DPW939™ 802.11g Wireless Network Adapter

Description

The DPW939™ 802.11g Wireless Network Adapter is a compact USB stick-style 802.11g wireless network adapter that is designed to interface with most home or office computers that are equipped with a USB 2.0 or 1.1 connection port.

The DPW939 provides an exceptional wireless solution for the on-the-go professional or the home enthusiast looking for a wireless solution to share high-speed Internet service with other PCs.

The DPW939 is designed and built to meet the 802.11g wireless specifications and offers data rates up to 54 Mbps. It is also backward-compatible with 802.11b networks. In addition to providing the data connection to the PC from the wireless network, the USB interface also provides power to the wireless adapter, which eliminates the need for an external power supply.

The DPW939 supports 64- and 128-bit WEP encryption. Wi-Fi Protected Access (WPA) security is also supported when used with the appropriate operating system or with the provided wireless utility.

The highly visible LED on the front of the DPW939 indicates status and data transmission activity.

Wireless Utility

The DPW939 can be managed directly by the Microsoft wireless management utility found in the Windows XP operating system.

The DPW939 features an easy-to-use wireless network management utility that can be automatically installed on the user's PC by inserting the installation CD into the PC. The wireless utility allows the user to create and save the configuration parameters for wireless networks. This capability allows the user to reconnect to frequently used wireless networks without manually reentering the wireless and encryption settings.

Features

- 802.11g wireless network adapter
- Lightweight, compact "USB stick" design
- USB 2.0 connectivity for Plug and Play convenience
- USB powering directly from PC, no external power unit needed
- LED that indicates the status and wireless activity
- WPA and 64- and 128-bit WEP encryption
