Authorized External Antennas and Corresponding Power Levels

Cisco's 2.4-GHz wireless products have either integral antennas or external (dedicated) antennas.

Products With Integral Antennas

Products with integral antennas put on the EU market are configured during the manufacturing process to radiate at a maximum power level of 100 mW EIRP.

Products with External Antennas

Depending on the type of antenna used, it might be necessary to reduce the output power of the equipment to result in a maximum radiated power of 100 mW EIRP.

Combinations of power levels and antennas resulting in a radiated power level above 100 mW EIRP are considered as not compliant with the directive and are not allowed for use within the European Community and countries that have adopted the European R&TTE Directive 1999/5/EC or the CEPT recommendation Rec 70.03 or both.

The antennas listed in [Table 2](#) were assessed together with the equipment against the requirements of the R&TTE directive. Therefore, the Declaration of Conformity referred to in this document is valid only for the antennas and corresponding power levels listed in [Table 2](#) below and should be used as a baseline. You can also find the list of external antennas available for a specific product in the product's hardware configuration guide. See the "[How to Access Technical Documents on Cisco.com](#)" section on [page 7](#) for instructions for downloading these guides from Cisco.com.
