Smart Call Home Wins SSPA Award for Best Embedded Product Support

Cisco® Technical Services has a reputation for award-winning exceptional customer service and network support.

The newest Cisco service capability to be recognized by industry peers is Smart Call Home, awarded a 2008 SSPA STAR Award by the Service & Support Professionals Association (SSPA) for “Best Embedded Product Support.”

Embedded in the latest OS release of the Cisco Catalyst® 6500 Series, Cisco MDS 9000 Family, and Cisco 7600 Series Router, the Smart Call Home capability offers **proactive diagnostics** and **real-time alerts** on Cisco devices. Alerts can automatically engage the Technical Assistance Center (TAC) in potential issues and determine resolution steps by the time network administrators are even aware there is a problem. Devices are continually monitored with secure, connected service. If an issue is detected, an automated service request may be generated, including detailed diagnostics, and immediately routed to the correct TAC team.

Resolution and parts replacement (if needed) can take less than one-third the time compared to the normal troubleshooting process. Mike DeDecker of Warner Pacific, a general insurance agency for insurance carriers, recently spoke about the time-saving business benefit he experienced:

"Cisco Smart Call Home allowed me to fix a network problem in about an hour that would have typically taken one of my staff two days to troubleshoot. Not only did Smart Call Home save me the operational expense of keeping one of my engineers on this issue for 48 hours, but the bigger bonus was that it kept my customer connected and happy as well."

The Smart Call Home capability is available through Cisco SMARTnet Service and Cisco SP Base Service and will be available for many other Cisco devices over the next 12 months. The Cisco Nexus® 5000 and Cisco Nexus 7000 Series will be supported in June.

Cisco helps customers operate their Cisco solutions throughout their lifecycle, and this award recognizes the innovative approach Cisco has taken with Cisco Smart Call Home. The prestigious SSPA peer-recognition award honors companies that demonstrate ongoing high-level commitment to delivering world-class results in software and technical support.

Tell customers about this new Cisco SMARTnet® Service feature so they can be sure to upgrade to the latest OS release and easily configure the Smart Call Home capability.
