Introducing the Cisco UC Integration™ for Microsoft Office Communicator

- Seamless collaboration with Cisco UC & Microsoft instant messaging (IM)
- Extends proven Cisco UC services to Microsoft Office Communicator with a single easy-to-manage communications platform
- Provides investment protection & business-class communications with Microsoft

Agenda

- Intro
- Cisco Unified Client Services Framework (CSF)
- Cisco Unified Personal Communicator (CUPC) 8.0
- Cisco UC Integration™ for Microsoft Office Communicator (CUCIMOC) 8.0

Cisco Unified Client Services Framework Cisco Client Services Framework

 The Cisco Unified Client Services Framework (CSF) is the Unified communications engine used to power:

Cisco Unified Personal Communicator
Cisco UC integration for MOC
Cisco UC integration for WebEx Connect
Cisco Quad

 The integration uses Voice, Video, IM & Presence, voice messaging and Collaboration services from the framework

Note: With CUCIMOC IM and Presence are provided by OCS.

Desk Phone Control

- The Client Services Frame work can register with Communications manager to control a desktop phone
- Initiate phone calls
- In call functions, Transfer, Conference, Hold, Park, Hang-up
- Monitor Line/Device status
- Device Selection
- Line Selection
- Extension Mobility is supported for desk phone devices

NOTE: Client Services Framework soft phone device doesn't currently support CTI control, Expected 2H CY10

Media Termination

- The CSF has the capability to register to Communications manager as SIP soft phone
- The CSF includes audio and video engine providing wide band audio and high definition video.
- As a Communications manager endpoint it interacts with CM for

Configuration

Call Admission control

Bandwidth controls / Codec selection

Secure Communications

 CSF will failover to a survivable remote site telephony (SRST) device if UC manager become unavailable

Audio Support

 The CSF supports a number of Standards based Audio codec's.

G.729a 8 kbps - Narrow Band
iLBC 16 kbps - Narrow Band
G.711u 64 kbps
G.722 64 kbps - Wide Band
iSAC 32 kbps - Wide Band

- Codec selection is managed using Communications Manager Regions and Locations.
- Authenticated signalling and encrypted voice is supported

Note: iSAC Supported on UC Manager 8.0, Client Must Have iSAC Enabled

Mobility

- The Client Service Framework integrates with the Communication Manager Mobility / Single number reach service.
- This provides simultaneous ring on CSF devices and remote destinations
- The CSF also provides a remote hand off service. When on a call using the "Transfer to Remote Device" option the call will be handed off to remote devices selected by the user.
- Cell phone, Home Office etc.

Video Support

- Video can be supported with both Soft phone and Desk phone devices.
- The CSF supports the Standard based H.264 Advanced Video Coding (AVC) codec.
- It supports the H.264 baseline profile with levels 1 through 3.1.
- This is a flexible codec that can support video for low bandwidth environments but also support high a definition video experience.
- Bandwidth / Call Admission control is managed by Communications manager

Cisco Unified Client Services Framework Modes of Video Operation

 The CSF provides two modes of video operation both enabled for up to high definition video communication.

Soft phone Mode

Video and audio uses devices on workstation. Video is displayed on workstation, audio is via headset (recommended) or PC Speakers.

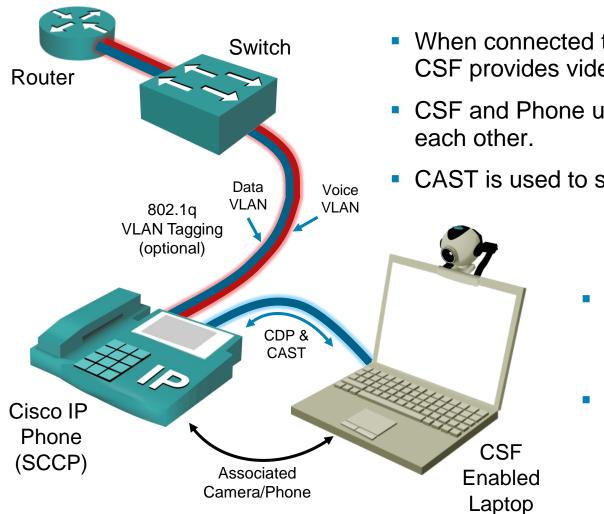

Desk Phone Mode*

Communication run across desk phone and workstation. Video is displayed on workstation while audio is terminated on the Cisco IP phone

^{*} Requires Cisco Phone with Switch port and Support for CAST and CDP Protocols (Current in SCCP Phone Loads)

Cisco Unified Client Services Framework Desk Phone Mode Video

- When connected to a Cisco IP phone the CSF provides video for desk phone Calls.
- CSF and Phone use CDP to discover
- CAST is used to setup/manage video

- CSF CDP driver requires 32 bit OS (64 bit road mapped – 2H CY10)
- SCCP phone images supported at this time. (SIP road mapped 2H CY10)

Additional Info: http://www.cisco.com/en/US/docs/voice_ip_comm/cucm/srnd/7x/endpnts.html#wp1044390

Cisco Unified Client Services Framework **Desktop Cameras**

- The Client Services Framework has been developed to work with USB video cameras supporting the USB Video Device Class (UVC)
- UVC devices use standard OS drivers and do not require additional camera drivers making installation simple.

Cisco Tandberg
PrecisionHD™ USB Camera
provides business-quality HD
video communication. Offering
video at 720p, 30 frames per
second, the webcam camera
provides exceptional HD and
superior audio capabilities.

USB connected 720p camera with a 2 megapixel sensor and a Carl Zeiss supplied fixed focus glass lens for improved performance and better image quality.

Additional Cameras <u>tested</u> by Cisco for use with CSF endpoints

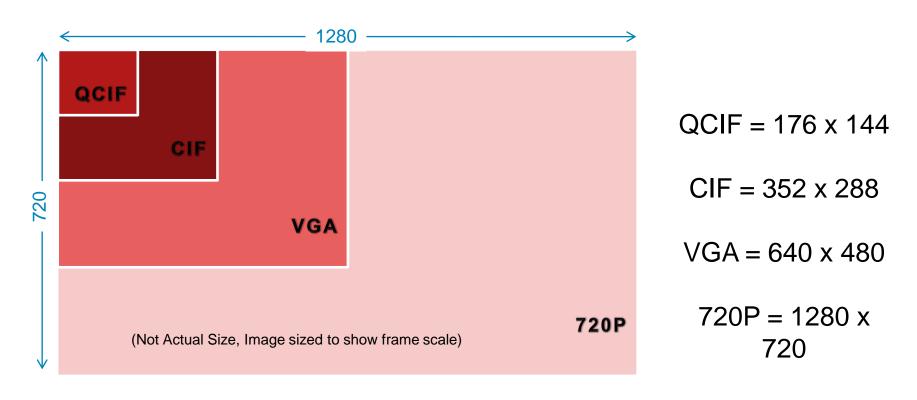

Selected integrated Cameras (Lenovo, HP and Dell)

^{*} HD Video requires specific workstation hardware specification

Cisco Unified Client Services Framework Video Engine/Frame Size & Rate

- The CSF can transmit QCIF, CIF, VGA and 720p HD frame sizes at up to 30 frames per second.
- It can receive these and additional frame sizes

Cisco Unified Client Services Framework Video Throttling Consideration

- The CSF will always aim to Transmit and Receive HD video.
- Factors that throttle HD video are:

Cisco UC Integration for Microsoft Office Communicator Video Throttling – CPU/Bitrate/Frame

- The CSF uses several tables to map video level.
- Windows WEI <u>processor</u> score is used to determine if workstation can encode and decode HD video

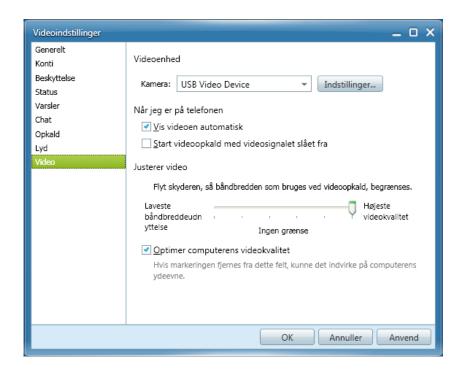

Rate and improve	your computer's performance			
Not sure where to s	start? Learn how you can improve your comp	outer's perfo	rmance.	
Your computer has a Wi	indows Experience Index base score of 5,6			
Component	What is rated	Subscore	Base score	
Processor:	Calculations per second	5.9		
Memory (RAM):	Memory operations per second	5.6	PAG	
Graphics:	Desktop performance for Windows Aero	5.9	5.0	
Gaming graphics:	3D business and gaming graphics performance	5.8	Determined by	
Primary hard disk:	Disk data transfer rate	5.9	lowest subscore	

Description (H.264 Level)	Bitrate Max	Max Frame	WEI Encode	WEI Decode
Voice			2	2
H.264 Level 1	64	QCIF	4	4
H.264 Level 1B	128	QCIF	4	4
H.264 Level 1.1	192	CIF	4	4
H.264 Level 1.2	384	CIF	4	4
H.264 Level 1.3	768	CIF	4	4
H.264 Level 2	2000	CIF	4	4
H.264 Level 2.1	4000	CIF	4	4
H.264 Level 2.2	4000	VGA	4.8	4.8
H.264 Level 3	10000	VGA	4.8	4.8
H.264 Level 3.1	14000	720p	5.9*	5.9*

^{*} Additional a quad core CPU is required to support 720p

Cisco UC Integration for Microsoft Office Communicator Receive Level: Admin/User Settings

- The CSF also provides the ability to manually adjust video settings.
- This throttles the WEI based video level selected.
- Reducing the settings will lower the requested H.264 Level

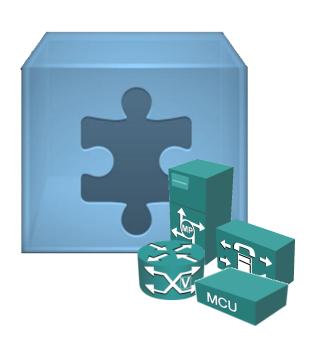

Mode	Up Stream	Down Stream	H.264 Level
1	64 Kb/s	192 kb/s	1.1
2	128 kb/s	384 kb/s	1.2
3	384 kb/s	768 kb/s	1.3
4	384 Kb/s	4 Mb/s	2.1
5	768 kb/s	4 Mb/s	2.1
6	No Limit		WEI level

Manual Video Throttle Table

Example Head Video Settings

Ad-hoc Audio/Video Conference Support

- The CSF supports multi-party conference management.
- Audio conferences are supported using UC Manager software and hardware based DSP resources
- Audio/Video conferences are supported using the Cisco Unified Videoconferencing(CUVC) MCU and Cisco MeetingPlace.
- Cisco CUVC or MXE can be used for video interop with TelePresence endpoints

Directory/Contact Services

- LDAP or LDAPS Directory Search
- Search up to 5 search bases
- Contact Search

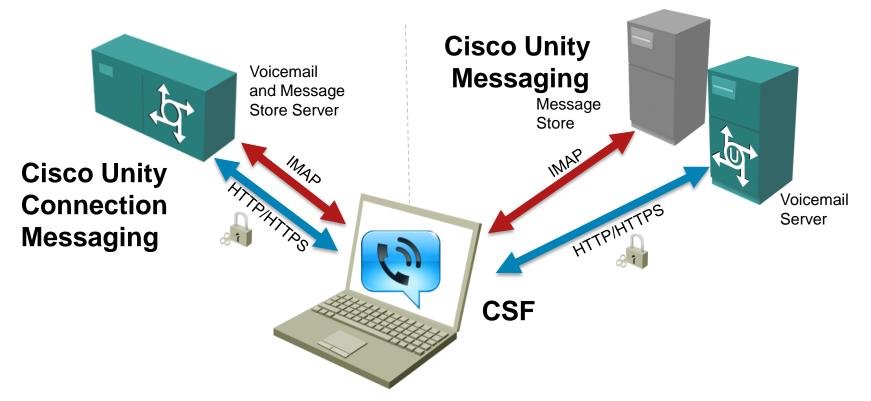

Contacts, Contact numbers, Organisational information

- Reverse Number Lookup
 Resolve incoming telephone number to contact
- Contact Photo retrieval
- Client based dialling rules and directory lookup rules
- Local Cache maintained

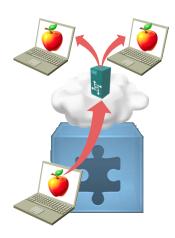

Voicemail Access/Visual Voicemail

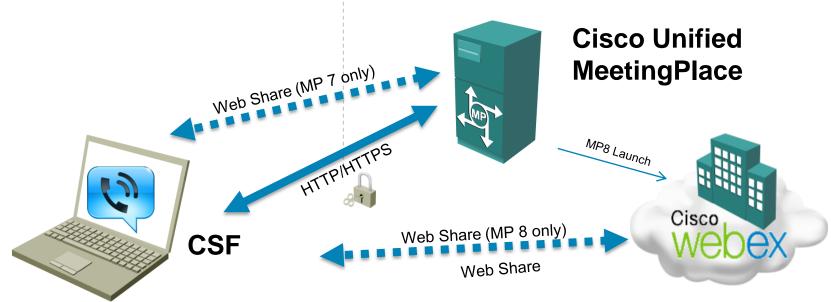

CSF provides two voicemail access methods
 TUI access to voicemail – VM Pilot Point
 GUI access to voicemail – Unity / Connection

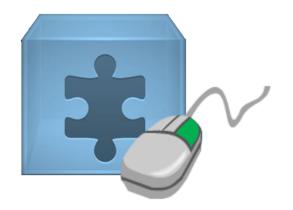

Cisco Unified Client Services Framework Ad-hoc Desktop Collaboration

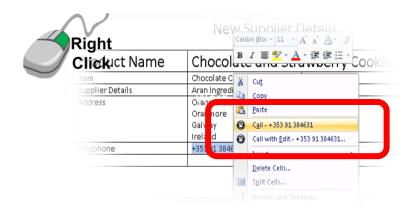

- The UC Client uses Cisco MeetingPlace to provide desktop sharing.
- When used with Unified MeetingPlace 7, on-premises sharing is used.
- When used with Unified MeetingPlace 8, WebEx will be used to host the desktop share

Click to Call

 The CSF also provides an application interface to support Cisco provided Click to Call application plug-ins

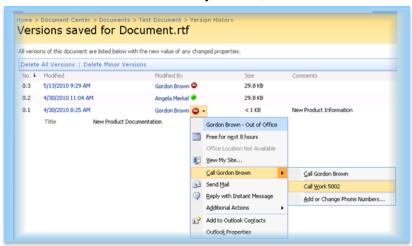

Outlook - Availability status, Ribbon, Click-to-X

SharePoint - Availability status, Click-to-X

Browser - Click-to-call

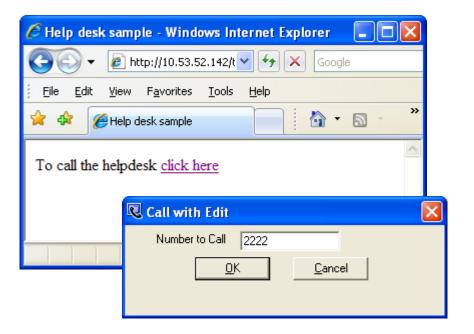

Changing availability status updates in SharePoint

Note: Click to "X" refers to two option to communicate – Call or IM

Cisco Unified Client Services Framework **Desktop Integration**

- The UC Integration™ provides for "TEL" URI Hyperlinks.
- Example: <u>Tel:+140822244444</u> (Click to call link)
- TEL URI's can be used to UC enabled business applications to support the click to call function.

Agenda

- Intro
- Cisco Unified Client Services Framework (CSF)
- Cisco Unified Personal Communicator (CUPC) 8.0
- Cisco UC Integration™ for Microsoft Office Communicator (CUCIMOC) 8.0

Cisco Unified Personal Communicator 8.0 Highlights

 Based on Cisco Unified Client Services Framework (CSF) technology

Rich and Full integration with Cisco UC

Integrated voice, video, web collaboration, visual VM and presence

Standards-based wideband audio & high-definition video

Click-to-Call/IM and presence functionality from MS office

Jabber XMPP based technology

Enhanced Presence & Enterprise IM

Point to Point, Group Chat, Persistent Chat

Offline IM capabilities

Client/Server side logging & compliance

Business to business Presence & IM federation

- Enhanced user experience "New Unified" UI design
- Supports Windows XP, Vista, Windows 7

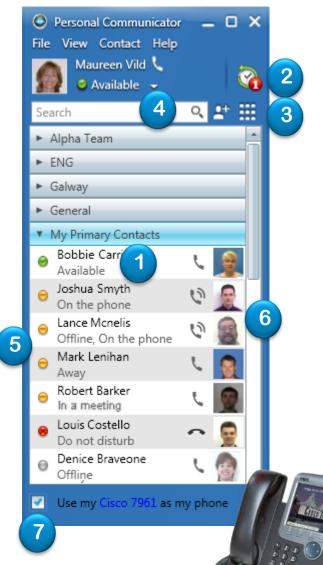

Personal Communicator

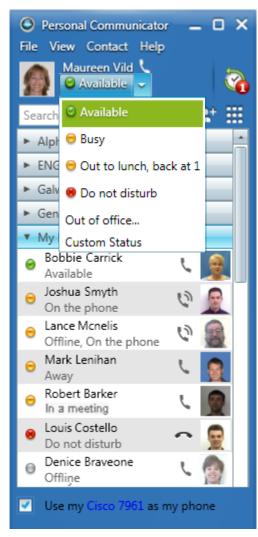

Maureen Vild 📞

Cisco Unified Personal Communicator 8.0 Product Overview – The Hub

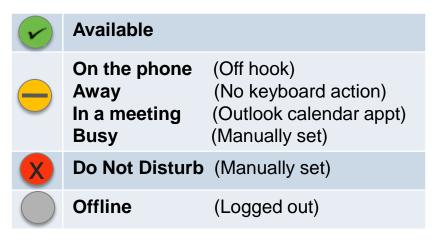

- 1. Contact and Groups List Sort contacts by status or name
- 2. Conversation History/Missed Calls Indicator Click to show the Conversation History window
- 3. Keypad Ad hoc dialing
- 4. Directory Search / Predictive Search search to add users, use this window to enter a number to call
- 5. Presence colored bubble and specific text
- 6. Photos (Shown with expanded view of console)
- 7. Check to control deskphone, un-check for softphone

Cisco Unified Personal Communicator 8.0 Product Overview – Availability Status

Availability State — Aggregated state, user based

- Status text (e.g. "In a meeting" correlates to the Outlook calendar)
- Manually set status

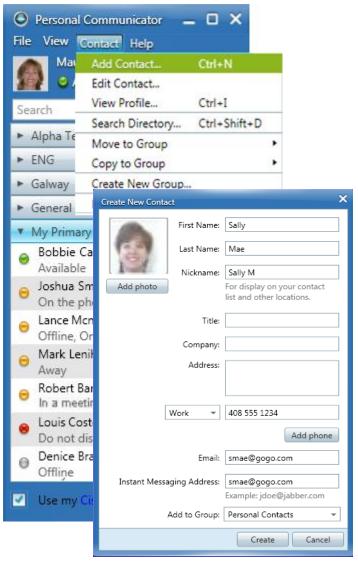

Busy or a custom message

Do Not Disturb — shared with the deskphone

Out of Office — set to offline with a custom message

Exchange availability status with 3rd party XMPP clients

Cisco Unified Personal Communicator 8.0 Feature Overview - Adding Contacts

Adding non corporate contacts

- Add contacts to easily communicate with
- Exchange availability status and chat (XMPP based or federated clients)
- Include Instant Message address
- Contact will be sent a notification to 'accept' the ability to exchange status and chat
- Add photos to your contact entries
- Incoming calls of Personal contacts will be identified from the information entered, including the photo

Cisco Unified Personal Communicator 8.0

Feature Overview - Chat

Point-to-point Chat sessions

Multi-tab parent window

Peel out tabs to individual chat windows if desired

Chat history

Conversation from previous chat is shown as historical

Chat with internal or external XMPP clients.

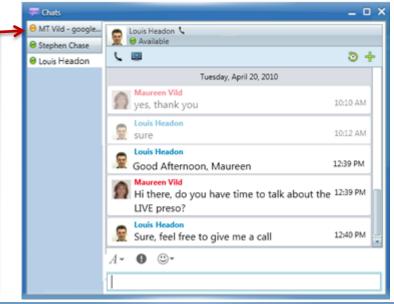

Group Chat

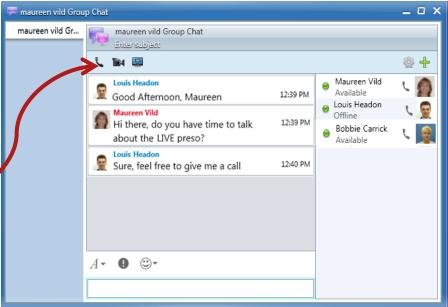

Drag contacts into a existing point-to-point chat window to start a group chat or add to an existing group chat

From point-to-point, group chat and persistent chat room windows:

Place a call or a video call or

Start a web conference

Cisco Unified Personal Communicator 8.0

Conversation History

Missed Communication indicator

Incoming, outgoing, missed calls

Visual Voicemail

Integration with Unity and Unity Connection

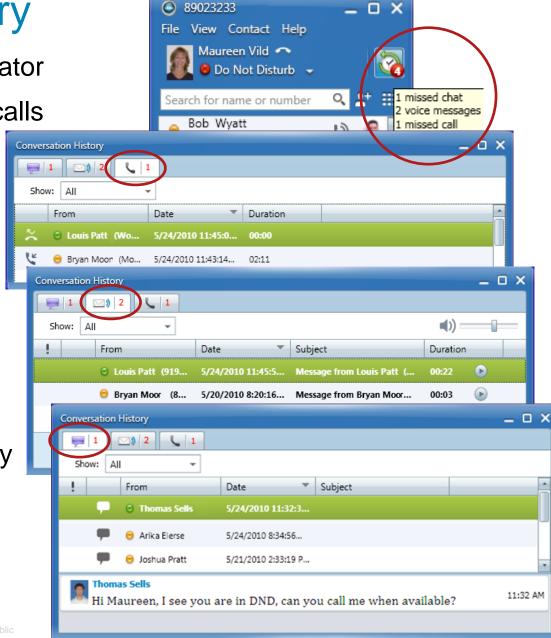

Supports IMAP Idle

Secure messaging

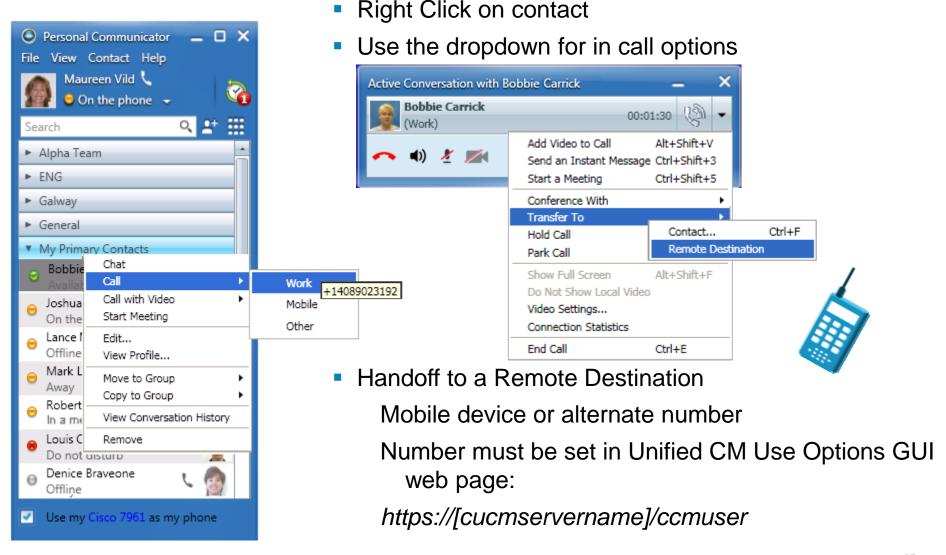

Playback to PC speakers

Chat history
 Easily recall past chats

- Chat & Call logs stored locally
- Presence everywhere
- Right click to return the communication

Cisco Unified Personal Communicator 8.0 Placing a call

Cisco Unified Personal Communicator 8.0 Video

Softphone and Deskphone video

Deskphone video requires the PC be tethered to the Cisco IP Phone

- H.264 AVC Video Codec
- Supported Resolutions

Quarter Common Intermediate Format (QCIF)

Common Intermediate Format (CIF)

Video Graphics Array (VGA)

High-Definition (HD)

(See CSF specs in the latest Cisco Unified Communications SRND for details on HD requirements)

Agenda

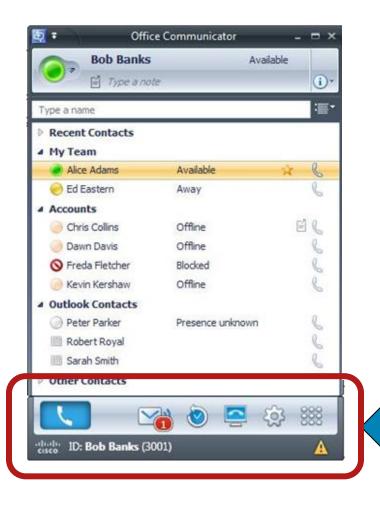

- Intro
- Cisco Unified Client Services Framework (CSF)
- Cisco Unified Personal Communicator (CUPC) 8.0
- Cisco UC Integration[™] for Microsoft Office Communicator (CUCIMOC) 8.0

Delivers Seamless Communications with Cisco UC & Microsoft (IM)

- Fully integrated soft phone
- Desk phone control
- Wide band audio experience
- Standard/High definition Video
- Ad-hoc Audio/Video/Web conferencing
- Phone presence in Applications
- Visual Voicemail
- Desktop Sharing
- Inbound call notification & divert
- Click to call from Office, browsers
- Client call history
- Remote Site Survivability

Cisco UC Integration™ for Microsoft Office Communicator Communication Pane

- Users interact with desktop integration to Unified Communications Manager via the Communications Pane
- The pane is loaded when the user logs into the office communicator application.

Cisco UC Integration™ for Microsoft Office Communicator Communication Pane Functions

- 1. Call Icon: Drag contacts to this button to place a call
- 2. Voicemail Access Button: Select to call your voice message service.

Message Waiting Indicator (MWI) appears if there is a voicemail message

- Communications History: Select to display incoming or outgoing received, placed and missed calls
- 4. Phone Mode: Select to switch from soft phone mode to desk phone mode
- Options: Select to modify particular user options, such as call forwarding
- **6. Integrated Key Pad**: For ad hoc dialing

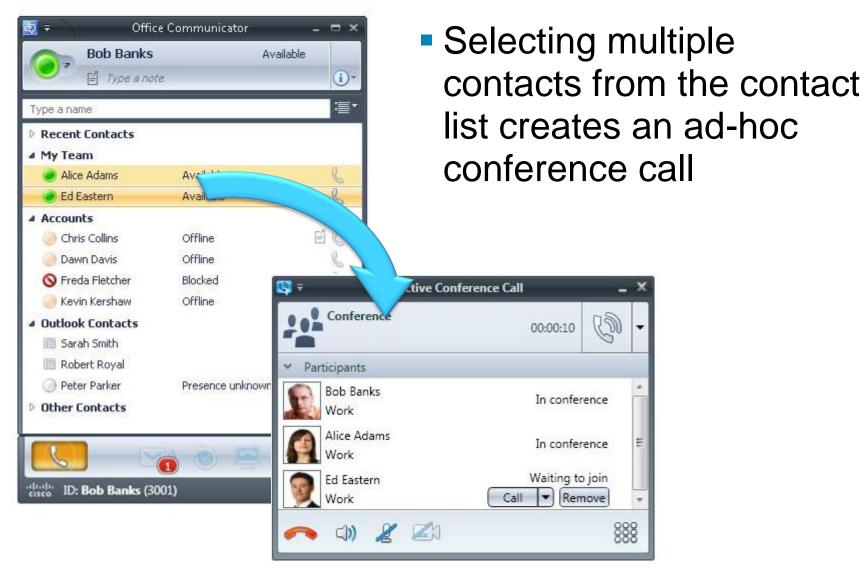

Cisco UC Integration™ for Microsoft Office Communicator How to make a call with the integration

Note: Call destinations include Business, Mobile, Home

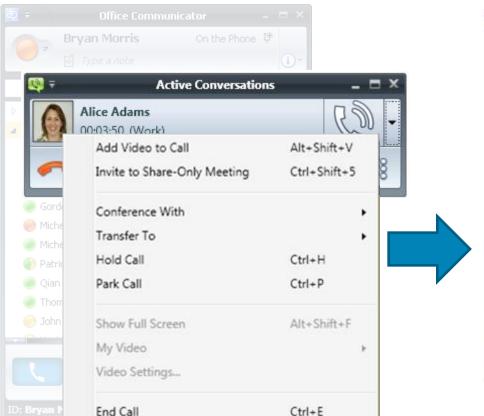

- If multiple numbers exist for the contact, the Cisco UC Integration™ for Microsoft Office Communicator contact card is displayed
- The user then clicks on the required destination

Cisco UC Integration™ for Microsoft Office Communicator Conference Calling

Cisco Unified Communications Integration™ for MOC Standard/High Definition Video Communication

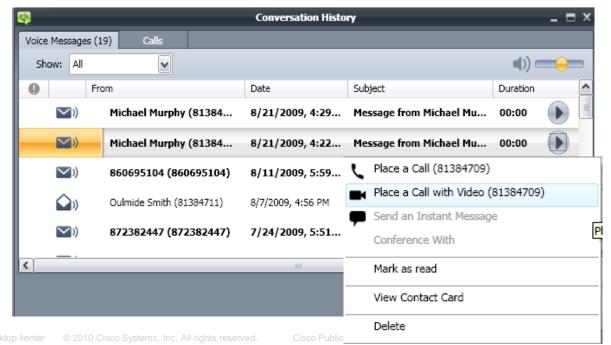

- The Cisco UC Integration provides users the ability to interact using standards based H.264 video including support for 720p high definition video.
- Video calling leverages UC managers call admission control to allow an administration to manage video traffic on the LAN and WAN.

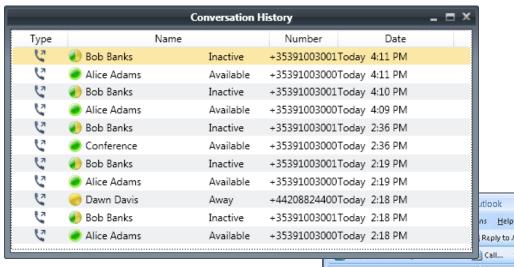

Cisco Unified Communications Integration™ for MOC Visual Voicemail

- The 8.0 release introduces voicemail playback from within the Office Communicator client.
- Play, Volume and message position are controlled by the user.
- Call back options accessible via right click.

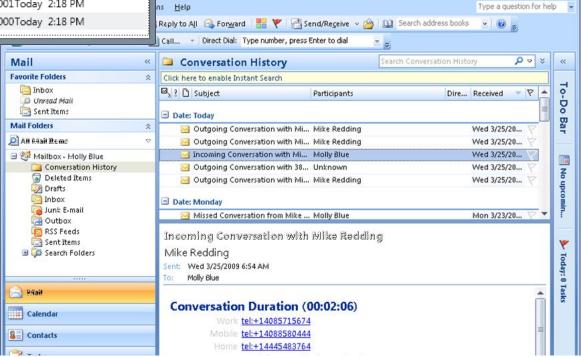

If the client is not configured for Visual voicemail then 7.1 client behaviour is provided.

Cisco UC Integration™ for Microsoft Office Communicator Call History

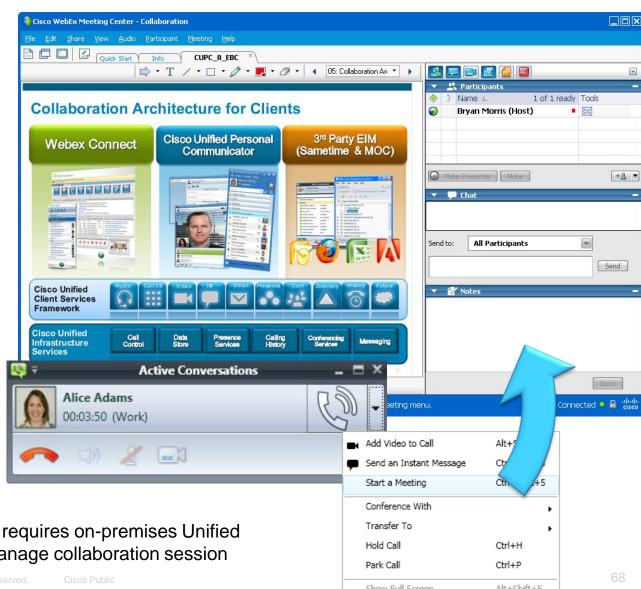

Call History is available from within Microsoft Office Communicator

A user may also choose to have Call History placed in the Conversation History in Outlook with IM History

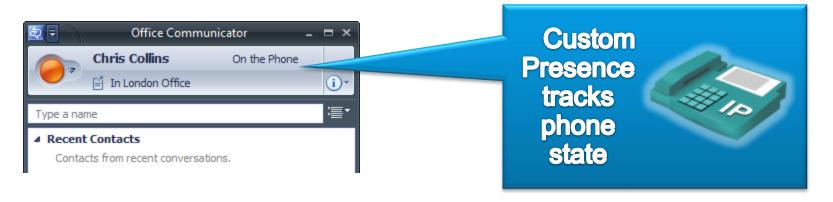

Cisco UC Integration™ for Microsoft Office Communicator **Desktop Sharing**

- Desktop collaboration is provided as an escalation function from the in call controls.
- Collaboration provides screen sharing and white boarding

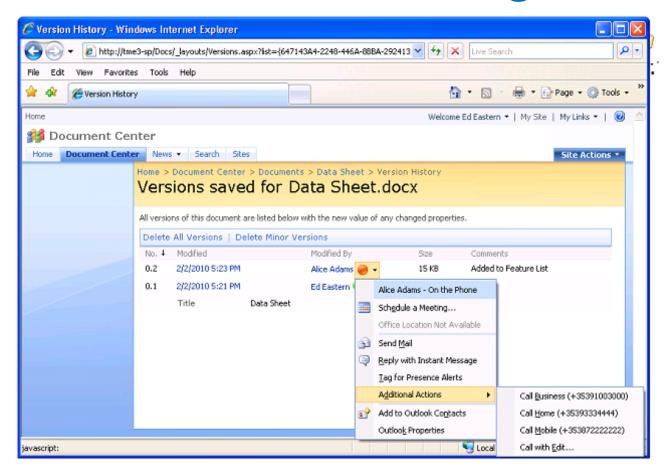

Note: Webex example shown requires on-premises Unified MeetingPlace 8.0 server to manage collaboration session

Cisco UC Integration™ for Microsoft Office Communicator Presence integrated phone state

- When using the Cisco UC Integration as you make a receive calls your presence state is updated in Microsoft office communicator to reflex phone state.
- Shows your current phone state to your contacts
- Allow you to see the current phone state of others
- Presence state is shown across devices when using a share line.

Cisco UC Integration™ for Microsoft Office Communicator Microsoft SharePoint Integration

 The Cisco UC integration persona menu support enables calling from Microsoft SharePoint

Cisco UC Integration™ for Microsoft Office Communicator Core Component Overview

The desktop integration brings together the following components to deliver the Solution and User Experience

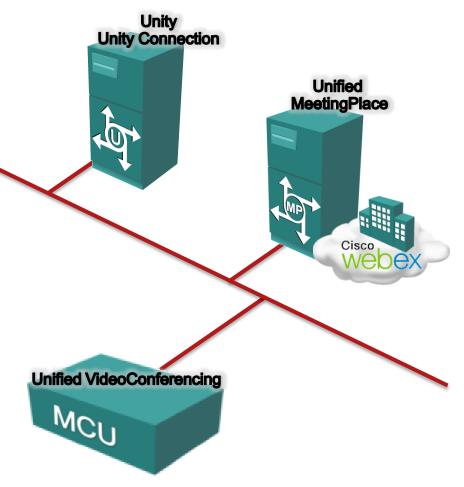

- Microsoft Active Directory
- Microsoft Office Communications Server 2007
- Cisco UnifiedCommunications Manager6.1(4) or later
- Microsoft Office Communicator
- Cisco UC Integration™ for Microsoft
 Office Communicator including
 Cisco Unified Client Services Framework

Cisco UC Integration™ for Microsoft Office Communicator Optional Component Overview

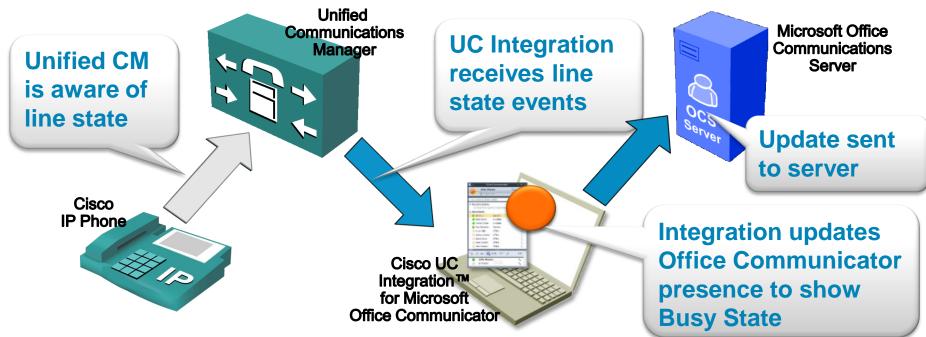

Optional Server Components

- Cisco Unity & Unity Connection
 - Visual Voicemail
- Cisco Unified MeetingPlace
 - Escalation to Multi-point video
 - Escalation to Web Conferencing
- Cisco Unified Videoconferencing
 - Escalation to Multi-point video

Cisco UC Integration™ for Microsoft Office Communicator Presence with the Cisco UC Integration™

- The UC Integration[™] provides phone status to Microsoft Office Communications Server environment.
- The Integration receives line events from Unified Communications Manager, This update is passed to Office Communicator as a status change.
- Presence is shown across multiple shared line devices.

Cisco UC Integration™ for Microsoft Office Communicator Summary

- Extends Cisco UC to Microsoft Office Communicator with easier to manage single call control architecture
- Enables seamless collaboration with Cisco UC Communications and Microsoft IM
- Provides investment protection and business-class communications with Microsoft
