# Cisco Smart Business Communications System

A Simple Yet Powerful All-in-One Voice, Data, and Video Solution for Small Business.

## Communicate the way you want, when and where you want.

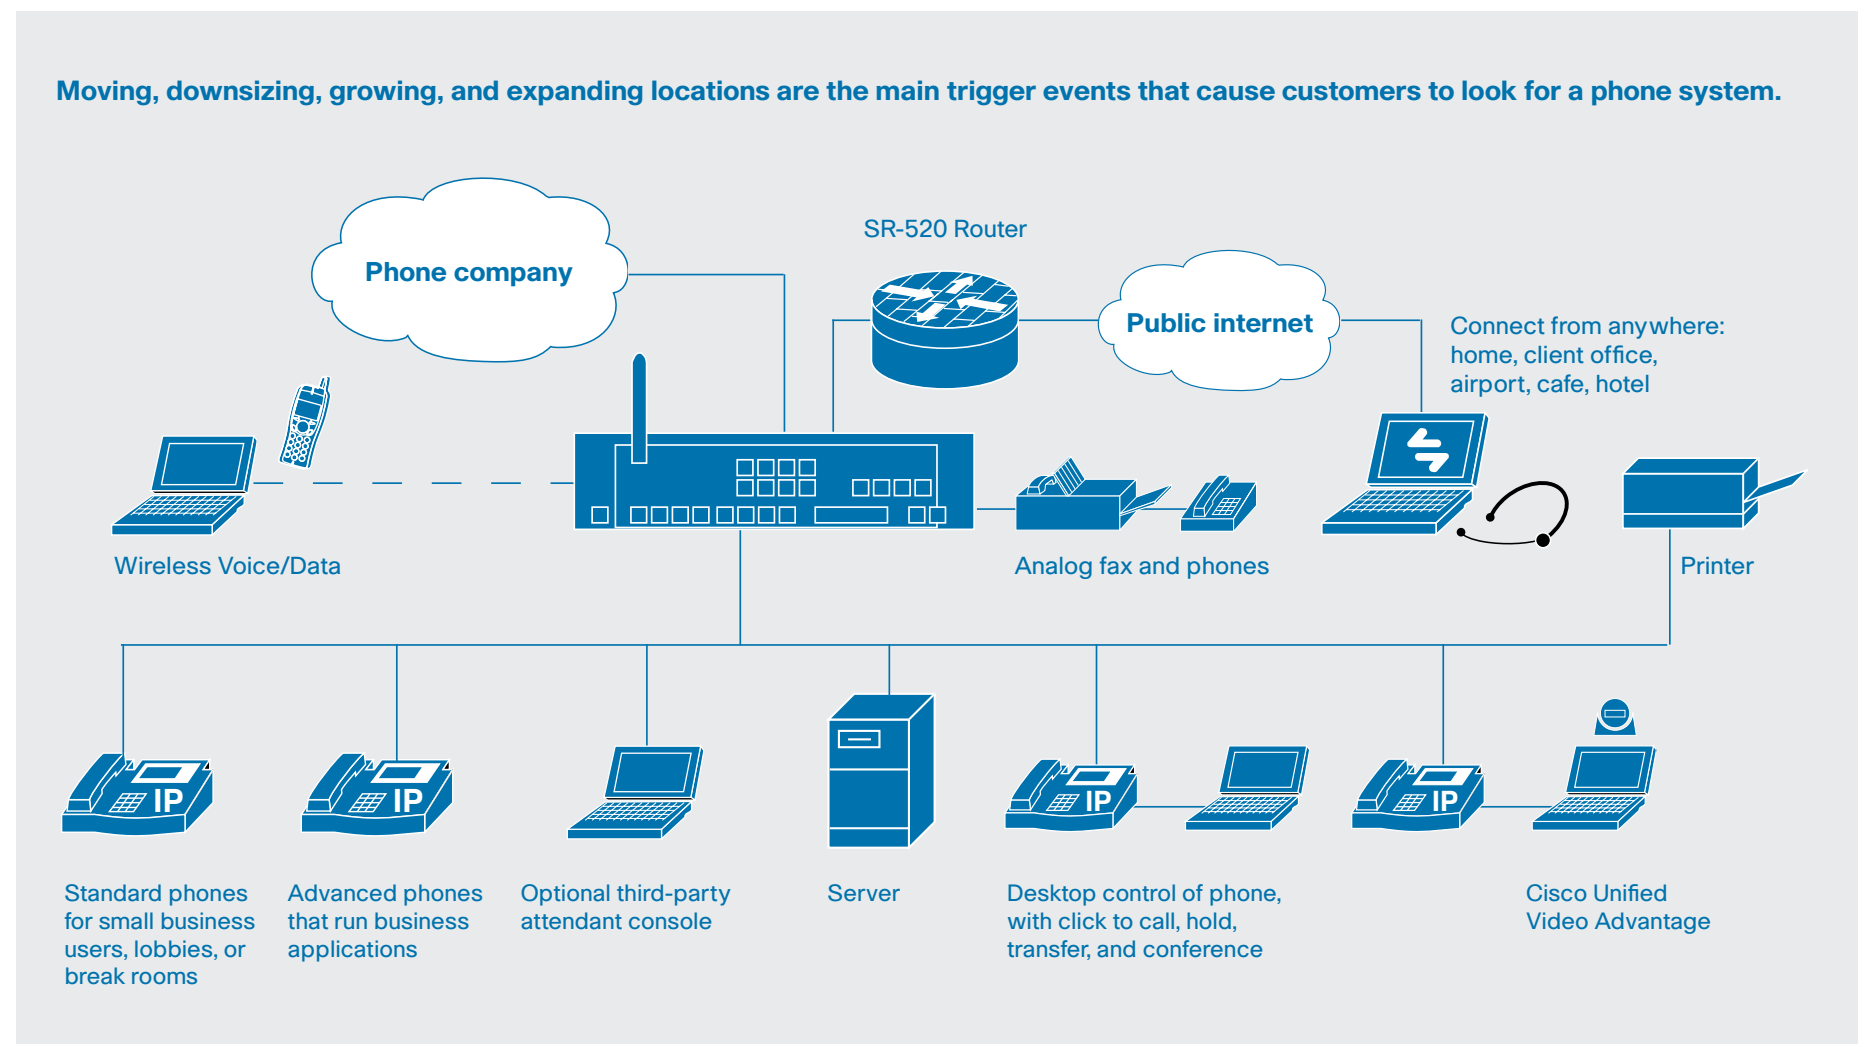

Whether someone's at their desk, down the hall, or across the country, the Cisco® Smart Business Communications System (SBCS) makes it easy to access key business applications and communication tools, including click-to-dial phone and video calls.

## Never miss a message—or a business opportunity.

Cisco SBCS keeps small business employees in constant touch by delivering messages to whatever device you specify. You can access faxes by email, route office calls to mobile phones, even receive automatic SMS or pager alerts.

## Reduce your costs while improving collaboration.

Bring all voice and video communications together on a single Power over Ethernet network that is less expensive and easier to manage than separate networks. Use a single cable for both phone and PC. For simplified management, the entire system uses the GUI-based Cisco Configuration Assistant tool to configure and manage the entire solution.
