Introduction

This configuration allows private networks behind three Cisco Secure PIX Firewall boxes to be connected by VPN tunnels over the Internet or any public network that uses IPsec. Each of the three networks has connectivity to the other two networks. In this scenario, Network Address Translation (NAT) is required for connections to the public Internet. However, NAT is not required for traffic between the three intranets, which can be transmitted using a VPN tunnel over the public Internet.

Prerequisites

Requirements

For IPsec to work, you must have connectivity from tunnel endpoint to tunnel endpoint before you begin this configuration.

Components Used

This configuration was developed and tested with PIX Firewall version 6.1(2).

Note: The **show version** command must show that encryption is enabled.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Refer to the Cisco Technical Tips Conventions for more information on document conventions.

Configure

In this section, you are presented with the information to configure the features described in this document.

Note: Use the Command Lookup Tool (registered customers only) to obtain more information on the commands used in this section.

Network Diagram

This document uses this network setup:

Configurations

This document uses these configurations:

- PIX 1
- PIX 2
- PIX 3

PIX 1 Configuration

```
PIX Version 6.1(2)
nameif ethernet0 outside security0
nameif ethernet1 inside security100
enable password 8Ry2YjIyt7RRXU24 encrypted
passwd 2KFQnbNIdI.2KYOU encrypted
hostname pix_1
fixup protocol ftp 21
fixup protocol http 80
fixup protocol h323 1720
fixup protocol rsh 514
fixup protocol smtp 25
```

```
fixup protocol sqlnet 1521
fixup protocol sip 5060
names

!--- Traffic to PIX 2 private network:

access-list 120 permit ip 10.1.1.0 255.255.255.0 10.2.2.0 255.255.255.0

!--- Traffic to PIX 3 private network:

access-list 130 permit ip 10.1.1.0 255.255.255.0 10.3.3.0 255.255.255.0

!--- Do not perform NAT for traffic to
!--- other PIX Firewall private networks:

Verify

There is currently no verification procedure available for this configuration.

Troubleshoot

This section provides information you can use to troubleshoot your configuration. Refer to [Troubleshooting the PIX to Pass Data Traffic on an Established IPsec Tunnel](#) for more information.

Troubleshooting Commands

Note: Refer to [Important Information on Debug Commands](#) before you use **debug** commands.

debug Commands

Use these commands on the PIX, with the **logging monitor debugging** or **logging console debugging** commands running.

- **debug crypto ipsec** Debugs IPsec processing.
- **debug crypto isakmp** Debugs Internet Security Association and Key Management Protocol (ISAKMP) processing.
- **debug crypto engine** Displays debug messages about crypto engines, which perform encryption and decryption.

clear Commands

In order to clear security associations (SAs), use these commands in the config mode of the PIX.

- **clear [crypto] ipsec sa** Deletes the active IPsec SAs. The keyword `crypto` is optional.
- **clear [crypto] isakmp sa** Deletes the active Internet Key Exchange (IKE) SAs. The keyword `crypto` is optional.

Note: For IPsec to work, you must have connectivity from tunnel endpoint to tunnel endpoint before you begin this configuration.
