## Introduction

This document provides a sample configuration for the configuration of IPsec tunnels using ISAKMP profiles on a hub router with two PIX remote sites. One PIX remote site consists of LAN-to-LAN and the other consists of EzVPN Remote Access mode configuration. The hub router is configured for local authentication for the EzVPN tunnels, and RADIUS authentication for the software VPN Client.

## Prerequisites

### Requirements

There are no specific requirements for this document.

### Components Used

The information in this document is based on these software and hardware versions:

- Cisco Secure PIX Firewall Appliance 501 that runs 6.3(3)
- Cisco Router 1750 that runs Cisco IOS® Software Release 12.3.9a
- Cisco Secure PIX Firewall Appliance 506 that runs 6.3(3)
- Cisco VPN Client that runs 4.0 (Rel) (User authentication using RADIUS server)

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

## Conventions

Refer to the Cisco Technical Tips Conventions for more information on document conventions.

## Configure

In this section, you are presented with the information to configure the features described in this document.

**Note:** Use the Command Lookup Tool (registered customers only) to find additional information on the commands used in this document.

## Network Diagram

This document uses this network setup:

## Configurations

This document uses these configurations:

- VPN 1750 Hub Router
- PIX-501 – LAN-to-LAN
- PIX-506-B – EzVPN Client
- VPN Client

```

## VPN Client Configuration

Complete these steps to configure the VPN Client.

1. Launch the VPN Client and create a new connection with the required connection entry parameters.

2. Once the connection entry is created, click **Connect** and authenticate with the user parameters configured on the RADIUS server.

## Verify

This section provides information you can use to confirm your configuration is working properly. Refer to IP Security Troubleshooting – Understanding and Using debug Commands for additional verification/troubleshooting. If you should encounter any VPN Client issues or errors, refer to the VPN Client GUI Error Lookup Tool.

Certain **show** commands are supported by the Output Interpreter Tool (registered customers only) , which allows you to view an analysis of **show** command output.

- **show crypto isakmp profile** Displays all ISAKMP profiles and their configurations on the router.
- **show crypto isakmp key** Displays all the keyrings and their preshared keys. Use this command to verify your crypto keyring configuration on the router.
- **debug crypto ipsec** Displays information on IPsec SA negotiations on the router.
- **debug crypto isakmp** Displays the ISAKMP SA that is built and the IPsec attributes that are negotiated. During ISAKMP SA negotiation, the PIX might discard several proposals as "not acceptable" before one is accepted. Once the ISAKMP SA is agreed upon, the IPsec attributes are negotiated.

## LAN-to-LAN debugs on the VPN 1750 Hub Router Using debug crypto isakmp and debug crypto ipsec

# Troubleshoot

This section provides information you can use to troubleshoot your configuration.

## Troubleshooting Commands

Certain **show** commands are supported by the Output Interpreter Tool (registered customers only), which allows you to view an analysis of **show** command output.

**Note:** Refer to Important Information on Debug Commands before you issue **debug** commands.

- **show crypto isakmp sa** Displays all current Internet Key Exchange (IKE) SAs at a peer.

```
VPN1750#show crypto isakmp sa
dst          src          state         conn-id slot
172.18.124.195 172.18.173.80 QM_IDLE      3      0

!--- VPN Client.

172.18.124.195 172.18.124.197 QM_IDLE      2      0

!--- EzVPN between hub router and PIX-506-B.

172.18.124.195 172.18.124.196 QM_IDLE      1      0

!--- EzVPN between hub router and PIX-501.
```

- **show crypto ipsec sa** Displays the settings used by current SAs.

```
VPN1750#show crypto ipsec sa
