

Borderless Networks – Medianet

Enabling high-quality business video

Søren Dulong Andreasen
Technical Solution Architect
CCIE #3252

Agenda

- Cisco Medianet (A Dream Come True)
- MSI, Auto-configuration, Video Monitoring and Troubleshooting solutions
- Medianet demo (CLI rules!)
- Cisco Prime Collaboration Manager Demo (But GUI rocks)

Why medianet? Why Now?

Business Drivers

IT Drivers

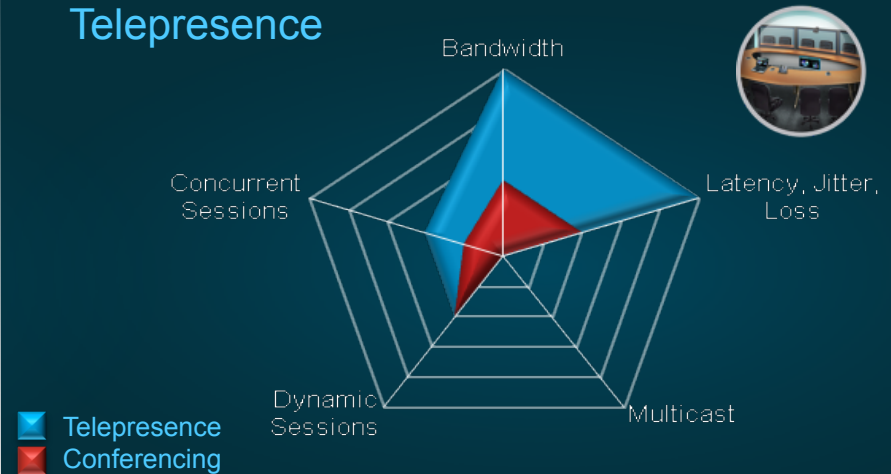

Business Video

Increasing demands on the network

Streaming Media

Telepresence

Video Surveillance

Desktop Collaboration

Challenges Deploying Video

Endpoint Deployment

- Need for high-skilled personnel to deploy endpoints
- On-going support of endpoints is a challenge

Quality of Experience

- High expenditures with troubleshooting
- Don't know where the problem is most of the time
- Cannot replicate problems

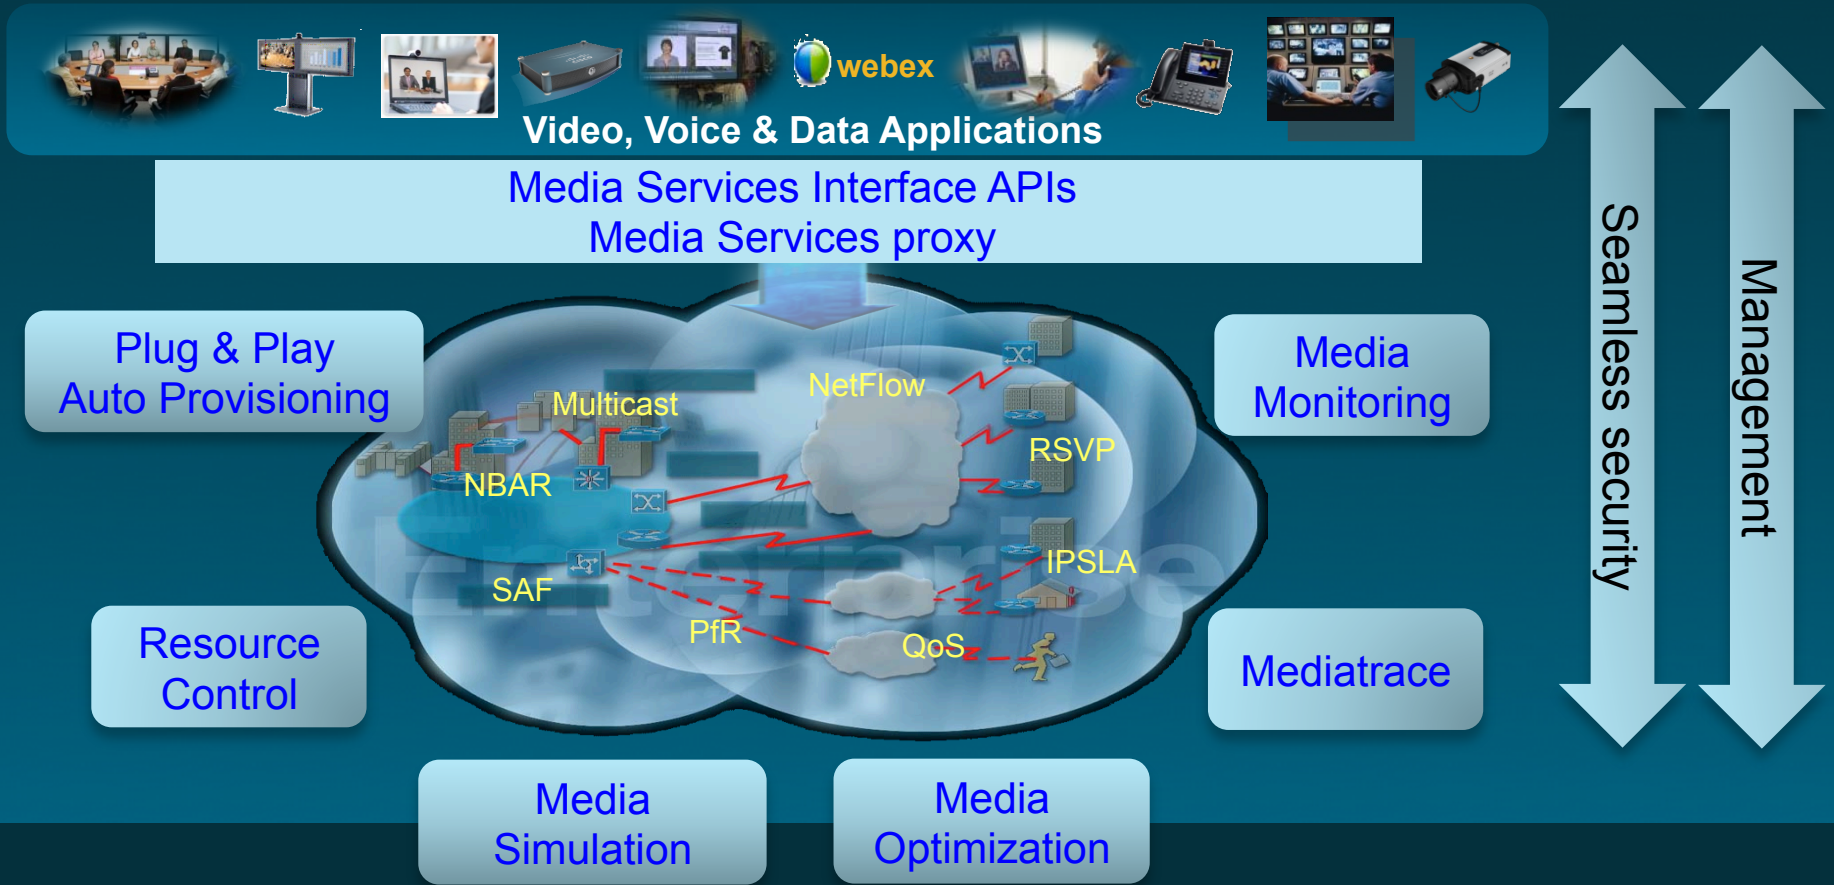

Lack of Visibility

- Inability to assess impact of video, voice and data applications on the network
- High-bandwidth upgrade costs
- Inability to verify service level agreements

Medianet Architecture

Video & Collaboration

Deliver the network optimized for video
anytime, anywhere, any device

Demystifying Medianet

Medianet is

- An Architecture/Blueprint for successful deployment of multiple media and business critical applications

Medianet is NOT

- A Product, a SKU, a feature within a network device
- A Marketecture to describe just QoS/CAC

or a bunch of video endpoints

Medianet Solutions include

- Automated, Plug and Play Deployment
- Media performance monitoring, troubleshooting and capacity planning
- Media flow awareness for Bandwidth Management

Medianet Solutions require

- Compliant products and features in both Smart Endpoints/Applications and Smart Network infrastructure
- DO NOT require an entirely end to end Cisco network with medianet enabled on every hop

Media Service Interface

Media Service Interface Endpoint Support

Supported Devices

2HCY11

1HCY12

WebEx

CTS

Tandberg

VXI

CIUS

Standard Def

Auto Provisioning

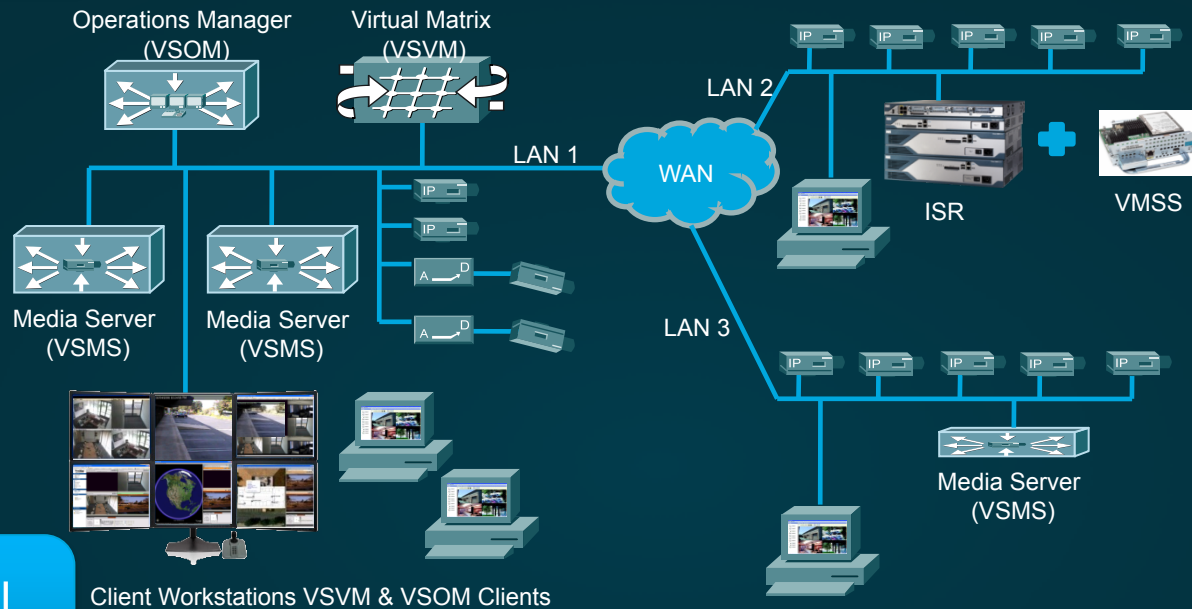

Medianet – Auto-configuration

Addressing Challenges of Mass Deployment

Preparation

Planning

Access switch configuration

Operational Cost

Right Port? Right Config?

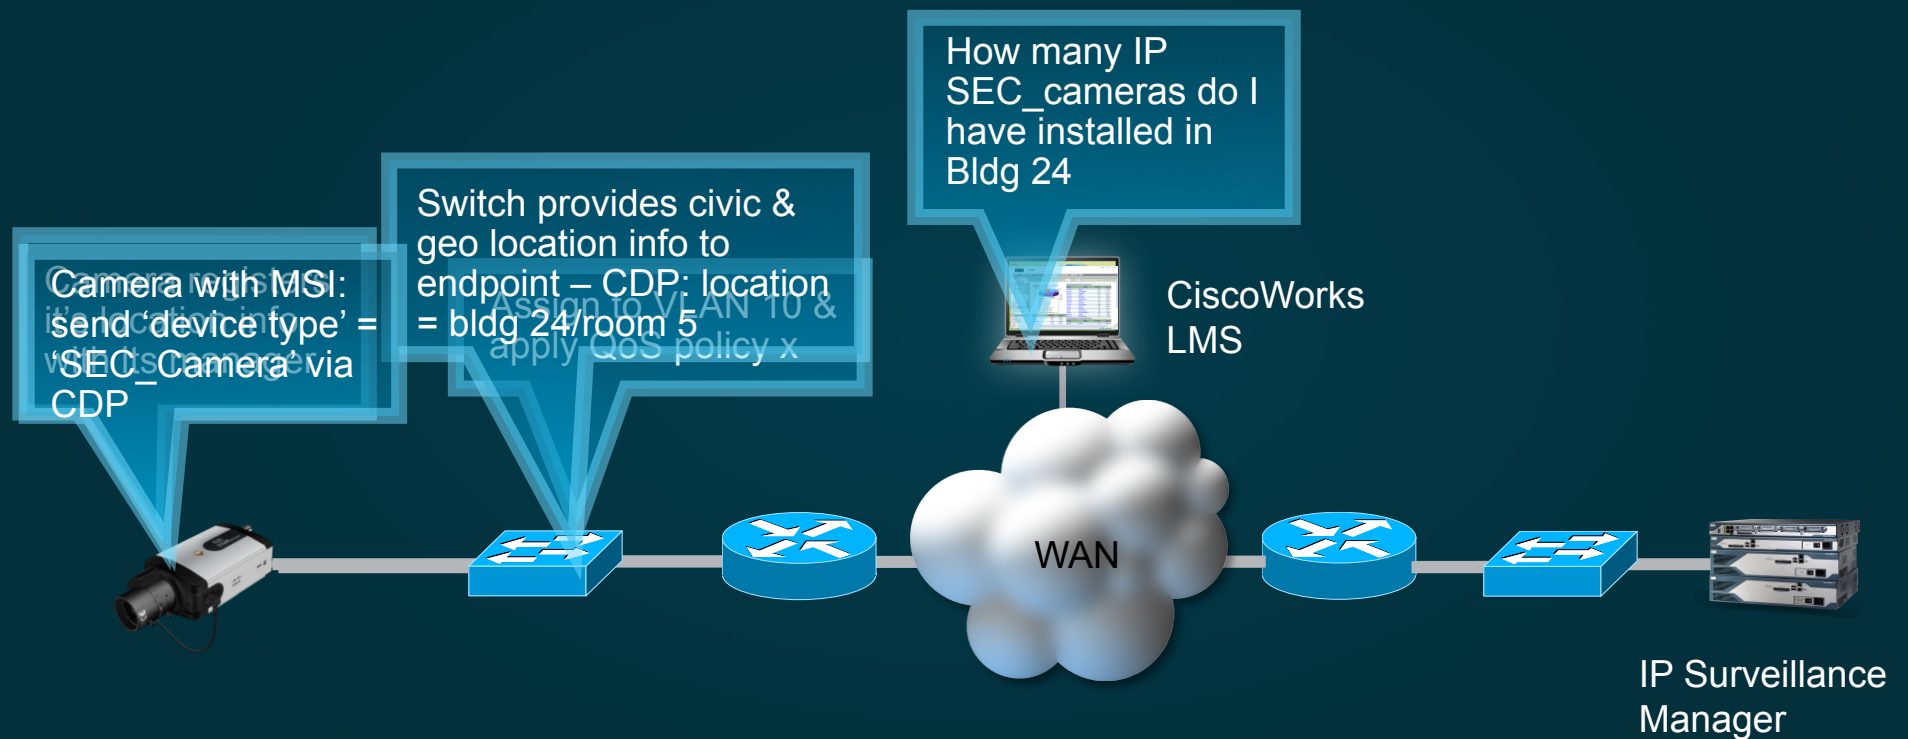

IT Skills?

Video Skills?

Medianet Auto-Configuration help in reducing installation time and cost

Medianet Auto-configuration

- Automate network configuration – Auto Smartports
- Location awareness – Applications automatically learn from the network

Monitoring and Troubleshooting

A Story

Using perf-mon, mediatrace and IPSLA VO together

Angry user reports issue days after encountering problem

“My video was terrible, the network is terrible!”

“An issue was seen by performance-monitor at the time”
“fault was identified and fixed by our engineers”

“I’ve got another video meeting today. Can I trust you?”

“Let me verify the network state using IPSLA VO”

“Yes. It looks good. I also checked via mediatrace that the correct path is being taken”

“If you like, I can run IPSLA VO and mediatrace periodically until your meeting starts...”

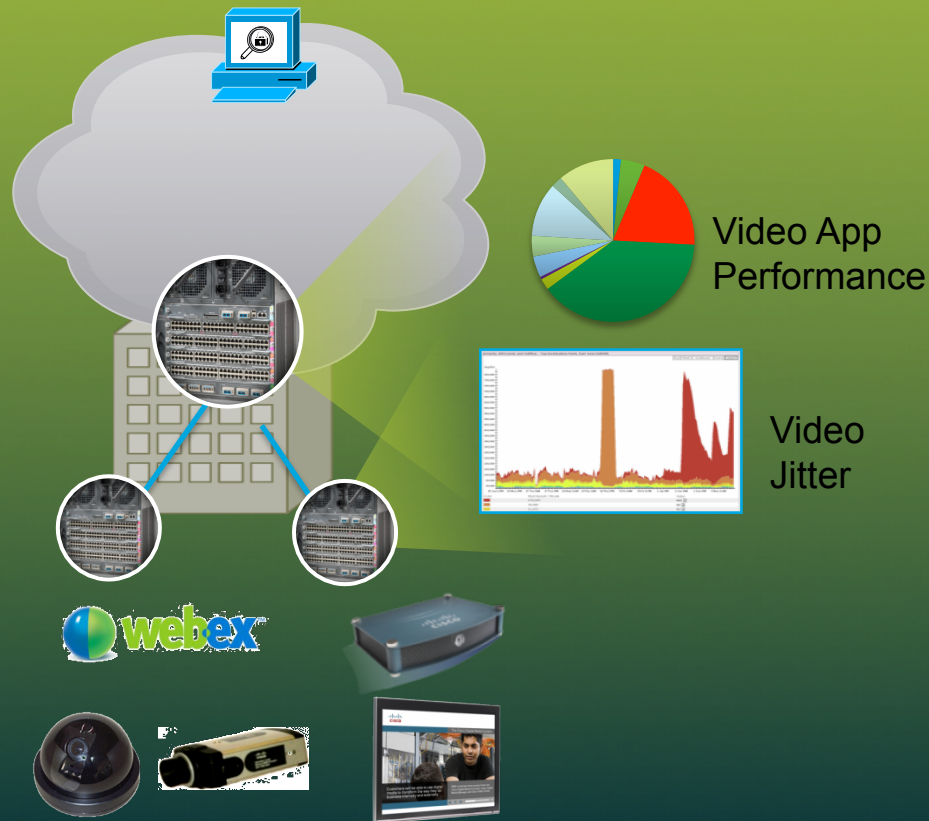

Medianet Troubleshooting Tools

- Video Performance Monitoring
- Mediatrace
- IP SLA VO

Medianet Video Troubleshooting

Troubleshoot: Real Time Video Performance Monitoring

Application Performance Mngt

- Pervasive infrastructure-based video performance monitoring. Gather per-media flow performance:
 - Jitter,
 - Packet drops,
 - Flow rate,
 - SSRC-ID etc.,
 - TCP round trip time
- Reporting media performance through FNF & MIB

Video Performance Monitoring Wide Applicability

- Tested with:

Cisco EX90, MXP1700, Polycom, Cisco TelePresence (1xxx, 3xxx),
CUVA, CP-9971, CP-7985, CP-7960 (audio only),

Cisco Video Surveillance Cameras, WebEx (HTTPS), IPTV (VLC)

Just plain web transactions (wget)

Metrics of Video Performance Monitor

- Variety of network centric metrics added.
- More metrics and protocols coming
- IETF standardization in progress

Metric/Data Value	Protocol
transport rtp ssrc	RTP
application media packets counter (long)	All
application media bytes counter (long)	All
application media bytes rate	All
application media packet rate	All
transport packets lost counter	RTP,
transport packets expected counter	RTP,
transport packets lost rate	RTP,
counter bytes rate	All
transport event packet-loss counter	TCP, RTP
transport round-trip-time	TCP
transport rtp jitter maximum	RTP
transport rtp jitter minimum	RTP
transport rtp jitter mean	RTP
application media packets rate variation	IP-CBR
application media event	-
counter packets dropped	All

Thresholds & Alerts

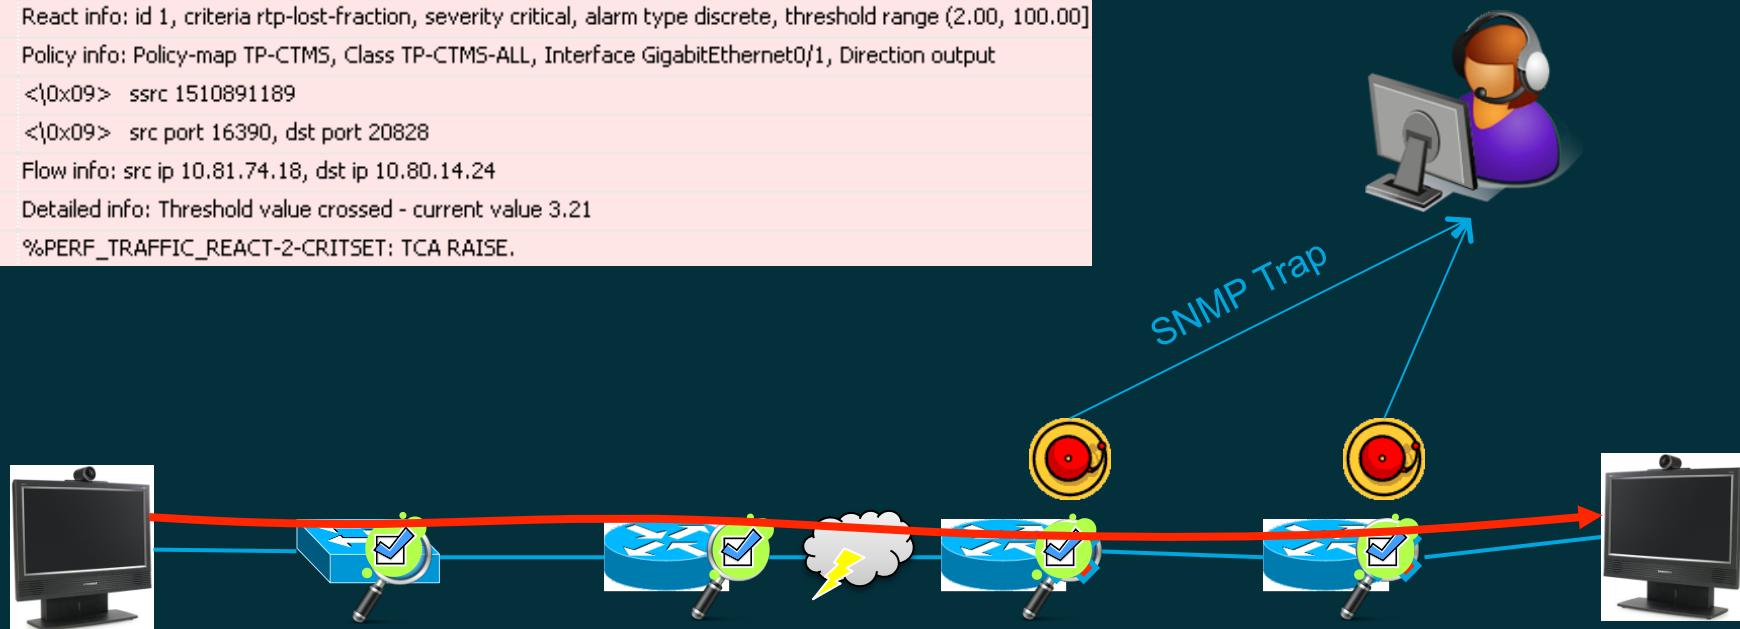

- Metrics can be **tested against thresholds** to **trigger actions**

Multi-level Alarm Raise/Clear, SNMP Traps, Syslog, embedded scripts, automatic mediatrace, path adaptation (PfR)

SyslogWatcher

```
React info: id 1, criteria rtp-lost-fraction, severity critical, alarm type discrete, threshold range (2.00, 100.00]
Policy info: Policy-map TP-CTMS, Class TP-CTMS-ALL, Interface GigabitEthernet0/1, Direction output
<\0x09> ssrc 1510891189
<\0x09> src port 16390, dst port 20828
Flow info: src ip 10.81.74.18, dst ip 10.80.14.24
Detailed info: Threshold value crossed - current value 3.21
%PERF_TRAFFIC_REACT-2-CRITSET: TCA RAISE.
```

Reports - NetFlow

- **NetFlow** based metrics **export** from network
Can be based on **flows**, or **aggregations of flows**, etc.
Variety of uses: **capacity planning**, **troubleshooting**, **baselining**, etc.

Solution Details: Third Party Components and Software

- Performance Monitor (NetFlow v9)

ActionPacked **LiveAction** (configuration also planned)

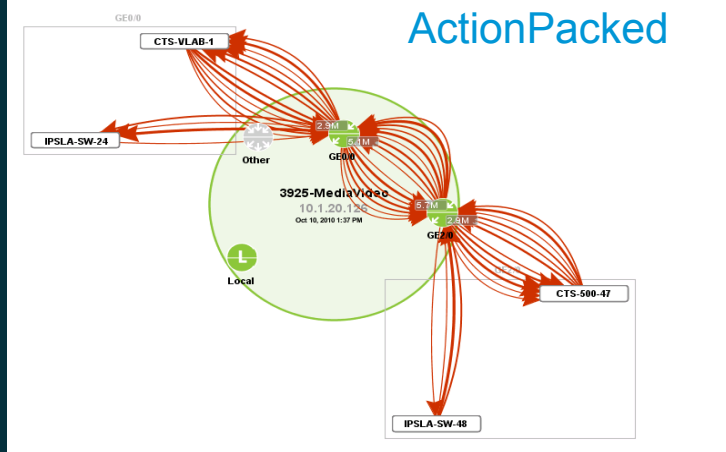

Plixer **Scrutinizer**

SevOne **SevOneNMS**

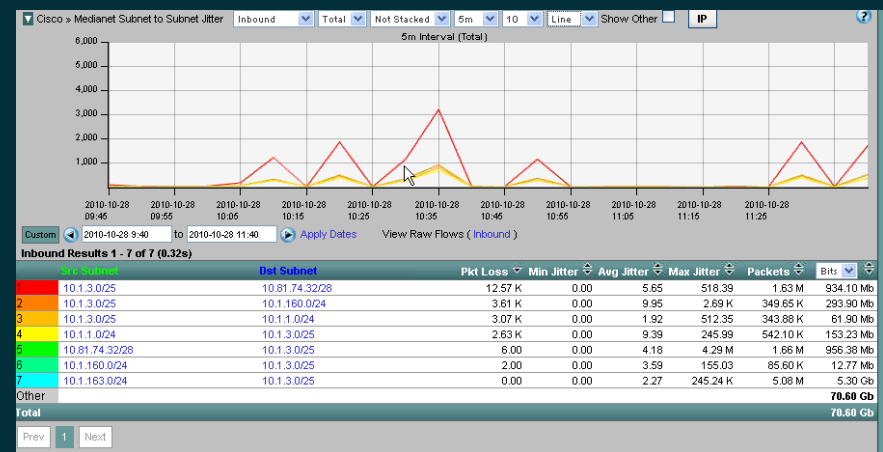

More info: CDN Partners Page:
<http://developer.cisco.com/web/mnets/partners>

- 14+ NMS application vendors engaged!

Name	Protocol	In IF	Out IF	Src IP Addr	Src Port	Dst IP Addr	Dst Port	RTP SSRC	Fraction Lost	Packet Loss Count	Loss Event Count	Interarrival Jitter Mean	Interarrival Jitter Max	Bit Rate	Media Packet Rate	Measured

Medianet Video Troubleshooting

Mediatrace: Live Video Troubleshooting

Debug live sessions: What path did the media take? Where is the problem?

Cisco Collaboration Manager

```
initiator#show mediatrace session stats 1
Session Index: 1
```

```
...
Mediatrace Hop: 2 (host=responder2, ttl=253)
Metrics Collection Status: Success
Reachability Address: 10.10.34.3
Ingress Interface: Gi0/1
Egress Interface: Gi0/2
Metrics Collected:
```

```
Flow Sampling Start Timestamp: 23:45:56
Loss of measurement confidence: FALSE
Media Stop Event Occurred: FALSE
IP Packet Drop Count (pkts): 0
IP Byte Count (Bytes): 6240
```

```
IP Packet Count (pkts): 60
IP Byte Rate (Bps): 208
Packet Drop Reason: 0
IP DSCP: 0
IP TTL: 57
IP Protocol: 17
Media Byte Rate Average (Bps): 168
Media Byte Count (Bytes): 5040
Media Packet Count (pkts): 60
RTP Jitter Average (usec): 3911
RTP Packets Lost (pkts): 0
RTP Packets Expected (pkts): 60
RTP Packet Lost Event Count: 0
RTP Loss Percent (%): 0.00
```

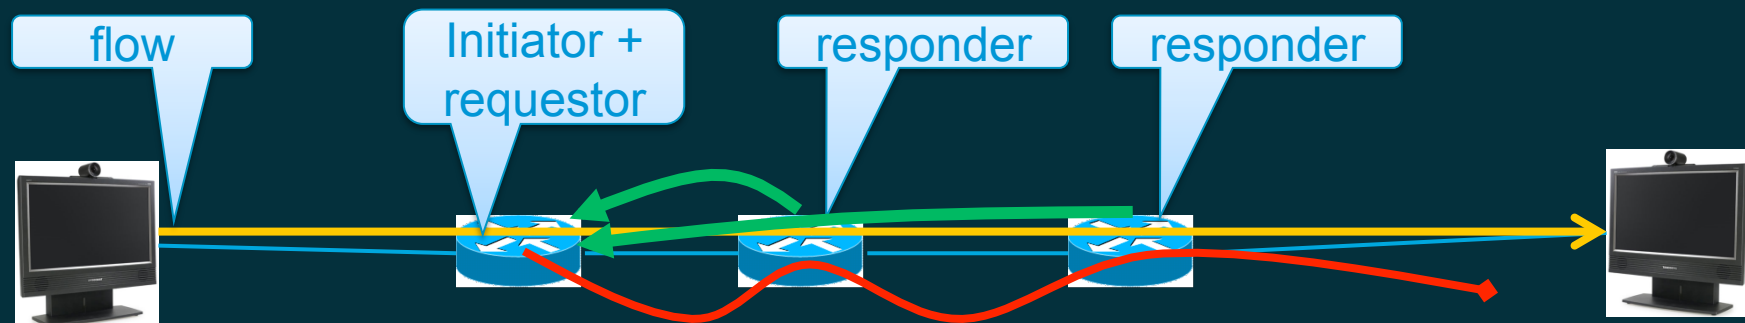

Mediatrace: Hop by hop Collection of Statistics from the Media Path

Dynamic Monitoring using Mediatrace

- Mediatrace discovers and queries L2 and L3 nodes along a flow's path
- Gathers system resource, interface and flow specific (perf-mon) stats
 - For performance monitor: dynamically configures monitoring policy (if needed) 5-tuple + intervals etc. match static policy).
- Consolidates information into a single screen
- Allows for easy comparisons of device behavior
 - Which interface dropping packets?
 - Where is DSCP getting reset?
- Can be requested by remote device
- Automatically (based on thresholds) via EEM script
 - Built into MSI applications, operator or automatic triggering

Mediatrace Components

- **Requestor** – origin of request
Video end system, NMS, same node as initiator, remote router/switch
- **Initiator** - injects the trace
- **Responder** - sends data back to initiator
- Multiple types of data requests
 - Hops – hop discovery
 - System – system information
 - Performance monitor – enables perf-mon, then collects data
- Multiple execution formats
 - Poll – minimal config, run from IOS exec
 - Session – flexible configuration, allows for periodic, recurring requests and history

Mediatrace Performance Monitor Session

- Preconfigured mediatrace session- perf-mon profile
- Performance-monitor policy automatically configured (if needed) along path, then flow data collected
- Fixed field-sets for RTP and TCP flow analysis

```
initiator#show mediatrace session stats 1
Session Index: 1
...

Mediatrace Hop Number: 2 (host=responder2, ttl=253)
Metrics Collection Status: Success
Reachability Address: 10.10.34.3
Ingress Interface: Gi0/1
Egress Interface: Gi0/2
Metrics Collected:
Flow Sampling Start Timestamp: 23:45:56

Cisco Prime CM: cisco.com/go/cpcm
Mediascope: medianet.sourceforge.net

mediascope

IP SLA Video Operation

- IPSLA known in industry for jitter, ICMP, etc. probes
- Most probes measure experience without affecting user traffic (hopefully)
- Need traffic to stress test network
- IPSLA VO provides
 - Realistic representation of arbitrary video (RTP) traffic
 - Packet sizes, burstiness, traffic rate, etc.
- Pre-packaged profiles:
 - IPTV, Video Surv, CTS
 - Extensible via data file
- Custom profile generation from packet capture
- WebEx profile available for download soon

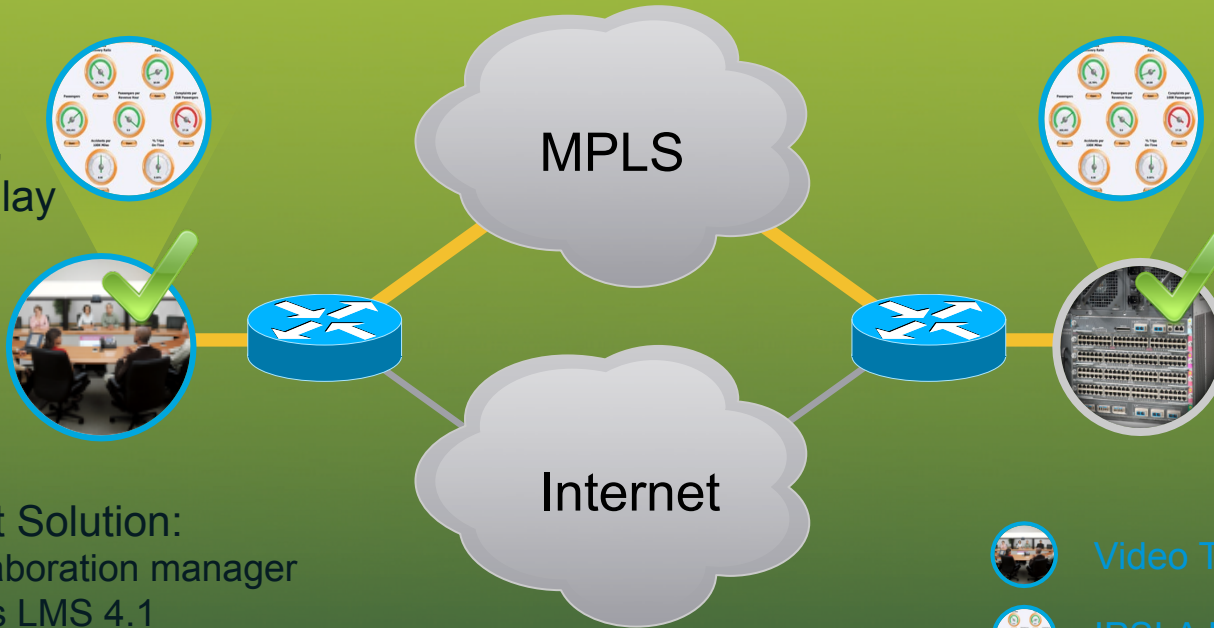

Medianet

Planning: Network Assessment with Video IPSLA

- Pre-deployment: Is my network ready for Video?
- Post-deployment: Is the problem with network or application?
 - Hardware based Video IP SLA simulates real-life video traffic.
 - Built-in traffic profiles to generate Telepresence, IPVSC or IPTV traffic
 - Automated scheduling to gather IPSLA during various time of day

Latency,
Jitter,
Packet loss,
One way delay

Management Solution:

- Cisco Collaboration manager
- Ciscoworks LMS 4.1
- Partners (Sevone, ActionPacked etc)

Video Traffic Simulation

IPSLA Measurement

Solution Details: Third Party Components and Software

- IPSLA Video Operation

<http://developer.cisco.com/web/mnets/partners>

The screenshot displays the Cisco Prime Collaboration Manager interface. At the top, there is a notification window for 'CTS-500-2 to CTS-500-1' and 'CTS-500-1 to CTS-500-2', both showing 'Major Alarm' status. Below this, the main navigation bar includes 'Home', 'Monitoring', 'Inventory', and 'Administration'. The 'Monitoring' section is active, showing 'Proactive Troubleshooting' and 'IPSLA Test Result' tabs. The 'IPSLA Test Result' tab is selected, displaying a table of test results. The table has three columns: 'Latest Result', 'Last 1 Hour Aggregated Result', and 'Last Updated'. The table contains various performance metrics such as 'Last Test Duration', 'Number of Tests Run', 'Minimum Latency', 'Average Latency', 'Maximum Latency', 'Packets Lost', and various Jitter metrics (Minimum Positive, Average Positive, Maximum Positive, Minimum Negative, Average Negative, Maximum Negative, and Inter-arrival Jitter).

	Latest Result	Last 1 Hour Aggregated Result	Last Updated
Last Test Duration	60 s	60 s	02/22/11 10:56:38
Number of Tests Run	44	44	02/22/11 10:56:38
Minimum Latency	243 ms	231 ms	02/22/11 10:56:38
Average Latency	317 ms	312 ms	02/22/11 10:56:38
Maximum Latency	389 ms	476 ms	02/22/11 10:56:38
Packets Lost	188 pkts	8035 pkts	02/22/11 10:56:38
IPDV (RFC 5481) Minimum Positive Jitter	0 ms	0 ms	02/22/11 10:56:38
IPDV (RFC 5481) Average Positive Jitter	12 ms	12 ms	02/22/11 10:56:38
IPDV (RFC 5481) Maximum Positive Jitter	117 ms	171 ms	02/22/11 10:56:38
IPDV (RFC 5481) Minimum Negative Jitter	0 ms	0 ms	02/22/11 10:56:38
IPDV (RFC 5481) Average Negative Jitter	8 ms	9 ms	02/22/11 10:56:38
IPDV (RFC 5481) Maximum Negative Jitter	64 ms	102 ms	02/22/11 10:56:38
Inter-arrival Jitter (RFC 1889) at Responder	0 ms	0 ms	02/22/11 10:56:38
Last Updated	02/22/11 10:56:38	02/22/11 10:56:38	02/22/11 10:56:38

How do I Deploy Media Monitoring?

Do I Have to Upgrade My Whole Network?

- Media monitoring does **NOT** need to be in every hop for benefits to be realized
- Start in trouble spots or high usage areas
- The more locations are upgraded the more visibility and benefits you get!

Here is an example of media monitoring deployment:

- Phase 1: remote sites (expensive to troubleshoot)—enable Performance Monitor for high value applications (e.g. videoconferencing and webex)
- Phase 2: trouble spots; high value applications—recurring issues on campus A
- Phase 3: new sites where additional visibility is needed to easily localize problems – based on what we learned on phases 1 and 2

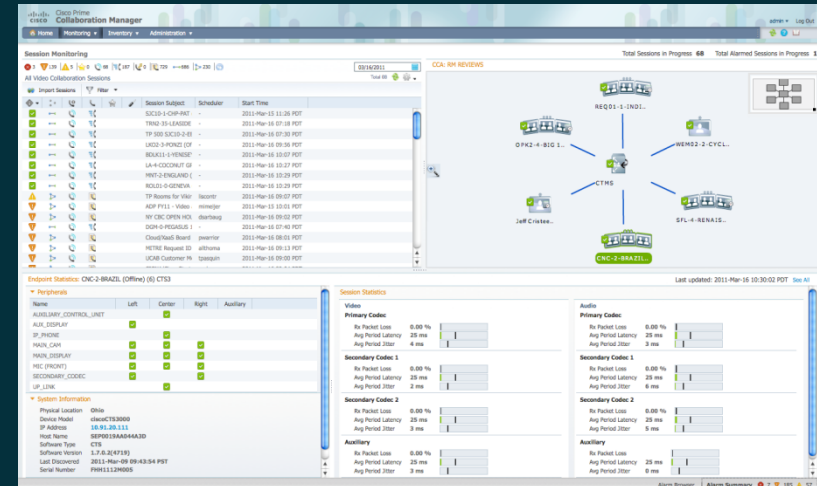

Cisco Prime Collaboration Manager DEMO ?

Cisco Prime Collaboration Manager

- Obtain complete summary of any problems affecting sessions in progress, endpoints, and service infrastructure devices
- Filter by alarm severity of all sessions – in progress, recently completed, and scheduled
- View topology and rapidly determine whether issues are in endpoints or in the network
- See detailed endpoint and session statistics – latency, jitter, packet loss
<http://www.cisco.com/go/cpcm>

The screenshot shows a detailed view of the Session Monitoring table. The table has columns for Session Subject, Scheduler, and Start Time. The data rows include session details such as SJC10-1-CHP-PAT, TRN2-35-LEASIDE, and TP 500 SJC10-2-EI.

Session Subject	Scheduler	Start Time
SJC10-1-CHP-PAT	-	2011-Mar-15 11:26 PDT
TRN2-35-LEASIDE	-	2011-Mar-16 07:18 PDT
TP 500 SJC10-2-EI	-	2011-Mar-16 07:30 PDT

Network Diagnostics

Quickly isolate and troubleshoot the source of video related problems

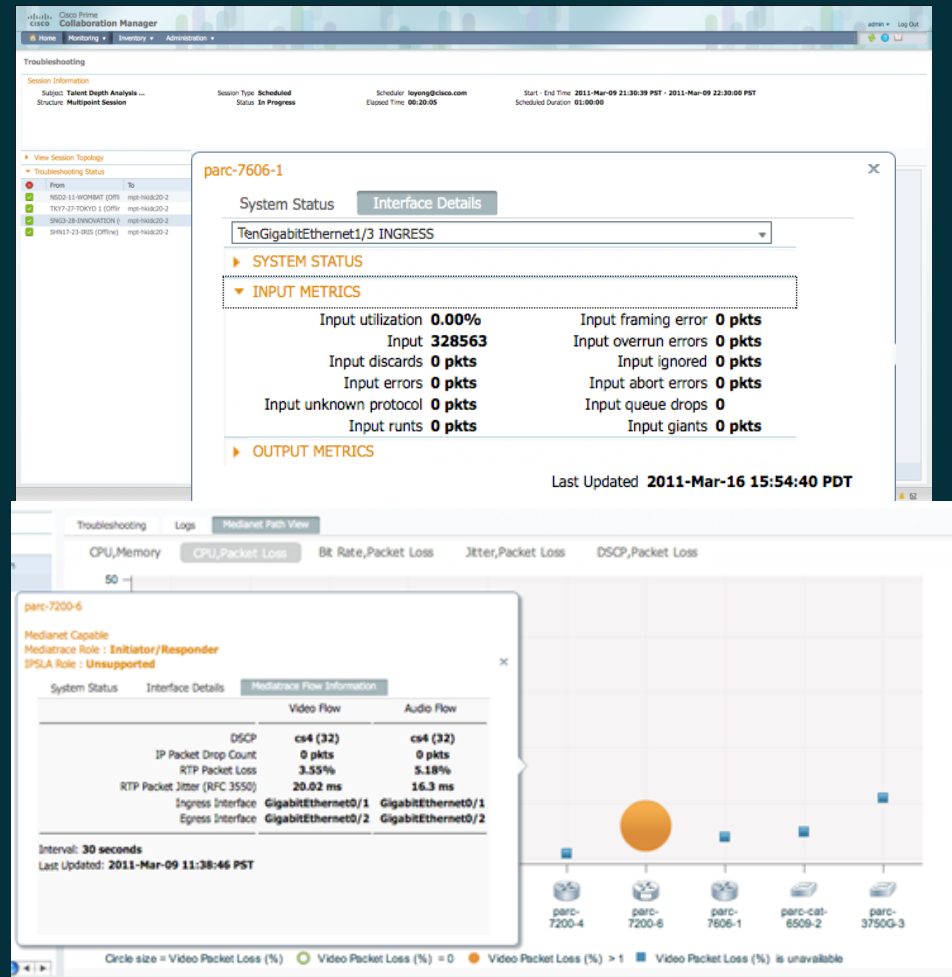

- Improves the overall end-to-end video experience – rapidly isolates and pinpoints video related issues between the network path and endpoints
- Visualizes end-to-end video path and quickly identify trouble spots – with additional flow based information where Medianet enabled devices are deployed
- Automatically captures troubleshooting data for important sessions – allows operator to identify and analyze issues after sessions have completed

Network Diagnostics - Details

Visualize end-to-end media path between endpoints

- Media path visualization and flow statistics identify network issues degrading service quality
- Analyze detailed device information, CPU, Memory, Interface statistics
- Medianet enabled devices provide additional flow based details – packet loss and jitter
- Troubleshooting data can be captured and exported for trending and later analysis

ISR G2 Video Conferencing Services

15.1.4M

- Multiple video streams traverse the WAN to a central MCU resource – non-optimal use of limited WAN BW
- Video is mixed by a centralized MCU controlled by CUCM

- Video is processed by the ISR G2 DSPs controlled by CUCM
- Keeps traffic local in the branch if all participants are located in the branch
- Ad-hoc and MeetMe conferences

Enterprise Medianet Today and Beyond

Deploy

Now

**Reduce
TCO**

- Medianet Readiness Assessment
- Auto-configuration to simplify video deployment & location awareness
- Media Monitoring for much improved visibility & troubleshooting

Scale

2012

**Maximize
Resources**

- Flow Metadata – Media-aware
- Media Services Proxy for legacy, 3rd Party & Cloud services
- Resource control to maximize resources

Optimize

2012 & beyond

**Optimize
Resources**

- Media optimization – Optimize resource usage & preserve video quality
- Business Policy to support client funded model

MEDIANET

Cisco Medianet Architecture Summary

Quality of Experience: Predictable Quality on Any Device

Any to Any: Seamless Experience

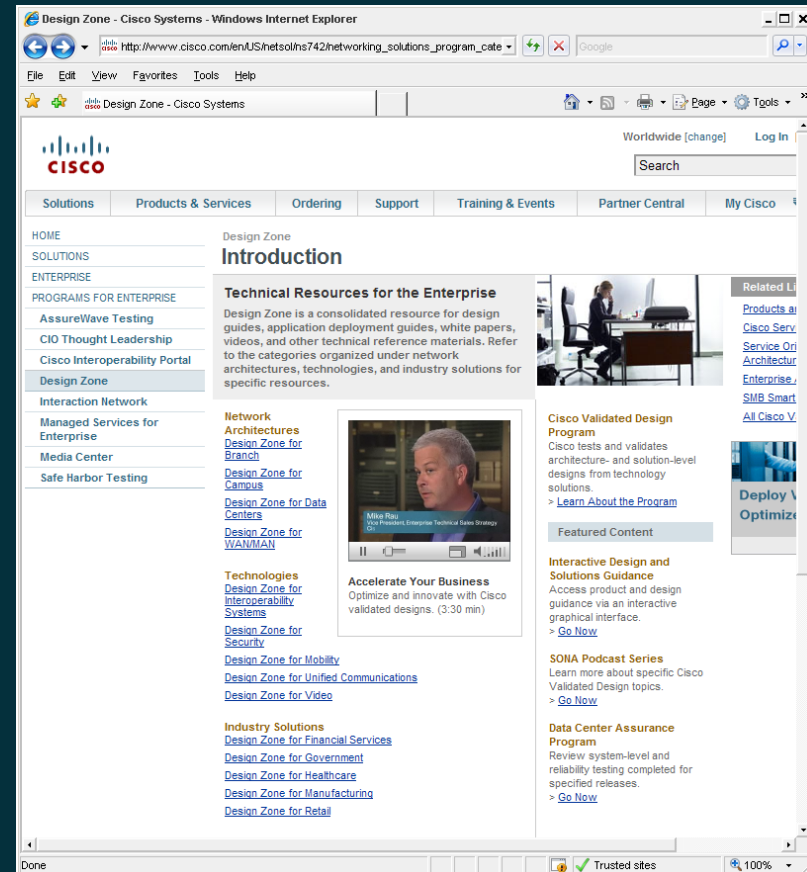

Simplicity: Ease of Use

Plug and Play: Speed & Reliability

Scalability, Reliability, Availability: Video at Scale
