Introduction

This document explains how to upgrade or move a configuration from a PIX Security Appliance that runs software version 6.3 to a new PIX Security Appliance that runs software version 7.0.

Note: Administrators who upgrade software version 6.2 or 6.3 to version 7.0 on the same PIX device should refer to the Guide for Cisco PIX 6.2 and 6.3 Users Upgrading to Cisco PIX Software Version 7.0.

Prerequisites

Requirements

This document is designed to assist administrators with the migration of a PIX configuration to a new appliance. This document should not be a replacement for the documents listed here. It is strongly recommended that you read and understand these two documents before you upgrade and use PIX software version 7.x.

- Guide for Cisco PIX 6.2 and 6.3 Users Upgrading to Cisco PIX Software Version 7.0
- Cisco PIX Firewall Software Release Notes

Note: Save and copy your configurations to a text file or TFTP server before any upgrade attempts. In order to download the freeware version of the TFTP server, Cisco recommends that you use TFTP32 .

Components Used

The information in this document is based on these software and hardware versions:

- PIX 515E Security Appliance with software version 6.3.5
- PIX 515E Security Appliance with software version 7.0.6

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Refer to Cisco Technical Tips Conventions for more information on document conventions.

Configure

In this section, you are presented with the information to configure the features described in this document.

Note: Use the Command Lookup Tool (registered customers only) to obtain more information on the commands used in this section.

This document uses these configurations:

- PIX Software Version 6.3.5 Configuration
- Apply a PIX Software Version 6.3.5 Configuration to PIX Software Version 7.0
- Apply a PIX Software Version 6.3.5 Configuration to Adaptive Security Appliance (ASA) Software Version 7.0

PIX Software Version 6.3.5 Configuration

The document begins with a PIX 515E and software version 6.3.5. The configuration includes several options typically found in production environments.

```

Apply a PIX Software Version 6.3.5 Configuration to PIX Software Version 7.0

This section describes how to move the PIX software version 6.3.5 configuration to a new PIX with software version 7.0.

From PIX 6.3.5, transfer the configuration to a TFTP server.

```

pix515e#write net 172.22.1.235:pix515e635
Building configuration...
TFTP write 'pix515e635' at 172.22.1.235 on interface 1
[OK]
pix515e#

```

Now that the configuration has been saved to a TFTP server, the new PIX with software version 7.0 can retrieve the configuration.

```

pixfirewall#configure terminal
pixfirewall(config)#interface e1
pixfirewall(config-if)#no shut

```

```
pixfirewall(config-if)#nameif inside
INFO: Security level for "inside" set to 100 by default.
pixfirewall(config-if)#ip address 172.22.1.159 255.255.255.0
pixfirewall(config-if)#exit
```

```
!--- The new appliance needs a temporary configuration
!--- to allow the 6.3.5 configuration
!--- to be transferred (TFTP) to the new appliance. The new PIX can be assigned any
!--- available IP address.
```

```
pixfirewall(config)#
pixfirewall(config)#exit
pixfirewall#copy tftp startup-config
```

```
Address or name of remote host []? 172.22.1.235
```

```
Source filename []? pix515e635
```

```
Accessing tftp://172.22.1.235/pix515e635...!!
```

```
Writing system file...
```

```
!!
```

```
5867 bytes copied in 0.180 secs
```

```
pixfirewall(config)#reload
```

```
!--- Disconnect the new appliance from the network. After the device reloads,
!--- the device has the IP address of the production PIX 6.3.5.
!--- Disconnecting the new device prevents duplicate
!--- IP addresses on the network.
```

```
Proceed with reload? [confirm]
```

```
pixfirewall(config)#

Apply a PIX Software Version 6.3.5 Configuration to ASA Software Version 7.0

The conversion of a PIX 6.2 or 6.3 configuration to a new ASA Security Appliance is a manual process. The ASA/PIX administrator is required to convert PIX 6.x syntax to match the ASA syntax and type the commands into the ASA configuration. You can cut and paste some commands such as the **access-list** command. Be sure to closely compare the PIX 6.2 or 6.3 configuration to the new ASA configuration in order to ensure no mistakes have been made in the conversion.

Note: The process for upgrading to a new ASA appliance is different from an upgrade to a new PIX appliance. An attempt to upgrade to an ASA with PIX process generates a number of configuration errors on the ASA.

Verify

Verify the newly upgraded configuration to the PIX 6.2 or 6.3 configuration saved prior to the upgrade. Compare each line of the previously saved configuration with the new configuration. Even though the syntax has changed, the device policies (security, routing, interface, and so forth) should be the same.

Troubleshoot

There is currently no specific troubleshooting information available for this configuration.
