

Cisco Care-at-a-Distance Solutions Portfolio

Shaping a World of Healthcare Without Boundaries

The Cisco Care-at-a-Distance solutions are designed to help your organizations deliver effective care at a distance, and promote better collaboration among patients and caregivers. These solutions deliver:

Flexible, Comprehensive Communications: Utilizing Cisco Unified Communications, TelePresence, instant messaging, web-based collaboration, and leading-edge video conferencing, your staff can quickly share information and work more efficiently –and physicians can meet person-to-person with remote patients.

Enhanced Collaboration: Video conferencing and web-based information sharing make it easy to work with colleagues in other locations, review patient cases, and provide distance learning.

Reduced Costs: By raising productivity, minimizing the need to transfer patients, and remotely accessing the expertise of specialists, you can realize savings while delivering the highest quality care.

Increased Productivity: Enabling your staff to access information and services across any device and location can help you maximize productivity and free up time for focusing on patients, wherever they are.
