > Attend Settings**. For details, see [http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_--\\_Add\\_User\\_Profile\\_Page](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_--_Add_User_Profile_Page).

## Dial-Out Calls from the Cisco WebEx Web Meeting Room

This release enables all guest users to dial out via the Cisco Unified MeetingPlace telephone user interface (TUI). For details, see [http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_--\\_Enabling\\_Dial-Out\\_Calls\\_from\\_the\\_Cisco\\_WebEx\\_Web\\_Meeting\\_Room](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_--_Enabling_Dial-Out_Calls_from_the_Cisco_WebEx_Web_Meeting_Room).

## New Meeting Settings Field

Release 7.0.3 (MR2) supports a new meeting settings field called **Maximum reserved ports per scheduled meeting**. This field restricts the maximum number of ports that can be reserved when a meeting is scheduled.

- The upper limit for this field is Maximum ports per scheduled meeting.
- The lower limit for this field is 2.

You can find this field by signing into the Cisco Unified MeetingPlace Administration Center and selecting **System Configuration > Meeting Configuration**.

## Features that Have Changed from Release 7.0.2 (MR1) to Release 7.0.3 (MR2)

- [Upgrade and Migration Paths, page 6](#)
- [User Interface Changes, page 7](#)
- [Support for Distributed Exchange 2007 Configuration, page 7](#)
- [Custom Prompts, page 7](#)
- [Requirement for Profile PIN During Installation, page 7](#)
- [Maximum Number of Invitees, page 7](#)
- [Updated Specifics for View Backup Logs Page, page 8](#)
- [Video Labels and the Guest Profile Field, page 8](#)
- [Display Differences in the Alarm Table, page 8](#)
- [Attendant and System Manager Privileges, page 8](#)
- [Configuring Single Sign-On in Cisco Unified MeetingPlace for Outlook, page 8](#)
- [Rescheduling Recurring Meetings, page 9](#)
- [Recording Restriction, page 9](#)

## Upgrade and Migration Paths

This release of Cisco Unified MeetingPlace supports the following upgrade and migration paths:

- Upgrade from Release 7.0.2 (MR1) to 7.0.3 (MR2)
- Migration from Release 6.0 MR5 to 7.0.3 (MR2)

### Note

---

Upgrading from Release 7.0.1 to 7.0.3 is not supported.

---

For further information about migrating to Release 7.0.3, see

[http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace\\_Release\\_7.0\\_--\\_Migrating\\_to\\_Cisco\\_Unified\\_MeetingPlace\\_Release\\_7.0.3\\_from\\_Release\\_6.0](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace_Release_7.0_--_Migrating_to_Cisco_Unified_MeetingPlace_Release_7.0.3_from_Release_6.0)

For further information about upgrading to Release 7.0.3, see

[http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_--\\_How\\_to\\_Upgrade\\_to\\_Cisco\\_Unified\\_MeetingPlace\\_Release\\_7.0.3](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_--_How_to_Upgrade_to_Cisco_Unified_MeetingPlace_Release_7.0.3)

**Note**

Before upgrading or migrating to Release 7.0.3, make sure that you download the Cisco Unified MeetingPlace Release 7.0.3 Prerequisite Package to access all required hotfixes and dependencies. You can find the prerequisite package on the Cisco Software Download site at: <http://tools.cisco.com/support/downloads/go/Model.x?mdfid=282340975&mdfLevel=Software%20Version/Option&treeName=Voice%20and%20Unified%20Communications&modelName=Cisco%20Unified%20MeetingPlace%207.0&treeMdfid=278875240>. Select **Unified MeetingPlace Application Server > 7.0(3)**.

## User Interface Changes

- In Release 7.0.3, the “Reserve Resources for Recording” field has been removed from the user interface.
- In Release 7.0.3, the “Preserve mute status in Q&A meetings” field has been changed to “Preserve mute status in meetings” on the Usage Configuration Page. This is a label change only. Q&A meetings are still supported.

## Support for Distributed Exchange 2007 Configuration

Release 7.0.3 supports a distributed Exchange 2007 configuration in which the SMTP connector and WebDAV/EWS service are on different Exchange servers. Two new fields have been added to the Exchange Configuration page to support this change. The fields are Hostname (SMTP) and Hostname (WebDAV/EWS). For details, see [http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_-\\_Exchange\\_Server\\_Configuration\\_Page#Table:\\_Field\\_Reference:\\_Exchange\\_Server\\_Configuration\\_Page](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_-_Exchange_Server_Configuration_Page#Table:_Field_Reference:_Exchange_Server_Configuration_Page).

## Custom Prompts

Users can no longer create custom audio prompts from the phone interface. In release 7.0.3, you can only create custom prompts by recording and uploading through the Administration Center. For details, see [http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_-\\_How\\_to\\_Customize\\_Music\\_and\\_Voice\\_Prompts#Creating\\_a\\_Custom\\_Voice\\_Prompt](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_-_How_to_Customize_Music_and_Voice_Prompts#Creating_a_Custom_Voice_Prompt).

## Requirement for Profile PIN During Installation

A new field in the Cisco Unified MeetingPlace installer requires system administrators to enter a profile password PIN during installation.

## Maximum Number of Invitees

Release 7.0.3 supports a maximum of 450 invitees when you schedule or reschedule a meeting from the Cisco Unified MeetingPlace web scheduling page. If you need to invite more than 450 invitees, an administrator or user with Attendant privileges must schedule the meeting from the MeetingPlace Conference Manager interface.

## Updated Specifics for View Backup Logs Page

In Release 7.0.3, the “View Backup Logs” page displays log files that are approximately 100KB or less and prompts you to save log files that are larger. In Release 7.0.0 to 7.0.2, the page displayed log files that were 20KB or less.

## Video Labels and the Guest Profile Field

If you want to change the video label of the guest profile, make sure to put all of the text that you want displayed into the “First name” field. The last name of the guest profile is not displayed in the video labels of live conferences. Video labels are displayed in the lower left corner of the video windows.

## Display Differences in the Alarm Table

The brief description in an alarm table entry may contain values that are specific to one alarm occurrence, such as an IP address or the available disk space on a Web Server. These values may differ for all alarms that are combined into one table entry. In Release 7.0.0 - 7.0.2, only the values for the first alarm are displayed. In Release 7.0.3, only the values for the most recent alarms are displayed. For details, see

[http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_-\\_About\\_Alarms#Alarm\\_Table](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_-_About_Alarms#Alarm_Table).

## Attendant and System Manager Privileges

- Users with Attendant and System Manager privileges can now modify meetings scheduled from Cisco Unified MeetingPlace for Microsoft Outlook from the Cisco Unified MeetingPlace end-user web interface.
- Users with System Manager or Attendant privileges can now schedule meetings with over 200 invitees from MeetingPlace Conference Manager.

### Note

Scheduling several large meeting chains concurrently may cause system delay. Also, rescheduling meeting chains of over 30 occurrences with 500 invitees may cause long rescheduling times and system unresponsiveness. Neither of these actions are recommended.

## Configuring Single Sign-On in Cisco Unified MeetingPlace for Outlook

Release 7.0.3 includes additional requirements when configuring Single-Sign-On authentication for workgroup and domain environments.

- In a workgroup environment, the domain portion of the user email address (that is, the part after @) must match a configured Outlook Single Sign-On Domain in Cisco Unified MeetingPlace. For example, from the email address userA@example.com, you would configure “example.com” as a domain in Cisco Unified MeetingPlace.
- In a domain environment, the following requirements apply:
  - The domain of the client machine must match a configured Outlook Single Sign-On Domain in Cisco Unified MeetingPlace. Note that the client machine domain may differ from the user domain. For example, a user PC may be in domainA.example.com, while the user account is domainB\username. You would configure "domainA" in Cisco Unified MeetingPlace.

- Each Cisco Unified MeetingPlace user must have a unique username in Microsoft Outlook and Microsoft Exchange that is the same across the entire organization in Active Directory. For example, suppose that Cisco Unified MeetingPlace user "userA" is associated with two different domains, domain1.example.com and domain2.example.com, both of which you configured in Cisco Unified MeetingPlace. The Single Sign-On authentication method assumes that userA@domain1.example.com and userA@domain2.example.com refer to the same "userA" user profile in Cisco Unified MeetingPlace.

For further information, see

[http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_-\\_How\\_to\\_Enable\\_Scheduling\\_From\\_Microsoft\\_Outlook#Default\\_Authentication\\_Methods\\_for\\_Microsoft\\_Outlook\\_Users\\_in\\_Cisco\\_Unified\\_MeetingPlace\\_Release\\_7.0.3](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_-_How_to_Enable_Scheduling_From_Microsoft_Outlook#Default_Authentication_Methods_for_Microsoft_Outlook_Users_in_Cisco_Unified_MeetingPlace_Release_7.0.3).

## Rescheduling Recurring Meetings

In Release 7.0.3 (MR2), when you reschedule a recurring meeting that contains previously made exceptions, those exceptions are not preserved.

## Recording Restriction

In Release 7.0.3 (MR2), there must be at least one audio participant in the meeting before users can record a web meeting. For further information about configuring recordings, see [http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_-\\_Configuring\\_Recordings\\_for\\_Cisco\\_Unified\\_MeetingPlace](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_-_Configuring_Recordings_for_Cisco_Unified_MeetingPlace).

End-user information about recording meetings can be found in the User Guide at:

[http://www.cisco.com/en/US/docs/voice\\_ip\\_comm/meetingplace/7x/english/user/web\\_recording\\_a\\_meeting.html](http://www.cisco.com/en/US/docs/voice_ip_comm/meetingplace/7x/english/user/web_recording_a_meeting.html).

## New Features in Release 7.0.2 (MR1)

- [IBM Lotus Sametime Web Conference Integration, page 9](#)
- [Capacity Management Reports, page 10](#)

## IBM Lotus Sametime Web Conference Integration

With the Cisco Unified MeetingPlace for IBM Lotus Sametime Web Conference integration, you can provide Sametime users with integrated web and audio conferencing capabilities. The Sametime infrastructure provides the web conference, and Cisco Unified MeetingPlace serves as the audio bridge. Users schedule and attend meetings from the Sametime Meeting Center, and the Sametime Meeting Room provides the integrated roster and in-session controls. You can view and manage the audio meeting provided by Cisco Unified MeetingPlace through the MeetingPlace Conference Manager.

With this integration, a Sametime Connect client can start an instant meeting, and invitees receiving the meeting invitation can join the meeting in the Sametime Web Meeting Room and receive audio through Cisco Unified MeetingPlace.

For details, see the *Integration Note for Installing and Configuring IBM Lotus Sametime Web Conference with Cisco Unified MeetingPlace*.

## Capacity Management Reports

The following capacity management reports are now available in the Administration Center:

- Unattended Ports Report—Shows what percentage of scheduled ports were not used during a specified time range. The output can help you determine the appropriate settings for your overbook and floater ports.
- Monthly Usage Report—Shows the number of minutes per month that were used for conferencing on the system.

## Features That Have Changed from Release 7.0.1 to Release 7.0.2 (MR1)

- [Scalability](#), page 10
- [Supported Languages](#), page 10
- [MeetingPlace Conference Manager](#), page 11
- [Directory Service](#), page 11
- [Cisco WebEx Integration](#), page 12
- [Microsoft Outlook Front-End Integration](#), page 12
- [Microsoft Outlook Back-End Integration](#), page 13
- [IBM Lotus Notes Integration](#), page 14
- [Line Echo Cancellor for G.729 Codec](#), page 14

## Scalability

Audio scalability increased from 1000 to 1500 ports per Cisco Unified MeetingPlace system. For details, see the *Planning Guide for Cisco Unified MeetingPlace Release 7.0*.

## Supported Languages

Cisco Unified MeetingPlace now supports the following locales, with the specified exceptions:

- English (UK)—telephone user interface (TUI) only
- English (US)
- French (Canadian)—TUI only
- French (France)
- German
- Japanese
- Portuguese (Brazil)
- Russian—no localized documentation
- Spanish (Latin American)

**Note**

Only U.S. English is supported on Cisco Unified MeetingPlace systems that are integrated with Cisco WebEx.

In the previous release, only the following locales were supported:

- English (UK)—telephone user interface (TUI) only
- English (US)

## MeetingPlace Conference Manager

MeetingPlace Conference Manager now provides the following features:

- Full functionality for adding and editing user profiles—In the previous release, you could only modify the user password or e-mail address of an existing user profile from MeetingPlace Conference Manager.
- Ability to export and import a list of servers—In the previous release, you could only add servers one at a time.
- Ability to change the look and feel of the application.

For details, see the following modules in the *Configuration Guide for Cisco Unified MeetingPlace*:

- [Installing MeetingPlace Conference Manager](#)
- [Using MeetingPlace Conference Manager](#)

## Directory Service

- Directory Service filters for assigning time zones to imported users now support telephone numbers that do not include spaces or punctuation. You can specify the number of digits to use as the phone prefix to match a time zone filter.
- New options are available for assigning profile numbers to Directory Service users:
  - Use the Telephone Number field entry in Cisco Unified Communications Manager as the profile number for each Directory Service user.
  - Use a configurable number of trailing digits from the Telephone Number field entry in Cisco Unified Communications Manager as the profile number for each Directory Service user.
  - Use a six-digit auto-generated profile number, starting from 100001.

If you select the first method of assigning profile numbers, but the Telephone Number in Cisco Unified Communications Manager is blank, then Cisco Unified MeetingPlace will instead use a six-digit auto-generated profile number for the user.

If you select either of the first two methods of assigning profile numbers, and the selected method results in a conflict with an existing profile number in Cisco Unified MeetingPlace, the system will instead use a six-digit auto-generated profile number for the user.

You also specify whether to apply the profile number configuration method to new users only, or to each user profile that gets imported or updated during Directory Service user profile updates or full synchronizations.

In the previous release, the system assigned a profile number based on the Telephone Number field in Cisco Unified Communications Manager. If the Telephone Number field was empty for the user, then the system randomly generated a unique profile number during the initial import. If a previously empty Telephone Number field becomes populated, then the randomly generated profile number gets overwritten at the next Directory Service user profile update or full synchronization.

## Cisco WebEx Integration

- Cisco Unified MeetingPlace Release 7.0.2 supports Cisco WebEx Release WBS 27.

If you upgrade Cisco Unified MeetingPlace from Release 7.0.1 to Release 7.0.2, then you must also do the following:

- Work with your Cisco WebEx administrator to upgrade your Cisco WebEx site from WBS 26 to WBS 27.
- Create and upload a new Cisco WebEx certificate.
- Configure Single Sign-On in the Cisco WebEx Site Administration.

For details, see the *Installation and Upgrade Guide for Cisco Unified MeetingPlace*.

- For Cisco WebEx meetings that are scheduled from the Cisco Unified MeetingPlace end-user web interface, meeting schedulers may now designate one or more profiled invitees as *alternate hosts*. Alternate hosts can initiate the meeting in the absence of the meeting owner (host), and they have recording and share privileges in the Cisco WebEx web meeting.

If the meeting owner joins a meeting that was initiated by an alternate host, the meeting owner immediately takes the *host* role but not the *presenter* role. The host must manually take the presenter role to have share privileges in the meeting.

---

**Note** Alternate hosts cannot start end-to-end–encrypted meetings.

---

In Release 7.0.1, the meeting owner was required to join the Cisco WebEx meeting to designate another user as the host.

For details, see the [Scheduling Meetings](#) module in the *User Guide for Cisco Unified MeetingPlace*.

- Cisco WebEx meetings now support Cisco Unified MeetingPlace video conferencing, which displays video through the video endpoints, for example, Cisco Unified Personal Communicator, Cisco Unified Video Advantage, and video terminals. Note, however, that Cisco Unified MeetingPlace video conferencing is not recorded in Cisco WebEx meetings.

In Release 7.0.1, users could join Cisco WebEx meetings with video, but only through web cameras. Video is displayed in the Video Panel within the Cisco WebEx web meeting interface and is included in Cisco WebEx meeting recordings.

When you obtain your Cisco WebEx account and site, you choose between Cisco Unified MeetingPlace video conferencing and Cisco WebEx webcam video. The Cisco WebEx site cannot support both types of video at the same time.

For details, see the [Integrating Cisco Unified MeetingPlace with Cisco WebEx](#) module in the *Configuration Guide for Cisco Unified MeetingPlace*.

## Microsoft Outlook Front-End Integration

- Microsoft Exchange 2007 is now supported.
- Multiple delegates are now supported, specifically:
  - A Microsoft Outlook delegate may schedule meetings for multiple users.
  - A user may have multiple Microsoft Outlook delegates.

For more information about scheduling meetings on behalf of other users, see the [Using Microsoft Outlook with Cisco Unified MeetingPlace](#) module in the *User Guide for Cisco Unified MeetingPlace*.

- A single sign-on default user authentication method is now available. When the system is configured to use single sign-on, users do not need to log in to Cisco Unified MeetingPlace from Microsoft Outlook after successfully logging in to Microsoft Exchange or to Active Directory.

In the previous release, all users were required to log in to Cisco Unified MeetingPlace the first time they try to schedule a meeting from Microsoft Outlook, and again each time the Cisco Unified MeetingPlace user password expires. If the user selected the Remember Me option, then stored cookies were used to authenticate the users at all other times.

You can choose whether your system uses the single sign-on or the Remember Me default authentication method. To use single sign-on, you must enable SSL on the Application Server.

If you upgrade your system from Release 7.0.1 to Release 7.0.2 and select the single sign-on authentication method, then your users need to install the new Cisco Unified MeetingPlace plug-in for Microsoft Outlook.

For details, see the [Enabling Cisco Unified MeetingPlace Scheduling from Microsoft Outlook](#) module in the *Configuration Guide for Cisco Unified MeetingPlace*.

## Microsoft Outlook Back-End Integration

- Microsoft Exchange 2007 is now supported.
- You now configure the back-end Microsoft Outlook integration on the Application Server. In the previous release, this configuration was performed on the Web Server.
  - Special steps are required to update Cisco Unified MeetingPlace systems that use the back-end integration. For details, see the *Installation and Upgrade Guide for Cisco Unified MeetingPlace*.
  - E-mail notifications for the back-end Microsoft Outlook integration now use the same e-mail notification templates and language property files as the front-end Microsoft Outlook integrations, which are configured and customized through the Administration Center.
 

In the previous release, the e-mail notification templates for back-end Microsoft Outlook integration were stored and customized on the Web Server.
  - Customized e-mail notification templates for Release 7.0.1 will remain on the Web Server, in case you want to reference them in the future.
- The e-mail formats available for Microsoft Exchange are now HTML and plain text.
  - In the previous release, only Rich Text Format was supported for Microsoft Exchange.
  - When migrated from Release 7.0.1 to Release 7.0.2, user profiles with the e-mail type and format setting of Microsoft Exchange (RTF) will automatically be reconfigured to use Exchange (HTML).
  - HTML-formatted notifications do not support embedded images.

For details, see the [Enabling Microsoft Outlook Calendar Notifications for Meetings Scheduled from the Cisco Unified MeetingPlace End-User Web Interface](#) module in the *Configuration Guide for Cisco Unified MeetingPlace*.

## IBM Lotus Notes Integration

The following enhancements were added in Cisco Unified MeetingPlace Release 7.0.2:

- Users may now control the following items through a new field in the calendar preferences (More > Preferences > Calendar & To Do > MeetingPlace).
  - When default meeting settings are fetched from Cisco Unified MeetingPlace.
  - Default layout of the IBM Lotus Notes calendar entry form.

The new “Auto Profile Synchronization” field has these setting options:

- True—(Default) IBM Lotus Notes automatically obtains the default meeting settings (such as the billing code and the number of participants) from Cisco Unified MeetingPlace. The calendar entry form always displays the Cisco Unified MeetingPlace fields and meeting settings. This is how the integration worked in Cisco Unified MeetingPlace Release 7.0.1.
  - False—The calendar entry form does *not* initially display Cisco Unified MeetingPlace fields and meeting settings. The user needs to click a new “Make this a MeetingPlace meeting” button in the calendar entry form to fetch the default meeting settings from Cisco Unified MeetingPlace and display those settings on the calendar entry form.
- The Cisco Unified MeetingPlace User ID and User Password fields no longer appear on the IBM Lotus Notes calendar entry form. Users are initially prompted to log in through a separate dialog box, and the login credentials are stored and can be modified in the IBM Lotus Notes calendar preferences (More > Preferences > Calendar & To Do > MeetingPlace).

## Line Echo Canceller for G.729 Codec

Release 7.0.2 introduces the availability of the Line Echo Canceller (LEC) for the G.729 codec.

By default, the LEC is enabled when the G.729 codec is in use. This default configuration requires that the system use the lower capacity global audio mode.

If you want to use the higher capacity global audio mode, then disable LEC for G.729. To do this, set the **Enable LEC w. G.729** field to **No** on the Media Parameters Page in the Administration Center. Note that you need to restart the system after changing this field.

## New Features in Release 7.0.1

- Integrated the Cisco Unified MeetingPlace audio on-premise solution with the Cisco WebEx-hosted web-conferencing offering.
- Added functionality for integrated audio-web and audio-video recordings.
- Requires Cisco Unified Communications Manager Release 6.x or higher for integration with other directory servers. (Cisco Unified Communications Manager Release 6.x is bundled with Cisco Unified MeetingPlace Release 7.0.)
- Added breakout sessions for video.

## Features No Longer Supported in Release 7.0

**Note** WebConnect is not supported in Release 7.0. However, information for WebConnect erroneously appears in the online help for the Administration Center in Release 7.0.1.

Release 6.0	Release 7.0
<b>Audio Conferencing Features</b>	
Ability to reschedule meetings from the phone.	Not supported. Users can reschedule meetings from the web and other scheduling integrations, such as Cisco Unified MeetingPlace for Outlook.
In-session features: meeting agenda, meeting comments, meeting attachments.	Not supported.
Flex menus (audio menu customization).	Not supported.
<b>Video Conferencing Features</b>	
Service prefix selection during scheduling.	Not supported.
Cascading by endpoint location.	Not supported.
High-definition transcoding.	Not supported.
SCCP partition MCU for Cisco Unified Communications Manager ad-hoc video telephony support.	Not supported. Users must use Cisco Unified Videoconferencing Release 5.x or 7.x to enable this feature.
ISDN Video (H.320) Gateways or ISDN Video terminals	Not supported.
<b>Web Conferencing Features</b>	
WebConnect	Not supported.
<b>Recordings</b>	
Ability to listen to audio recordings from the phone.	Not supported. Users can listen to audio recordings from the web file locally on their computer.
<b>Administrative Features</b>	
Teams and team outdial.	Not supported. Users can automatically outdial to participants in continuous meetings if the Find Me option is configured.
<b>Deployment Options</b>	
Multiserver meetings, including the ability to schedule through the web.	Not supported.
<b>Integrations</b>	
Cisco Unified MeetingPlace for Outlook integration:	Cisco Unified MeetingPlace for Outlook integration:

Release 6.0	Release 7.0
<ul style="list-style-type: none"> <li>Users can attend meetings through the MeetingPlace tab in their Microsoft Outlook client.</li> <li>Users can check the availability of potential invitees by clicking the Check Availability button.</li> <li>System sends out a notification when a recurring meeting chain is set to expire.</li> <li>System sends out a notification that indicates the number of scheduled ports.</li> <li>E-mail notification illustrates whether the meeting was scheduled as “internal” or “external”.</li> </ul>	<ul style="list-style-type: none"> <li>Attending meetings through the MeetingPlace tab is no longer supported. Users can attend meetings through the URL in their meeting notifications instead.</li> <li>The Check Availability button is no longer supported.</li> <li>The end of recurring meeting chain notification is no longer supported.</li> <li>This feature is no longer supported.</li> <li>This feature is no longer supported.</li> </ul>
<ul style="list-style-type: none"> <li>System supports HTML-based notifications for meetings scheduled from Microsoft Outlook.</li> </ul>	<ul style="list-style-type: none"> <li>This feature is no longer supported. Meetings scheduled from Microsoft Outlook support plain text notifications only.</li> </ul>
Directory Services	
Cisco Unified MeetingPlace Directory Services uses scripted business rules customized for each specific installation and directly integrated to LDAP.	Uses Cisco Unified Communications Manager (CUCM) LDAP integration to synchronize with LDAP.
Cisco Unified MeetingPlace Directory Services can be scripted to use any data field mapping so that it provides flexibility.	CUCM synchronizes a limited set of fields from LDAP, including lastname, firstname, e-mail, phone number, department, and status.
Cisco Unified MeetingPlace Web provides end-user authentication methods.	Release 7.0 provides end-user authentication to LDAPs through either CUCM or Cisco Unified MeetingPlace Web end-user authentication methods.
Users can go to the Cisco Unified MeetingPlace Accounts page to change their profile passwords.	Not supported. If the Cisco Unified MeetingPlace system is configured with an LDAP integrations, users must go to the Cisco Conference Manager user page to change their profile passwords.

## Features that Have Changed from Release 6.0 to Release 7.0

Release 6.0	Release 7.0
Main menu prompt: Press 1, enter Meeting ID.	Main menu prompt: Enter Meeting ID. The system no longer requires the user to press 1.
Audio Server component for audio.	Application Server component for audio.

<b>Release 6.0</b>	<b>Release 7.0</b>
Separate audio and video components.	Audio and video components now merged into one component.
Smart Blades and Multi-Access Blades.	Audio Blades and Video Blades.
Native SIP, H.323, PSTN support.	Native SIP support only.
Redundancy by shadow server.	Redundancy by failover.
<p>MeetingTime has the following main roles:</p> <ul style="list-style-type: none"> <li>• Admin console</li> <li>• Generate reports and logs</li> <li>• Conference monitor</li> </ul>	<p>Web-based Administration Center takes over the following roles:</p> <ul style="list-style-type: none"> <li>• Configure various system parameters and integration configurations (Cisco WebEx, LDAP, Outlook and so on)</li> <li>• Import/export users, groups and meetings</li> <li>• Generate system logs, alarms and usage reports</li> </ul>
	<p>Conference Manager is a separate application for the following:</p> <ul style="list-style-type: none"> <li>• Conference monitoring</li> <li>• Attendant scheduling</li> <li>• Profile management including password update (not auto reset)</li> <li>• Bulk user lock/unlock, activate/deactivate</li> <li>• Outdial attendees by drag-and-drop</li> <li>• Meeting Summary tab</li> <li>• Event Log tab</li> </ul> <p>The following features are NOT supported in Conference Manager:</p> <ul style="list-style-type: none"> <li>• Join meetings from Conference Manager</li> <li>• Schedule different web templates (will use the default web template)</li> <li>• Rename breakout sessions</li> <li>• Display Speaker icon for breakout sessions</li> <li>• Poll for meeting attendance</li> </ul>
SMTP E-Mail Gateway for e-mail integration.	E-mail support integrated into the application.
Network backup gateway.	SSH and FTP backups.
Non-synchronization of invitee lists between Cisco Unified MeetingPlace for Outlook and Cisco Unified MeetingPlace Web or MeetingTime.	Invitee lists are synchronized between the separate applications. Rescheduling a meeting via the Cisco Unified MeetingPlace for Outlook plug-in results in updated invitee lists on Cisco Unified MeetingPlace Web and MeetingTime.

Release 6.0	Release 7.0
<p>Cisco Unified MeetingPlace for Outlook integration:</p> <ul style="list-style-type: none"> <li>• Video endpoint scheduling:                             <ul style="list-style-type: none"> <li>– MCU ports are “reserved”</li> <li>– Video endpoints cannot be scheduled and automatic outdial capabilities are not supported</li> </ul> </li>   <li>• Recurring meetings are supported but with restrictions, such as a limit of one day per week for weekly meetings.</li> <li>• Single sign-on is not supported.</li>   <li>• Requires the Cisco Unified MeetingPlace for Outlook Release 6.0 plug-in, which supports the following:                             <ul style="list-style-type: none"> <li>– User ID and password information in the MeetingPlace Server Properties form</li> <li>– Custom name support</li> <li>– URL format uses http://hostname/cgi-bin</li> </ul> </li> </ul>	<p>Cisco Unified MeetingPlace for Outlook integration:</p> <ul style="list-style-type: none"> <li>• Video endpoint scheduling in Release 7.0 MR1 and later:                             <ul style="list-style-type: none"> <li>– MCU video ports are not “reserved”</li> <li>– Video endpoints can be scheduled with automatic outdial capabilities</li> <li>– Video endpoints can be scheduled from the Microsoft Outlook scheduling tab</li> <li>– Video endpoints require Microsoft Exchange profiles</li> </ul> </li>   <li>• Release 7.0 MR1 and later supports more recurring patterns with no restrictions.</li>   <li>• Release 7.0MR1 and later supports both single sign-on and “Remember Me” options.</li> <li>• Requires the Cisco Unified MeetingPlace for Outlook Release 7.x plug-in, which supports the following:                             <ul style="list-style-type: none"> <li>– User ID and password information saved in cookies</li> <li>– FQDN instead of names</li> <li>– URL format uses http:hostname/outlook/mp</li> </ul> </li> </ul>

## Limitations and Restrictions

Communicate the relevant limitations and restrictions to your end users:

- [Media Server, page 19](#)
- [System, page 19](#)
- [Conference Manager, page 20](#)
- [Web Server, page 20](#)
- [Cisco WebEx Integration, page 20](#)
- [Cisco Unified MeetingPlace for Microsoft Office Communicator \(MOC\), page 21](#)
- [Cisco Unified MeetingPlace for Microsoft Outlook, page 21](#)
- [Cisco Unified MeetingPlace Click-to-Conference with IBM Lotus Sametime Instant Messaging, page 21](#)
- [Cisco Unified MeetingPlace for IBM Lotus Sametime Web, page 21](#)
- [Online Help, page 22](#)
- [Closed Caveats, page 22](#)

## Media Server

- [CSCsq98121](#): In systems with only one Video Blade, when all the video ports are in use and one video participant moves to a breakout room, he cannot claim the video port that he just dropped when he left the main meeting room; however, a new participant can join the main meeting and claim the last video port.

## System

- [CSCsy86643](#): Cisco Unified Communications Manager does not support the logical partitioning feature for calls that involve Cisco Unified MeetingPlace.
- [CSCsm80659](#): You cannot install the Java Release 1.6 update 3 from the Sun Java installer located on java.com after installing and uninstalling different versions of JRE. If you already have Java 1.6 installed or if you do not have JRE at all, the problem does not occur. For more information, see [http://bugs.sun.com/bugdatabase/view\\_bug.do?bug\\_id=6656888](http://bugs.sun.com/bugdatabase/view_bug.do?bug_id=6656888) or [http://bugs.sun.com/bugdatabase/view\\_bug.do?bug\\_id=6591761](http://bugs.sun.com/bugdatabase/view_bug.do?bug_id=6591761).
- [CSCsq88071](#): The system displays an error if you do not use the same format (either hostname or IP address) for both the “Hostname [Home Page]” and “Hostname [Web Conferencing]” configuration values, even if they resolve to the same IP address. For best results, enter both as either hostnames or IP addresses.
- [CSCsm28212](#): If a participant attempts to start to record a meeting from the web, but the meeting scheduler does not have recording privileges, the system immediately stops recording the meeting. However, the system still produces an icon to an invalid web meeting recording that can later be found on the meeting recordings page.
- [CSCsv40103](#): If all recording resources for the system are in use when a user starts to record a meeting from the Cisco Unified MeetingPlace web meeting room:
  - Only the web portion of the meeting gets recorded.
  - Meeting participants are *not* notified that the audio portion of the meeting is not being recorded.

If, however, the meeting recording was initiated from the telephone user interface (TUI), then the user hears a voice prompt indicating that the recording cannot be started.

- [CSCsq75533](#): IOS routers that are used as transcoders for Cisco Unified MeetingPlace occasionally see the following traceback:

```
Sep 12 05:59:44.597: %DSMP-3-INTERNAL: Internal Error : dsmpSession not found,
-Traceback= 0x6156F9DC 0x61704AD4 0x60149830 0x6123F250 0x60149BEC 0x6123BE40 0x
60C6FB98 0x60C6A33C 0x60C6A9A4 0x60C545B0 0x60C5E168 0x60C52048 0x60C52310
```

This traceback usually correlates to a dropped, one way, or no-way audio call. Check the details of this defect using the CCO Bug Toolkit to find out which version of IOS is affected by this error symptom.

- [CSCsu73586](#): SMTP notifications show the meeting time in the time zone of the recipient. For recurring meetings, the meeting time in the message body is for the first occurrence. Because Daylight Savings Time occurs on different dates for different time zones, the meeting time for a recurring meeting may change for the recipient even if Daylight Savings Time has not yet occurred (for the recipient) because it has already occurred for the meeting scheduler. The recipient should be aware of the Daylight Savings Time difference between his time zone and the time zone of the meeting scheduler and convert the meeting time as needed.

- [CSCsv11016](#): Audio quality may be poor when using a softphone (such as Cisco Unified Personal Communicator or Cisco IP Communicator) while participating or presenting in a web meeting. Specifically, audio quality may degrade when meeting participants are sharing content, such as an application or desktop, which increases the CPU usage and bandwidth consumption on the end-user PCs. Typically, CPU usage exceeding the 80% threshold causes latency and results in choppy or garbled audio.

This issue is not unique to Cisco Unified MeetingPlace. Other applications which increase CPU usage or consume bandwidth may also negatively affect the audio quality. If you observe poor audio quality through your softphone, we recommend that you exit any application(s) that are not being used for the meeting and that may be consuming CPU and bandwidth.

## Conference Manager

- [CSCsm59792](#): The Cisco Unified MeetingPlace Conference Manager is unable to launch after enabling SSL due to Java web start limitations. You must reinstall Conference Manager after you enable or disable SSL on the server.

## Web Server

- When scheduling meetings from the end-user web interface, delegates cannot schedule meetings on behalf of other users. To schedule meetings for others, delegate must use the Microsoft Outlook with Cisco Unified MeetingPlace integration.
- [CSCsr95200](#): If a user reschedules a meeting in the following way, the meeting data becomes only partially updated, and users may not be able to join or modify the meeting:
  - While rescheduling the meeting, the user does *not* click the Update button on the Meeting Information page.
  - Instead, the user clicks Attachments/Recordings and then clicks OK.
  - If the new meeting time is still far enough in the future to not be in session, the user is brought back to the Meeting Information page but still does *not* click the Update button.
- [CSCsv00313](#): If there are no audio or video participants and only one web participant in a reservationless meeting, and that user installs the Cisco Unified Presenter Add-in from the web meeting room, then the meeting will end. Because the installation of the Cisco Unified Presenter Add-in causes the meeting room to relaunch, the system determines that there are no meeting participants in the reservationless meeting and therefore ends the reservationless meeting.

## Cisco WebEx Integration

- [CSCsm13611](#): When a user renames another Cisco WebEx user, only the participant who renamed the user can see the updated name.
- [CSCs188092](#): Cisco WebEx users can hear voice prompts for features that are not supported in Cisco WebEx.
- [CSCsk66953](#): Breakout room functionality does not work with the Cisco WebEx meeting room.
- [CSCsk95787](#): You cannot lock a Cisco WebEx web meeting from the phone. To lock a Cisco WebEx meeting, use the lock feature available in the Cisco WebEx web meeting room.

- [CSCso48210](#): Users should only use the My WebEx link to access Cisco WebEx meeting recordings. We do not support any other features found on the page to which you are redirected after clicking My WebEx.
- [CSCsk95184](#) and [CSCsm10841](#): Profiled users can join the same Cisco WebEx meeting twice.
- [CSCsm16223](#): Users have phone numbers in their profiles, but those phone numbers are not available in the Cisco WebEx meeting room. Set Cisco WebEx to remember the phone number used on the client machine instead.
- [CSCso80988](#): If a user dials out with the Invite By Phone feature in the Cisco WebEx meeting room, the Hang Up option does not work until either the phone rings eight times or the called party joins the meeting.

## Cisco Unified MeetingPlace for Microsoft Office Communicator (MOC)

- [CSCsl21354](#): If a profiled user dials in to a Cisco Unified MeetingPlace meeting that was initiated from Microsoft Office Communicator, leaves that meeting, and later rejoins that meeting by having the system dial out, then the user will be unable to mute audio.

## Cisco Unified MeetingPlace for Microsoft Outlook

- [CSCsr11853](#): For meetings scheduled through the end-user web interface, the system sends Microsoft Outlook notifications to the meeting scheduler on behalf of a dedicated system profile but sends notifications to invitees on behalf of the scheduler. Because of this, the scheduler does not see other invitees in the header or the scheduling tab of the notification. To see all the invitees in the notification body for meetings scheduled through the end-user web interface, enable the “Include list of invitees when scheduled from Unified MP Web” profile setting.

## Cisco Unified MeetingPlace Click-to-Conference with IBM Lotus Sametime Instant Messaging

- [CSCsw68185](#): If Cisco Unified MeetingPlace is configured to use a language other than English, some network or connectivity error messages are only partially localized or are displayed only in English.

## Cisco Unified MeetingPlace for IBM Lotus Sametime Web

- [CSCsv00013](#): The End Meeting menu option is greyed out, even for the chair, in instant meetings that are initiated from the chat client.
- [CSCsw38320](#): For meetings that are scheduled with telephony service, users cannot delete a single meeting instance of a recurring meeting series. When attempting to delete a recurring meeting, the user cannot uncheck the option to delete all meetings in the series.
- [CSCsw14731](#): If the chair dials out to another user:
  - The system treats the dialed-out user as a guest and prompts the user to record a name before joining the audio portion of the meeting.

- If the same profiled user to whom the chair dialed out also joined the web meeting as a profiled user, the meeting roster will show a web-only participant for the user, but it will not be automatically associated to the audio-only participant entry created by the dial-out call. As a workaround, the chair can manually merge the two entries into a single participant by selecting them and then selecting Tools > Audio > Associate Users.
- [CSCsw20960](#): In the IBM Lotus Sametime Meeting Center, if a user clicks the URL for a scheduled recurring meeting, the user sees the following error: “HTTP Web Server: Lotus Notes Exception - Entry not found in index.” To resolve this issue, install IBM hotfix IHAS-7JZK69.
- [CSCsw70545](#): Users cannot change the duration of the audio portion of a meeting that is already in session. If a user clicks “Change Duration” on the Meeting Details page of the IBM Lotus Sametime Meeting Center, then the modified remaining meeting time is applied only to the web portion of the meeting.

This limitation is unlikely to affect the end-user experience, because Cisco Unified MeetingPlace automatically extends meetings as long as two or more audio users are in the meeting.

- [CSCsw73757](#): If a user tries to delete a previously edited occurrence of a repeated meeting:
  - The user is *not* given the option to delete all occurrences of the repeated meeting. Instead, the user can delete only the one selected occurrence.
  - If the user confirms the deletion of the single occurrence, the occurrence gets deleted only from the IBM Lotus Sametime Web system. The occurrence does *not* get deleted from Cisco Unified MeetingPlace.
- [CSCsw94840](#): Rescheduling part of a recurring meeting series creates additional meeting instances which unnecessarily reserve voice ports on the Cisco Unified MeetingPlace system. Specifically, if a user reschedules part of a recurring meeting series:
  - The changes are applied as if the meeting instance being modified is the first one of the series. The system creates new future meeting instances for those meeting instances that have already occurred in the past.
  - Future meeting instances are moved to the new meeting time only if the start times of those meeting instances match the start time of the meeting instance that is being modified. If the start time does not match, then the old meeting instance remains the same in the system while a new meeting instance is created for the new meeting time.

## Online Help

The online help systems were not updated for Cisco Unified MeetingPlace Release 7.0.3. For the latest documentation updates, refer your users to the Cisco docwiki:  
[http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0)

## Closed Caveats

These caveats have been closed, which means that Cisco acknowledges that there is a problem but is choosing not to fix it. See the “[Using Bug Toolkit](#)” section on [page 25](#) for information about accessing these caveats.

Additional closed caveats are described in the “[Limitations and Restrictions](#)” section on [page 18](#).

**Table 1** *Closed Caveats for Cisco Unified MeetingPlace Release 7.0.3*

<b>Caveat Number</b>	<b>Severity</b>	<b>Component</b>	<b>Description</b>

**Table 2** *Closed Caveats for Cisco Unified MeetingPlace Release 7.0.1 and 7.0.2 (continued)*

Caveat Number	Severity	Component	Description
<a href="#">CSCsx01602</a>	3	installer	UpdatedSIPConfig.xml is not updated when using NET CLI options
<a href="#">CSCsq24187</a>	3	outlook	Inviting user that does not have MP Outlook integration installed
<a href="#">CSCsm66065</a>	4	web	Script error and broken links on page after session stale
<a href="#">CSCsr74427</a>	4	data-conf-breeze	MeetingPlace Red Door icon image has low resolution
<a href="#">CSCso34167</a>	6	data-conf-breeze	Powerpoint 2007 slides do not convert properly

## Important Notes

### Third-Party Software Policy

Cisco Unified MeetingPlace is extensively tested in its supported hardware and software environment. Diverging from the supported hardware and software environment by adding third-party components may negatively impact Cisco Unified MeetingPlace functionality and may impose limitations to your Cisco support.

Cisco qualifies a fixed set of required third-party software, including remote-access and antivirus. This set is documented in the System Requirements document for each release. Any third-party components that are not explicitly listed in the System Requirements documentation are not supported.

### Microsoft Updates and Patches

Do not apply operating system updates or patches directly from Microsoft on your Cisco MCS. Cisco qualifies such updates and patches for its applications and then makes them available to customers. Customers can sign up to be proactively notified of available updates through the following URL: <http://www.cisco.com/cisco/support/notifications.html>.

### Adobe Flash Media Server Vulnerabilities

Cisco Unified MeetingPlace is not affected by the following Adobe Flash Media Server Vulnerabilities because Cisco Unified MeetingPlace does not ship with the Flash Media Server administration console:

- Vulnerability identifier: APSB10-19
- CVE number: CVE-2010-2217, CVE-2010-2218, CVE-2010-2219, CVE-2010-2220

For more information about these vulnerabilities, see <http://www.adobe.com/support/security/bulletins/apsb10-19.html>.

## Caveats

- [Documentation Errata, page 25](#)

- [Using Bug Toolkit, page 25](#)
- [Open Caveats, page 26](#)
- [Resolved Caveats, page 29](#)

## Documentation Errata

- [Incorrect Exception Code, page 25](#)
- [Missing Page Documentation, page 25](#)
- [Online Help Points to Invalid Document, page 25](#)

### Incorrect Exception Code

Release 7.0 documentation incorrectly identified the exception that arises when communication has been unexpectedly lost between the application server and a web conferencing or integrations server as EX\_UNITFAULT. This has been updated to EX\_UNITFAULT\_GATEWAY. You can find the updated *Alarm and Exception Code Reference* documentation at:

[http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod\\_technical\\_reference\\_list.html](http://www.cisco.com/en/US/products/sw/ps5664/ps5669/prod_technical_reference_list.html)

### Missing Page Documentation

The online help for the Cisco Unified MeetingPlace Release 7.0 Administration Center fails to describe the “Configure Log Levels” page. This description is now available on the Cisco Unified MeetingPlace docwiki at:

[http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_-\\_Configuring\\_the\\_Media\\_Server\\_Logging\\_Levels](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_-_Configuring_the_Media_Server_Logging_Levels)

### Online Help Points to Invalid Document

The Cisco Unified MeetingPlace Administration Center Online Help directs users to the incorrect document for information regarding the installation of the Cisco Unified MeetingPlace for IBM Lotus Sametime Web Conference Installer. The document at [http://www.cisco.com/en/US/docs/voice\\_ip\\_comm/meetingplace/7x/english/integration/sametime\\_integration\\_guide.html](http://www.cisco.com/en/US/docs/voice_ip_comm/meetingplace/7x/english/integration/sametime_integration_guide.html) is no longer valid.

Updated information regarding the Cisco Unified MeetingPlace for IBM Lotus Sametime Web Conference Installer is available on the Cisco docwiki site at:

[http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace%2C\\_Release\\_7.0\\_-\\_Deploying\\_the\\_Cisco\\_Unified\\_MeetingPlace\\_for\\_IBM\\_Lotus\\_Sametime\\_Web\\_Conference\\_Installer](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace%2C_Release_7.0_-_Deploying_the_Cisco_Unified_MeetingPlace_for_IBM_Lotus_Sametime_Web_Conference_Installer).

## Using Bug Toolkit

Known problems (bugs) are graded according to severity level. These release notes contain descriptions of the following:

- All severity level 1 or 2 bugs.
- Significant severity level 3 bugs.
- All customer-found bugs.

You can search for problems by using the Cisco Software Bug Toolkit.

### Before You Begin

To access Bug Toolkit, you need the following items:

- Internet connection
- Web browser
- Cisco.com user ID and password

### Procedure

- 
- Step 1** To access the Bug Toolkit, go to <http://tools.cisco.com/Support/BugToolKit/action.do?hdnAction=searchBugs>.
- Step 2** Log in with your Cisco.com user ID and password.
- Step 3** To look for information about a specific problem, enter the bug ID number in the “Search for Bug ID” field, then click **Go**.
- 

For information about how to search for bugs, create saved searches, and create bug groups, click **Help** in the Bug Toolkit page.

## Open Caveats

The caveats in this section describe possible unexpected behavior in Cisco Unified MeetingPlace Release 7.0. Bugs are listed in order of severity.

**Table 3** Cisco Unified MeetingPlace Release 7.0.3 Open Caveats

Caveat Number	Severity	Component	Description
<a href="#">CSCti31481</a>	2	webex-integration	SSL certificate domain name parser to handle non-alphanumeric characters
<a href="#">CSCti16612</a>	3	cp-mediacontrol	Many calls faile due to CUCM not being able to handle more than 15 calls per second
<a href="#">CSCth70301</a>	3	mp-server	Optimize ActiveConf Mutex handling in ConfSchd
<a href="#">CSCti35521</a>	3	web	Error on schedule meeting page
<a href="#">CSCti41383</a>	3	web	Inability to share with Select from Attachments
<a href="#">CSCsx15251</a>	4	webex-integration	Non-english character long name not displayed correctly on WebEx
<a href="#">CSCta16195</a>	4	sametime-server	user in mute/locked state, becomes new chair, cant unmute/unlock self
<a href="#">CSCte55353</a>	4	webex-integration	Type II deployment - IE 8 user cannot login through the App admin UI
<a href="#">CSCtf51275</a>	4	web	Collaborative reservationless - move to WR locks the meeting
<a href="#">CSCtf77803</a>	4	web	After service restart audio user shown incorrecly
<a href="#">CSCtf81053</a>	4	webex-integration	no function of hangup button in webex mtg
<a href="#">CSCtg17389</a>	4	mp-server	newcomers are muted on entry after 'unmuted all' command
<a href="#">CSCtg94258</a>	4	notifications	Error message in Outlook needs localization

**Table 3** Cisco Unified MeetingPlace Release 7.0.3 Open Caveats (continued)

Caveat Number	Severity	Component	Description
<a href="#">CSCth31675</a>	4	db	some numbers for backup logs are missing
<a href="#">CSCth33492</a>	4	mp-server	Propagation of profile flex fields from web to admin odd behavior
<a href="#">CSCth40556</a>	4	web	no localized error message for non-english user
<a href="#">CSCth48081</a>	4	installer	Hostname field during install
<a href="#">CSCth55637</a>	4	cisco-integration	Wrong and duplicate messages in IP Phone Services
<a href="#">CSCth67080</a>	4	cisco-integration	Newly added user in CCM ldap cannot navigate through menu 4 in IPSS
<a href="#">CSCth74888</a>	4	web	size of billing code need to be increased to support all language
<a href="#">CSCth77868</a>	4	db	Failover   ConfSchd db rebuilt after running clearadb on standby server
<a href="#">CSCth78024</a>	4	mp-server	Error pops-up while scheduling personal mtg from Conference manager
<a href="#">CSCth78062</a>	4	sametime-server	Re-scheduling recc. mtg from Sametime Web adds unwanted instances
<a href="#">CSCth80491</a>	4	mp-server	internal error due rescheduling mtg with video terminals
<a href="#">CSCth84682</a>	4	localization	ALL-LANG: Not adequate error message for non english user
<a href="#">CSCth87513</a>	4	mp-server	User suddenly leaves meeting ("Now departing...") but remain on audio
<a href="#">CSCth87590</a>	4	admin	Failover   Exception reading log file after running backup on active srv
<a href="#">CSCth88262</a>	4	sametime-server	Error after clicking on "Link to online meeting" for recc. meeting
<a href="#">CSCth91455</a>	4	mp-server	remove old, junk file related to MPDS migration from MP7MR2 appserver
<a href="#">CSCti00714</a>	4	mp-server	Wrong prompt when scheduling future mtg via TUI
<a href="#">CSCti05649</a>	4	db	Deleted terminal not found in deletedrec table
<a href="#">CSCti16333</a>	4	admin	MP7.0 Upgrade MR1->MR2 : Cannot delete a group from admin UI
<a href="#">CSCti18418</a>	4	outlook	If "Vanity ID"=No mtgID is changed for series with passed instances
<a href="#">CSCti18744</a>	4	db	can not initiated specified backup level from CLI
<a href="#">CSCti33019</a>	4	mp-server	Backup needs to check if it's already running and handle cleanup errors
<a href="#">CSCti34301</a>	4	db	Include email template files, outlook file etc as part of archive
<a href="#">CSCti20934</a>	4	notifications	Series with exceptions inconsistent OL and web
<a href="#">CSCti28216</a>	5	web	Inadequate part of error message during recording
<a href="#">CSCth28852</a>	5	web	Number of attach/record back to 0 if you add/delete some invitee
<a href="#">CSCth55691</a>	5	cisco-integration	Doubled and undesired ERROR messages when try to record over IPSS
<a href="#">CSCtf41848</a>	5	mp-server	Moderator has listener's icon when joins first via phone then web

**Table 4** Cisco Unified MeetingPlace Release 7.0.1 and 7.0.2 Open Caveats

Caveat Number	Severity	Component	Description
<a href="#">CSCsv99600</a>	2	data-conf-breeze	Reservationless meetings on loaded secondary server start with incorrect template
<a href="#">CSCsq97920</a>	3	outlook	Remove recurrence button does not remove recurrence
<a href="#">CSCsr95200</a>	3	web	Inconsistent meeting info displayed after "update mtg" from att/rec page

Table 4 Cisco Unified MeetingPlace Release 7.0.1 and 7.0.2 Open Caveats (continued)

Caveat Number	Severity	Component	Description
CSCsv15282	3	data-conf-breeze	Language Russian. Start Screen Sharing displayed on English instead Russ
CSCsv96063	3	web	Replication recovery issue
CSCsv96351	3	mcu-radvision	Mute and UnMute Prompt doesn't play
CSCsw14731	3	sametime-server	"chair outdial to profile user, phone connection not auto-associated"
CSCsw20541	3	mcu-radvision	New active-speakers notification sent only when most-active-spker chang
CSCsw29808	3	webex-integration	Alternate host can't join meetings with E2E before host
CSCsw31836	3	db	DB query error. Error code 211/245
CSCsw38580	3	outlook	Ugly experience when deleting meeting from Outlook no cookie
CSCsw44777	3	mp-server	Perf:Call Disconnects at Appserver level during hi-load overlap traffic
CSCsw83258	3	mp-server	EX_LONGLOCK. Recurring meetings.
CSCsw86626	3	web	Limit recurring meetings to prevent users from impacting sys perform
CSCsw97561	3	mcu-radvision	lip sync. 4cif test.
CSCsw97602	3	mp-server	System failed to clean up the state of meetings that may have ended
CSCsx01523	3	installer	mpx_sipserver is not running after initial install
CSCsx02089	3	installer	"MP APP server time unable to synch with NTP server, it was working"
CSCsx09934	3	notes	Rescheduled Subject in Recurrent Meetings is not complete
CSCsx10500	3	mp-server	Unable to hear audio in mtg when joining after switching from Cell Phone
CSCsx16472	3	conferencemanager	Conference Manager needs ability to toggle Entry/Exit Announcements
CSCsx38904	3	sametime-server	sametime web: new chair person cannot mute, unmute other users
CSCsx39669	3	sametime-server	resched mtg in series result in sametime mtgs without MP audio
CSCsx42046	3	outlook	After cookie expires or is deleted, forward notification returns error.
CSCsx44682	3	outlook	Outlook asks scheduler to deconflict meeting records, double meetings
CSCsx51657	3	outlook	OL2003: reschedule recurring occurrence caused Participant already invited
CSCsx59876	3	admin	User profile get locked after single attempt using OL scheduling
CSCsk01923	4	web	Error 1 evaluating webpart expression
CSCso79119	4	mp-server	RL meeting having p/w set to Yes shows a dummy password on web
CSCsq28699	4	mcu-radvision	MP7.0:MCU Subnet Mask is in Hex Format
CSCsu06216	4	web	Some past meetings stuck on Web Conferences page
CSCsw50087	4	outlook	Subject reverts to Last name when hidden.
CSCsw97037	4	mp-docs	Location of Presenter Add-in missing
CSCsx01523	4	installer	mpx_sipserver is not running after initial install
CSCsx10070	4	sametime-server	Unmute user doesn't take off user from mute state
CSCsh68447	6	web	Presentation meeting should not have Lecture style prompt .
CSCsi96915	6	mp-docs-outlook	MeetingPlace for Outlook Scheduling via TREO/PALM & BLACKBERRY etc.
CSCsl86152	6	db	database_export.sh error during upgrade installation

**Table 4** Cisco Unified MeetingPlace Release 7.0.1 and 7.0.2 Open Caveats (continued)

Caveat Number	Severity	Component	Description
<a href="#">CSCsq92594</a>	6	data-conf-breeze	Security Issue - File pod permissions - need controls
<a href="#">CSCsr14529</a>	6	data-conf-breeze	Presentors should be able to change their name in meeting room
<a href="#">CSCsr46129</a>	6	notes	FlexMenu items need to be able to be included in all email notifications
<a href="#">CSCsr58328</a>	6	mp-server	MP7.0:Users can't outdial from web if the phone disconnects from audio
<a href="#">CSCsr72467</a>	6	web	MP7.0:Require configurable option to extend ext mtg recording availability
<a href="#">CSCsu60118</a>	6	web	ILO support on MeetingPlace App server and Web server
<a href="#">CSCsu60164</a>	6	web	MP Web servers should support upgrade via web interface
<a href="#">CSCsu87177</a>	6	mp-server	Attendant and System Administrator want to use LDAP password
<a href="#">CSCsv66582</a>	6	outlook	Request ability to add meeting attachments from MP Outlook plug-in
<a href="#">CSCsv66612</a>	6	mp-server	Separate minimum user profile length and minimum meeting ID length
<a href="#">CSCsw20797</a>	6	admin	Add bulk import to the Time Zone Filter.
<a href="#">CSCsw35894</a>	6	db	Add SNMP to Failer Over Server
<a href="#">CSCsw35961</a>	6	directory-services	change user type after LDAP import
<a href="#">CSCsw35985</a>	6	admin	strict meeting passwords
<a href="#">CSCsw52065</a>	6	web	random meeting passwords
<a href="#">CSCsw99705</a>	6	outlook	Inviting a video terminal through Outlook plugin invites them as Invitee
<a href="#">CSCsx16493</a>	6	admin	Port Utilization reports need to have a date range

## Resolved Caveats

This section lists caveats that are resolved but that may have been open in previous releases.

Bugs are listed in order of severity. Because defect status continually changes, be aware that this document reflects a snapshot of the defects that were resolved at the time this report was compiled. For an updated view of resolved defects, access the Bug Toolkit (see the [“Using Bug Toolkit”](#) section on page 25).

[Table 5](#) lists caveats that are resolved in Cisco Unified MeetingPlace Release 7.0.3 but that may have been open in previous releases.

[Table 6](#) list caveats that are resolved in Cisco Unified MeetingPlace Release 7.0.2 but that may have been open in previous releases.

**Table 5** Caveats Resolved in Cisco Unified MeetingPlace Release 7.0.3

Caveat Number	Severity	Component	Description
<a href="#">CSCsh96563</a>	1	web	Conferences are terminated when audio server connection is lost.
<a href="#">CSCsw46606</a>	1	web	MPWeb service keeps crashing and recycling after service goes down under load.
<a href="#">CSCsw88534</a>	1	data-conf-breeze	MPWEB Slave SQL database performance problem.
<a href="#">CSCsy62469</a>	1	web	SQL Server Agent dependency: outage when moving from workgroup to domain.

**Table 5** *Caveats Resolved in Cisco Unified MeetingPlace Release 7.0.3 (continued)*

<b>Caveat Number</b>	<b>Severity</b>	<b>Component</b>	<b>Description</b>
<a href="#">CSCsz59976</a>	1	web	MPX crash in C_LocalIO::AddFormItem+3b caused by long SiteMinder cookie in cache.
<a href="#">CSCta29577</a>	1	mp-server	Perf: MCU/ICM connection reset under load and 40 percent of calls failed.
<a href="#">CSCtc39691</a>	1	web	MeetingPlace needs more stringent validation of SQL command.
<a href="#">CSCtc79626</a>	1	mp-server	E-mail notification table has wrong data which causes rolling restarts.
<a href="#">CSCtd10861</a>	1	web	Accessing past meeting content while using MeetingPlace 6.0 causes MPWeb services to crash.
<a href="#">CSCtd18765</a>	1	web	MPWeb services crash when updating meeting.
<a href="#">CSCtd22992</a>	1	web	MPAgent.exe crashes when trying to reschedule an entire recurring meeting series using the Outlook plug-in.
<a href="#">CSCtd43990</a>	1	platform	System account(s) may reuse password across all installs
<a href="#">CSCtd68180</a>	1	mp-server	MeetingPlace stops accepting calls due to exception flooding of logs.
<a href="#">CSCtg24855</a>	1	admin	new user cannot be added to system
<a href="#">CSCth01027</a>	1	mcu-radvision	MeetingPlace sends SIP 200 OK without SDP
<a href="#">CSCth90825</a>	1	cp-digit-analysis	SIP REFER fails across different CUCM Nodes within CUCM cluster
<a href="#">CSCti15307</a>	1	installer	uninstall_meetingplace.sh script should adequately WARN administrator
<a href="#">CSCso80899</a>	2	notes	Attending Domino authentication only.
<a href="#">CSCsr52318</a>	2	outlook	Invited users can delete a meeting from MP.
<a href="#">CSCsr74682</a>	2	mp-server/media server	Reservationless Meetings getting 5179 error and then 5190 errors.
<a href="#">CSCsv10475</a>	2	data-conf-breeze	Breeze freezes when clicking on or scrolling through participant list.
<a href="#">CSCsv99794</a>	2	web	Event queue processing stuck waiting on outdial request.
<a href="#">CSCsv97857</a>	2	notes	Joining backend meeting on voice part does not work for Domino Authentication.
<a href="#">CSCsx70981</a>	2	notes	Creating an exception in a recurring back end meeting (other than first).
<a href="#">CSCsx50352</a>	2	data-conf-breeze	MPWeb outages, Adobe Breeze is failing a health check, particular Powerpoint slide uploads cause MPWeb service outages.
<a href="#">CSCsx65934</a>	2	web	Toggling shared storage causes the web conferencing service to fail.
<a href="#">CSCsx73515</a>	2	snmp	SNMPDM is not running on virtual machines.
<a href="#">CSCsx82454</a>	2	db	Application server upgrade hangs when archiving is enabled.
<a href="#">CSCsy13163</a>	2	mp-server	MeetingPlace 7.0 application server VUI crash and server reboot.
<a href="#">CSCsy14132</a>	2	web	“Allow Guest Access to Find Meetings” guest cannot attend recurring meetings.
<a href="#">CSCsy30362</a>	2	mp-server	Conference Scheduler crashes in Alpha MeetingPlace, and audio outages occur.
<a href="#">CSCsy31121</a>	2	admin/ds	MeetingPlace 7.0 stops importing user profiles if AD account has alphabet in phone number.
<a href="#">CSCsy41022</a>	2	web	Improper SQL result set handling leads to ODBC connection outage.
<a href="#">CSCsy58150</a>	2	mp-server/failover	Application server rebooting itself.

**Table 5** *Caveats Resolved in Cisco Unified MeetingPlace Release 7.0.3 (continued)*

<b>Caveat Number</b>	<b>Severity</b>	<b>Component</b>	<b>Description</b>
<a href="#">CSCsy72820</a>	2	api	BCL does not honor guest outdial restrictions.
<a href="#">CSCsy80455</a>	2	admin	User profiles starting with 90xxxx have timezone value 0, not editable.
<a href="#">CSCsy90959</a>	2	snmp	System restarts when the system is under a significant delay.
<a href="#">CSCsz02865</a>	2	web	Cannot upgrade DMZ server from 7.0.2.3 to 7.0.2.4.
<a href="#">CSCsz10231</a>	2	mp-server	Users unable to join audio meetings when the meetings are set for up for a maximum of 250 people.
<a href="#">CSCsz12934</a>	2	mp-server	The nmpagent crashes when partName is too large.
<a href="#">CSCsz15221</a>	2	mp-server	Perf: VUI Port Timeout occurs during a 1,000-port test and call failure occurs after a few hours.
<a href="#">CSCsz17720</a>	2	mp-server	Perf: With 240 calls, VUI response to new calls takes 27 seconds.
<a href="#">CSCsz26687</a>	2	conferencemanager	Unable to launch Conference Manager.
<a href="#">CSCsz49592</a>	2	mp-server	Conference Scheduler crashes when running a load of 40 meetings and 200 users.
<a href="#">CSCsz59694</a>	2	web	Last minute meeting changes might not take effect for all users.
<a href="#">CSCsz59753</a>	2	mp-server/outlookconfmgr	Reschedule meeting received “Insufficient video licenses are available” error.
<a href="#">CSCsz66389</a>	2	data-conf-breeze	Breeze conference room freezes when using presenter plugin.
<a href="#">CSCsz67792</a>	2	outlook	Reschedule recurrent meeting to earlier or later date inconsistent with MeetingPlace.
<a href="#">CSCsz70902</a>	2	web	Failed to archive recording file and inconsistent result.
<a href="#">CSCsz73418</a>	2	data-conf-breeze	Breeze PPT conversion fails with CPU spin.
<a href="#">CSCsy31121</a>	2	directory-services	MP 7.0 stops importing user profile if AD account has alphabet in phone #.
<a href="#">CSCsz02115</a>	2	mp-server	Several sim core files on system.
<a href="#">CSCsz67792</a>	2	outlook	Reschedule recurrent meeting to earlier/later date inconsistent with MP.
<a href="#">CSCsz76538</a>	2	mp-server	Alpha MeetingPlace: Conference Scheduler crashed and core dumped.
<a href="#">CSCsz78132</a>	2	api/outlook/confmgr	Outlook needs new BCL API to set fStartPeopleInWr per meeting (api/ol/confmgr).
<a href="#">CSCsz78416</a>	2	web	Cannot set up external configuration system because it generates an error.
<a href="#">CSCsz80410</a>	2	web	Alternate host unable to join and start meeting.
<a href="#">CSCsz86281</a>	2	mp-server	Web and meeting manager shows in-session, but VUI says meeting ID not recognized.
<a href="#">CSCsz88082</a>	2	web	Improper Breeze SQL result set handling leads to ODBC connection outage.
<a href="#">CSCsz90465</a>	2	mp-docs	Document is missing for installing SSL certification on the application server in a failover configuration.
<a href="#">CSCsz93807</a>	2	mp-server	Perf: VUI, 15-minute delay terminating the call.
<a href="#">CSCsz95106</a>	2	webex-integration	MPWebEx service fails with start with DB error.
<a href="#">CSCsz95165</a>	2	mp-server	Perf: nmpagent exits with coredump.
<a href="#">CSCta27645</a>	2	outlook	JPN:MP7.0MR1 Unable to schedule meeting with multi-byte subject name.

**Table 5** *Caveats Resolved in Cisco Unified MeetingPlace Release 7.0.3 (continued)*

Caveat Number	Severity	Component	Description
<a href="#">CSCta60481</a>	2	outlook	MeetingPlace tab is missing when opening recurring series.
<a href="#">CSCta97066</a>	2	outlook	SSO Fails In Outlook plug-in when client machine is in a workgroup.
<a href="#">CSCtb11867</a>	2	outlook	Future weekly recurrence meeting cannot be rescheduled.
<a href="#">CSCtd78945</a>	2	notes	Alternative phone number facility missing in MPforNOTEs.
<a href="#">CSCte98522</a>	2	outlook	MPOL ignores reschedule on failure and crashes Outlook on delete.
<a href="#">CSCte98555</a>	2	outlook	Deleting disassociated meeting crashes Outlook.
<a href="#">CSCta14173</a>	2	conferencemanager	JRE 6.0 update 14 causes Conference Manager login to fail.
<a href="#">CSCta23833</a>	2	conferencemanager	Conference Manager is able to delete non-local users.
<a href="#">CSCta27645</a>	2	outlook	JPN: MeetingPlace 7.0MR1 is unable to schedule a meeting with multibyte subject name.
<a href="#">CSCta29769</a>	2	notifications	Tomcat restart causes MeetingPlace 7 application server to fail or hang.
<a href="#">CSCta47855</a>	2	web	Shared storage cannot be configured.
<a href="#">CSCta60481</a>	2	outlook	MeetingPlace tab missing when recurring series are opened when login username and Outlook profile username not the same in latter case.
<a href="#">CSCta67594</a>	2	web	Cannot start reservationless meeting from external.
<a href="#">CSCta72339</a>	2	outlook	MeetingPlace tab shown blank page when weekday meeting with exception is changed to daily (interval=2) meetings (OL2007 SP2 only).
<a href="#">CSCta97066</a>	2	outlook	SSO fails in Outlook plug-in when the client machine is in a workgroup.
<a href="#">CSCtb47918</a>	2	mp-server/media server	Auto Attend prompts the user to join a cancelled meeting.
<a href="#">CSCtb86244</a>	2	mp-server/recording	MeetingPlace should specify H.264 when opening a recording channel.
<a href="#">CSCtb88386</a>	2	mp-server	MeetingPlace unable to start an audio conference.
<a href="#">CSCtb95691</a>	2	mp-server	MeetingPlace 7.0 not releasing meetings creating orphaned conferences.
<a href="#">CSCtb95724</a>	2	admin	No way to tell if the WebEx user "recorder" account has expired.
<a href="#">CSCtc03894</a>	2	admin/web	Filter out password lines in install logs in infocap.
<a href="#">CSCtc15433</a>	2	outlook	MPOL MR5 upgrade does not complete in large production systems.
