

Mobile Applications

Cisco Unified Communications Mobility

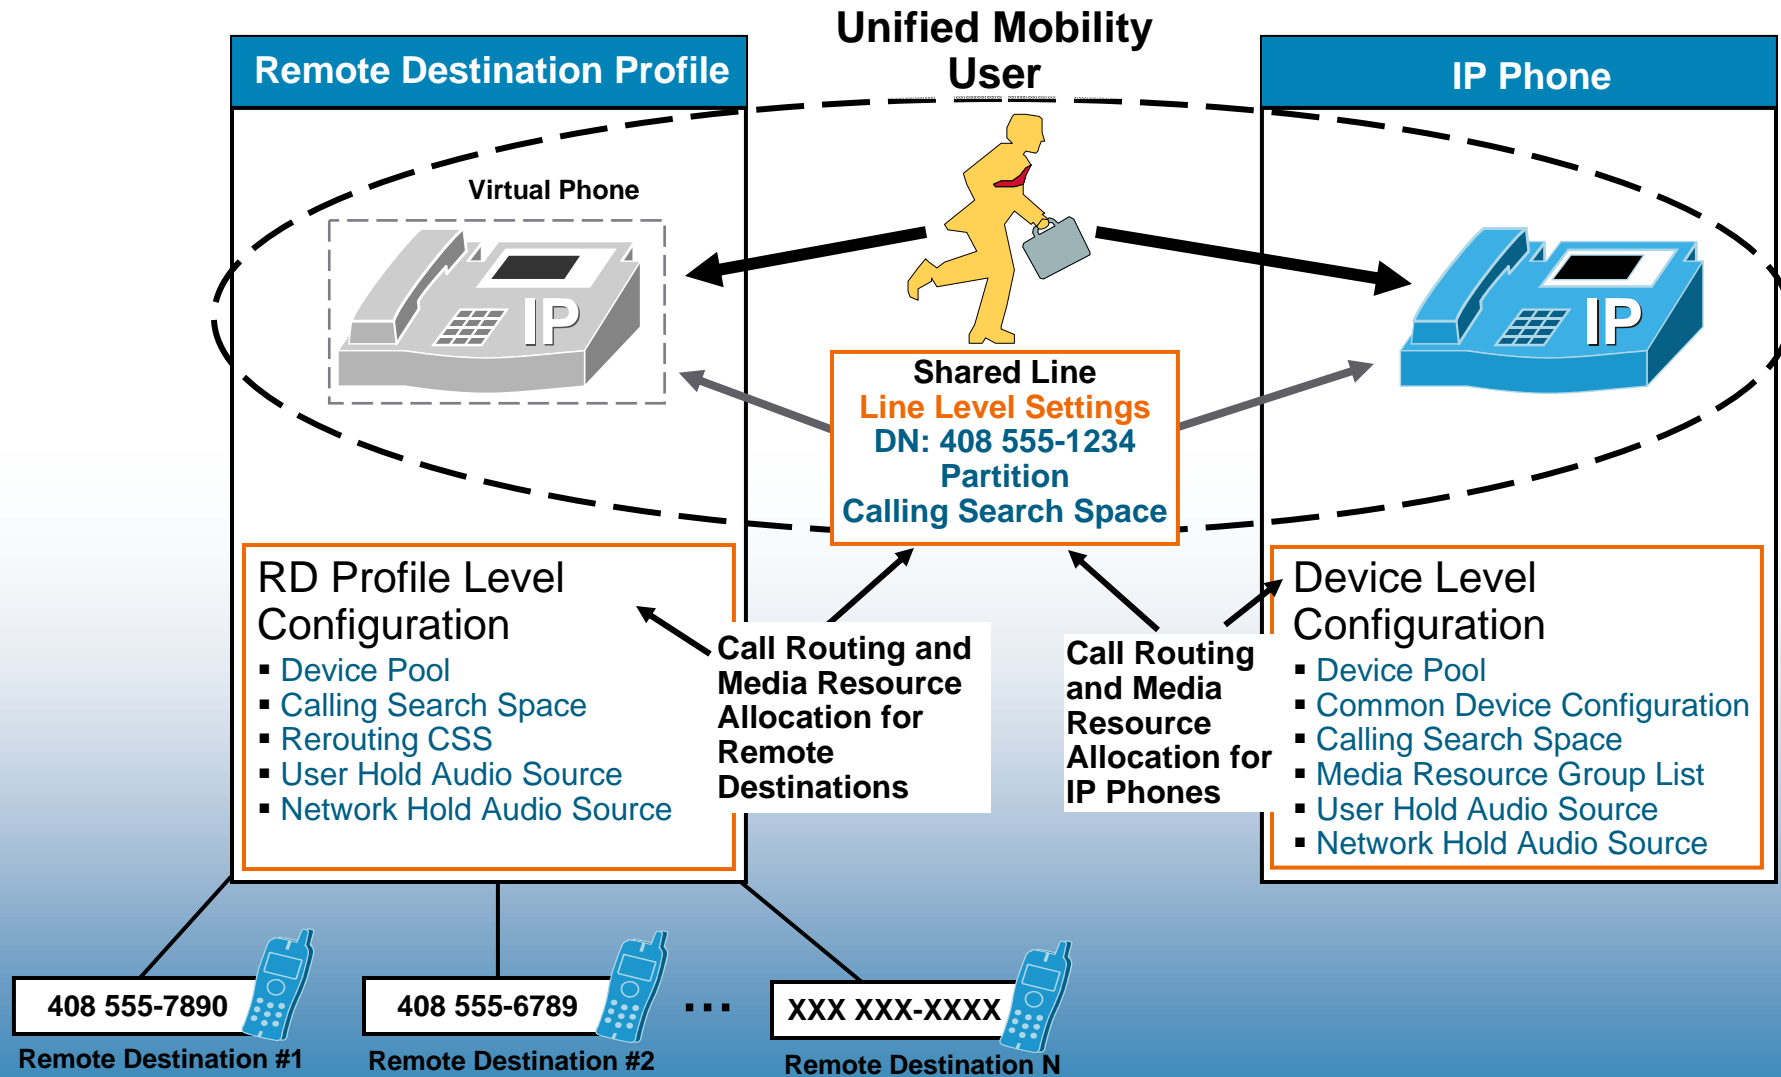

UC Mobility Improves Productivity Anytime Anywhere

- Fully integrated within Cisco Unified Communications Manager (Unified CM) 6.0 and later.
- Includes the following features:
 - Mobile Connect
 - Mobile Voice Access (MVA)
 - Enterprise Feature Access (EFA) 2 Stage-Dialing
 - Mid-Call Features
 - Single Enterprise Voicemail Box

Unified Mobility

Configuration and Call Routing Concept

Unified Mobility

Feature Review: Mobile Connect, MVA, and EFA

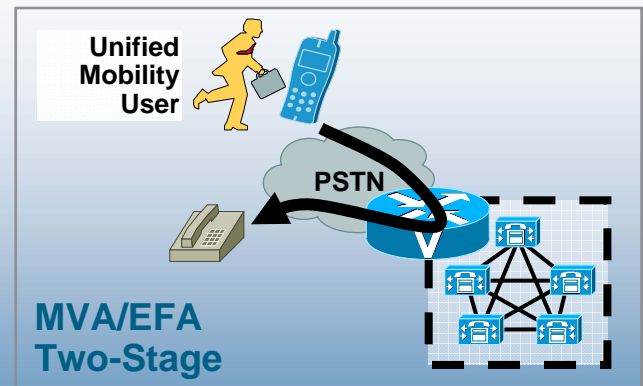

- **Mobile Connect**—Incoming calls to user's enterprise number rings both desk phone and configured Remote Destination(s)
- **Mobile Voice Access (MVA)**—Provides the ability to make calls from mobile phone using the enterprise IP telephony infrastructure

IVR based application accessed by dialing into the enterprise

Requires H.323 VXML gateway

User can also enable/disable Mobile Connect

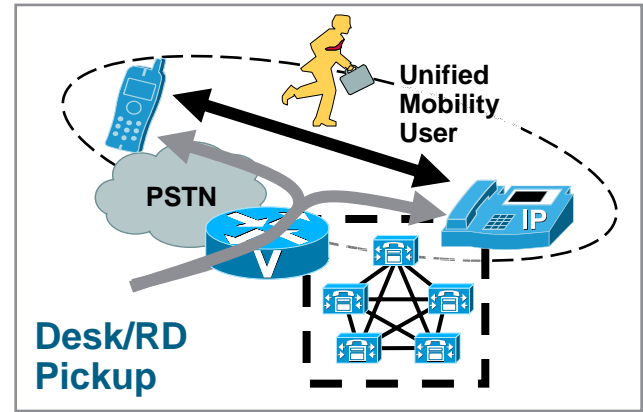

- **Enterprise Feature Access (EFA) Two-Stage Dialing**—Provides identical functionality as MVA without the IVR component

Unified Mobility

Feature Review: Pickup and Mid-Call Features

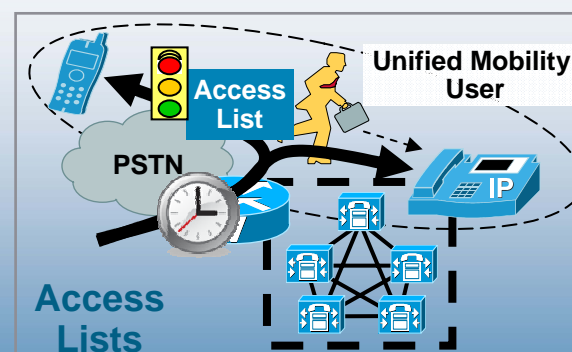

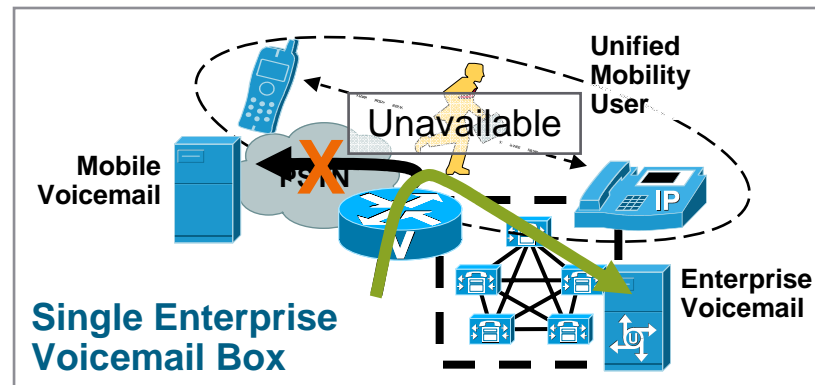

- **Desk Phone/Remote Destination Pickup**—Once incoming mobility call has been answered, call can be moved between desk phone and RD(s)
- **Mid-Call Features**—Provides the ability to invoke enterprise features Hold, Resume, Transfer, Conference, and Directed Call Park from the RD/mobile phone for active mobility calls

Unified Mobility

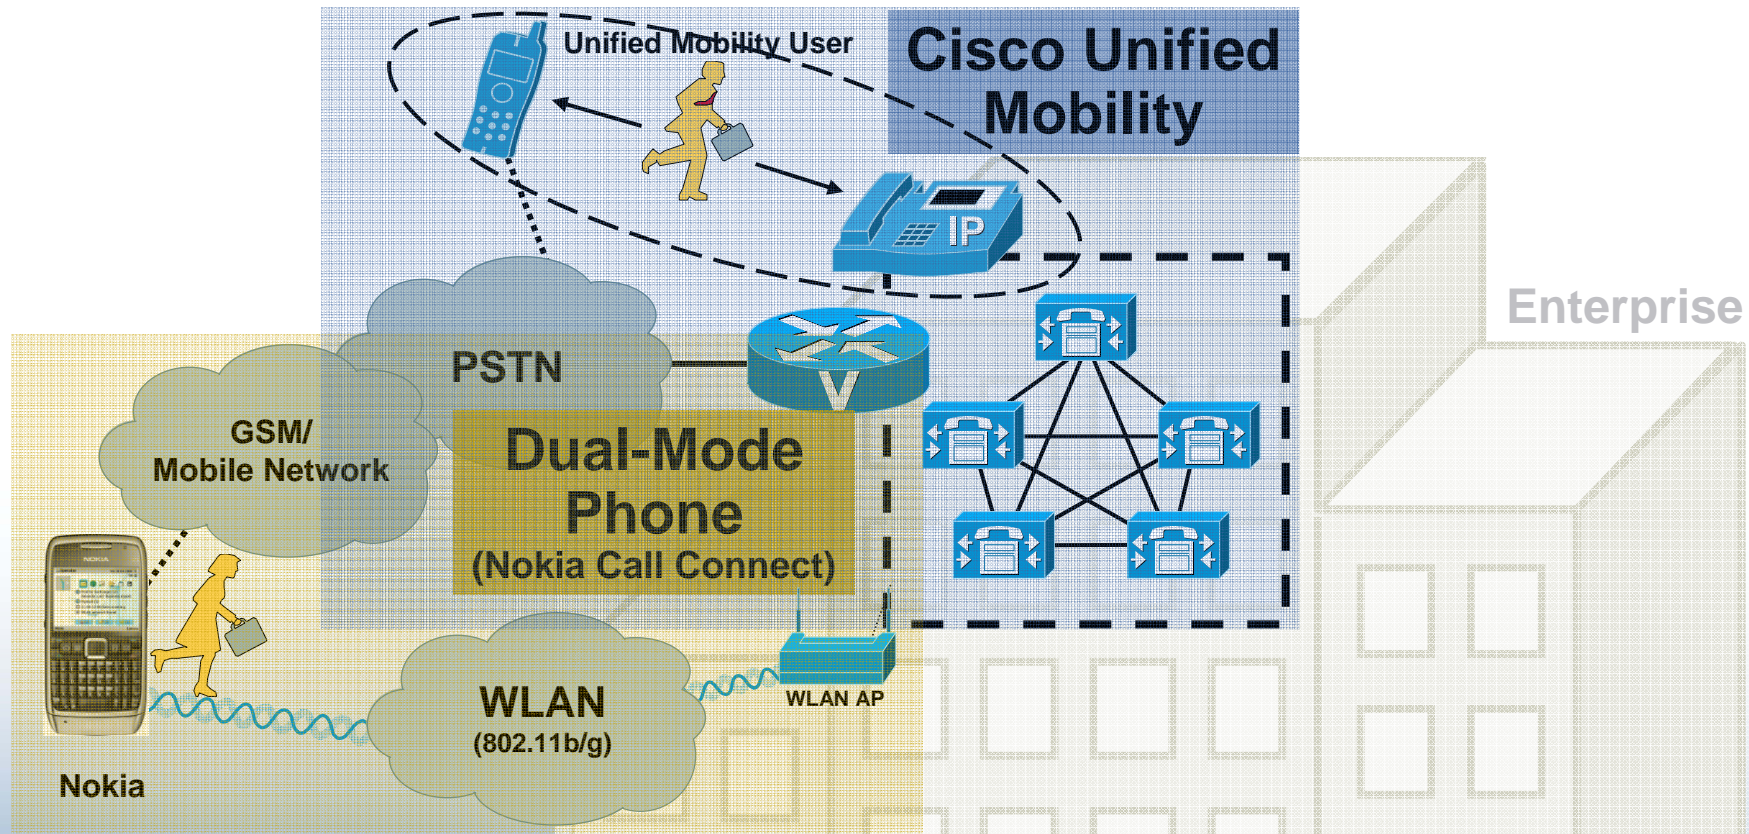

Feature Review: Single Enterprise VM Box and Access Lists

- **Single Enterprise Voicemail Box** (mobile voicemail avoidance)—Per RD timers ensure that when mobility user is unavailable, unanswered incoming calls are forwarded to enterprise voicemail box rather than mobile or other voicemail box
- **Access Lists**—Per RD access lists can be defined to filter or screen incoming calls to a mobility user based on caller ID. Filtering allows or blocks calls from being extended to the user's RD.

Cisco Unified Communications Mobility

UC Mobility Improves Productivity Anytime Anywhere

- Nokia Call Connect for Cisco
- Provides the ability to use enterprise IP telephony infrastructure for making and receiving calls
- When using Cisco Unified Wireless Network, the mobile phone uses SCCP client to register with Cisco Unified Communications Manager as a phone
- When the WLAN coverage is unavailable, the mobile phone uses GSM for calls

Nokia Call Connect for Cisco

- **Nokia Call Connect 2.0 for Cisco**

 - VoWLAN and VoIP over 3G

 - Automatic handover between networks
(select devices)

 - DTMF Mid-Call Features

 - XML Application Support

 - Interoperable with Cisco Unified Mobile Communicator

- **Customer Benefits**

 - Reduce cellular costs with Dial via Office and VoWLAN

 - Productivity-enhancing features

Tin Can Touch for iPhone

- **Tin Can Touch is a Softphone for iPhone** This application is built from the Client Services Framework (CSF) assets, mostly the Skittles phone code and the GIPS media engine.
- Tin Can looks like a CIPC device to the Call Manager because it is a CIPC device. It's the same Call Processing code, ported for the iPhone and Mac. .
- Tin Can looks like the Apple Phone app because imitation is the most sincere form of flattery. Read on to see the future for Tin Can.
- Since Tin Can Touch behaves like CIPC, if you already have a SIP CIPC device setup.

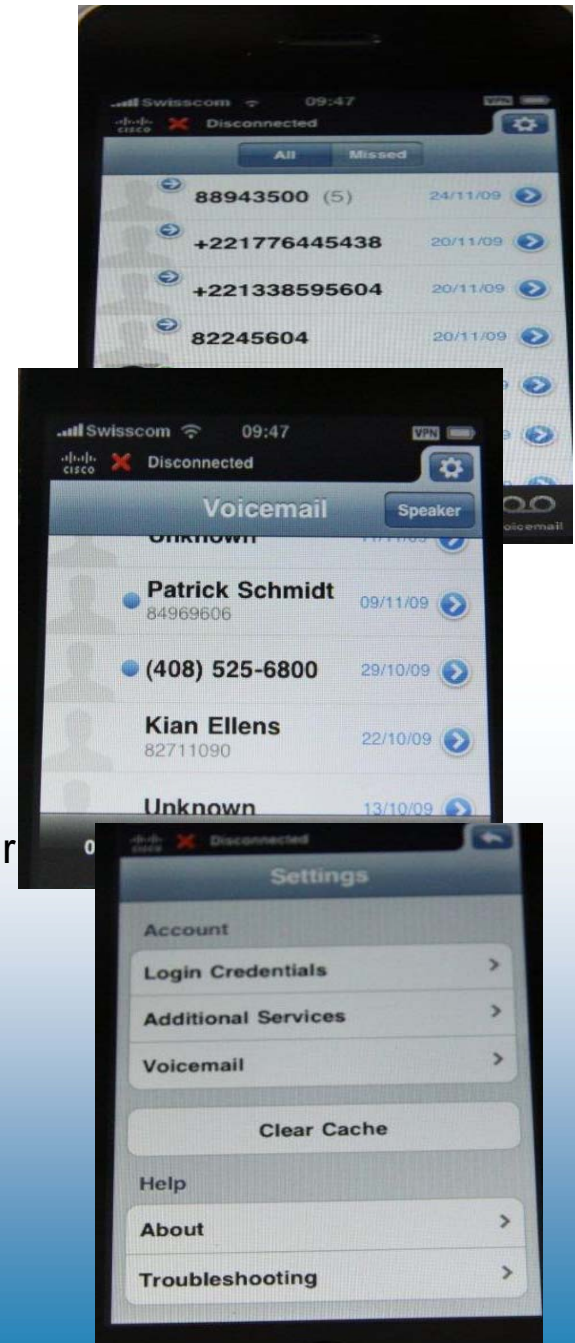

Tin Can Touch for Iphone

- **What can I do with Tin Can Touch (TCT)?**
- Place a VoIP phone call from your corporate phone line. This is just a phone. And it has your desk phone number.
- Receive a call. When someone calls you, and you are running Tin Can Touch, your phone will ring. Answer it.
- Access Contacts, Recents, Favorites just like the iPhone "Phone" application.
- Exit the application while you are on a call and the person that you are talking to gets "Parked". Start the application back up and automatically get the call back (limit 1 minute).
- G.711, G.729, iLBC codecs are supported.
- Hold/Resume
- Speakerphone

Tin Can Touch for Iphone

- **What can I do with Tin Can Touch (TCT)?**
- DTMF support
- 2 simultaneous calls, swap back and forth
- Conference with the "Merge" button
- Application dialing rules. Use your contacts as they are to place calls.
- Pickup deskphone calls when you launch Tin Can Touch.
- WiFi to Mobile handoff while in a call.
- Cisco Speech Connect by simply raising the iPhone to your face.
- Voicemail support via IMAP.

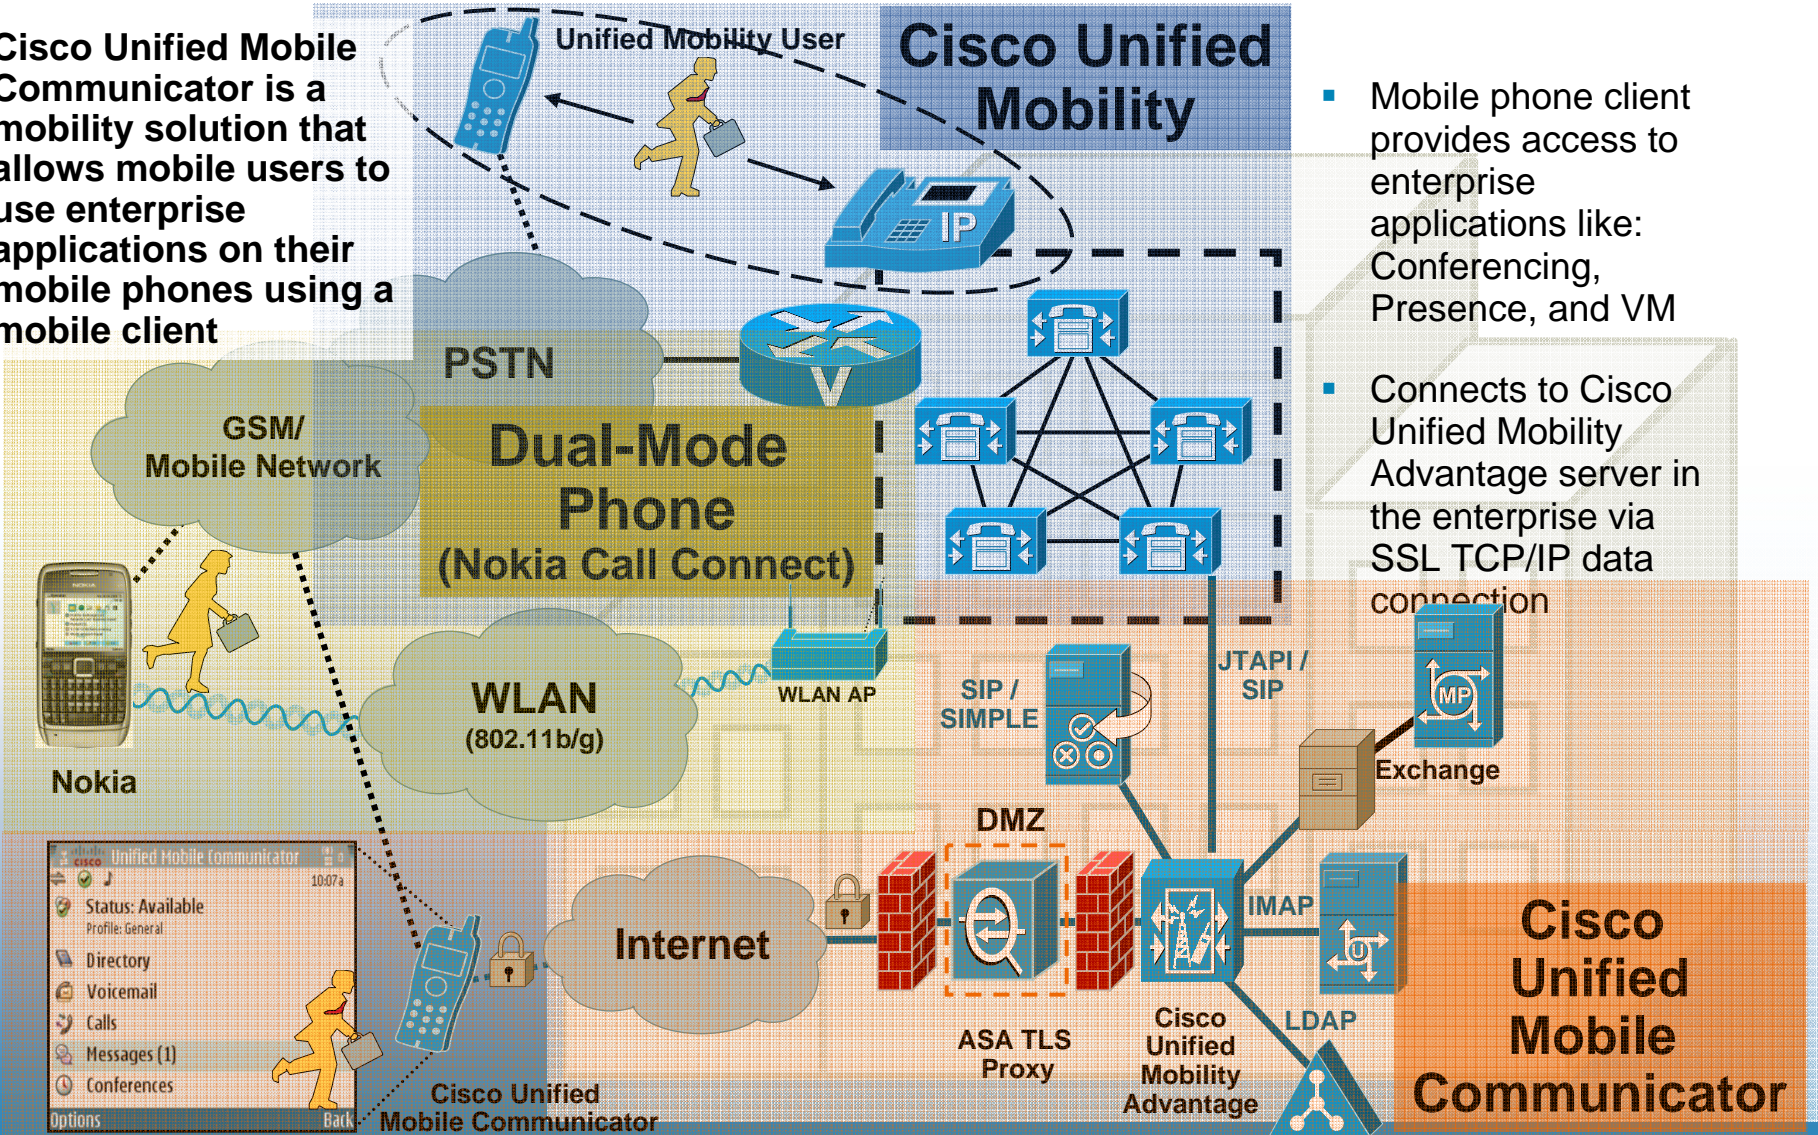

Cisco Unified Communications Mobility

UC Mobility Improves Productivity Anytime Anywhere

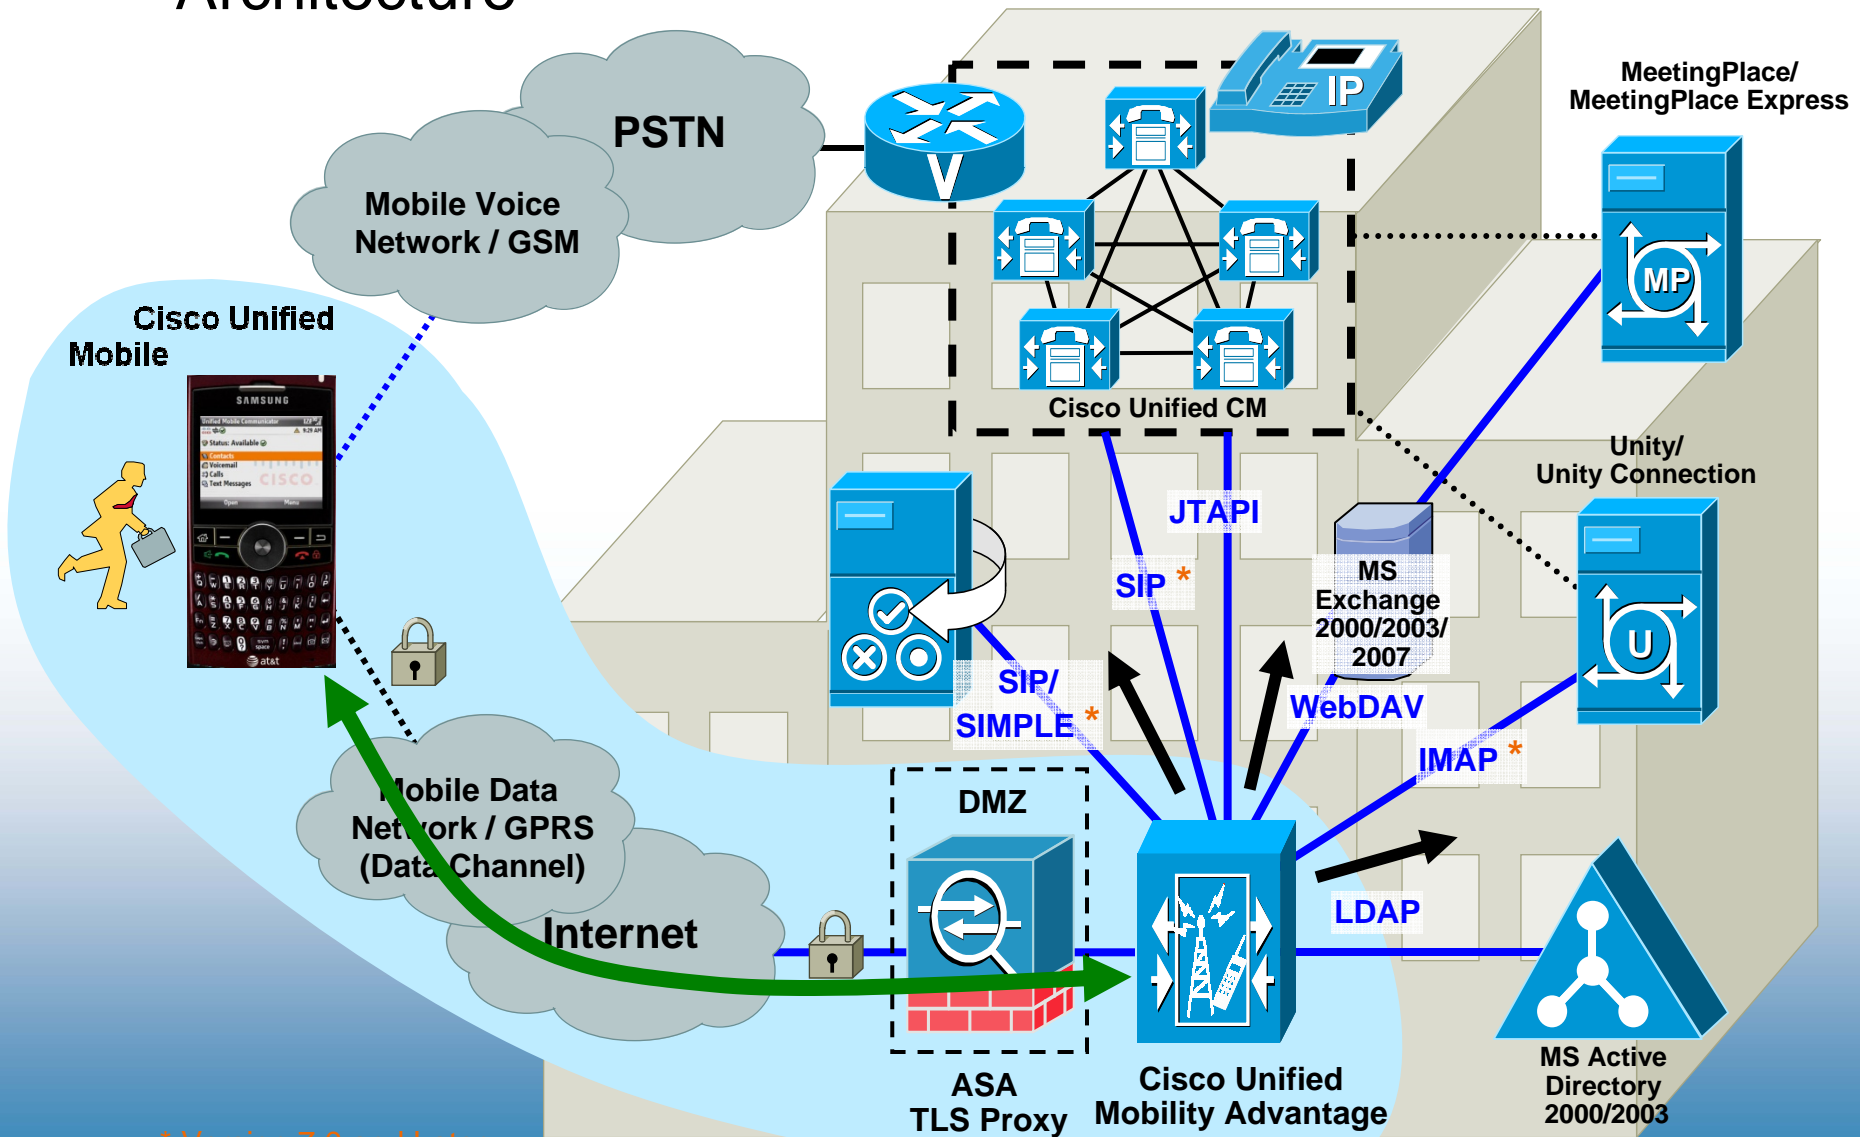

Cisco Unified Mobile Communicator is a mobility solution that allows mobile users to use enterprise applications on their mobile phones using a mobile client

- Mobile phone client provides access to enterprise applications like: Conferencing, Presence, and VM
- Connects to Cisco Unified Mobility Advantage server in the enterprise via SSL TCP/IP data connection

Cisco Unified Mobile Communicator Architecture

* Version 7.0 and Later
