

NEW CISCO CATALYST 3750 SERIES WITH 10GIGABIT ETHERNET

Cisco Systems® is pleased to introduce the new Cisco® Catalyst® 3750G-16TD switch, a new member of the Cisco Catalyst 3750 Series of switches.

The Cisco Catalyst 3750 Series switches are an innovative product line that improves LAN operating efficiency by combining industry-leading ease of use and the highest resiliency available for stackable switches. This product series represents the next generation in desktop switches, and features Cisco StackWise™ technology, a 32-Gbps stack interconnect that allows customers to build a unified, highly resilient switching system—one switch at a time.

The following new configuration has been added to the Cisco Catalyst 3750 Series:

- Cisco Catalyst 3750G-16TD—16 Ethernet 10/100/1000 ports and 1 10GBase XENPAK uplink

The Cisco Catalyst 3750 Series is available in the standard multilayer software image (SMI) or the enhanced multilayer software image (EMI). The SMI feature set includes advanced quality of service (QoS), rate limiting, access control lists (ACLs), and basic static and Routing Information Protocol (RIP) functions. The EMI provides a richer set of enterprise-class features, including advanced hardware-based IP unicast and IP Multicast routing.
